Discontinued XXXX

ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing.

Components identified with the IEC symbol  in the parts list are special significance to safety. When replacing a component identified with , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

LEAKAGE TEST(FOR SERVICE ENGINEERS IN THE U.S.A)

Before returning the unit to the user, perform the following safety checks :

1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the unit.
2. Be sure that any protective devices such as nonmetallic control knobs, insulating fish-papers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. Which were removed for the servicing are properly re-installed.
3. Be sure that no shock hazard exists ; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows : Plug the power cord directly into a 120 volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a 1500 ohms, 10watt Resistor paralleled by a 0.15uF capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 ohms per volt, or higher sensitivity to measure the AC voltage drop across the resistor. (See diagram) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

HK 3490 TECHNICAL SPECIFICATIONS

Audio Section

Stereo Mode:
 Continuous Average Power (FTC):
 120 Watts per channel, 20Hz – 20kHz,
 @ <0.07% THD, both channels driven into 8 ohms
 150 Watts per channel, 20Hz – 20kHz
 @ <0.2% THD, both channels driven into 4 ohms

Input Sensitivity/Impedance
 Linear (High-Level): 200mV/47k ohms

Signal-to-Noise Ratio (IHF-A): 95dB

Frequency Response @ 1W (+0dB, -3dB): 10Hz – 110kHz

High Instantaneous Current Capability (HCC): ±45 Amps

Transient Intermodulation
 Distortion (TIM): Unmeasurable
 Rise Time: 16 µsec
 Slew Rate: 40V/µsec

FM Tuner Section

Frequency Range: 87.5 – 108.0MHz
 Usable Sensitivity: IHF 1.3µV/13.5dB
 Signal-to-Noise Ratio: Mono/Stereo 73/72dB
 Distortion: Mono/Stereo 0.3/0.4%
 Stereo Separation: 40dB @ 1kHz
 Selectivity: ±400kHz, 65dB
 Image Rejection: >80dB
 IF Rejection: >100dB
 Tuner Output Level: 1kHz, ±100kHz, Dev 500mV

AM Tuner Section

Frequency Range: 520 – 1720kHz
 Signal-to-Noise Ratio: >40dB
 Usable Sensitivity: Loop 500µV/M
 Distortion: 1kHz, 50% Mod 0.8%
 Selectivity: ±10kHz, >25dB

Video Section

Television Format: NTSC/PAL/SECAM
 Signal Format: Composite
 Input Level: 1Vp-p
 Input Impedance: 75 Ohms, unbalanced
 Sync Polarity: Negative
 Output Level: 1Vp-p
 Output Impedance: 75 Ohms, unbalanced
 Video Frequency Response: 10Hz – 10MHz

General

Power Requirement: AC 120V/60Hz
 Power Consumption: <1W standby, 310W maximum
 (both channels driven)

Dimensions:	(Product)	(Shipping)

FRONT-PANEL CONTROLS

Power Indicator: This LED has two modes. When power is turned off, the LED is amber to indicate that the receiver is plugged in and ready to be turned on. When the receiver is turned on, the LED turns white.

Power Switch: This electrical switch turns the receiver on for playback, or leaves it in Standby mode for quick turn-on using the remote control.

Phono/The Bridge Source Selector: Press this button to select a turntable connected to the Phono Inputs as the source. Press it again to select an iPod docked in the optional Harman Kardon The Bridge II docking station as the source. Each additional press switches between these two sources.

CD Source Selector: Press this button to select the device connected to the CD Inputs as the source.

Video Source Selectors: Press any of these buttons to select the device connected to the corresponding Audio and Video Inputs for playback. Remember to turn on the source device, to connect the Video Monitor Output to your video display and to turn on your video display and select the correct Video Input.

NOTE: The Video 3 source device may be connected to either the front- or rear-panel connectors. To select the desired device, press the Video 3 Source Selector repeatedly to toggle between the front and rear inputs.

Tape Source Selector: Press this button to select the device connected to the Tape/CDR Audio Inputs as the source. If you are making a recording using a three-head tape deck or another unit with off-head playback, you will be able to monitor the recording as it is being made.

Speaker 1/2: Press the left side of this button to enable the HK 3490 to output audio to the speakers connected to the Speaker 1 Outputs, and press the right side of the button to enable the Speaker 2 Outputs. You may enable or disable both sets of speaker outputs simultaneously. This feature is a convenient way of hearing audio in more than one room at a time, although the same source material will be played through both sets of speakers.

Tuning: Press either side of this button to tune a radio station. Tap the button briefly to tune one frequency step at a time, or press and hold the button to seek the next frequency with an acceptably strong signal.

Preset Scan: Press this button once to scan through the stations you have previously programmed as presets. Each station will play for five seconds before the tuner skips to the next preset station. Press the button a second time to select the current station. If no presets have been programmed, the 0 PRESET message will be displayed. When listening to XM® Radio, each press displays the current playback information: channel name and number, category, artist and song title.

Preset Stations: Press this button to select a preset radio station. If no presets have been programmed, the 0 PRESET message will be displayed. When listening to XM Radio, each press changes the preset number within the current lettered bank.

Tuner Band: Press this button to select the tuner as the source, or to select the AM (left side of button) or FM (right side of button) band. Each press of the FM side of the button toggles between the FM and XM bands.

FM Mode: This button toggles between Stereo and Mono modes when an FM station is tuned. Mono mode may improve reception of weaker signals. When listening to XM radio, each press of this button changes the channel search mode as follows:

- **All Channel Search:** The Tuning Buttons and the ◀/▶ Buttons on the remote may be used to tune any channel.
- **Preset Search:** The ◀/▶ Buttons on the remote may be used to change the lettered bank of presets.
- **Category Search:** The Tuning Buttons and the ◀/▶ Buttons on the remote may be used to tune a channel within the current category.

Sleep: Press this button to activate the sleep timer, which shuts off the receiver after a programmed period of time up to 90 minutes.

DSP Mode: Each press of this button switches the digital signal processing mode as follows: Dolby® Virtual Speaker Wide, Dolby Virtual Speaker Reference, Stereo.

Mute: Press this button to mute the HK 3490's speaker and headphone outputs temporarily. To end the muting, press this button or adjust the volume. Muting is also canceled when the receiver is turned off.

Volume Control: Turn this knob to raise or lower the volume, which will be shown in decibels (dB) in the Message Display.

Headphone Jack: Plug a 1/4" headphone plug into this jack for private listening.

Bass Control: Turn the knob clockwise to boost low-frequency output by up to 10dB, or counterclockwise to cut low-frequency output by up to 10dB. Set the control to suit your taste and room acoustics.

Treble Control: Turn the knob clockwise to boost high-frequency output by up to 10dB, or counterclockwise to cut high-frequency output by up to 10dB. Set the control to suit your taste and room acoustics.

Balance Control: Turn the knob to adjust the relative volume of the left and right channels, which affects imaging and can compensate for room characteristics.

NOTE: To use the Bass, Treble or Balance Controls, gently press the knob until it unlatches. When finished, press the knob again to lock it.

Video 3 A/V Inputs: Connect a source component that will only be used temporarily to these jacks, such as a camera or game console, or connect an iPod using the supplied audio/video cable.

Message Display: Various messages appear in this display in response to commands. In normal use, the Upper Line will display the current source and audio input (analog or one of the digital audio inputs). The Lower Line displays the current speaker group (if any are active) and the DSP mode. Other messages may appear for some sources, such as The Bridge docking station and the tuner.

NOTE: To make it easier to follow the instructions throughout the manual that refer to this illustration, a copy of this page may be downloaded from the Product Support section at www.harmankardon.com.

REAR-PANEL CONNECTIONS

AM and FM Antenna Terminals: Connect the included AM and FM antennas to their respective terminals for radio reception.

Video 1, Video 2 and Video 3 Audio/Video Inputs: These jacks may be used to connect your video-capable source components (e.g., VCR, DVD player, cable TV box) to the receiver.

NOTE: The Video 3 source has inputs on both the front and rear panels of the HK 3490, and you may connect different devices to each set of inputs. To select between the two sets of inputs, press the Video 3 Source Selector repeatedly.

Video 1 Audio/Video Outputs: These jacks may be used to connect your VCR or another recorder.

Video Monitor Output: If some of your sources use video connections, connect the Video Monitor Output to the corresponding input on your television or video display to view the sources. No video signal will be available when an audio-only source input, such as CD or Tape, is selected.

Remote Infrared (IR) Input and Output: When the remote IR receiver on the front panel is blocked, such as when the HK 3490 is placed inside a cabinet, connect an optional IR receiver to the Remote IR Input jack for use with the remote control. The Remote IR Output may be connected to the Remote IR Input of a compatible source device (or other product) to enable remote control through the HK 3490. When several source devices are used, connect them in "daisy chain" fashion.

Update Port: This connection is for authorized service personnel only. It is used with a proprietary device in the event that a software update for the HK 3490 becomes available in the future. Do not make any connections to it.

Reset Button: In the event that the HK 3490 operates erratically, a system reset may restore proper functionality. Place the unit in Standby mode by pressing the Power Switch so that the Power Indicator turns amber. Then use a fine-point pen or other similar object to press the Reset Button.

The Bridge/DMP Input: Connect the optional Harman Kardon  or  docking station to this input for use with your iPod, iPod touch or iPhone (not included). Make sure the receiver is turned off (in Standby mode) when connecting The Bridge or The Bridge II docking station.

XM Antenna Jack: Plug in an XM antenna module here. The XM antenna module is purchased separately, and should specify that it is for home use with an XM Ready product. You will need to subscribe to the XM service, which is available separately, and activate the service for your antenna module. (XM service is not available in Alaska and Hawaii.)

Coaxial and Optical Digital Audio Inputs: If a source has a compatible digital audio output, connect it to one of these jacks for improved audio performance. Use only one type of digital audio connection for each source.

AC Power Cord: After you have made all other connections, plug the AC power cord into an unswitched outlet.

Switched AC Accessory Outlets: You may plug the AC power cord of one source device into each of these outlets, and it will turn on whenever you turn on the receiver. Do not use sources that consume more than 100 watts of power per outlet.

Speaker 1 and 2 Outputs: Use two-conductor speaker wire to connect each set of terminals to the correct speaker. Observe the correct polarity (positive and negative connections). Always connect the positive lead to the red or white terminal on the receiver and the red terminal on the speaker. Connect the negative lead to the black terminal on both the receiver and the speaker. Use the Speaker 1/2 Selectors on the front panel or remote to select either or both pairs of speakers for playback.

Subwoofer Outputs: If you have a powered subwoofer, connect these jacks to the line-level inputs on the subwoofer. The same full-range signal is output through both jacks. Thus, you have the option of connecting each jack to the line-level input on a separate subwoofer or to use the full-range outputs to feed a remote room in a distributed-audio application. If you have only one subwoofer with a single line-level input, connect it to the right Subwoofer Output on the HK 3490.

Subwoofer Trigger Outputs: Connect these outputs to a compatible trigger input on the subwoofer connected to the Subwoofer Output immediately to the right of the Trigger Output. Consult the owner's manual for the subwoofer to set its trigger input correctly, and the subwoofer will automatically turn on or off when the HK 3490 is turned on or off. In addition, the Trigger Outputs are used with the Subwoofer Link Switches to conserve energy by powering off the subwoofer's amplifier when it is not needed. The Subwoofer Trigger Outputs send a signal of 15 volts DC.

Subwoofer Link Switches: Each switch affects the subwoofer connected to the jack immediately to the left of the switch. To use the switch, first connect the corresponding Subwoofer Trigger Output to a compatible trigger input on the subwoofer, and make sure the subwoofer's instructions are followed to activate its trigger input. When the Link Switch is on, the HK 3490 will remove the trigger signal whenever the corresponding pair of main speakers is not in use, thereby conserving energy that would otherwise be used to maintain the subwoofer's amplifier in Standby mode. This feature is activated any time no signal is present at the main speaker outputs, including when the Speaker 1/2 Switch turns off both speaker pairs, when the HK 3490's output is muted, or when the headphones are plugged in. See Table A2 in the appendix for details.

Main-Amp Inputs and Preamp Outputs: These jacks are normally connected directly to each other with an included jumper. Some devices, such as equalizers and some loudspeaker systems, require connection between the Preamp Outputs and Main-Amp Inputs, in which case the jumpers should be removed and stored in a safe place for future use. You may also remove the jumpers if you wish to connect the Preamp Outputs to an external amplifier, or if you wish to connect another device's line-level output directly to the HK 3490's power amplifier for a special application.

Tape Outputs: These jacks may be used to connect your CDR or another audio-only recorder.

NOTE: To make it easier to follow the instructions throughout the manual that refer to this illustration, a copy of this page may be downloaded from the Product Support section at www.harmankardon.com.

REAR-PANEL CONNECTIONS

CD and Tape Inputs: These jacks may be used to connect your audio-only source components (e.g., CD player, tape deck). Do not connect a turntable to these jacks unless you are using the turntable with a phono preamp. When your recorder features three-head or off-head playback, you may monitor a recording as it is being made.

Phono Inputs and Ground: Connect the outputs of your turntable or tonearm to these jacks, and connect the ground wire from the turntable to this Ground Connector to reduce system hum. Only moving-magnet (MM-type) cartridges are compatible with the Phono Inputs. If your turntable is equipped with its own onboard phono preamp, you may connect it to any of the HK 3490's other audio inputs.

Main Power Switch: This mechanical switch turns the power supply on or off. It is usually left turned on (push the rocker in at the top), and cannot be turned on using the remote control. Turn this switch off when connecting or disconnecting source devices or loudspeakers to prevent any possibility of damage to components resulting from an unexpected power surge.

REMOTE CONTROL FUNCTIONS

The HK 3490 remote is capable of controlling six devices, including the HK 3490 itself. The remote is preprogrammed at the factory to operate most Harman Kardon DVD, CD and CDR players. Each time you wish to use the codes for any component, first press its Selector Button. This changes the button functions to the appropriate codes.

Phono: Controls only the HK 3490 when a turntable is in use.

Video 1: Controls the Harman Kardon DMC 1000 digital media server.

Video 2 and 3: Controls DVD players. Each source uses a slightly different code set. Test the remote on your Harman Kardon DVD player, and refer to Table A3 in the appendix. Connect the DVD player to the source inputs corresponding to the code set that correctly operates the device.

Tape: Controls CD recorders.

CD: Controls CD players.

AM/FM: Controls the HK 3490 and its internal tuner only.

XM: Controls the HK 3490 and its internal tuner only.

The Bridge: When an optional Harman Kardon The Bridge or The Bridge II docking station is connected and an iPod (not included) is docked, this mode controls navigation and playback of materials stored on the iPod.

The functions specific to the HK 3490 are always available: Main Power On and Off, Speaker 1/2, source selection, Mute, Sleep, Dimmer and the Volume Controls.

Any given button may have different functions, depending on which component is being controlled. Some buttons are labeled with these functions. For example, the Track Skip Buttons are labeled with the transport control icons printed on the buttons themselves, and these functions are active when a CD or DVD player is in use. The Preset indications appear above these buttons, and those commands are active when the HK 3490's tuner is in use. See the appendix for listings of the different functions for each type of component.

IR Transmitter Lens: As buttons are pressed on the remote, infrared codes are emitted through this lens. Make sure it is pointing toward the component being operated.

Power Off Button: Press this button to turn off the HK 3490 or another device.

Power On Button: Press this button to turn on the HK 3490 or another device.

Speaker 1/2: Press the Speaker 1 Button to enable the HK 3490 to output audio to the speakers connected to the Speaker 1 Outputs, and press the Speaker 2 Button to enable the Speaker 2 Outputs. You may enable or disable both sets of speaker outputs simultaneously. This feature is a convenient way of hearing audio in more than one room at a time, although the same source material will be played through both sets of speakers.

Source Selectors: Press one of these buttons to select a source device, which is a component where a playback signal originates, e.g., DVD, CD or the tuner. This will also turn on the receiver and switch the remote to the codes that operate the source device.

NOTE: The Video 3 source device may be connected to either the front- or rear-panel connectors. To select the desired device, press the Video 3 Source Selector repeatedly. The VIDEO 3 message indicates that the rear-panel inputs are active, and the VIDEO F message indicates the front-panel inputs have been selected.

FM Mode: This button toggles between Stereo and Mono modes when an FM station is tuned. When XM Radio is in use, each press of this button changes the search mode, which controls how the ◀/▶ Buttons operate.

- **Preset Search Mode:** Each press of the ◀/▶ Buttons changes the lettered bank of preset stations. Each press of the ▲/▼ Buttons changes the numbered preset within the bank.
- **Category Search Mode:** Each press of the ◀/▶ Buttons jumps to the next category of stations, e.g., Decades.
- **All Channel Search Mode:** The ◀/▶ Buttons do nothing. The ▲/▼ Buttons change the channel number.

DSP Mode: Each press of this button switches the digital signal processing mode as follows: Dolby Virtual Speaker Wide, Dolby Virtual Speaker Reference, Stereo.

Auto Preset: The Auto Preset feature enables you to automatically set presets for all available FM radio stations in your area with a single button press. To start the process, make sure the FM tuner has been selected as the source. Press and hold this button. The AUTO PRESET message will appear as the HK 3490 tuner scans through all FM stations with acceptable signal quality and programs them into the presets. If there are fewer than 30 stations, the tuner will cycle through again, filling up the higher preset slots with the same stations. The scan will stop when all 30 presets have been filled, or after two scans through the FM band.

Numeric Keys: Use these buttons to enter radio station frequencies when using the tuner (after pressing the Direct Button, except for XM), or to select station presets.

Direct: Press this button before using the Numeric Keys to directly enter a radio station frequency. It is not necessary to press this button before using the Numeric Keys to enter an XM Radio channel.

Clear: Press this button to clear a radio station frequency you have started to enter.

Memory: After you have tuned a particular radio station, press this button, then the Numeric Keys, to save that station as a radio preset. When XM Radio is in use, programming presets is somewhat different. First, tune to the desired channel. Then, press the Memory Button and the preset indication will flash. Use the ◀/▶ Buttons to select the desired preset bank (A through E), and then use the ▲/▼ Buttons

NOTE: To make it easier to follow the instructions throughout the manual that refer to this illustration, a copy of this page may be downloaded from the Product Support section at www.harmankardon.com.

REMOTE CONTROL FUNCTIONS

to select a numbered location (1 through 8) within the bank. Press the Memory Button to complete the process and let the HK 3490 return to normal operation.

Menu: This button has no effect on the HK 3490, but is used with some source devices to access the source's setup menus.

Navigation (▲/▼/◀/▶) and OK Buttons: When XM Radio is in use, the ◀/▶ Buttons may be used to change the channel category or the lettered bank of presets. As described above, press the FM Mode Button to select a search mode. Use the ▲/▼ Buttons to change the numbered preset within a bank when in Preset Search mode, or to change the channel sequentially when in All Channel Search mode. These buttons have no other effect on the HK 3490, but are used to make selections within the on-screen menu system for some source devices. The OK Button transmits the Random Play command when used with CD players.

Preset Scan: Press this button once to scan through the stations you have previously programmed as presets. Each station will play for five seconds before the tuner skips to the next preset station. Press the button a second time to select the current station. If no presets have been programmed, the 0 PRESET message will be displayed. When XM Radio is in use, this button has nothing to do with preset stations. Instead, each press of this button changes the information displayed on the front panel as follows: channel name and number, channel category, artist name and song title.

Disc Menu: This button has no effect on the HK 3490, but is used with some DVD players to access the DVD disc's menus.

Volume Controls: Use this control to raise or lower the volume, which will be shown in decibels (dB) in the Message Display.

Mute Button: Press this button to mute the HK 3490's speaker and headphone outputs temporarily. To end the muting, press this button or adjust the volume. Muting is also canceled when the receiver is turned off. When the Subwoofer Trigger Output is connected to the correct input on the subwoofer, and the corresponding Subwoofer Link Switch is on, muting the HK 3490 will remove the trigger signal, turning off the subwoofer's amplifier to conserve energy. When normal listening resumes, the trigger signal will be reactivated, turning on the subwoofer.

Tuning: Use this control to tune a radio station. Tap one end of the button briefly to tune one frequency step at a time, or press and hold it to seek the next frequency with an acceptably strong signal. When XM Radio is in use, the digitally tuned channels are always of acceptable strength, and thus there is no seek function, although pressing and holding the Tuning Buttons scans through the channels faster. When the FM Mode Button has been used to activate Category Search Mode, the Tuning Buttons will only tune channels within the current category. Press the FM Mode Button until All Channel Search Mode has been selected to tune any channel.

Preset Stations Selectors/Track Skip: Press these buttons to select a preset radio station, or to change tracks or chapters on compatible Harman Kardon DVD and CD players. XM presets are stored in one of five lettered banks. To switch banks, press the FM Mode

Button repeatedly until the PRESET SEARCH message appears in the Message Display, and use the ◀/▶ Buttons to change to the desired bank. Then use the Preset Stations Selectors to select the numbered preset within the bank.

Stop, Record, Pause and Play: These transport controls have no effect on the receiver, but are used to control compatible Harman Kardon DVD and CD players.

Fast Search: The Fast Search function is available with compatible Harman Kardon DVD and CD players.

Dimmer: Press this button to partially or fully dim the front-panel display.

Repeat (V. Mode): This button has no effect on the HK 3490, but issues the Repeat command when used with DVD and CD players. On some remotes this button is labeled "V. Mode," but it still issues the Repeat command.

A-B (Source): This button has no effect on the HK 3490, but issues the Repeat A-B command when used with DVD and CD players with that feature. On some remotes, this button is labeled "Source," but it still issues the Repeat A-B command.

Sleep: Press this button to activate the sleep timer, which shuts off the receiver after a programmed period of time up to 90 minutes.

CONNECTIONS

There are different types of audio and video connections used to connect the receiver to the speakers and video display, and to connect the source devices to the receiver. To make it easier to keep them all straight, the Consumer Electronics Association has established a CEA® color-coding standard. Table 1 may be helpful to you as a reference while you set up your system.

Table 1 – Connection Color Guide

Composite	

Types of Connections

This section will briefly review different types of cables and connections that you may use to set up your system.

Speaker Connections

Speaker cables carry an amplified signal from the receiver’s speaker terminals to each loudspeaker. Speaker cables contain two wire conductors, or leads, inside plastic insulation. The two conductors are usually differentiated by using different colors, or stripes, or by adding a ridge to the insulation. Sometimes the wires are different colors, one being copper red and the other silver.

The differentiation is important because each speaker must be connected to the receiver’s Speaker-Output terminals using two wires, one positive (+) and one negative (–). This is called speaker polarity. It’s important to maintain the proper polarity for all speakers in the system. If some speakers have their negative terminals connected to the receiver’s positive terminals, performance can suffer, especially for the low frequencies.

Always connect the positive terminal on the loudspeaker, which is usually colored red, to the positive terminal on the receiver, also colored red. Similarly, always connect the black negative terminal on the speaker to the black negative terminal on the receiver.

The HK 3490 uses binding-post speaker terminals that can accept banana plugs or bare-wire cables.

Banana plugs are simply plugged into the hole in the middle of the terminal cap. See Figure 1.

Figure 1 – Binding-Post Speaker Terminals With Banana Plugs

Bare-wire cables are installed as follows (see Figure 2):

1. Unscrew the terminal cap until the pass-through hole in the collar is revealed.
2. Insert the bare end of the wire into the hole.
3. Screw the cap back into place until the wire is held snugly.

Figure 2 – Binding-Post Speaker Terminals With Bare Wires

The HK 3490 features two sets of speaker connections, with each set allowing connection of a left and right loudspeaker. This allows you to place a second set of speakers in another room, or even outdoors, when weather-resistant loudspeakers are used. You may play both sets of speakers simultaneously, one set at a time or neither set when using the headphones or making recordings. Use the Speaker 1/2 Buttons to activate or deactivate each pair of speakers. It is not possible to select different sources for each speaker pair.

Subwoofer

The subwoofer is a specialized type of loudspeaker used to play only the low frequencies (bass), which require much more power than the other speaker channels. To obtain the best results, most speaker manufacturers offer powered subwoofers, in which the speaker contains its own amplifier on board. Usually, a line-level (nonamplified) connection is made from the receiver’s Subwoofer Output to a corresponding jack on the subwoofer, as shown in Figure 3, but sometimes the subwoofer is connected to the receiver using the left and right speaker outputs, then the left and right speakers are connected to terminals on the subwoofer. The same full-range signal is output through both jacks. Thus, you have the option of connecting each jack to the line-level input on a separate subwoofer. If you have only one subwoofer with a single line-level input, connect it to the right Subwoofer Output on the HK 3490.

Connect the Subwoofer Trigger Output for each subwoofer to the corresponding trigger input on its amplifier. This enables the subwoofer to turn on or off together with the HK 3490. To further conserve energy, when the trigger connection is made, turn the Subwoofer Link Switch on to turn the subwoofer off when the corresponding pair of main speakers are not being used, such as during muting, when headphones are being used, or when the main speakers are turned off using the Speaker 1/2 switch.

Figure 3 – Subwoofer

Connecting Source Devices to the HK 3490

The HK 3490 is designed to process audio and video input signals, playing back the audio and displaying the video on a television or monitor connected to it. These signals originate in what are known as “source devices,” including your DVD player, CD player, DVR (digital video recorder) or other recorder, tape deck, game console, cable or satellite television box, or MP3 player. Although the tuner is built into the

CONNECTIONS

HK 3490, it also counts as a source, even though no external connections are needed, other than the FM and AM antennas and the XM module.

Separate connections are required for the audio and video portions of the signal.

Audio Connections

There are two formats for audio connections: digital and analog. Digital audio signals offer improved quality, free of distortion and with greater detail and presence. The HK 3490 uses two types of digital audio connections: coaxial and optical. Either type of digital audio connection may be used for each source device, but never both simultaneously for the same source. However, it's alright to make both analog and digital audio connections to the same source.

Digital Audio

Coaxial digital audio jacks are usually color-coded in orange. Although they look similar to analog jacks, they should not be confused, and you should not connect coaxial digital audio outputs to analog inputs or vice versa. See Figure 4.

Figure 4 – Coaxial Digital Audio

Optical digital audio connectors are normally covered by a shutter to protect them from dust. The shutter opens as the cable is inserted. Input connectors are color-coded using a black shutter, while outputs use a gray shutter. See Figure 5.

Figure 5 – Optical Digital Audio

Analog Audio

Analog connections require two cables, one for the left channel (white) and one for the right channel (red). These two cables are often attached to each other for most of their length. See Figure 6. Most sources that have digital audio jacks also have analog audio jacks, although some older types of sources, such as tape decks, have only analog jacks. For sources that are capable of both digital and analog audio, you may wish to make both connections. If you wish to record materials from DVDs or other copy-protected sources, you may only be able to do so using analog connections. Remember to comply with all copyright laws if you choose to make a copy for your own personal use.

Figure 6 – Analog Audio

Video Connections

Although some sources only produce an audio signal (e.g., CD player, tape deck), many sources output both audio and video signals (e.g., DVD player, cable television box, HDTV tuner, satellite box, VCR, DVR). In addition to the audio connection, make a video connection for each of these sources.

The composite video jack is usually color-coded yellow, and looks like an analog audio jack, although it is important never to confuse the two. Do not plug a composite video cable into an analog audio jack, and vice versa. Both the chrominance (color) and luminance (intensity) components of the video signal are transmitted using a single cable. See Figure 7.

Figure 7 – Composite Video

Antennas

The HK 3490 uses separate terminals for the included FM and AM antennas that provide proper reception for the tuner.

The FM antenna uses a 75-ohm F-connector. See Figure 8.

Figure 8 – FM Antenna

The AM loop antenna needs to be assembled. Connect the two leads to the spring terminals on the receiver. The AM antenna leads are polarized, and it is important to color-match the leads and terminals to maintain the proper polarity. See Figure 9.

Figure 9 – AM Antenna

To enjoy XM satellite radio, purchase an XM antenna module designed for use with XM Ready devices and a subscription to the XM service. We recommend the XM Mini-Tuner and Home Dock Bundle, available at www.xmradio.com. The older Connect-and-Play module is also compatible with the HK 3490, but it may no longer be available in your area.

An XM Ready-compatible module uses the special connector on the HK 3490's rear panel that allows you to use the receiver's tuner, including its 40 preset station locations and remote control. Although you may use a module with standard audio connections, which may be indicated for "car and home use," you will not be able to enjoy the HK 3490's ease of control.

INSTALLATION

You are now ready to connect your various components to your receiver. Before beginning, make sure that all components, including the HK 3490, are turned completely off and their power cords are unplugged. **Don't plug in any of the power cords until you have finished making all of your connections.**

The receiver generates heat while it is on. Select a location that leaves several inches of space on all sides of the receiver. It is preferable to avoid completely enclosing the receiver inside a cabinet. It is also preferable to place components on separate shelves rather than directly on top of the receiver. Some surface finishes are delicate. Try to select a location with a sturdy surface finish.

Step One – Connect the Speakers

If you have not yet done so, place your speakers in the listening room as described in the Speaker Placement section.

Connect the front left and right loudspeakers to the Speaker 1 speaker terminals on the HK 3490. Maintain the proper polarity by always connecting the positive and negative terminals on each speaker to the positive and negative terminals on the receiver. You may place a second pair of speakers in another room, or in the same room for additional sound power, connecting those speakers to the Speaker 2 Outputs and maintaining polarity. Use the Speaker 1/2 Selector on the front panel or remote to activate either or both pairs of speakers simultaneously. See Figure 11.

Figure 11 – Speaker Connections

Step Two – Connect the Subwoofer

Connect the Subwoofer Outputs on the HK 3490 to the line-level inputs on your subwoofer. The same full-range signal is output through both jacks. Thus, you have the option of connecting each jack to the line-level input on a separate subwoofer. If both pairs of main speaker outputs are in use in different locations, you may install a separate subwoofer with each speaker pair. If you have only one subwoofer with a single line-level input, connect it to the right Subwoofer Output on the HK 3490. For optional auto turn-on/turn-off control over the subwoofer, connect the Subwoofer Trigger Output for each subwoofer to the corresponding trigger input on its amplifier. This enables the subwoofer to turn on or off together with the HK 3490. To further conserve energy, when the trigger connection is made, turn the Subwoofer Link Switch on to turn the subwoofer off when the corresponding pair of main speakers is not being used, such as during

muting, when headphones are being used, or when the speakers are turned off using the Speaker 1/2 Switch. See Figure 12. Consult the manufacturer's guide for the subwoofer for additional information.

Figure 12 – Subwoofer Connection

Step Three – Connect the Antennas

Connect the FM and AM antennas to their terminals, and plug the XM antenna module (not included) into its connector. The XM module is purchased separately, and must be activated at the time you purchase a subscription. See Figure 13.

Figure 13 – Antenna Connections

Step Four – Connect the Source Components

Use the worksheets in the appendix to note which connections you will use for each of your source devices.

For each source, select a source input (Video 1, Video 2, Video 3, etc.). In Table A1 in the appendix, we recommend connecting certain types of sources to certain source inputs to make it easier to use the remote control.

The remote is preprogrammed to operate certain Harman Kardon components, as shown in Table A1. However, you may connect any component with analog audio and/or composite video outputs to any source input on the HK 3490, with the exception of the Phono Inputs, and you may use the original remote control supplied with the component. It is not possible to reprogram the HK 3490 remote, or to change the device type associated with any source input.

INSTALLATION

We recommend you follow the guidelines in Table A1 when connecting various source components to the HK 3490. However, due to the limitations in the design of the HK 3490 remote control, when using source components manufactured by other brands, use the device's original remote control to operate it.

For each audio-only source, such as a CD player, connect the left and right analog audio outputs of the source device to the corresponding inputs on the HK 3490.

For sources that have a digital audio output, connect it to the corresponding Optical or Coaxial Digital Audio Input on the HK 3490. You may connect a source's analog and digital audio outputs at the same time; only one connection is active at a time. To select the digital audio input, press and hold the front-panel Source Selector and simultaneously press the T-Mon Selector to change the audio input as follows: Analog, Optical, Coaxial.

For audio/video devices, such as a cable television set-top box, in addition to the audio connections, connect the composite video output on the set-top box to the corresponding video input jack on the HK 3490.

Phono (Turntable)

Connect the audio outputs of your turntable or tonearm with a moving-magnet (MM-type) cartridge to the Phono Inputs, and connect the ground wire to the Ground Terminal immediately below the Phono Inputs (not the AM Antenna Ground Terminal). If the cartridge is a moving-coil (MC-type) cartridge, it requires a separate phono preamp (available at your local electronics store) before you connect it to the Phono Inputs. See Figure 14.

Figure 14 – Phono Inputs and Ground

If your turntable has an MM-type cartridge and a built-in phono preamp, *do not* connect it to the Phono Inputs. Use one of the other available audio input sources on the HK 3490.

Compact Disc (CD) Player

Connect the analog audio outputs of your CD player (or another audio-only device) to the CD Audio Inputs. See Figure 15.

Figure 15 – CD Audio Inputs

Tape

The Tape source is used for audio recorders, such as a CDR, MiniDisc or cassette deck.

Connect the output jacks on your recorder to the Tape/CDR Audio Input jacks on the HK 3490, and the input jacks on your recorder to the Tape/CDR Output jacks on the HK 3490. See Figure 16.

Figure 16 – Tape/CDR Audio Inputs and Outputs

To listen to the Tape/CDR source, press the Tape Mon Button. The upper line of the Message Display will indicate the last-selected source, which is always available at the Tape/CDR Outputs for recording. The T-Mon message will flash in the lower line, indicating that the HK 3490 is playing the signal present at the Tape/CDR inputs. When the recorder is in Playback-Only mode, this signal will originate in the recorder, e.g., when playing a commercial CD. If the recorder is in recording mode and has off-head playback capability, you may monitor recording of the source displayed in the upper line. If the recorder does not have off-head playback, you will not be able to monitor the recording. To hear the original source, press the Tape Mon Button to stop monitoring the recording.

NOTE: To make recordings, insert blank media in the recording device and set it in Recording mode. The fact that a signal is always available at the Tape/CDR Outputs doesn't mean recording is taking place if the recorder is not set to record.

Video 1 Source

Since this source includes audio and video recording output jacks, it is best suited to a video recorder, such as your VCR or DVR, even though the remote codes are programmed to operate the DMC 1000. Simply use your video recorder's original remote.

Connect your recorder to the Video 1 Audio Inputs and Outputs. Then connect the recorder to the Video 1 Composite Video Input and Output. See Figure 17.

Figure 17 – Video 1 A/V Inputs and Outputs

Remember to connect the audio and video *output* jacks on your recorder to the Video 1 *Input* jacks on the HK 3490, and the audio and video *input* jacks on your recorder to the Video 1 *Output* jacks on the HK 3490.

INSTALLATION

Video 2 Source

The Video 2 source is used only for playback. Since the remote is preprogrammed to operate a Harman Kardon DVD player when the Video 2 source is selected, we recommend that you connect a DVD player to the Video 2 Inputs.

You may have observed that the HK 3490 does not feature surround sound decoding, other than Dolby Virtual Speaker. If you prefer the complete home theater experience, you may wish to consider purchasing a full-featured Harman Kardon AVR Series audio/video receiver. However, we hope you will find that using a DVD player with the HK 3490 in smaller settings, such as a bedroom or den, surpasses the audio performance of most televisions, including those with onboard stereo speakers.

Connect the left and right analog audio outputs of the DVD player to the Video 2 Audio Inputs on the HK 3490. Then connect the composite video output of the DVD player, usually colored yellow, to the Video 2 Video Input. See Figure 18.

Figure 18 – Video 2 Audio and Video Inputs

NOTE: If you receive your television programming using your TV with an antenna or direct cable connection, connect the TV's analog audio outputs (if available) to the Video 2 Analog Audio Inputs. Do not connect any video output on the television set to any Video Input on the receiver. See Step Five for information on connecting the receiver's Video Monitor Outputs to the television.

Video 3 Source

The Video 3 source is used only for playback. The Video 3 source has two sets of input jacks, one located on the HK 3490's rear panel and one set on the front panel. If you wish to connect a video device more or less permanently, you may prefer to connect it to the rear-panel inputs for a neater appearance. You may prefer to reserve the front-panel inputs for devices connected on a temporary basis, such as an iPod (not included), a camcorder, a game console, or another type of media player with analog audio and/or video outputs.

You may connect devices to both the front- and rear-panel inputs simultaneously. To select either device, press the Video 3 Source Selector on the HK 3490's front panel or remote repeatedly. When VIDEO 3 appears on the front panel of the HK 3490, the rear-panel inputs are active. When VIDEO F appears, the front-panel inputs are active.

Connect the left and right analog audio outputs of your device to the corresponding Video 3 Inputs on either the front or rear panel, and if available, connect the composite video output of the device to the Video 3 Video Input on the same panel. See Figure 19.

Figure 19 – Front- and Rear-Panel Video 3 A/V Inputs

To connect an iPod to the Video 3 Inputs, insert the 1/8" mini plug on the A/V cable included with the HK 3490 into the headphone jack of the iPod. Insert the left and right analog audio plugs on the other end of the A/V cable into the Video 3 Audio Inputs on the front of the receiver. If the iPod is capable of playing videos or displaying images, insert the composite video plug of the A/V cable into the Video 3 Video Input.

NOTE: The iPod classic, iPod touch and iPhone require a special cable (not included) for video playback through the HK 3490. The cable features a dock receptacle at one end, and conventional A/V plugs at the other end that may be connected to the HK 3490 as described above. Visit www.apple.com for more information about the cable.

When the front-panel inputs and tone controls are not in use, place the supplied covers over them for a cleaner appearance by snapping the covers in place. To remove the covers, gently press on the left side of each cover so that it pivots out.

Since the remote is preprogrammed to operate a Harman Kardon DVD player when the Video 3 source has been selected, use the source device's original remote to control other components, or operate an iPod using its own controls.

The Bridge II Docking Station

With the optional The Bridge II docking station, you can listen to audio or view videos stored on your iPod, iPod touch or iPhone (not included), use your HK 3490 remote control to operate the iPod, and even charge the iPod while it's docked in The Bridge II docking station. Simply plug the proprietary cable from The Bridge II unit into the special connector on the rear of the HK 3490. See Figure 20. Refer to the owner's manual for The Bridge II model for more information.

Figure 20 – The Bridge II Connection

INSTALLATION

Step Five – Connect the Video Display

Only video connections should be made between the receiver and your video display (TV), unless your TV is the source for your television programming (see note below Figure 18).

To view video or images played by your source devices, connect the Video Monitor Output of the HK 3490 to a Composite Video Input on your television or video display. See Figure 21. Consult the manual for your TV so that you understand how to select the correct video input.

Figure 21 – Video Monitor Output

Step Six – Connect the Remote IR Input and Output (Optional)

The HK 3490 is equipped with a Remote IR Input and a Remote IR Output to facilitate use of your system with a remote control in a variety of situations.

When the HK 3490 is placed in such a way that aiming the remote at the front-panel IR sensor is difficult, such as inside a cabinet or facing away from the listener, you may connect an external IR receiver, such as the optional Harman Kardon HE 1000, to the Remote IR Input jack.

If any of your source devices are equipped with a compatible Remote IR Input, use a 1/8" mini-plug interconnect cable (not included) to connect the HK 3490's Remote IR Output to the source device's Remote IR Input, which will pass any applicable remote signals transmitted through the HK 3490 to the source device. This enables you to control your sources even when the HK 3490 itself is controlled via an external IR receiver.

To control more than one source device using the Remote IR Output, connect all sources in "daisy chain" fashion, with the HK 3490's Remote IR Output connected to the first device's Remote IR Input, that device's Remote IR Output connected to the next device's Remote IR Input, and so forth. See Figure 22.

Figure 22 – Remote IR Input and Output

NOTE: Not all remote-controllable devices are equipped with compatible IR inputs and outputs. Check with the manufacturer of the source device for more information on the type of IR signal expected. The HK 3490 will output a "stripped carrier" IR signal.

Step Seven – Connect Optional External Equipment

If you wish to use the HK 3490 with an external power amplifier, remove the jumpers connecting the Preamp Outputs and Main-Amp Inputs. Store the jumpers in a safe place in case they are needed in the future. Connect the left and right Preamp Outputs of the HK 3490 to the analog audio inputs on the external power amplifier. See Figure 23.

Figure 23 – Preamp Outputs and Main-Amp Inputs

You may adjust the Volume and Tone Controls using the HK 3490's front panel or remote (volume only).

If you wish to install an external processor, such as an equalizer, connect it to the Preamp Outputs and Main-Amp Inputs. Remove the jumpers and store them in a safe place. Connect the HK 3490's Preamp Outputs to the processor's analog audio inputs, and then connect the processor's analog audio outputs to the Main-Amp Inputs on the HK 3490.

Alternatively, you may connect the external processor to the HK 3490's Tape Monitor Loop. See Figure 16.

Step Eight – Plug In AC Power

Having made all of your wiring connections, it is now time to plug each component's AC power cord into a working outlet.

You may plug two devices into the AC Switched Accessory Outlets on the rear of the HK 3490. See Figure 24. Make sure each device draws no more than 100 watts. The devices should have their mechanical or master power switches turned on, and they will power on any time the HK 3490 is turned on.

Figure 24 – AC Switched Accessory Outlets

Step Nine – Insert Batteries in Remote

The HK 3490 remote control uses four AAA batteries, which are included.

To remove the battery cover located on the back of the remote, squeeze the tab and lift the cover.

Insert the batteries as shown in the diagram, making sure to observe the correct polarity. See Figure 25.

INSTALLATION

Figure 25 – Remote Battery Compartment

When using the remote, point the lens toward the front panel of the HK 3490. Make sure no objects, such as furniture, are blocking the remote's path to the receiver. Bright lights, fluorescent lights and plasma video displays may interfere with the remote's functioning. The remote has a range of about 20 feet, depending on the lighting conditions. It may be used at an angle of up to 30 degrees to either side of the HK 3490.

If the remote seems to operate intermittently, then make sure the batteries have been inserted correctly, or replace the batteries with fresh ones.

Step Ten – Turn On the HK 3490

Place the HK 3490 in Standby mode by turning on the Main Power Switch on the rear panel. The Power Indicator will turn amber. The HK 3490 may be turned on from Standby mode by pressing the Power Switch or any Source Selector on either the front panel or the remote. See Figures 26 and 27.

Figure 26 – Front-Panel Power Switch

Figure 27 – Remote Control Power Switch

OPERATION

Now that you have installed your system components, you are ready to begin enjoying your new audio system.

Turning On the HK 3490

After you plug the power cord into an AC outlet and turn on the Main Power Switch on the rear panel, the Power Indicator should light up in amber. This indicates that the HK 3490 is in Standby mode and is ready to be turned on. See Figure 26.

The HK 3490 may be turned on by pressing the Power Switch or any Source Selector on the front panel or the remote. See Figures 26 and 27.

The Power Indicator will turn white to indicate that the HK 3490 is on. If the PROTECT message appears in the Message Display, unplug the receiver from AC power and check all of your wires and connections. Make sure no speaker wires are shorting out by touching each other, and that there are no breaks in the insulation covering any of the speaker wires, interconnects or the power cord. If the PROTECT message still appears when you plug in the HK 3490 and try to turn it on again, bring the receiver to an authorized Harman Kardon service center for assistance.

To turn the receiver off, press the Power Switch on the front panel, or press the Power Off Button on the remote. When the HK 3490 is left unplugged, any settings you have programmed, including system configuration and preset radio stations, will be preserved indefinitely.

Volume Control

The volume may be adjusted either by turning the knob on the front panel (clockwise to increase volume or counterclockwise to decrease volume), or by pressing the Volume Control Buttons on the remote. See Figure 28. The volume is displayed as a negative number of decibels (dB) below the 0dB reference point. Unlike some volume controls on other products, 0dB is the maximum volume for the HK 3490. Although it's physically possible to turn the volume to a higher level, doing so may damage your hearing and your speakers. For certain more-dynamic audio materials, even 0dB may be too high, allowing for damage to equipment.

Figure 28 – Volume Controls

The HK 3490 is designed to reproduce audio with a minimum amount of distortion. This clarity may lead you to believe that your hearing and the equipment can handle higher volumes. We urge caution with regard to volume levels.

Mute Function

To temporarily mute all speakers and the headphones, press the Mute Button on the front panel or remote. See Figure 29. Any recording in progress will not be affected. If the Subwoofer Trigger Outputs are

in use and the Subwoofer Link Switch is on, muting will turn off the subwoofer's amplifier to conserve energy. The MUTE message will flash in the display as a reminder. To restore normal audio, either press the Mute Button again, or adjust the volume. Turning off the HK 3490 will also end muting.

Figure 29 – Mute Buttons

Sleep Timer

You may program the HK 3490 to play for up to 90 minutes and then turn off automatically using the sleep timer.

Press the Sleep Button on the front panel or remote, and the time until turn-off will be displayed. Each additional press of the Sleep Button will reduce the time until turn-off by 10 minutes, until the OFF setting is reached, which disables the sleep timer. See Figures 30 and 31.

Figure 30 – Front-Panel Sleep Button

Figure 31 – Remote Control Sleep Button

When the sleep timer has been set, the front-panel display will automatically dim to half-brightness. If you press any button on the remote or front panel, the display will return to full-brightness. The display will dim again several seconds after your last command.

If you press the Sleep Button after the timer has been set, the remaining time until turn-off will be displayed. You may press the Sleep Button to change the time until turn-off. Pressing and holding the Sleep Button will disable the sleep timer, and the SLEEP OFF message will appear.

Tone Controls

You may boost or cut either the treble or the bass frequencies by up to 10dB.

The Bass and Treble Tone Controls may be adjusted using the knobs on the front panel. Remove the front-panel covers if necessary, then gently press the desired control until it unlatches and pops out. Turn the appropriate knob counterclockwise to reduce the levels of the low frequencies (Bass Control) or the high frequencies (Treble Control), and turn it clockwise to increase the levels for the low or high frequencies. See Figure 32.

Figure 32 – Tone Controls

You may also adjust the balance to compensate for speaker placement or the acoustic characteristics of your listening room. Ideally, the audio

OPERATION

should be heard most clearly at a point exactly midway between the left and right speakers, unless the artist has mixed the recording in a way that pans sounds to one side or the other. If your speakers are not placed the same distance from the listening position, or if your room has other unusual characteristics, gently press the Balance Control knob until it unlatches and pops out. Then turn it counterclockwise to move the sound toward the left speaker or clockwise to move the sound toward the right speaker. See Figure 33.

Figure 33 – Balance Control

The Balance Control reduces the level of the speaker opposite the pointer. For example, turning the knob from the midpoint toward “R” reduces the level of the left speaker, leaving the right speaker unaffected. If two pairs of speakers are connected to the HK 3490, then both will be affected.

IMPORTANT NOTE: Do not attempt to install the front-panel covers with the Tone and Balance Control knobs in the unlatched position. Gently press each knob until it latches. When locked, the controls cannot be adjusted, preventing inadvertent changes to your desired settings.

Headphones

Plug the 1/4" plug on a pair of headphones into the headphone jack on the front of the receiver for private listening. See Figure 34.

Figure 34 – Headphone Jack

Speaker 1/2

The HK 3490 may be used with up to two pairs of speakers for additional sound power in the main listening room or if you wish to place the second pair of speakers in another room, or even outdoors (when you select weather-resistant loudspeakers). Select each pair of speakers by pressing its associated button on either the front panel or remote. See Figure 35.

Figure 35 – Speaker 1/2 Buttons

Press the button a second time to deactivate that pair of speakers. You may activate both speaker pairs simultaneously, or deactivate both pairs for private listening through the headphones. When either of the speaker pairs are deactivated, if the corresponding Subwoofer Trigger Output is connected to the subwoofer and the corresponding Subwoofer Link

Switch is on, the trigger signal will be deactivated, turning off the subwoofer amplifier and conserving energy when the subwoofer is not needed.

Source Selection

Select a source device connected to the HK 3490 for playback by pressing its associated button on the front panel or remote control. See Figure 36.

Figure 36 – Source Selectors

To enjoy video sources, make sure to connect the device's composite video output to the correct Video Input on the HK 3490. In addition, connect the HK 3490's Video Monitor Output to an input on your television or video display.

To select whether the source will use its analog audio input or one of the digital audio inputs, press and hold the front-panel Source Selector and simultaneously tap the front-panel T-Mon Button repeatedly until the desired input appears in the Message Display. Audio input selection requires use of the front-panel controls and cannot be selected using the remote control.

To select a device connected to either the front- or rear-panel Video 3 Inputs, press the front-panel or remote Video 3 Source Selector repeatedly to toggle between the front- and rear-panel Video 3 Inputs, as indicated in the front-panel display. When the front-panel inputs are not in use, you may snap the supplied cover over them. Remove the cover by pressing on the left side until it pivots outward.

If you have connected a three-head tape deck to the Tape/CDR Inputs, you may monitor a recording while it is being made so that you can confirm that the correct program material is being recorded and make any necessary adjustments to the recording level. Press the T-Mon Button on the front panel to hear playback from the tape deck's playback head. When the recording is being monitored, the T-MON message will flash. Press the T-Mon Button again to hear the original source.

NOTES:

- The HK 3490 is not an audio/video surround sound receiver. It is only capable of playing source programs in one- or two-channel formats, and any information encoded in additional channels will be lost. The HK 3490 cannot decode digital surround-sound programs. If you have connected the analog audio and composite video outputs of a DVD player to the HK 3490, remember to select two-channel audio in the DVD player and disc menus. However, you may press the DSP Surround Button to select a Dolby Virtual Surround mode (Reference or Wide) to expand the presentation of the sound field even though only two main loudspeakers are in use.

OPERATION

- The HK 3490 does not switch the last-selected video source when an audio-only source, such as Phono, CD or Tape/CDR, is selected subsequently. It is not possible to view video while listening to an audio-only source.

Using the Tuner (AM, FM and XM Modes)

The HK 3490's built-in tuner may be selected in one of two ways (see Figure 37):

1. Press the front-panel AM or FM Button. The front-panel FM Button toggles between the FM and XM bands.
2. Press the AM, FM or XM Button on the remote.

Figure 37 – Tuner Input Selection

Radio stations may be selected in one of five ways (see Figures 38–40):

1. If you know the frequency number, enter it directly by first pressing the Direct Button on the remote, and then using the Numeric Keys. It is not necessary to press the Direct Button when XM Radio is in use.
2. After you have programmed preset stations (see below), either enter the preset number (1 through 30) using the remote or use the front-panel Preset Stations Button to scroll through the list of presets. When XM Radio is in use, first press the FM Mode Button repeatedly to select Preset Search mode. Then use the ◀/▶ Buttons to select a lettered bank of presets. To select a numbered preset within a bank, make sure the HK 3490 is in Preset Search mode, then use the Numeric Keys, the ▲/▼ Buttons or the Preset Stations Buttons.
3. In Auto Tuning mode, press and hold the Tuning Buttons (front-panel or remote) to scan in the chosen direction until a station with acceptable signal strength is detected.
4. In Manual Tuning mode, with each press of the Tuning Buttons the HK 3490 will tune the next frequency increment (0.1MHz for FM, or 10kHz for AM) in the selected direction.

NOTE: When XM Radio is in use, there are no auto or manual tuning modes. Use the Tuning Button or ▲/▼ Buttons (only when in All Channel Search mode) to select a channel. Press and hold the button to search faster.

5. Press the Preset Scan Button on the front panel or remote to scan through the previously programmed preset stations. The tuner will pause for five seconds at each frequency before tuning to the next preset. Press the Preset Scan Button again to select the current station and stop scanning. When XM Radio is in use, this button is used to change the display as follows: channel name and number, category, artist and song title.

Figure 38 – Tuning a Station

When an FM station has been tuned, pressing the FM Mode Button will switch between stereo and mono tuning, which may improve reception of weaker stations. See Figure 39.

Figure 39 – FM Mode Button

To store a station in one of the 30 AM/FM presets (see Figure 40):

1. Tune the desired station.
2. Press the Memory Button on the remote.
3. Use the Numeric Keys to enter the desired preset number.

To clear a station from the preset memory:

1. Tune the preset station using any of the methods described above.
2. Press the Memory Button.
3. Within five seconds, press the Clear Button.

Figure 40 – Programming Presets

When XM Radio is in use, programming presets is somewhat different.

1. Tune to the desired channel.
2. Press the Memory Button on the remote.
3. Use the ◀/▶ Buttons to select the desired preset bank (A through E).
4. Use the ▲/▼ Buttons to select a numbered location (1 through 8).

OPERATION

5. Press the Memory Button on the remote to complete the process and let the HK 3490 return to normal operation.

To delete an XM Radio preset, tune to the preset station and press the Clear Button. To delete all XM Radio presets in all banks, press and hold the Clear Button until the ALL DELETED message appears. Table 2 may be helpful to you as a reference while using the XM Radio tuner.

Table 2 – Using the XM Radio Tuner

Auto Preset (FM Only)

You may automatically program all FM radio stations in your area that are received with acceptable signal strength into the HK 3490's presets. Press and hold the Auto Preset Button until the Memory and Preset Indicators flash in the front-panel display. The tuner will automatically scan through the entire FM band, entering all stations with acceptable signal strength into the presets until either all 30 presets have been filled, or the tuner has scanned the band twice.

NOTE: If there are a large number of FM stations in your area, Auto Preset will overwrite any presets you programmed previously. Stations with exceptionally strong signals may be programmed into more than one preset.

Using Docking Station

The Bridge II docking station is an optional unit that may be used with a compatible iPod, iPod touch or iPhone (not included). When The Bridge II docking station is connected to its proprietary input on the HK 3490 and the iPod is docked, you may play the audio materials on your iPod through your high-quality audio system, operate the iPod using the HK 3490 remote or the HK 3490's front-panel controls, and charge the iPod.

Either press the front-panel Phono Selector repeatedly until the DMP/THE BRIDGE IS CONNECTED message scrolls across the front panel, or press The Bridge Button on the remote to select The Bridge II docking station as the input source.

In normal operation, information from the iPod will appear in the HK 3490's Message Display. While a track is playing, its title will scroll once on the upper line, and the elapsed and remaining track times will appear on the lower line. While navigating the iPod, the menu title or current setting will appear on the upper line, and the current menu line or setting option will appear on the lower line.

Table 3 summarizes the controls available when The Bridge II unit is in use.

Table 3 – Using The Bridge II

iPod Function	Remote Control Key	Front Panel-Button
Play	Play (▶)	Preset Scan
Pause	Pause ()	Preset Scan
Menu	Menu	FM Mode
Select	OK	Preset Scan
Scroll Reverse	Up Arrow (▲)	Preset Up
Scroll Forward	Down Arrow (▼)	Preset Down
Forward Search/Next Track	Right Arrow (▶▶1)	Tuning Up
Reverse Search/Previous Track	Left Arrow (1◀◀)	Tuning Down
Switch between normal operation and iPod Manual mode	Press and hold Menu	Press and hold FM Mode Button

When the HK 3490 is in Standby mode, the iPod is not charged.

It is not possible to view videos or still images stored on the iPod.

To access the full functions of the iPod, press and hold the Menu Button (FM Mode Button on front panel) to switch it to Manual mode. You may navigate the iPod using the HK 3490 remote while viewing its menus on the iPod screen. Manual mode allows access to functions such as Repeat and Shuffle. Although the audio portion of video content may be played, it will not be possible to view the content on a video display connected to the HK 3490. To return to normal operation, press and hold the Menu Button again until the check mark appears on the screen of the iPod.

Recording

Two-channel analog audio signals, as well as composite video signals, are normally available at the appropriate recording outputs. Thus, to make a recording, you need only make sure to connect your audio or video recorder to the appropriate output jacks, as described in the Installation section, insert blank media and make sure the recorder is turned on and recording while the source is playing.

You may monitor your recording if your recorder has separate record and playback heads. Press the front-panel T-Mon Button to monitor the recording using the playback head, indicated by the T-MON message flashing. This will not affect the recording being made from the original source. To hear the original source again, press the T-Mon Button again.

If your recorder does not have off-head playback, then you will not hear anything when you press the T-Mon Button, unless the recorder is being used for playback.

NOTE: Please make certain that you are aware of any copyright restrictions on any material you record. Unauthorized duplication of copyrighted materials is prohibited by federal law.

Dim Function

Some people find the front-panel messages distracting and would prefer to dim them or turn them off altogether.

To dim the display, press the Dim Button on the front panel or remote. Each button press will cycle through the three settings of:

VFD FULL: Normal brightness

VFD HALF: Display is dimmed but still visible; the light inside the volume knob goes dark

VFD OFF: Display goes completely dark except for Power Indicator to remind you that the receiver is turned on

NOTE: When the remote is in the device mode for either the Video 1 or Video 2 source, the Dimmer Button on the remote will only affect the source device (if compatible), and will not affect the HK 3490.

Processor Reset

If you wish to fully reset the HK 3490 to its factory defaults, or if it behaves erratically after a power surge, first turn the Master Power Switch off and unplug the AC power cord for at least three minutes. Plug the cord back in and turn the receiver back on. If this doesn't help, you may want to try a system reset.

NOTE: A system reset erases all user configurations, including tuner presets. After a reset, you will need to reenter all of these settings.

Place the receiver in Standby mode by pressing the Power Switch so that the Power Indicator turns amber. Simultaneously press and hold the front-panel Preset Scan and Mute Buttons for at least five seconds until the software version number, followed by the RESET message, appears in the display.

The unit will return to Standby mode, and you may power it on.

You may reset the HK 3490 by using a sharp object to press the rear-panel Reset Button. This method does not erase user configurations.

If the receiver still does not function correctly after a processor reset, contact an authorized Harman Kardon service center for assistance. Service centers may be located by visiting www.harmankardon.com.

Memory

If the HK 3490 is unplugged or experiences a power outage, it will retain user settings indefinitely.

TROUBLESHOOTING GUIDE

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed	<ul style="list-style-type: none"> No AC power 	<ul style="list-style-type: none"> Make certain AC power cord is plugged into a live outlet Check to see whether outlet is switch-controlled
Display lights, but there's no sound or picture	<ul style="list-style-type: none"> Intermittent input connections Mute is on Volume Control is down Desired source not selected Speakers deactivated Headphones are in use Jumper pins between Preamp Outputs and Main-Amp Inputs were removed 	<ul style="list-style-type: none"> Make certain that all input and speaker connections are secure Press Mute Button Turn up Volume Control Press correct Source Selector Press Speaker 1 or Speaker 2 Button Unplug headphones Replace jumper pins or, if external amplifier is in use, make sure it is turned on
No sound from any speaker; light around Power Switch is red	<ul style="list-style-type: none"> Amplifier is in Protection mode due to possible short Amplifier is in Protection mode due to internal problems 	<ul style="list-style-type: none"> Check speaker-wire connections for shorts at receiver and speaker ends Contact your local Harman Kardon service center

In addition to the items shown above, additional information on troubleshooting possible problems with your HK 3490, or on installation-related issues, may be found in the list of "Frequently Asked Questions," which is located in the Product Support section at www.harmankardon.com.

Processor Reset

If you wish to fully reset the HK 3490 to its factory defaults, or if it behaves erratically after a power surge, first turn the Master Power Switch off and unplug the AC power cord for at least three minutes. Plug the cord back in and turn the receiver back on. If this doesn't help, you may want to try a system reset.

NOTE: A system reset erases all user configurations, including tuner presets. After a reset, you will need to reenter all of these settings.

Place the receiver in Standby mode by pressing the Power Switch so that the Power Indicator turns amber. Simultaneously press and hold the front-panel Preset Scan and Mute Buttons for at least five seconds until the software version number, followed by the RESET message, appear in the display. The unit will return to Standby mode, and you may power it on.

Memory

If the HK 3490 is unplugged or experiences a power outage, it will retain user settings indefinitely.

DISASSEMBLY

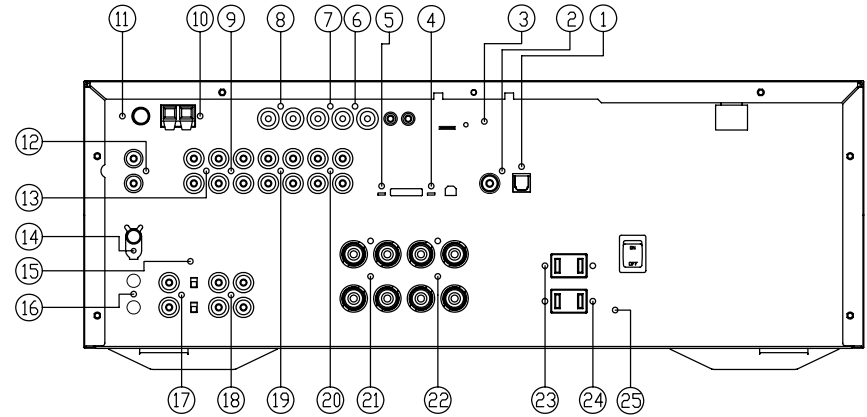

1. Removing the Top Cabinet
Remove the Screws ①~⑬

2. Removing the Front Panel
Remove the Screws ①~⑨

3. Removing the Rear Panel
Remove the Screws ①~⑳

4. Removing the Main PCB
Remove the Screws ①~⑤

HK3490 DISASSEMBLY PROCEDURE

1 TOP-CABINET (21) REMOVAL

1. Remove 13 screws (S1) and then remove the Top-cabinet.

2 FRONT PANEL ASS'Y REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the lead wire (BN22-11P) on the Potentiometer PCB (43-4) from connector (CN22) on the Input PCB (45).
3. Disconnect the lead wire (BN13-9P) on the Front PCB (43-1) from connector (CN13) on the Main PCB (44-1).
4. Disconnect the connector (CN87-19P) on the Front PCB (43-1) from connector (CN87) on the Main PCB (44-1).
5. Disconnect the lead wire (BN73-5P) on the Phone PCB (43-3) from connector (CN73) on the Main PCB (44-1).
6. Disconnect the lead wire (BN84-5P) on the Front input video PCB (43-6) from connector (CN84) on the Input PCB (45).
7. Remove 1 screw (S6) and then lead wire (JW98,JW99-1P) on the PCB (43-5, 43-3).
8. Remove 1 screw (S6) and then lead wire (JW97-1P) on the Power LED PCB (43-2).
9. Remove 10 screws (S1) and then remove the Front Panel ASS'Y.

3 POTENTIOMETER PCB (43-4) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Remove 2 screws (S3) and then remove the Potentiometer PCB (43-4).

4 PHONE PCB (43-3) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Remove 2 screws (S4) and then remove the Phone PCB (43-3).
4. Disconnect the lead wire (BN73-5P) from connector (CN73) on the PHONE PCB (43-3).

5 Volume PCB (43-5) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Pull out the Volume Knob ASS'Y .
4. Remove 4 screws (S3) and then Volume PCB (43-5).
5. Disconnect the lead wire (BN81-5P) from connector (CN81) on the Volume PCB (43-5).

6 POWER LED PCB (43-2) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Remove 2 screws (S3) and then remove the Power LED PCB (43-2).
4. Disconnect the lead wire (BN82-5P) from connector (CN82) on the Power LED PCB (43-2).

7 FRONT INPUT VIDEO PCB (43-6) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Remove 2 screws (S3) and then remove the Front input video PCB (43-6).

8 FRONT PCB (43-1) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Front Panel ASS'Y, referring to the previous step 2.
3. Remove the Potentiometer PCB (43-4) , referring to the previous step 3.
4. Remove the PHONE PCB (43-3), referring to the previous step 4.

5. Remove the Volume PCB (43-5), referring to the previous step 5.
6. Remove the POWER LED PCB (43-2), referring to the previous step 6.
7. Remove the Front input video PCB (43-6), referring to the previous step 7.
8. Remove 12 screws (S3) and then remove the Front PCB (43-1).

9 TUNER MODULE (34) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the connector (CON1-Card cable) from connector (CN26) on the Input PCB (45).
3. Remove 2 screws (S5) and then remove the Tuner Module (47).

10 VIDEO PCB (43-8) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the connector (CN85-Card cable) from connector (CN85) on the Input PCB (45).
3. Remove 4 screws (S8,S5) and then remove the Video PCB (43).

11 DSP PCB (46-1) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the connector (CN51,52,71-Card cable) from connector (CN51,52,71) on Input PCB (45).
3. Disconnect the connector (CN51) from lead wire (BN51-11P) on the Tr PCB (46-2).
4. Remove 5 screws (S8,S5,S14) and then remove the DSP PCB (46-1).

12 INPUT PCB (46-1) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the connector (CN21-Card cable) from connector (CN21) on the Main PCB (44-1).
3. Disconnect the connector (CN24) from lead wire (BN24-5P) on the Main PCB (44-1).
4. Remove 7 screws (S5,S14) and then remove the DSP PCB (46-1).

13 POWER TRANS (30) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Disconnect the connector (CN15,CN12) on the Trans PCB (43-7) from lead wire (BN15-3P,BN12-2P) on the Main PCB (44-1).
3. Disconnect the connector (CN11,CN14,CN15) on the Main PCB (44-1) from lead wire (BN11-3P,BN14-13P,BN15-3P) on the Trans PCB (43-7)
4. Remove 4 Trans screws (S15) and then remove the Power Trans (42).

14 MAIN PCB ASS'Y(44) REMOVAL

1. Remove the Top-cabinet, referring to the previous step 1.
2. Remove the Power Trans (43-7),referring to the previous step 13.
3. Remove the TUNER MODULE (34), referring to the previous step 9.
4. Remove the VIDEO PCB (43-8), referring to the previous step 10.
5. Remove the DSP PCB (46-1), referring to the previous step 11.
6. Remove the INPUT PCB (46-1), referring to the previous step 12.
7. Disconnect the connector (CN13) from lead wire (BN13-9P) on the Front PCB (43-1).
8. Disconnect the connector (CN73) from lead wire (BN73-5P) on the PHONE PCB (43-3).
9. Disconnect the connector (CN61) from Power cord(35).
10. Remove 15 screws (S5-7EA, S8-2EA,S14-3EA,S9-1EA,S10-1EA,S3-1EA) and then remove the Main PCB ASS'Y(44).

HK3490/3390 idle current Adjustment

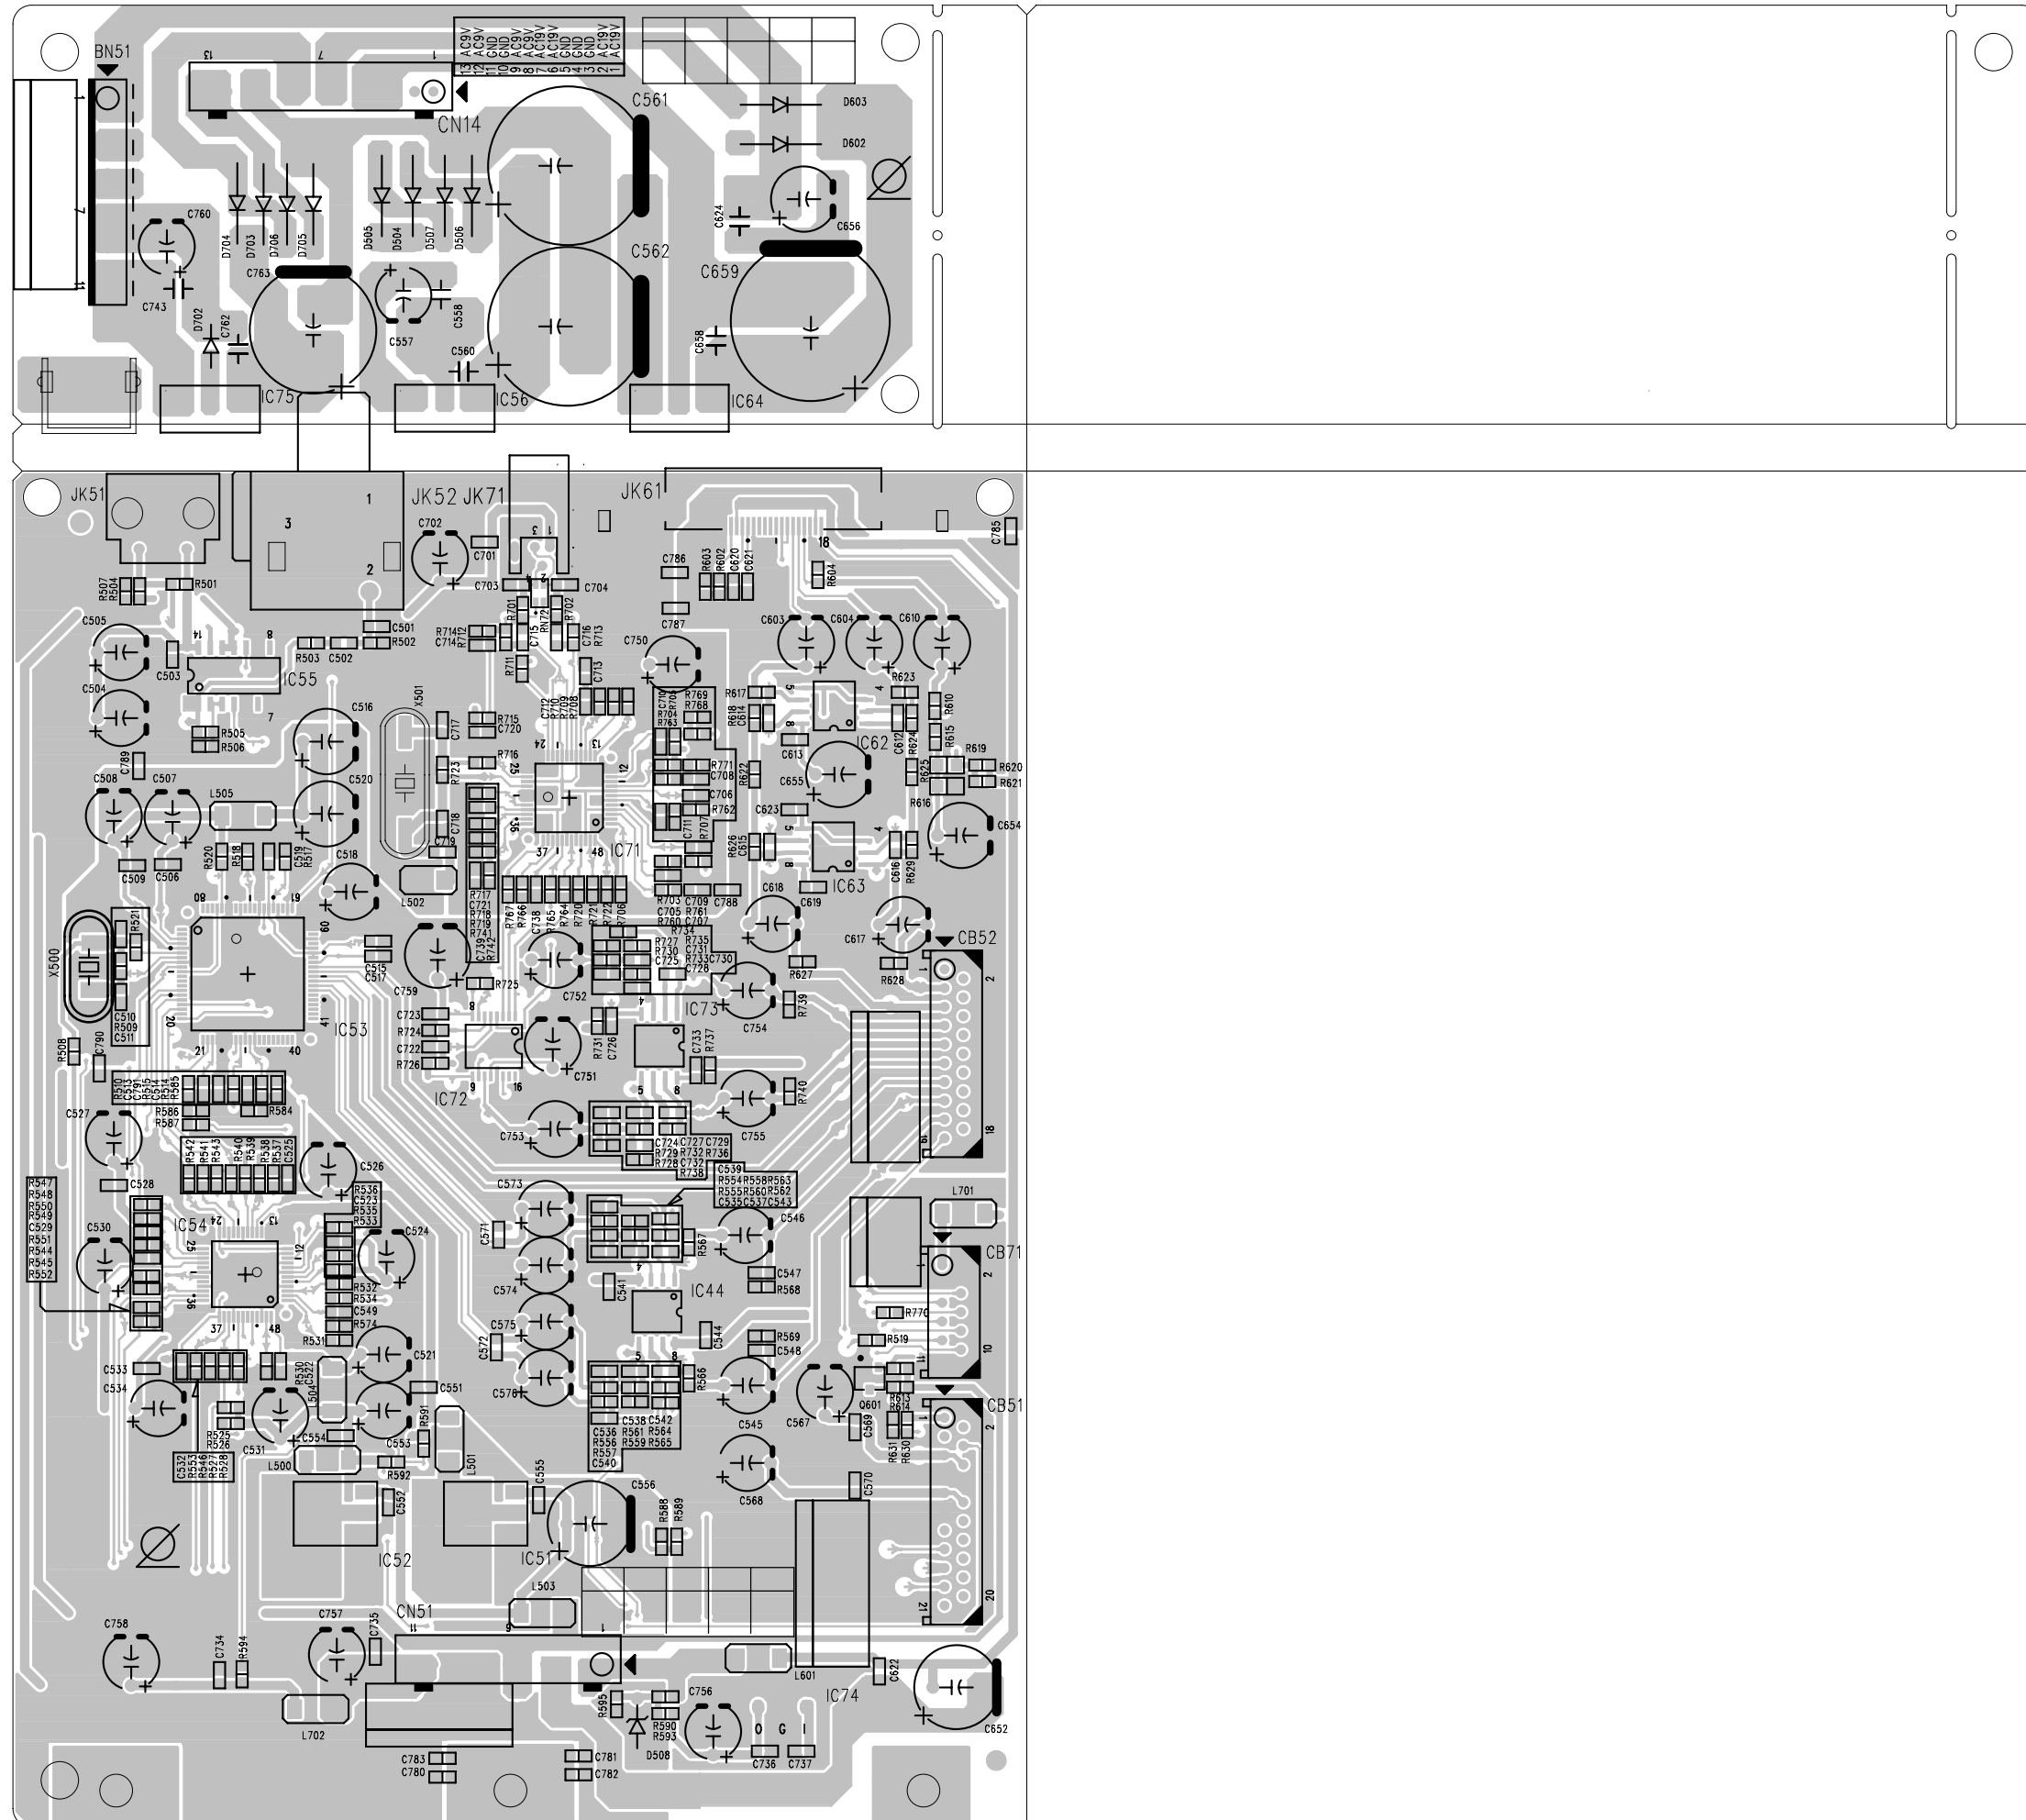

1. Adjust VR31 to set $21.12\text{mV}(\pm 5\%)$ on DC EVM.
2. Adjust VR32 as same way above.

IC71 XM IC

PRELIMINARY (14 Aug 04)

User Spec - XM Digital Transceiver Integrated Circuit - Rev 3

1. Overview

The XM Digital Transceiver Integrated Circuit (XM/DT IC) provides a cost effective means for an electronics equipment manufacturer to be XM Satellite Radio compatible by multiplexing data and audio streams between the XM Receiver and User Interface Controller into a 2 wire time division duplex (TDD) high frequency serial link.

In a typical application, two XM/DT IC devices connect to each other via a differential link as depicted on Figure 1.1 below. In the 'Slave' unit ("XM/DT Digital Transceiver" (antenna)), the XM/DT IC interfaces directly to the XM Radio receiver chipset taking in a real-time PCM (I2S) audio stream along with data information. The XM/DT IC stores this data in internal RAM and then time division multiplexes the data on a 2-wire serial communication link. This link provides for the physical decoupling of the Slave and Master side of up 100 meters with software transparency

between the Master side processor and audio circuitry and the Slave side XM Satellite Radio receiver chip set.

In the Master unit ("XM/DT Ready Radio"), the XM/DT IC demultiplexes the received data, buffers it internally and reproduces it for consumption. The XM/DT IC is capable of simultaneously sending and receiving serial frames while multiplexing and de-multiplexing them in real time, formatting them and then routing them into the appropriate Slave or Master side interfaces.

The software interface between the user interface and the receiver is unaffected by the introduction of the XM/DT IC link pair.

An input pin on the XM/DT IC configures the part's functionality as either Master (user interface end) or Slave (XM Digital Transceiver end) allowing the same IC to be used at either end of the link.

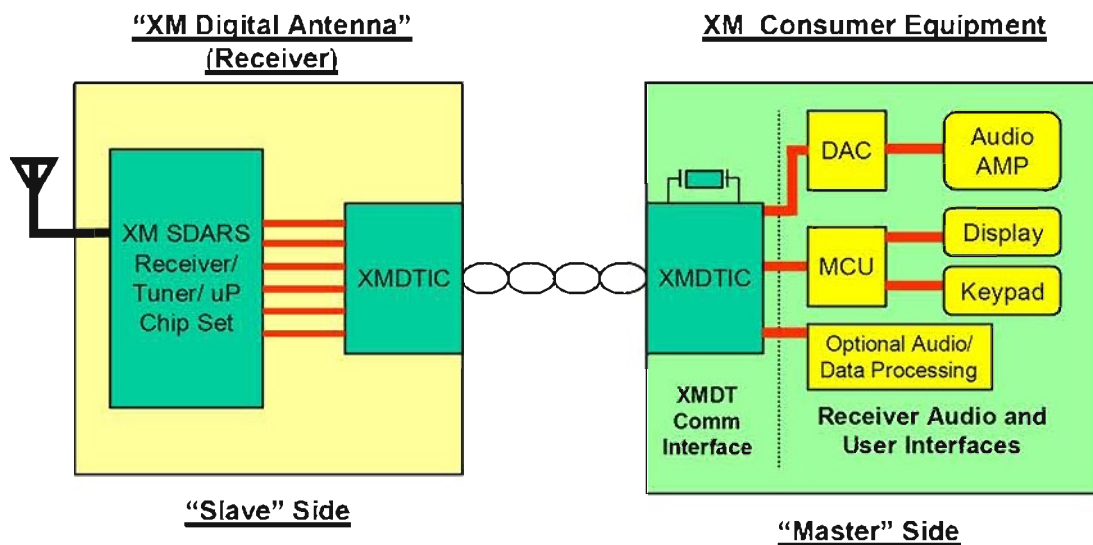

Figure 1.1 - Typical XM/DT Application

2. Functional Description

Figure 2.1 below shows a basic top level diagram showing each functional block in the XM/DT device.

Figure 2.1 XM/DT Top Level Diagram

The XM/DT IC is broken into the following functional blocks:

SC I/F – System Controller Interface

The System Controller Interface transports the serial communication commands and data between the microprocessor in the user interface device and the microprocessor in the XM Digital Antenna. The commands and data transported follow typically follow the XM CBM (Common Bus Messaging) protocol.

The System Controller Interface functional block consists of a full duplex asynchronous serial interface. The SC I/F is used for both the software configuration of the XM/DT IC, monitoring of XM/DT link status, and transparent communications with the SC I/F at the other end of the communications link. The SC I/F block contains five signals, SC_RX_IN, SC_TX_OUT, COMMAND_SEL, ERR_IRQ#, and RESET#.

The SC_RX_IN and SC_TX_OUT connect the asynchronous serial communications to the respective microprocessors. The SC I/F

communicates at a default mode of 9600 baud, no parity, 8 data bits, and 1 stop bit. The baud rate can be changed using the XM/DT IC Command Mode. The Master and Slave baud rates must be set to the same rate by their respective microprocessors.

The COMMAND_SEL input allows configuration of the XM/DT IC and to retrieve feedback of the link status during normal operation. This signal is logic low for normal operation and logic high for Command/Stat Mode. Details of the operation of this signal are described in the Programming section of this specification.

The ERR_IRQ# output signal is active low when an error occurs on the link if interrupts are enabled via the Interrupt Mask register. Access to the Interrupt Mask register is gained via the Command Mode and the interrupt source identification is obtained via the Status Mode. Details of these modes are described in the Programming section of this specification.

The RESET# input signal is used to perform a complete asynchronous reset of the XM/DT IC. The RESET# signal is also used to place the XM/DT IC into Command Mode. Refer to the Programming section.

SAII – Synchronous Audio Input Interface

The SAI Interface functional block provides a synchronous interface with hardware flow control from the Master to the Slave devices.

In Master mode, the XM/DT IC receives SAI Data and SAI Clock from the SAI source in the "playback unit". The SAI Enable (SAI_EN) output signal is fed back to the SAI source to control the flow of input data based on the state of the SAI_EN signal at the Slave Device.

In Slave mode, the XM/DT IC sends SAI Data and SAI Clock to the Slave device SAI receiver, and receives the SAI_EN signal from the SAI receiver to control the flow of transmitted data.

The Master XM/DT IC adapts to the incoming SAI data rate.

LSDP – Low Speed Data Port

The LSDP functional block consists of a unidirectional asynchronous serial interface.

In Master mode, the LSDP transmits data out of the device. In Slave mode, the LSDP receives data into the device.

This interface operates in default mode at 115200, no parity, 8 data bits, and 1 stop bit.

HSDP – High Speed Data Port Interface

The HSDP Interface functional block provides a synchronous serial interface combined with a framing signal from the Slave XM/DT IC to the Master XM/DT IC.

The source of the HSDP is typically the XM receiver chipset. The HSDP data is typically received by the Host microprocessor. The HSDP signals include a serial data bitstream (HSDP_DA), a synchronous clock (HSDP_CLK), and a framing signal (HSDP_EN). The framing signal can be used as a gating mechanism for the clock or an interrupt source to indicate the beginning and end of the HSDP data burst.

In Slave mode, the HSDP Interface receives HSDP_DA, HSDP_CLK, and HSDP_EN from the HSDP source. In Master mode, the HSDP Interface transmits HSDP_DA, HSDP_CLK, and HSDP_EN.

I2S – Inter-IC Sound (I2S) digital audio Interface

The I2S functional block receives and transmits timing and frame sensitive data. The I2S interface is also referred to as the PCM interface.

In Slave mode, the XM/DT IC I2S Interface receives the I2S digital audio from the XM Receiver chipset. The XM/DT IC automatically adjusts to the incoming I2S data sampling rate.

In Master mode, the XM/DT IC I2S Interface generates all required signals to drive an I2S compatible audio DAC.

COMM2W – Two Wire Communications Interface

The COMM2W functional block enables communications between two XM/DT ICs. The COMM2W is differential Time-Division-Duplex Interface.

TOSHIBA**T5CD2**

CMOS 16 Bit Microcontroller

T5CD2

Product No.	ROM (Flash ROM)	RAM	Package
T5CD2	128K bytes	8K bytes	LQFP100-P-1414-0.50F

1.1 Features

- High-speed 16-bit CPU (900/L1 CPU)
 - Instruction mnemonics are upward-compatible with TLCS-900,900/H,900/L
 - 16 Mbytes of linear address space
 - General-purpose registers and register banks
 - 16-bit multiplication and division instructions; bit transfer and arithmetic instructions
 - Micro DMA: 4 channels (800ns/2 bytes at 20MHz)
- Minimum instruction execution time:200ns (at 20MHz)
- Built-in memory
 - ROM:128K bytes (Flash ROM)
 - RAM:8K bytes
- External memory expansion
 - Expandable up to 16 Mbytes (shared program/data area)
 - Can simultaneously support 8/16-bit width external data bus

Dynamic data bus syzing

- 8-bit timers: 6 channels
- 16-bit timers: 5 channels
- General-purpose serial interface: 5 channels
 - UART/Synchronous mode: 3 channels
 - I²C bus mode: 2 channels
- 10-bit AD converter (Built-in Sample hold circuit): 16 channels
- Special timer for CLOCK
- Watchdog timer

$\overline{\text{NMI}}$	1	I	Non-Maskable Interrupt Request Pin: Interrupt request pin with programmable falling edge or both edge.
AM0-1	2	I	Operation mode:Fixed to AM1 "1", AM0 "1".
EMU0-1	2	O	Set to Open pins
$\overline{\text{RESET}}$	1	I	Reset: initializes T5CD2. (with pull-up resistor)
VREFH	1	I	Pin for reference voltage input to AD converter
AVCC	1		Power supply pin for AD converter
AVSS	1		Power GND pin for AD converter (0 V)
X1/X2	2	IO	High frequency oscillator connection pins
DVCC	3		Power supply pins (All DVCC pins should be connected with the power supply pin.)
DVSS	3		GND pins (0 V) (All DVSS pins should be connected with the GND (0V) pin.)

Note: All pins that have built-in pull-up resistors (other than the $\overline{\text{RESET}}$ pin) can be disconnected from the built-in pull-up resistor by software.

CS48500 Data Sheet

FEATURES

- ❑ Cost-effective, High-performance 32-bit DSP
 - 300,000,000 MAC/S (multiply accumulates per second)
 - Dual MAC cycles per clock
 - 72-bit accumulators are the most accurate in the industry
 - 24k x 32 SRAM, 2k blocks - assignable to data or program
 - Internal ROM contains a variety of configurable sound enhancement feature sets
 - 8-channel internal DMA
 - Internal watch-dog DSP lock-up prevention
- ❑ DSP Tool Set w/ Private Keys for Protecting Customer IP
- ❑ Configurable Serial Audio Inputs/Outputs
 - Configurable for all input/output types
 - Maximum 32-bit @ 192 kHz
 - Supports 32-bit audio sample I/O between DSP chips
 - TDM input modes (multiple channels on same line)
 - 192 kHz SPDIF transmitter
 - Multi-channel DSD direct stream digital SACD input
- ❑ Supports Two Different Input Fs Sample Rates
 - Output can be master or slave
 - Dual processing path capability
 - Input supports dual domain slave clocking
 - Hardware assist time sampling for sample rate conversion
- ❑ Integrated Clock Manager/PLL
 - Can operate from external crystal, external oscillator
- ❑ Input Fs Auto Detection
- ❑ Host & Boot via Serial Interface
- ❑ Configurable GPIOs and External Interrupt Input
- ❑ 1.8V Core / 3.3V I/O that are +5V Tolerant
- ❑ Low-power Mode
 - "Energy-Star Ready" via low-power mode, 350uW in standby

Differentiating from the legacy Cirrus multi-standard, multi-channel decoders, this new CS48500 family is still based on the same high-performance 32-bit fixed point DSP Digital Signal Processor core but instead is equipped with much less memory, tailoring it for more cost-effective applications associated with multi-channel and virtual-channel sound enhancements. Target applications are:

- Digital Televisions
- Multimedia Peripherals
- iPod® Docking Stations
- Automotive Head Units
- Automotive Outboard Amplifiers
- HD-DVD & Blu-ray Disc DVD Receivers
- PC Speakers

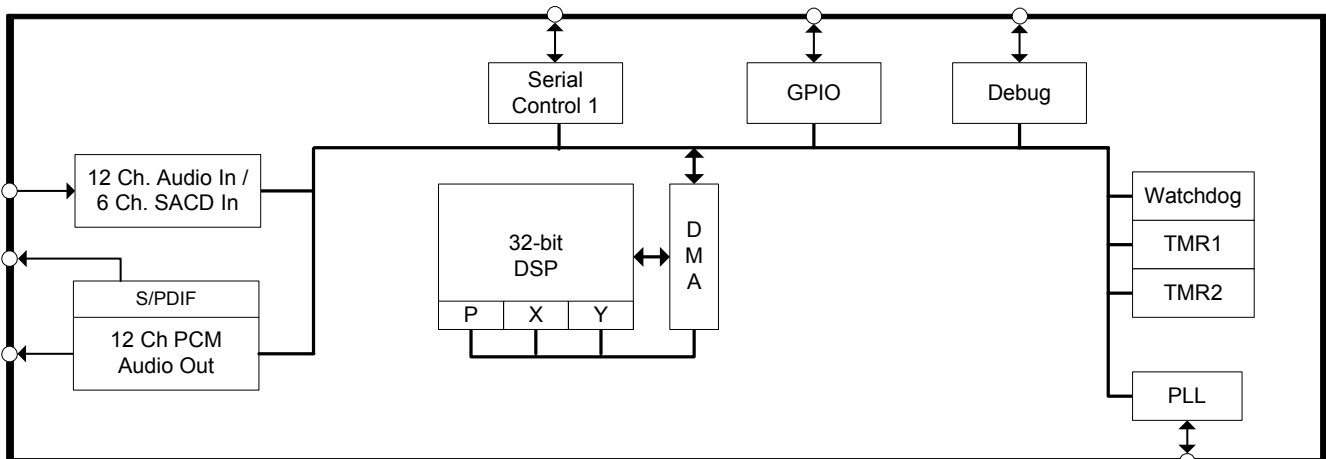

In these applications there are a wide variety of licensable DSP IP codes available today from:

Cirrus also has developed, or is developing their own royalty-free versions of popular features sets like Cirrus Bass Manager, Cirrus Dynamic Volume Leveler, Cirrus Original Multichannel Surround, Cirrus Virtual Speaker & Cirrus 3D-Audio.

The CS48500 is programmed using the Cirrus proprietary DSP Composer™ GUI development tool. Processing chains may be designed using a drag-and-drop interface to place/utilize functional macro audio DSP primitives. The end result is a software image that is down-loaded to the DSP via serial host or serial boot modes.

Features

- Low-voltage and Standard-voltage Operation
 - 2.7 ($V_{CC} = 2.7V$ to 5.5V)
 - 1.8 ($V_{CC} = 1.8V$ to 5.5V)
- Internally Organized 128 x 8 (1K), 256 x 8 (2K), 512 x 8 (4K), 1024 x 8 (8K) or 2048 x 8 (16K)
- Two-wire Serial Interface
- Schmitt Trigger, Filtered Inputs for Noise Suppression
- Bidirectional Data Transfer Protocol
- 100 kHz (1.8V) and 400 kHz (2.7V, 5V) Compatibility
- Write Protect Pin for Hardware Data Protection
- 8-byte Page (1K, 2K), 16-byte Page (4K, 8K, 16K) Write Modes
- Partial Page Writes Allowed
- Self-timed Write Cycle (5 ms max)
- High-reliability
 - Endurance: 1 Million Write Cycles
 - Data Retention: 100 Years
- Automotive Grade and Lead-free/Halogen-free Devices Available
- 8-lead PDIP, 8-lead JEDEC SOIC, 8-lead MAP, 5-lead SOT23, 8-lead TSSOP and 8-ball dBGA2 Packages
- Die Sales: Wafer Form, Waffle Pack and Bumped Wafers

Description

The AT24C01A/02/04/08A/16A provides 1024/2048/4096/8192/16384 bits of serial electrically erasable and programmable read-only memory (EEPROM) organized as 128/256/512/1024/2048 words of 8 bits each. The device is optimized for use in many industrial and commercial applications where low-power and low-voltage operation are essential. The AT24C01A/02/04/08A/16A is available in space-saving 8-lead PDIP, 8-lead JEDEC SOIC, 8-lead MAP, 5-lead SOT23 (AT24C01A/AT24C02/AT24C04), 8-lead TSSOP, and 8-ball dBGA2 packages and is accessed via a Two-wire serial interface. In addition, the entire family is available in 2.7V (2.7V to 5.5V) and 1.8V (1.8V to 5.5V) versions.

Maximum Operating Voltage	6.25V
DC Output Current.....	5.0 mA

***NOTICE:** Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Figure 1. Block Diagram

AT24C01A/02/04/08A/16A

Pin Description

SERIAL CLOCK (SCL): The SCL input is used to positive edge clock data into each EEPROM device and negative edge clock data out of each device.

SERIAL DATA (SDA): The SDA pin is bidirectional for serial data transfer. This pin is open-drain driven and may be wire-ORed with any number of other open-drain or open-collector devices.

DEVICE/PAGE ADDRESSES (A2, A1, A0): The A2, A1 and A0 pins are device address inputs that are hard wired for the AT24C01A and the AT24C02. As many as eight 1K/2K devices may be addressed on a single bus system (device addressing is discussed in detail under the Device Addressing section).

The AT24C04 uses the A2 and A1 inputs for hard wire addressing and a total of four 4K devices may be addressed on a single bus system. The A0 pin is a no connect.

The AT24C08A only uses the A2 input for hardwire addressing and a total of two 8K devices may be addressed on a single bus system. The A0 and A1 pins are no connects.

The AT24C16A does not use the device address pins, which limits the number of devices on a single bus to one. The A0, A1 and A2 pins are no connects.

WRITE PROTECT (WP): The AT24C01A/02/04/08A/16A has a Write Protect pin that provides hardware data protection. The Write Protect pin allows normal Read/Write operations when connected to ground (GND). When the Write Protect pin is connected to V_{CC} , the write protection feature is enabled and operates as shown in Table 2.

Table 2. Write Protect

WP Pin Status	Part of the Array Protected				
	24C01A	24C02	24C04	24C08A	24C16A
At V_{CC}	Full (1K) Array	Full (2K) Array	Full (4K) Array	Full (8K) Array	Full (16K) Array
At GND	Normal Read/Write Operations				

Memory Organization

AT24C01A, 1K SERIAL EEPROM: Internally organized with 16 pages of 8 bytes each, the 1K requires a 7-bit data word address for random word addressing.

AT24C02, 2K SERIAL EEPROM: Internally organized with 32 pages of 8 bytes each, the 2K requires an 8-bit data word address for random word addressing.

AT24C04, 4K SERIAL EEPROM: Internally organized with 32 pages of 16 bytes each, the 4K requires a 9-bit data word address for random word addressing.

AT24C08A, 8K SERIAL EEPROM: Internally organized with 64 pages of 16 bytes each, the 8K requires a 10-bit data word address for random word addressing.

AT24C16A, 16K SERIAL EEPROM: Internally organized with 128 pages of 16 bytes each, the 16K requires an 11-bit data word address for random word addressing.

AK4589

2/8-Channel Audio CODEC with DIR

GENERAL DESCRIPTION

The AK4589 is a single chip CODEC that includes two channels of ADC and eight channels of DAC. The ADC outputs 24bit data and the DAC accepts up to 24bit input data. The ADC has the Enhanced Dual Bit architecture with wide dynamic range. The DAC introduces the new developed Advanced Multi-Bit architecture, and achieves wider dynamic range and lower outband noise. The AK4589 has a dynamic range of 102dB for ADC, 114dB for DAC and is well suited for digital surround for home theater audio. The AK4589 also has the balance volume control corresponding to the Dolby Digital (AC-3) system.

The also has digital audio receiver (DIR) and transmitter (DIT) compatible with 192kHz, 24bits. The DIR has 8-channel input selector and can automatically detect a Non-PCM bit stream. The AK4589 provides a compatibility of hardware and software with the AK4588.

*Dolby Digital (AC-3) is a trademark of Dolby Laboratories.

FEATURES

□ ADC/DAC part

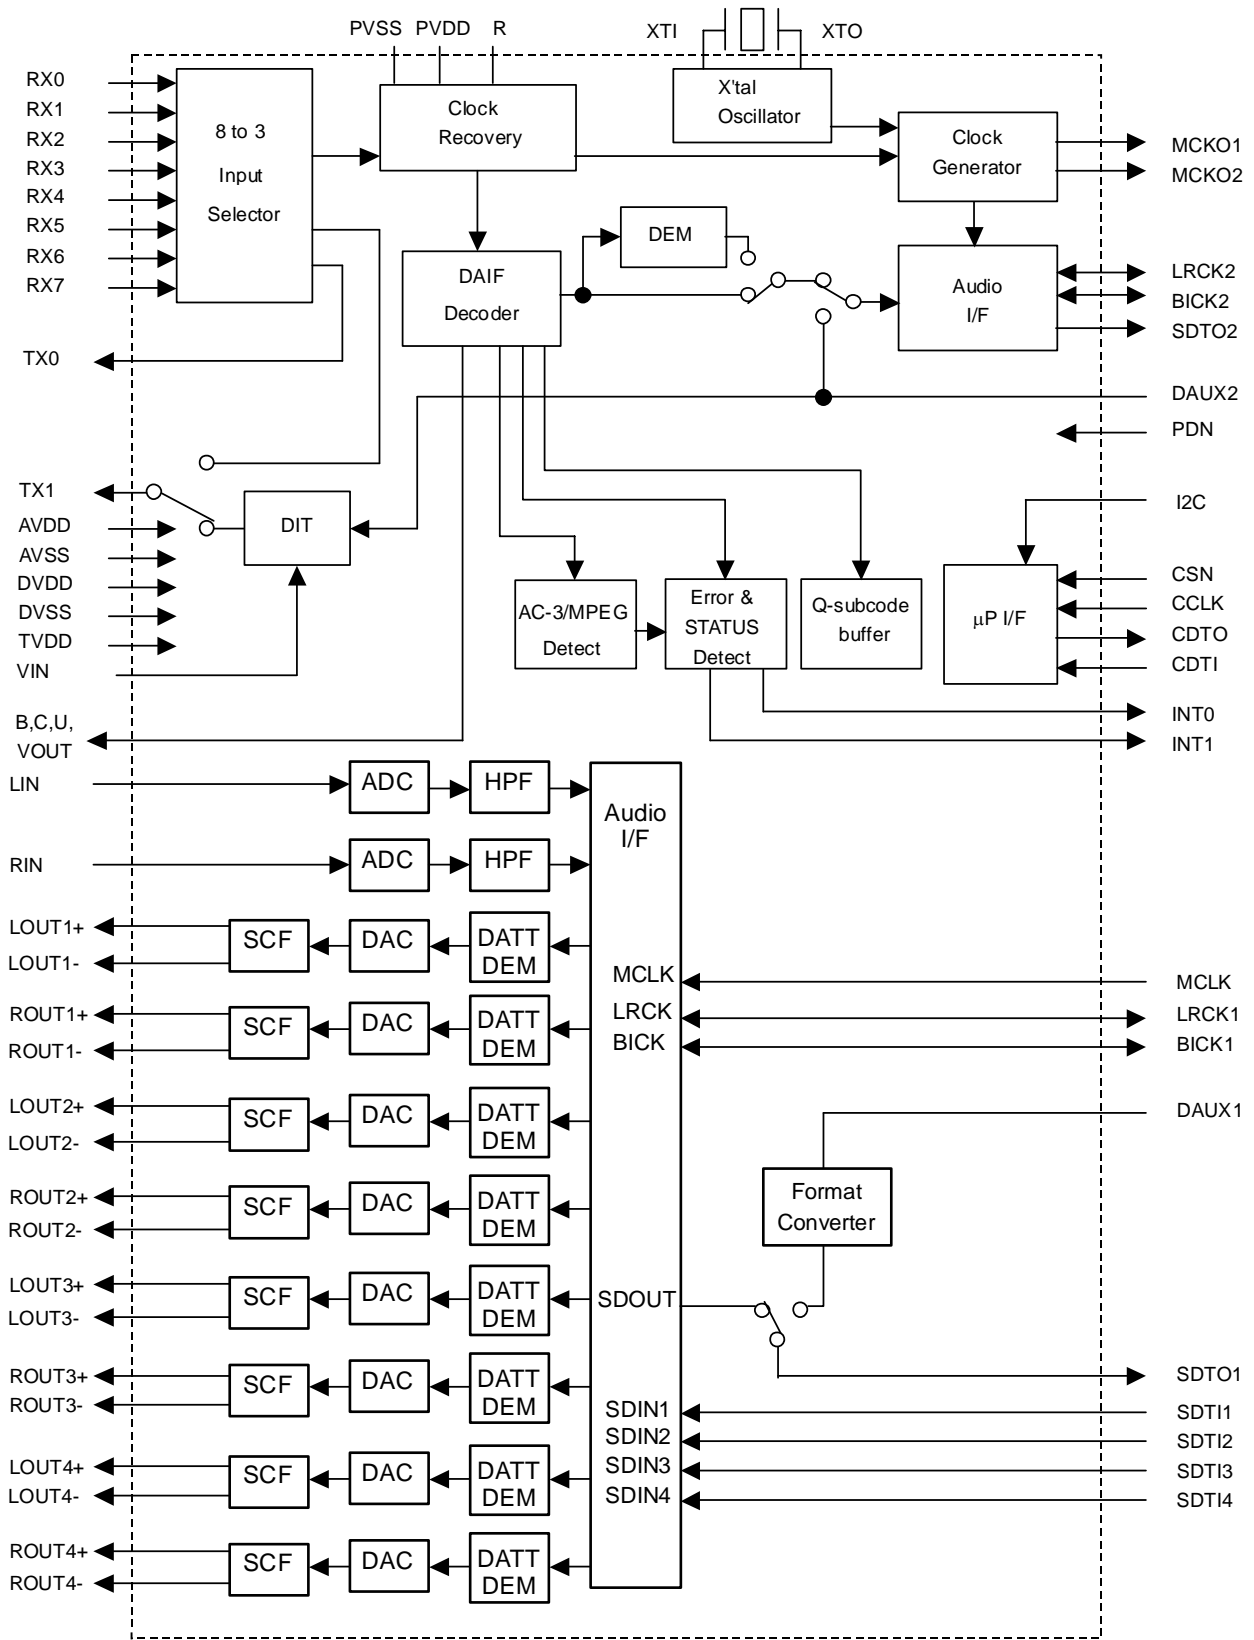

- **2ch 24bit ADC**
 - 64x Oversampling
 - Sampling Rate up to 96kHz
 - Linear Phase Digital Anti-Alias Filter
 - Single-Ended Input
 - S/(N+D): 92dB
 - Dynamic Range, S/N: 102dB
 - Digital HPF for offset cancellation
 - Overflow flag
- **8ch 24bit DAC**
 - 128x Oversampling
 - Sampling Rate up to 192kHz
 - 24bit 8 times Digital Filter
 - Differential Outputs
 - On-chip Switched-Capacitor Filter
 - S/(N+D): 94dB
 - Dynamic Range, S/N: 114dB
 - Individual channel digital volume with 128 levels and 0.5dB step
 - Soft mute
 - De-emphasis for 32kHz, 44.1kHz, 48kHz
 - Zero Detect Function
- **High Jitter Tolerance**
- **External Master Clock Input:**
 - 256fs, 384fs, 512fs (fs=32kHz ~ 48kHz)
 - 128fs, 192fs, 256fs (fs=64kHz ~ 96kHz)
 - 128fs (fs=120kHz ~ 192kHz)

DIR/DIT Part

- AES3, IEC60958, S/PDIF, EIAJ CP1201 Compatible
- Low jitter Analog PLL
- PLL Lock Range : 32kHz to 192kHz
- Clock Source: PLL or X'tal
- 8-channel Receiver input
- 2-channel Transmission output (Through output or DIT)
- Auxiliary digital input
- De-emphasis for 32kHz, 44.1kHz, 48kHz and 96kHz
- Detection Functions
 - Non-PCM Bit Stream Detection
 - DTS-CD Bit Stream Detection
 - Sampling Frequency Detection
(32kHz, 44.1kHz, 48kHz, 88.2kHz, 96kHz, 176.4kHz, 192kHz)
 - Unlock & Parity Error Detection
 - Validity Flag Detection
- Up to 24bit Audio Data Format
- Audio I/F: Master or Slave Mode
- 40-bit Channel Status Buffer
- Burst Preamble bit Pc and Pd Buffer for Non-PCM bit stream
- Q-subcode Buffer for CD bit stream
- Serial μ P I/F
- Two Master Clock Outputs: 64fs/128fs/256fs/512fs

 TTL Level Digital I/F

- 4-wire Serial and I²C Bus μ P I/F for mode setting
- Operating Voltage: 4.75 to 5.25V with 5V tolerance
- Power Supply for output buffer: 2.7 to 5.25V
- 80pin LQFP Package (0.5mm pitch)
- AK4588 compatible w/o analog outputs

17	SDTO1	O	Audio Serial Data Output Pin (ADC/DAC part)
18	BICK1	I/O	Audio Serial Data Clock Pin (ADC/DAC part)
19	LRCK1	I/O	Input Channel Clock Pin
20	CDTO	O	Control Data Output Pin in Serial Mode, I2C= "L".
21	CCLK	I	Control Data Clock Pin in Serial Mode, I2C= "L"
	SCL	I	Control Data Clock Pin in Serial Mode, I2C= "H"
22	CDTI	I	Control Data Input Pin in Serial Mode, I2C= "L".
	SDA	I/O	Control Data Pin in Serial Mode, I2C= "H".
23	CSN	I	Chip Select Pin in Serial Mode, I2C= "L".
		I	This pin should be connected to DVSS, I2C= "H".
24	DAUX1	I	AUX Audio Serial Data Input Pin (ADC/DAC part)
25	SDTI4	I	DAC4 Audio Serial Data Input Pin
26	SDTI3	I	DAC3 Audio Serial Data Input Pin
27	SDTI2	I	DAC2 Audio Serial Data Input Pin
28	SDTI1	I	DAC1 Audio Serial Data Input Pin
29	XTL1	I	X'tal Frequency Select 0 Pin
30	XTL0	I	X'tal Frequency Select 1 Pin

No.	Pin Name	I/O	Function
31	PDN	I	Power-Down Mode Pin When “L”, the AK4589 is powered-down, all digital output pins go “L”, all registers are reset. When CAD1/0 pins are changed, the AK4589 should be reset by PDN pin.
32	MASTER	I	Master Mode Select Pin “H”: Master mode, “L”: Slave mode
33	DZF2	O	Zero Input Detect 2 Pin (Table 13) When the input data of the group 1 follow total 8192 LRCK cycles with “0” input data, this pin goes to “H”. And when RSTN bit is “0”, PWDAN bit is “0”, this pin goes to “H”. It always is in “L” when P/S pin is “H”.
	OVF	O	Analog Input Overflow Detect Pin This pin goes to “H” if the analog input of Lch or Rch overflows.
34	DZF1	O	Zero Input Detect 1 Pin (Table 13) When the input data of the group 1 follow total 8192 LRCK cycles with “0” input data, this pin goes to “H”. And when RSTN bit is “0”, PWDAN bit is “0”, this pin goes to “H”. Output is selected by setting DZFE pin when P/S pin is “H”.
35	LOUT4-	O	DAC4 Lch Negative Analog Output Pin
36	LOUT4+	O	DAC4 Lch Positive Analog Output Pin
37	ROUT4-	O	DAC4 Rch Negative Analog Output Pin
38	ROUT4+	O	DAC4 Rch Positive Analog Output Pin
39	LOUT3-	O	DAC3 Lch Negative Analog Output Pin
40	LOUT3+	O	DAC3 Lch Positive Analog Output Pin
41	ROUT3-	O	DAC3 Rch Negative Analog Output Pin
42	ROUT3+	O	DAC3 Rch Positive Analog Output Pin
43	LOUT2-	O	DAC2 Lch Negative Analog Output Pin
44	LOUT2+	O	DAC2 Lch Positive Analog Output Pin
45	ROUT2-	O	DAC2 Rch Negative Analog Output Pin
46	ROUT2+	O	DAC2 Rch Positive Analog Output Pin
47	LOUT1-	O	DAC1 Lch Negative Analog Output Pin
48	LOUT1+	O	DAC1 Lch Positive Analog Output Pin
49	ROUT1-	O	DAC1 Rch Negative Analog Output Pin
50	ROUT1+	O	DAC1 Rch Positive Analog Output Pin
51	LIN	I	Lch Analog Input Pin
52	RIN	I	Rch Analog Input Pin
53	VCOM	-	Common Voltage Output Pin 2.2 μ F capacitor should be connected to AVSS externally.
54	VREFH	-	Positive Voltage Reference Input Pin, AVDD

No.	Pin Name	I/O	Function
55	AVDD	-	Analog Power Supply Pin, 4.75V~5.25V
56	AVSS	-	Analog Ground Pin, 0V
57	RX0	I	Receiver Channel 0 Pin (Internal biased pin. Internally biased at PVDD/2)
58	NC	-	No Connect pin No internal bonding. This pin should be connected to PVSS.
59	RX1	I	Receiver Channel 1 Pin (Internal biased pin. Internally biased at PVDD/2)
60	TEST1	I	Test 1 Pin This pin should be connected to PVSS.
61	RX2	I	Receiver Channel 2 Pin (Internal biased pin. Internally biased at PVDD/2)
62	NC	-	No Connect pin No internal bonding. This pin should be connected to PVSS.
63	RX3	I	Receiver Channel 3 Pin (Internal biased pin. Internally biased at PVDD/2)
64	PVSS	-	PLL Ground pin
65	R	-	External Resistor Pin 12kΩ +/-1% resistor should be connected to PVSS externally.
66	PVDD	-	PLL Power supply Pin, 4.75V~5.25V
67	RX4	I	Receiver Channel 4 Pin (Internal biased pin. Internally biased at PVDD/2)
68	TEST2	I	Test 2 Pin This pin should be connected to PVSS.
69	RX5	I	Receiver Channel 5 Pin (Internal biased pin. Internally biased at PVDD/2)
70	CAD0	I	Chip Address 0 Pin (ADC/DAC part)
71	RX6	I	Receiver Channel 6 Pin (Internal biased pin. Internally biased at PVDD/2)
72	CAD1	I	Chip Address 1 Pin (ADC/DAC part)
73	RX7	I	Receiver Channel 7 Pin (Internal biased pin. Internally biased at PVDD/2)
74	I2C	I	Control Mode Select Pin. “L”: 4-wire Serial, “H”: I ² C Bus
75	DAUX2	I	Auxiliary Audio Data Input Pin (DIR/DIT part)
76	VIN	I	V-bit Input Pin for Transmitter Output
77	MCLK	I	Master Clock Input Pin
78	TX0	O	Transmit Channel (Through Data) Output 0 Pin
79	TX1	O	Transmit Channel Output1 pin When DIT bit = “0”, Through Data. When DIT bit = “1”, DAUX2 Data.
80	INT0	O	Interrupt 0 Pin

Note: All input pins except internal biased pins and Analog input pins (RX0-7, LIN, RIN) should not be left floating.

Internal biased pin Circuit

AK4384

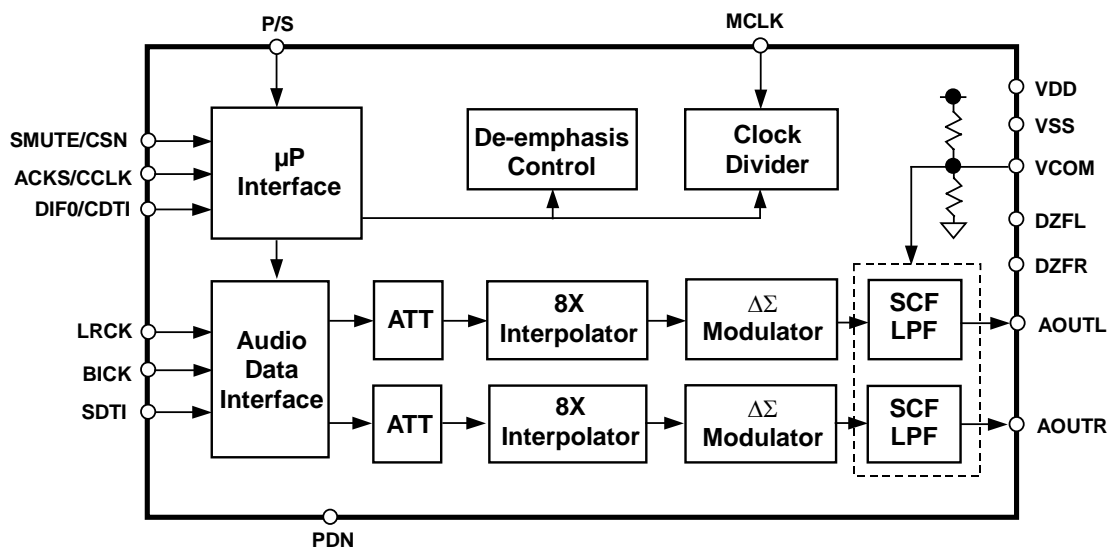

106dB 192kHz 24-Bit 2ch $\Delta\Sigma$ DAC

GENERAL DESCRIPTION

The AK4384 offers the perfect mix for cost and performance based audio systems. Using AKM's multi bit architecture for its modulator the AK4384 delivers a wide dynamic range while preserving linearity for improved THD+N performance. The AK4384 integrates a combination of SCF and CTF filters increasing performance for systems with excessive clock jitter. The 24 Bit word length and 192kHz sampling rate make this part ideal for a wide range of applications including DVD-Audio. The AK4384 is offered in a space saving 16pin TSSOP package.

FEATURES

- Sampling Rate Ranging from 8kHz to 192kHz
- 128 times Oversampling (Normal Speed Mode)
- 64 times Oversampling (Double Speed Mode)
- 32 times Oversampling (Quad Speed Mode)
- 24-Bit 8 times FIR Digital Filter
- SCF with High Tolerance to Clock Jitter
- 2nd order Analog LPF
- Single Ended Output Buffer
- Digital de-emphasis for 32k, 44.1k and 48kHz sampling
- Soft mute
- Digital Attenuator (Linear 256 steps)
- I/F format: 24-Bit MSB justified, 24/20/16-Bit LSB justified or I²S
- Master clock: 256fs, 384fs, 512fs, 768fs or 1152fs (Normal Speed Mode)
128fs, 192fs, 256fs or 384fs (Double Speed Mode)
128fs, 192fs (Quad Speed Mode)
- THD+N: -94dB
- Dynamic Range: 106dB
- Power supply: 4.5 to 5.5V
- Very Small Package: 16pin TSSOP (6.4mm x 5.0mm)

■ Ordering Guide

AK4384ET	-20 ~ +85°C	16pin TSSOP (0.65mm pitch)
AK4384VT	-40 ~ +85°C	16pin TSSOP (0.65mm pitch)

PIN/FUNCTION

No.	Pin Name	I/O	Function
1	MCLK	I	Master Clock Input Pin An external TTL clock should be input on this pin.
2	BICK	I	Audio Serial Data Clock Pin
3	SDTI	I	Audio Serial Data Input Pin
4	LRCK	I	L/R Clock Pin
5	PDN	I	Power-Down Mode Pin When at “L”, the AK4384 is in the power-down mode and is held in reset. The AK4384 must be reset once upon power-up.
6	SMUTE	I	Soft Mute Pin in parallel mode “H”: Enable, “L”: Disable
	CSN	I	Chip Select Pin in serial mode
7	ACKS	I	Auto Setting Mode Pin in parallel mode “L”: Manual Setting Mode, “H”: Auto Setting Mode
	CCLK	I	Control Data Clock Pin in serial mode
8	DIF0	I	Audio Data Interface Format Pin in parallel mode
	CDTI	I	Control Data Input Pin in serial mode
9	P/S	I	Parallel/Serial Select Pin (Internal pull-up pin) “L”: Serial control mode, “H”: Parallel control mode
10	AOUTR	O	Rch Analog Output Pin
11	AOUL	O	Lch Analog Output Pin
12	VCOM	O	Common Voltage Pin, VDD/2 Normally connected to VSS with a 0.1μF ceramic capacitor in parallel with a 10μF electrolytic cap.
13	VSS	-	Ground Pin
14	VDD	-	Power Supply Pin
15	DZFR	O	Rch Data Zero Input Detect Pin
16	DZFL	O	Lch Data Zero Input Detect Pin

Note: All input pins except pull-up pin should not be left floating.

NJM2068

LOW-NOISE DUAL OPERATIONAL AMPLIFIER

GENERAL DESCRIPTION

The NJM2068 is a high performance, low noise dual operational amplifier. This amplifier features popular pin-out, superior noise performance, and superior total harmonic distortion. This amplifier also features guaranteed noise performance with substantially higher gain-bandwidth product and slew rate which far exceeds that of the 4558 type amplifier. The specially designed low noise input transistors allow the NJM2068 to be used in very low noise signal processing applications such as audio preamplifiers and servo error amplifier.

PACKAGE OUTLINE

NJM2068D

NJM2068M

NJM2068V

NJM2068L

FEATURES

- Operating Voltage (±4V ~ ±18V)
- Low Total Harmonic Distortion (0.001% typ.)
- Low Noise Voltage (FLAT+JISA, 0.56 μV typ.)
- High Slew Rate (6V/μs typ.)
- Unity Gain Bandwidth (27MHz @f=10kHz)
- Package Outline DIP8, DMP8, SIP8, SSOP8
- Bipolar Technology

TOSHIBA

TC74HCU04AP/AF/AFN

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

TC74HCU04AP, TC74HCU04AF, TC74HCU04AFN

HEX INVERTER

The TC74HCU04A is a high speed CMOS INVERTER fabricated with silicon gate C²MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

Since the internal circuit is composed of a single stage inverter, it can be used in analog applications such as crystal oscillators.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

FEATURES :

- High Speed..... $t_{pd} = 4ns(\text{typ.})$ at $V_{CC} = 5V$
- Low Power Dissipation..... $I_{CC} = 1\mu A(\text{Max.})$ at $T_a = 25^\circ C$
- High Noise Immunity..... $V_{NIH} = V_{NIH} = 10\%V_{CC} (\text{Min.})$
- Output Drive Capability..... 10 LSTTL Loads
- Symmetrical Output Impedance... $|I_{OH}| = I_{OL} = 4mA(\text{Min.})$
- Balanced Propagation Delays..... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range... $V_{CC}(\text{opr.}) = 2V \sim 6V$
- Pin and Function Compatible with 74LS04

(Note) The JEDEC SOP (FN) is not available in Japan.

(Note) The JEDEC SOP (FN) is not available in Japan.

QUAD 2-INPUT AND GATE

The TC74VHCT08A is an advanced high speed CMOS 2-INPUT AND GATE fabricated with silicon gate C²MOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation. The input voltage are compatible with TTL output voltage. This device may be used as a level converter for interfacing 3.3V to 5V system. Input protection and output circuit ensure that 0 to 5.5V can be applied to the input and output*1 pins without regard to the supply voltage. These structure prevents device destruction due to mismatched supply and input/output voltages such as battery back up, hot board insertion, etc.
*1: V_{CC} = 0V

FEATURES :

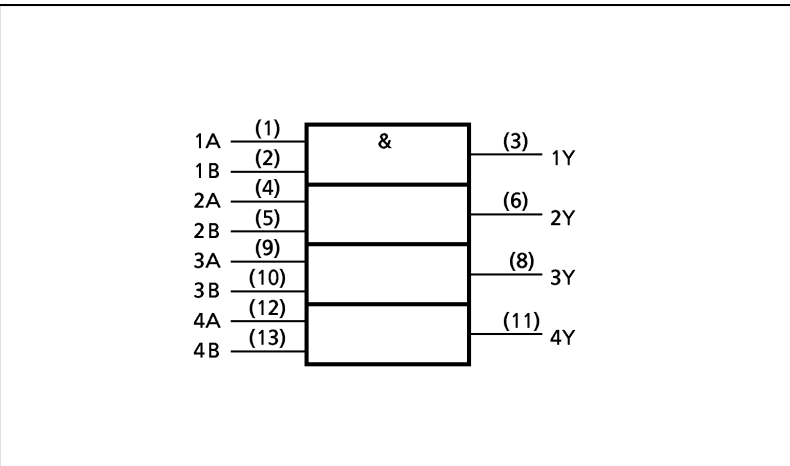

- High Speed..... t_{pd} = 5.0ns(typ.) at V_{CC} = 5V
- Low Power Dissipation..... I_{CC} = 2μA(Max.) at Ta = 25°C
- Compatible with TTL outputs... V_{IL} = 0.8V (Max.)
V_{IH} = 2.0V (Min.)
- Power Down Protection is provided on all inputs and outputs.
- Balanced Propagation Delays..... t_{pLH} ≈ t_{pHL}
- Low Noise V_{OLP} = 0.8V (Max.)
- Pin and Function Compatible with the 74 series (74AC / HC / F / ALS / LS etc.) 08 type.

QUAD 2-INPUT AND GATE

(Note) The JEDEC SOP (FN) is not available in Japan.

The TC74VHC08 is an advanced high speed CMOS 2-INPUT AND GATE fabricated with silicon gate C²MOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

The internal circuit is composed of 4 stages including buffer output, which provide high noise immunity and stable output. An input protection circuit ensures that 0 to 5.5V can be applied to the input pins without regard to the supply voltage. This device can be used to interface from 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

FEATURES :

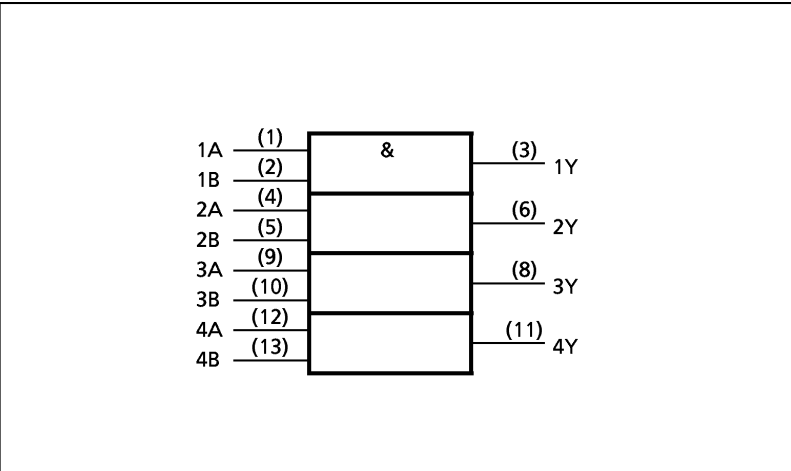

- High Speed..... $t_{pd} = 4.3ns$ (typ.) at $V_{CC} = 5V$
- Low Power Dissipation..... $I_{CC} = 2\mu A$ (Max.) at $T_a = 25^\circ C$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\% V_{CC}$ (Min.)
- Power Down Protection is provided on all inputs.
- Balanced Propagation Delays..... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range..... $V_{CC} (opr) = 2V \sim 5.5V$
- Low Noise $V_{OLP} = 0.8V$ (Max.)
- Pin and Function Compatible with 74ALS08

KEC SEMICONDUCTOR TECHNICAL DATA

KIA1117S/F00~ KIA1117S/F50 BIPOLAR LINEAR INTEGRATED CIRCUIT

LOW DROP FIXED AND ADJUSTABLE POSITIVE VOLTAGE REGULATOR

The KIA1117S/F × × is a Low Drop Voltage Regulator able to provide up to 1A of output current, available even in adjustable version (Vref=1.25V)

FEATURES

- Low Dropout Voltage : 1.1V/Typ. (Iout=1.0A)
- Very Low Quiescent Current : 4.2mA/Typ.
- Output Current up to 1A
- Fixed Output Voltage of 1.5V, 1.8V, 2.5V, 2.85V, 3.3V, 5.0V
- Adjustable Version Availability : Vref=1.25V
- Internal Current and Thermal Limit
- Only 10µF for stability
- Available in ±2% (at 25 °C) and 4% in full Temperature range
- High Ripple Rejection : 80dB/Typ
- Temperature Range : 0 °C ~ 125 °C

ULTRA-SMALL PACKAGE HIGH-PRECISION VOLTAGE DETECTOR

S-808xxC Series

The S-808xxC series is a series of high-precision voltage detectors developed using CMOS process. The detection voltage is fixed internally with an accuracy of $\pm 2.0\%$. Two output forms, Nch open-drain and CMOS output, are available. Ultra-low current consumption and miniature package lineup can meet demand from the portable device applications.
