

RF-7800M-V150
50-WATT MULTIBAND
VEHICULAR AMPLIFIER
ADAPTER (VAA)

***A low-profile, high-
efficiency VAA
for the RF-7800M
manpack radio***

The RF-7800M-V150 is a 50-watt Vehicular Amplifier Adapter (VAA) for use with a separately procured RF-7800M-MP manpack radio. Designed for long-range applications and increased communications reliability, the RF-7800M-V150 provides 50 watts from 30 MHz to 450 MHz, supporting both narrowband and wideband waveforms, up to 5 MHz bandwidth.

The single-unit VAA is extremely low-profile and can be deployed in multiple configurations, including as a single unit, alongside a single channel RF-5800M-HH handheld VAA or in a dual-unit configuration mounted in the Universal SINCGARS Interface Module (USIM).

The VAA features separate VHF, UHF, and wideband antenna ports with automatic port switching, providing the radio system with true multi-mission capability. The operator only needs to select the required preset on the radio to switch between ground, ground-to-air, and wideband networking communications.

Other features provided by the RF-7800M-V150 include: VHF (30-90 MHz) and UHF (200 - 400 MHz) collocation filters, internal LNA, VIC-1 and VIC-3 interface, wideband PA control interface, and external power output to power accessories such as a loudspeaker or battery charger. The VAA provides mechanism to lock the manpack radio for physical security.

(Manpack not included)
