HIGH-PERFORMANCE, MULTI PURPOSE
1/2" C-MOUNT 3CCD COLOR CAMERA

MAJOR FEATURE

● C-mount

The camera uses a C mount lens, which is the de facto standard in the industry.

● One chip LSI

Hitachi's leading edge processing technology (0.18 μm, internal core 1.8V drive, and 3 million gates) is contained on a single newly developed ultra LSI chip. The system is compact and consumes very little power.

● High picture quality

High resolution and sensitivity are achieved through the use of advanced CCD technology and three 1/2 inch 470,000-pixel CCD's. Together with the 12-bit A/D converter and 14-bit internal processor, a horizontal resolution of 800 TV lines and 62dB signal to noise (S/N) are obtained with the use of the new digital noise reduction system (DNR). Clear low noise images area obtained even in high gain mode.

● 6 color independent masking

The user can adjust hue and saturation of the three primary color (R, G, B) and complementary color (Mg, Ye, Cy) independently.

● Auto Shading Compensation (ASC)

The ASC function can automatically compensate for color shading errors caused by interaction between the lens and prism assembly in C-Mount optical systems. Three modes of shading are provided and can be selected according to the cameras application, a color shading mode, a two-dimensional luminance-shading mode, or a flat shading mode.

● Intelligent ALC (Auto Level Control)

Unattended operation under a wide range of illumination levels is possible with the selection of the auto mode from the main menu. The built-in microprocessor controls the gain (AGC) function, the auto electronic shutter (AES), and auto iris function so the proper video level is maintained over a wide range of light levels.

● RS-232C Interface

Control of camera functions and storage of setup data can be performed with the use of a personal computer through the use of the RS-232C interface.
