#### ADDITIONAL NOTES FOR PT-101 SDI PAN TILT HEAD

The operations of the PT-101 SDI are exactly the same as the standard PT-101 pan tilt head. The only differences are:

9 pin cable harness provides camera video to internal SDI converter. This cable replaces the standard BNC cable included with the PT-101. Output from the SDI converter exits the PT-101SDI head through the left BNC connector on the base pedestal.

Genlock input to right-hand BNC on base feeds genlock directly to the camera.

NOTE: for correct operation of the SDI converter, the output of the camera's multi pin output connector must be set to Y/C output and not RGB or Component output.
