

This release note applies

to

IMA Cards

The following information is important if you have IMA cards already installed with a level < 3.0.2 and if you have recently received new IMA cards with the level 3.0.2. In that case, you need to upgrade the already installed cards to version 3.0.2 (no interoperability between the 3.0.2 code and older levels).

You can verify the IMA cards code level by issuing the following command at the 8265 console:

SHOW PORT slot.ALL VERBOSE

The enhancements of version 3.0.2 compared to the previous version are related to interoperability problems with other vendors IMA cards:
