QoS-Based Routing Framework
draft-ietf-qosr-framework-02.txt

Eric Crawley (*esc@argon-net.com*)

Raj Nair (*nair@arrowpoint.com*)

Bala Rajagopalan (*braja@ccrl.nj.nec.com*)

Hal Sandick (*sandick@vnet.ibm.com*)

Status

- Very minor changes to draft
- Ready for Working Group Last Call after IETF meeting
- Last call will be issued 12/15/97 and expire on 1/12/98 modulo any serious comments or problems that come up today

Summary of Changes

- New introductory paragraphs on
  - Best Effort and QoS-Based Routing
  - QoS-Based Routing and Resource Reservation
- Lots of minor cleanups and edits

Comments Received that are considered "Last Call" comments

- A paragraph on Path Aggregation was missed in the last round of editing (send to mailing list?)
- Perhaps more verbage is needed to say that Class/TOS based routing is a solved problem but not widely deployed currently
  - e.g. OSPF TOS-based routing
  - IDRP features
- It is too early to talk about QoS routing for Differential Services at this time
