## INTRODUCTION

This service manual describes the latest service information for the BC-119N DESKTOP CHARGER/BC-121N MULTI-CHARGER at the time of publication.

## VERSIONS

Model	Version	Symbol	Supplied batt. adap.	AC adapter
BC-119N	U.S.A.	[USA]	—	BC-145A
		[USA-1]	AD-75	
	Europe	[EUR]	—	BC-145E
		[EUR-1]	AD-75	
	Australia	[AUS]	—	BC-145V
		[AUS-1]	AD-75	
United Kingdom	[UK]	—		BC-145UK
	[UK-1]	AD-75		
General	[GEN]	—		—
	[GEN-1]	AD-75		
BC-121N	General	[GEN]	—	—

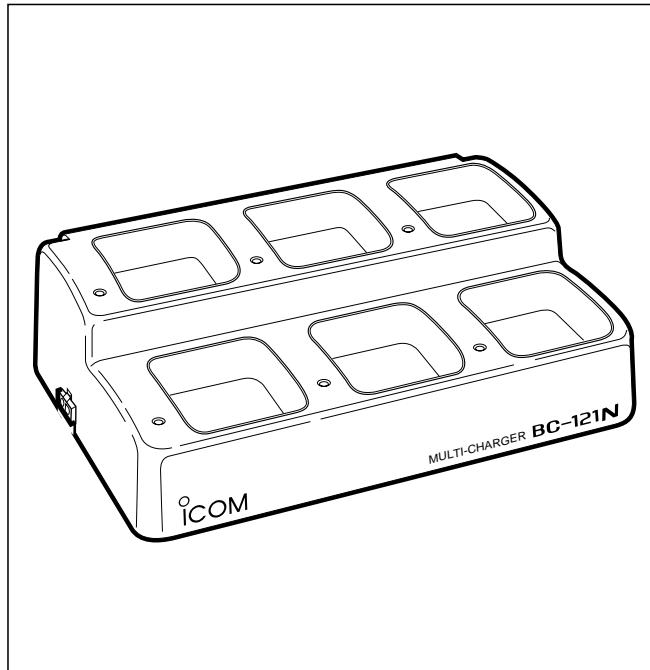

## DANGER

**NEVER** connect the charger to an AC adapter or a DC power supply that uses more than 20 V (BC-121N: 16 V). Such a connection could cause a fire hazard and/or electric shock.

**DO NOT** expose the chager to rain, snow or any liquids.

**DO NOT** expose the chager to rain, snow or any liquids.

**DO NOT** reverse the polarities of the power supply when connecting the charger.

## ORDERING PARTS

Be sure to include the following four points when ordering replacement parts:

1. 10-digit order numbers
2. Component part number and name
3. Equipment model name and unit name
4. Quantity required

### <SAMPLE ORDER>

8010018700	Case	BC-119N	Chassis	5 pieces
8810008660	Screw B0 3x8 NI-ZU	BC-119N	Chassis	8 pieces
1110004700	S.IC S-80847ALNP-EEB	BC-121N	MAIN-A UNIT	1 piece
8810008660	Screw B0 3x8 NI-ZU	BC-121N	1800 cover	8 pieces

Addresses are provided on the inside back cover for your convenience.

## REPAIR NOTES

1. Make sure a problem is internal before disassembling the charger box.
2. **DO NOT** open the chassis until the charger is disconnected from its power source.
3. **DO NOT** force any of the variable components. Turn them slowly and smoothly.
4. **DO NOT** short any circuits or electronic parts. An insulated tuning tool **MUST** be used for all adjustments.
5. **DO NOT** keep power ON for a long time when the charger is defective.
6. **READ** the instructions of test equipment thoroughly before connecting equipment to the charger.

# SECTION 1 SPECIFICATIONS

## • BC-119N

- Power supply requirement : 12 V to 20 V DC (negative ground)
- Dimensions (projections not included) : 115(W)×60(H)×103(D) mm; 4 1/2(W) × 2 1/4(H) × 4 1/16(D) in.
- Weight (adapters not included) : 200 g; 7.1 oz; 0.4 lbs

## • BC-121N

- Power supply requirement : 12 V to 16 V DC (negative ground)
- Dimensions (projections not included) : 300(W)×93(H)×197(D) mm; 11 13/16(W) × 3 21/32(H) × 7 3/4(D) in.
- Weight (adapters not included) : 1.4 kg; 49.4 oz; 3.1 lbs

## • COMMON

- Rapid charging current : 840 mA ±10 %  
670 mA ±10 %  
540 mA ±10 %  
420 mA ±10 %
- Trickle charging current : 30 mA ±10 %
- Constant voltage (Lithium-ion battery) : 8.4 V ±0.1 V
- Electrostatic durability : Air discharge 8 kV  
Contact discharge 4 kV
- Usable temperature range : +10°C to +40°C; +50°F to +104°F
- Rapid charging time : 1–2 hours.

All stated specifications are subject to change without notice or obligation.

## SECTION 2 CIRCUIT DESCRIPTION

### 2-1 DC-DC CONVERTOR CIRCUIT (STEP-UP/DOWN CONVERTOR)

The DC-DC convertor circuit regulates the charging voltage from an AC adapter or a power supply to appropriate values for various battery pack.

The applied voltage from an AC adapter or a power supply is regulated at the step-up and down convertor circuit (Q5, D6, D7, L2). The regulated voltage is passed through the constant-current circuit.

#### • STEP-DOWN CONVERTOR CIRCUIT

The step-down convertor circuit activates when the charging voltage is lower than the applied voltage from an AC adapter or a power supply.

The applied voltage is chopped (turn ON and OFF) by the step-down convertor circuit. The chopper voltage (square wave) is passed through the smoothing circuit (C26) for conversion to DC voltage.

The step-down convertor circuit is controlled by the CPU (IC2) via the switching regulator (IC5, Q8, Q9) and driver (Q3, Q4, D4, D5) circuits.

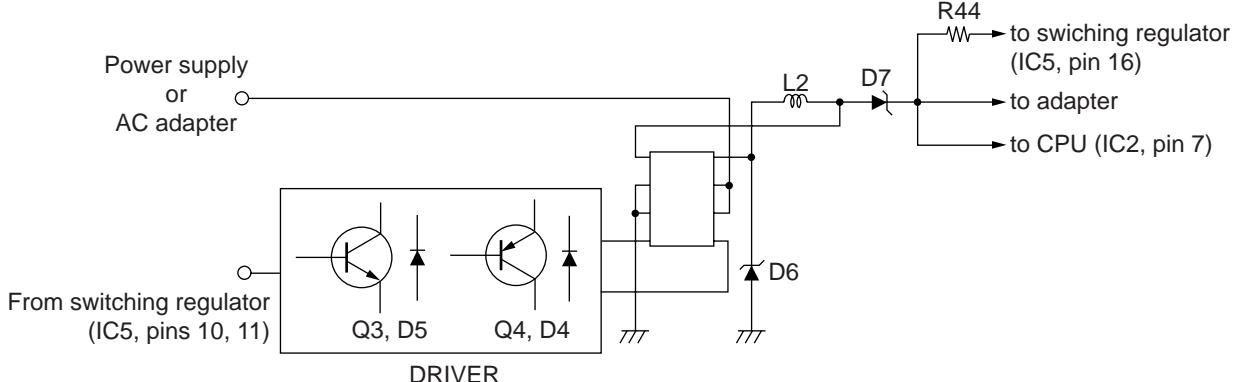

#### • STEP-UP CONVERTOR CIRCUIT

The step-up convertor circuit activates when the charging voltage is higher than the applied voltage from an AC adapter or a power supply.

The voltage passed through the step-up convertor circuit is chopped by the step-up convertor circuit.

Q5 is composed of two FETs (FET1 is pins 1–4, FET2 is pins 5–8). While FET2 is turned OFF, the same voltage as the applied voltage is output from the step-up convertor circuit. However, while FET2 is turned ON, stored energy at the coil (L2) is driven into flywheel diode (D7). In other words, a back electromotive force occurs when FET2 is turned ON. This electromotive force is used for the step-up voltage.

#### • STEP-UP/DOWN CONVERTOR CIRCUIT

### 2-2 CONSTANT-CURRENT CIRCUIT

The constant-current circuit consists of DC-DC convertor circuit (Q5, D6, D7, L2), IC4, IC5, R24, R44, and R45.

The current detector circuit (R24) detects a charging current and generates a voltage in proportion to the current. The generated voltage is applied to the amplifier section of IC4 (IC4a, pin 2).

The amplified voltage is applied to the CPU (IC2, pin 5) and the switching regulator (IC5, pin 1). The CPU (IC2) is output PWM signal from pin 2 to obtain stable output current. The signal is applied to the IC5 via the smoothing circuit (Q8, R32, C35) to convert to DC voltage. The DC voltage is applied to the switching regulator circuit (IC5, pins 2, 3, 15). The output current from switching regulator (IC5, pin 16) passes through the R44 and R45 to limit the maximum voltage. The output voltage is applied to the driver (Q3, Q4, D4, D5), and then applied to the DC-DC convertor circuit to obtain constant current.

### 2-3 REGULATOR CIRCUIT

Part of voltage from an AC adapter or a power supply are applied to the 1st regulator circuit (Q1, Q12) to convert to 12 V voltage signal. The 12 V signal is applied to the LED (DS1) and buffer amplifier (IC4b, pin 8).

Part of 12 V signals are applied to the 2nd regulator circuit (IC1, R25) to convert to the 5.15 V voltage signal. The 5.15 V signal is applied to the CPU (IC2, pin 25), voltage detector (IC3, pin 2), etc.

## 2-4 CHARGING CURRENT AND VOLTAGE CHART

IC2 pin number								Rapid charging current (mA)	Low-battery (V)	Max. voltage (V)
12	15	16	17	18	26	27	28			
AD-101	SW	BIT1	BIT2	BIT3	BIT4	BC-79	BC-119

High	High	High	High	High	High	Low	High	Do not operate.		

## 2-5 CPU PORT ALLOCATIONS (IC2)

Pin number	Port name	Description
2	PWM	Outputs DC-DC convertor control signal. The signal is applied to the Q8 as "PWM" signal.
5	CURRENT	Input port for current detector A/D signal.
12	AD-101	Input port for adapter select signal.
15 16 17 18	SW BIT1 BIT2 BIT3	Input ports for adapter select signals.
19	RESET	Input port for the reset signal.
26 27 28	BIT4 BC-79 BC-119	Input ports for adapter select signals.

## SECTION 3 ADJUSTMENT PROCEDURES

### 5-1 PREPARATION

#### ■ REQUIRED TEST EQUIPMENT

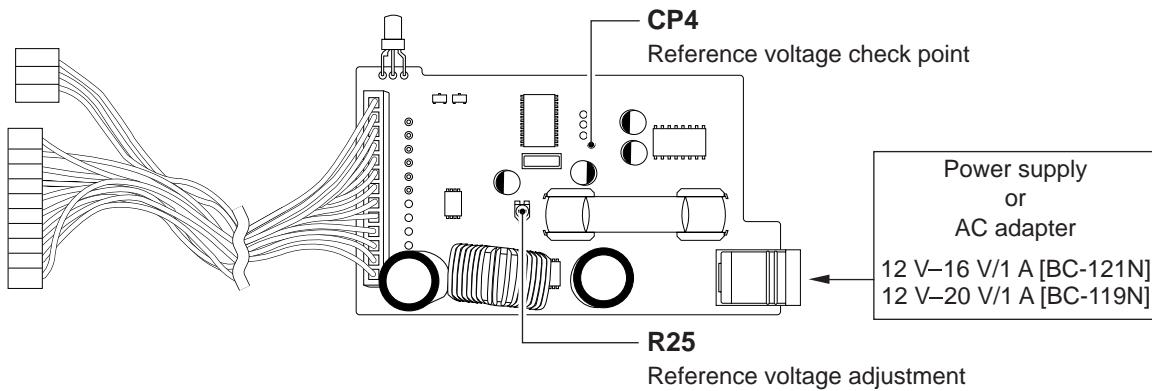

EQUIPMENT	GRADE AND RANGE	EQUIPMENT	GRADE AND RANGE
DC power supply	Output voltage : 12 V – 20 V DC Current capacity : 1 A or more	DC voltmeter	Input impedance : 50 kΩ/V DC or better Output level : 1–500 mV

### 5-2 TRIMMER ADJUSTMENT

ADJUSTMENT	ADJUSTMENT CONDITIONS	MEASUREMENT		VALUE	ADJUSTMENT	
		UNIT	LOCATION		UNIT	ADJUST
REFERENCE VOLTAGE	1 • Connect the power supply or AC adapter to the J1.	MAIN	Connect a DC voltmeter to the check point CP4.	5.15 V	MAIN	R25

[BC-121N ONLY]: Same adjustment as step 1 for MAIN-A–MAIN-F units.
