

ICOM

144 MHz FM TRANSCEIVER

IC-T2A (U.S.A. version)

IC-T2E (Europe version)

Simple, capable, high performance

The IC-T2A and IC-T2E are simple-to-operate, single band handhelds. Innovative features such as cloning capability, customizable keys and a guide function are housed in a no-nonsense, solid body. Functions such as tone squelch and DTMF operation are standard. These transceivers are sure winners.

Tone squelch standard

Tone squelch operation (encoder and decoder) provides quiet standby. In addition, the supplied system features the following useful functions.

Pocket beep: Provides a method of keeping track of calls even when you are away from the transceiver.

Tone scan: Allows you to detect subaudible tone frequencies, such as those used to open a repeater.

Customizable keys

Eight keys on the front panel are customizable—assign functions to these keys to suit your operating style. Functions can be assigned through cloning or manual keypad operation (a first for an amateur handheld transceiver).

DTMF encoder with memory channels

The IC-T2A/E has 5 DTMF memory channels, each capable of storing DTMF codes up to 32 digits long. A DTMF re-dial function is convenient for autopatching, etc. Enjoy quick and easy DTMF operation.

Durable construction

The front panel is made of rugged, polycarbonate while underneath lies a one-piece, die-cast aluminum chassis. A formidable combination that provides performance you can count on under demanding conditions.

Cloning capability

Transceiver-to-transceiver cloning is possible. With the optional OPC-474 CLONING CABLE you can easily transfer the entire contents of one IC-T2A/E to another. In addition, optional cloning software is available so that you can clone and edit contents with the convenience of a personal computer.
