

IMPORTANT INFORMATION REGARDING YOUR JBL SCS SERIES SATELLITE SPEAKER WALL-MOUNT BRACKET

1. When assembling the satellite speaker & the speaker support into the wall plate (please see page 5 of your owner's guide), please make sure that at least ¼-inch or 6 mm of the wall plate metal shaft is inserted into the support cavity. Please continue to firmly press the support onto the wall plate metal shaft until it is fully secured in place.

2. Please note that the satellite speaker, when mounted on these brackets, can only be adjusted horizontally (left or right). The speaker cannot be adjusted vertically (up or down) or otherwise tilted. Any attempt to do so will damage the speaker bracket wall plate and/or support & such damage will not be covered under warranty.
