Safety precaution

 **CAUTION** Burrs formed during molding may be left over on some parts of the chassis. Therefore, pay attention to such burrs in the case of performing repair of this system.

 **CAUTION** Please use enough caution not to see the beam directly or touch it in case of an adjustment or operation check.

Preventing static electricity

1. Grounding to prevent damage by static electricity

Electrostatic discharge (ESD), which occurs when static electricity stored in the body, fabric, etc. is discharged, can destroy the laser diode in the traverse unit (optical pickup). Take care to prevent this when performing repairs.

2. About the earth processing for the destruction prevention by static electricity

Static electricity in the work area can destroy the optical pickup (laser diode) in devices such as CD players. Be careful to use proper grounding in the area where repairs are being performed.

2-1 Ground the workbench

Ground the workbench by laying conductive material (such as a conductive sheet) or an iron plate over it before placing the traverse unit (optical pickup) on it.

2-2 Ground yourself

Use an anti-static wrist strap to release any static electricity built up in your body.

3. Handling the optical pickup

1. In order to maintain quality during transport and before installation, both sides of the laser diode on the replacement optical pickup are shorted. After replacement, return the shorted parts to their original condition. (Refer to the text.)
2. Do not use a tester to check the condition of the laser diode in the optical pickup. The tester's internal power source can easily destroy the laser diode.

4. Handling the traverse unit (optical pickup)

1. Do not subject the traverse unit (optical pickup) to strong shocks, as it is a sensitive, complex unit.
2. Cut off the shorted part of the flexible cable using nippers, etc. after replacing the optical pickup. For specific details, refer to the replacement procedure in the text. Remove the anti-static pin when replacing the traverse unit. Be careful not to take too long a time when attaching it to the connector.
3. Handle the flexible cable carefully as it may break when subjected to strong force.
4. It is not possible to adjust the semi-fixed resistor that adjusts the laser power. Do not turn it

Attention when traverse unit is decomposed

***Please refer to "Disassembly method" in the text for pick-up and how to detach the substrate.**

1. Solder is put up before the card wire is removed from connector on the CD substrate as shown in Figure.
(When the wire is removed without putting up solder, the CD pick-up assembly might destroy.)
2. Please remove solder after connecting the card wire with when you install picking up in the substrate.

Disassembly method

<Main body>

■ Removing the top chassis

(See Fig.1 to 5)

1. Remove the two screws **A** attaching the bottom cover to the top chassis on the bottom of the body.
2. Remove the two screws **B** attaching the top chassis on both sides of the body.
3. Remove the two screws **C** and the two screw **D** attaching the heat sink on the left side of the body.
4. Remove the two screws **E** and the screw **F** on the back of the body.
5. Remove the two screws **G** on the upper side of the body.
6. Move the top chassis upward and disconnect the CD mechanism connector from the main board connector by pulling it. Remove the top chassis from the body.

Fig.1

Fig.2

Fig.4-1 (KD-LX300)

Fig.3

Fig.4-2 (KD-LX100)

Fig.5

**■ Removing the front panel assembly
(See Fig.6 to 8)**

· Prior to performing the following procedure, remove the top chassis assembly.

1. Disconnect the flexible harness from connector CN701 on the main board assembly.
2. Remove the four screws **H** attaching the front panel assembly on both sides of the body. Remove the front panel toward the front.

Front panel assembly
Fig.6-1 (KD-LX300)

Front panel assembly
Fig.6-2 (KD-LX100)

Fig.7

Fig.8

■ Removing the Front Board (See Fig.9)

· Prior to performing the following procedure, remove the top chassis assembly and the front panel assembly.

1. Remove the four screws **I** attaching the front board on the back of the front panel assembly and release the eight joints **a**.

Fig.9

■ Removing the lifter unit (See Fig.10)

· Prior to performing the following procedure, remove the top chassis assembly and the front panel assembly.

1. Disconnect the harness from connector CN503 and CN504 on the main board.
2. Remove the four screws **J** and detach the lifter unit from the bottom cover.

Fig.10-1 (KD-LX300)

■ Removing the feed motor (L) (See Fig.11)

· Prior to performing the following procedure, remove the lifter unit.

1. Remove the washer attaching the clutch assembly and detach the clutch assembly from the shaft of the lifter unit.
2. Remove the two screws **K** attaching the feed motor (L).

Fig.10-2 (KD-LX100)

■ Removing the feed motor (R) (See Fig.12)

· Prior to performing the following procedure, remove the lifter unit.

1. Remove the washer attaching the clutch assembly and detach the clutch assembly from the shaft of the lifter unit.
2. Remove the two screws **L** attaching the feed motor (R).

Fig.12

Fig.11

■ Removing the operation assembly
(See Fig.13 to 17)

· Prior to performing the following procedure, remove the top chassis assembly, the front panel assembly and the lifer unit.

1. Disconnect the card wire from connector CN702 on the main board and remove the operation assembly.
2. Remove the three screws **M** attaching the right and left brackets which fix gears on both sides of the operation assembly.
3. Remove the springs 5 and 6 from the operation assembly.

ATTENTION: When reassembling, correctly engage the switch S651 and S652 on the main board and the right gear with the part **b** of the operation assembly.

Fig.13

Fig.14

Fig.16

Fig.15

■ Removing the operation switch board (See Fig.17 and 18)

- Prior to performing the following procedure, remove the operation assembly.
1. Remove the six screws **N** attaching the button panel on the operation assembly.
 2. Pull out the operation switch board from inside of the button panel.

Fig.17

Fig.18

■ Removing the CD mechanism assembly (See Fig.19)

- Prior to performing the following procedure, remove the top chassis.
1. Remove the three screws **O** and the CD mechanism assembly from the top chassis.

Fig.19

■ Removing the main board assembly
(See Fig.20 to 22)

· Prior to performing the following procedure, remove the top chassis.

1. Disconnect the flexible harness from connector CN701, the card wire from CN702 on the main board and the harness from CN503 and CN504 respectively.
2. Remove the three screws **P** attaching the main board assembly to the bottom cover on the upper side of the body.
3. Move the main board in the direction of the arrow and release the three joints **c**. (At this point, the main board can be removed with the rear panel and the rear heat sink.)
4. Remove the three screws **Q** attaching the rear heat sink on the back of the body.
5. Remove the two screws **R** and the screw **S** attaching the rear panel. Now, the main board assembly will be removed.

ATTENTION: When reassembling, correctly engage the switch S651 and S652 on the main board and the right gear with the part **b** of the operation assembly (Refer to Fig.21).

Fig.20-1 (KD-LX300)

Fig.20-2 (KD-LX100)

Fig.22-1 (KD-LX300)

Fig.22-2 (KD-LX100)

Fig.21

<CD mechanism section>

■ Removing the CD mechanism control board (See Fig.1 and 2)

1. Remove the screw **A** and the pickup cover attached to the front bracket with the double-sided tapes.
2. Unsolder the three parts **a**, **b** and **c** on the CD mechanism control board.
3. Remove the stator fixing the CD mechanism control board and the damper bracket (To remove the stator smoothly, pick up the center part).
4. Remove the screw **B** attaching the CD mechanism control board.
5. Remove the CD mechanism control board in the direction of the arrow while releasing it from the two damper bracket slots **d** and the front bracket slot **e**.
6. Disconnect the flexible wire from connector on the pickup unit.

ATTENTION: Turn the FD gear in the direction of the arrow to move the entire pickup unit to the appropriate position where the flexible wire of the CD mechanism unit can be disconnected easily (Refer to Fig.2).

■ Removing the loading motor (See Fig.3 to 5)

- Prior to performing the following procedure, remove the CD mechanism control board and the pickup cover.
1. Remove the two springs **f** attaching the CD mechanism assembly and the front bracket.
 2. Remove the two screws **C** and the front bracket while pulling the flame outward.
 3. Remove the belt and the screw **D** from the loading motor.

Fig.5

■ Removing the CD mechanism assembly (See Fig.1, 6 to 9)

• Prior to performing the following procedure, remove the CD mechanism control board and the front bracket (loading motor).

1. Remove the three screws **E** and the damper bracket.
2. Raise the both sides fix arms and move the fix plates in the direction of the arrow to place the four shafts **g** as shown in Fig.8 and 9.
3. Remove the CD mechanism assembly and the two springs **h** attaching the flame.
4. Remove the two screws **F** and both sides rear damper brackets from the dampers. Detach the CD mechanism assembly from the left side to the right side.

Fig.6

Fig.7

ATTENTION: The CD mechanism assembly can be removed if only the rear damper bracket on the left side is removed.

Fig.8

Fig.9

**■ Removing the feed motor assembly
(See Fig.10)**

- Prior to performing the following procedure, remove the CD mechanism control board, the front bracket (loading motor) and the CD mechanism assembly.
1. Remove the two screws **G** and the feed motor assembly.

Fig.10

**■ Removing the pickup unit
(See Fig.10 and 11)**

- Prior to performing the following procedure, remove the CD mechanism control board, the front bracket (loading motor), the CD mechanism assembly and the feed motor assembly.
1. Detach the FD gear part of the pickup unit upward. Then remove the pickup unit while pulling out the part **j** of the FD screw.

ATTENTION: When reattaching the pickup unit, reattach the part **i** of the pickup unit, then the part **j** of the FD screw.

Fig.11

2. Remove the screw **H** attaching the nut push spring plate and the pickup mount nut from the pickup unit. Pull out the FD screw.

**■ Removing the spindle motor
(See Fig.12 and 13)**

- Prior to performing the following procedure, remove the CD mechanism control board, the front bracket (loading motor), the CD mechanism assembly and the feed motor assembly.
1. Turn up the CD mechanism assembly and remove the two springs **k** on both sides of the clamber arms. Open the clamber arm upward.
 2. Turn the turn table and remove the two screws **l** and the spindle motor.

Fig.12

Fig.13

Adjustment method

■ Test instruments required for adjustment

1. Digital oscilloscope (100MHz)
2. AM Standard signal generator
3. FM Standard signal generator
4. Stereo modulator
5. Electric voltmeter
6. Digital tester
7. Tracking offset meter
8. Test Disc JVC :CTS-1000
9. Extension cable for check
EXTGS004-26P × 1

■ Standard volume position

Balance and Bass & Treble volume : Indication "0"
Loudness : OFF
BBE : OFF

Frequency Band

- FM 87.5MHz ~ 108.0MHz
- MW 144 ~ 279kHz, 520kHz ~ 1620 kHz

■ Dummy load

Exclusive dummy load should be used for AM, and FM. For FM dummy load, there is a loss of 6dB between SSG output and antenna input. The loss of 6dB need not be considered since direct reading of figures are applied in this working standard.

■ Standard measuring conditions

Power supply voltage DC14.4V(10.5~16V)
Load impedance 20Kohm(2 Speakers connection)
Output Level Line out 2.0V (Vol. MAX)

■ How to connect the extension cable for adjusting

Extension cord connecting method

■ Using the extension cords to connect the front panel with the main board

Remove the main board following the disassembly method. Then reattach the heat sink to main board.

1. Using the 2pin extension cord (EXTLX001-2p), connect the harness of the feed motor (L) assembly with the connector CN503 on the main board.
2. Using the 2pin extension cord (EXTLX001-2p), connect the harness of the feed motor (R) assembly with the connector CN504 on the main board.
3. Using the jig board (EXTLX002-SWPWB), its installing to the chassis, then using 4pin extension cord (EXTLX002-4P) connect the harness of the lifter detecting board with the connector CN704 on the board.
4. Connect the connector (EXTLX001-6PC) and extension wire (EXTLX001-6PF), connect the 6pin connector CN702 on the main board.
5. Connect the connector (EXTLX002-16PC) and extension wire (EXTLX002-16PF), connect the 16pin connector CN701 on the main board.

■ Extension cord list

EXTLX002-JIG : Kit including the following 8 extension parts.

No.	Parts number	Quantity	Description
1	EXTLX001-2P	2	2Pin, 30cm extension cord
2	EXTLX001-6PF	1	6Pin, 30cm flat wire
3	EXTLX001-6PC	1	6Pin x 2, interlocking connector
4	EXTLX002-16PF	1	16Pin flat wire
5	EXTLX002-16PC	1	16Pin, interlocking connector
6	EXTLX002-SWPWB	1	3 switch PWB
7	EXTLX002-4P	1	4Pin, 30cm extension cord

Besides the above kit, we offer the conventional extension cord for CD mechanism which are not essential to operation check or service. The mechanism should be directly connected to the board using the extension wire. EXTGS004-26P

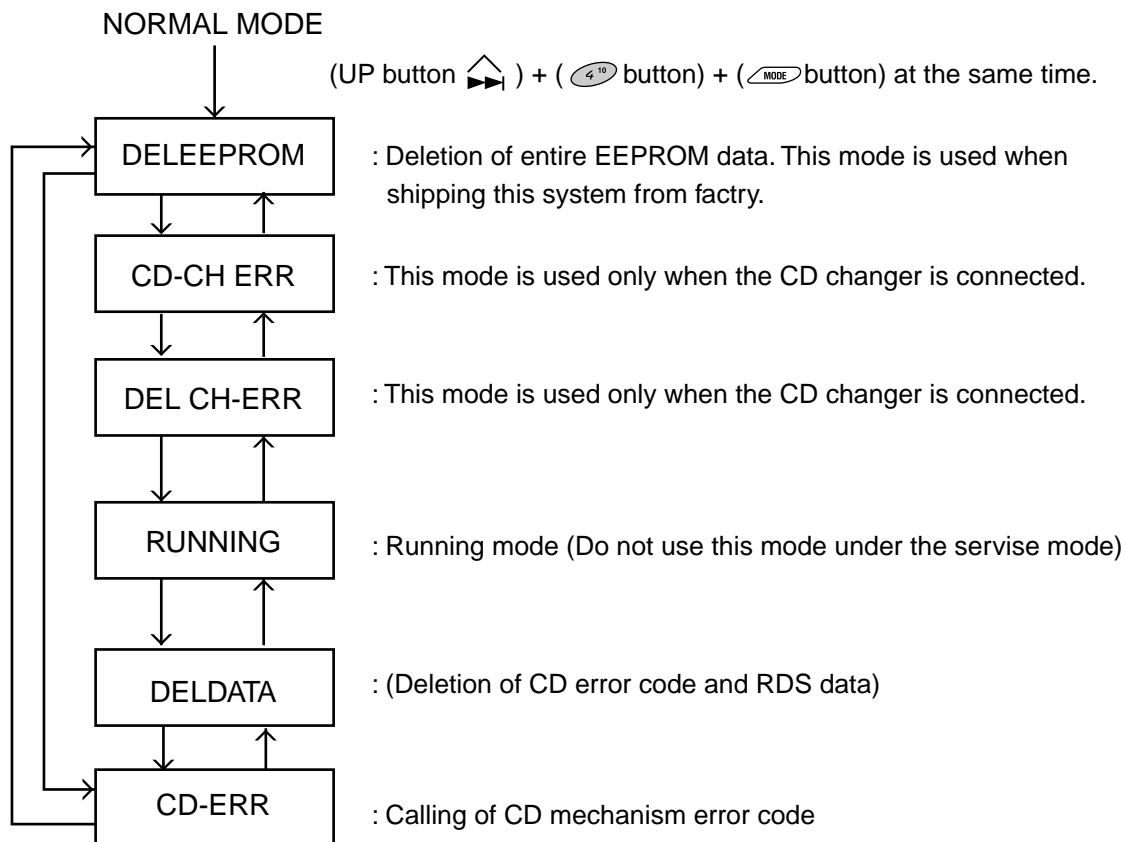

Functions of the mechanism under the service mode

With the three error modes stored in maximum in the internal memory of the mechanism in the body of this system, it is possible under the service mode to call the contents of error according to the following steps when any error has occurred.

Press the three buttons (UP button ) + (4 10 button) + (Func button ). Then it is possible to select the following service modes. After changing over to the service mode, press the UP button  and DOWN button  to change the mode. For executing the respective service modes, press the SEL button.

With the service mode 2, it is possible to call the error codes of the mechanism.

Data stored in EEPROM

1. RDS data
 2. CD mechanism error cord
 3. Station name (to be input by user)
 4. DISC name (to be input by user)
 5. AUX input name
- *Any data 3 to 5 above should not be deleted.

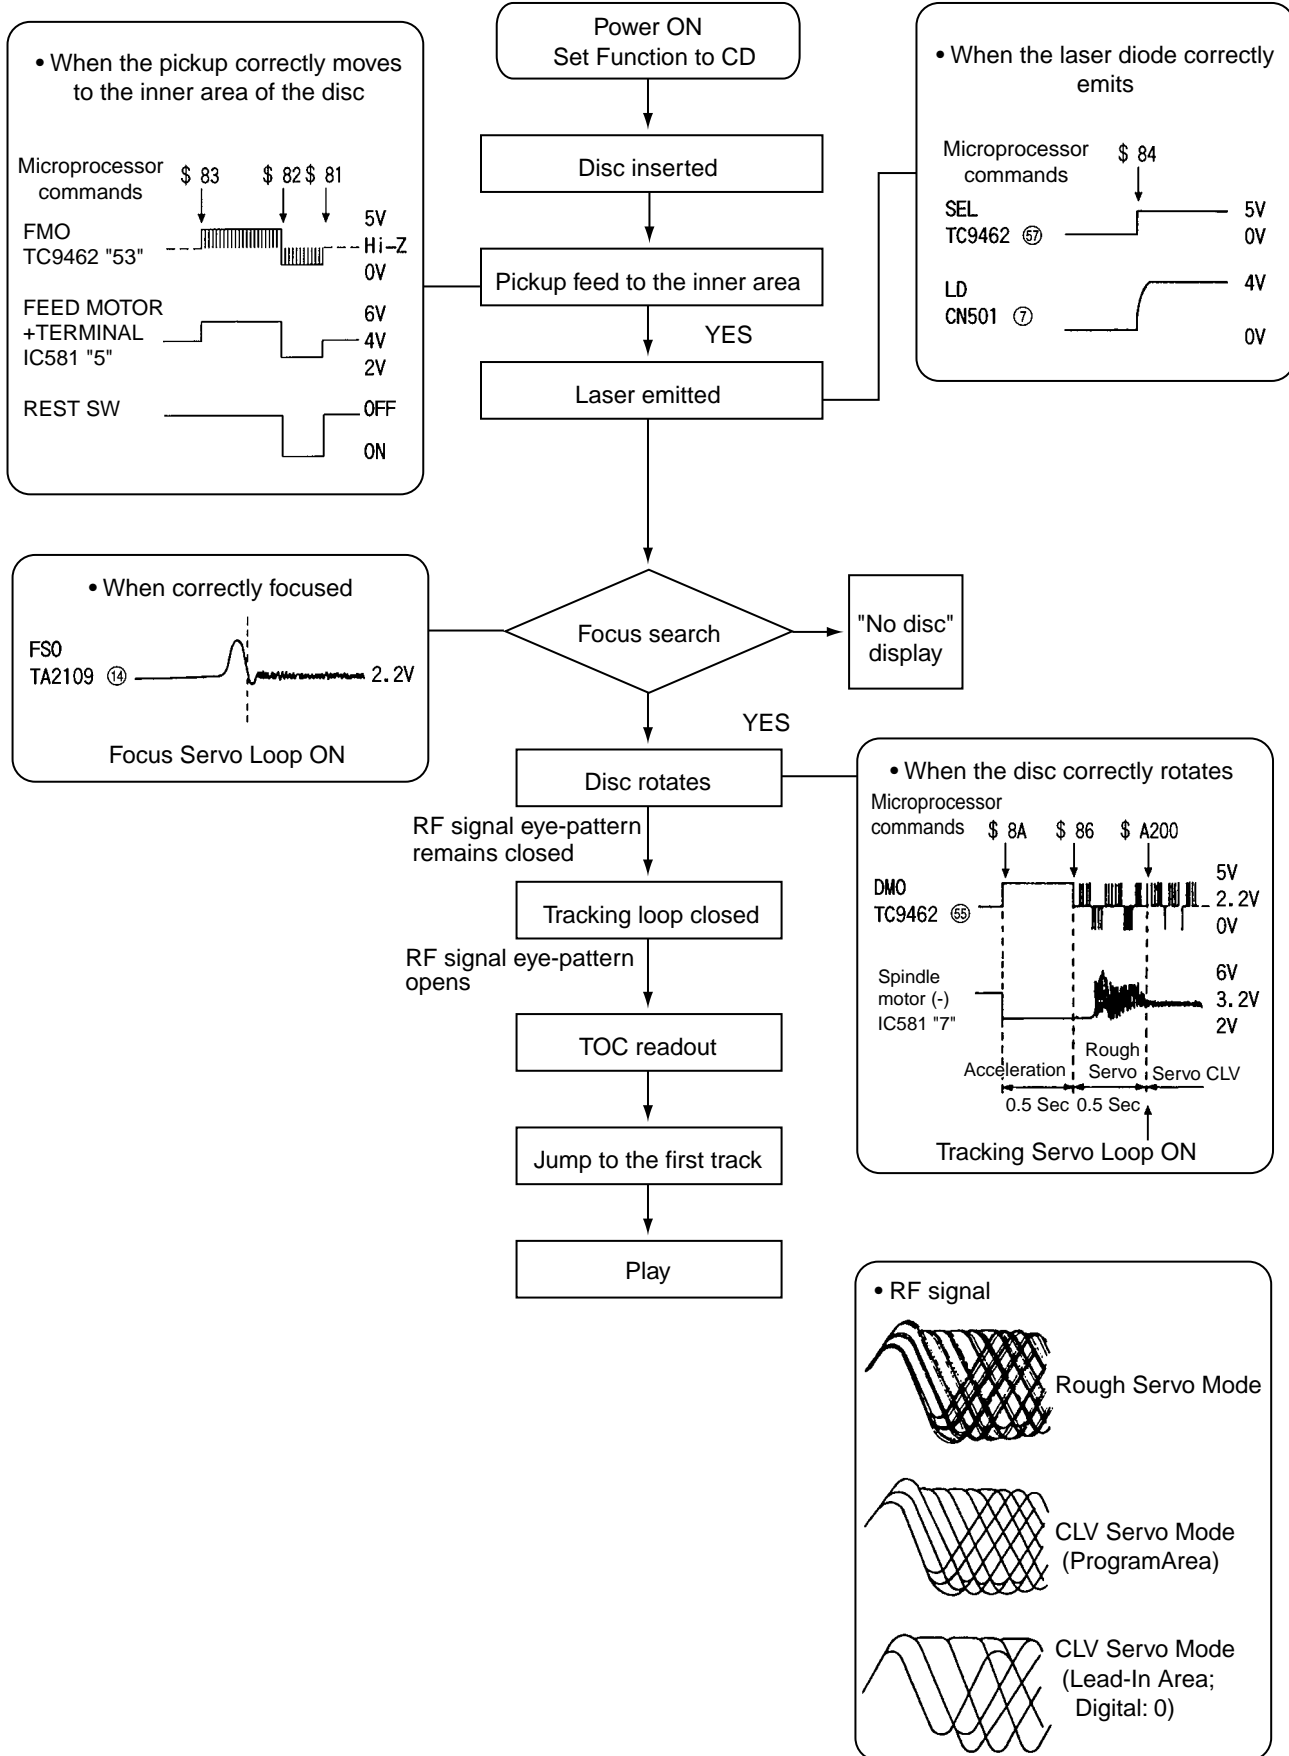

1. Display of mechanism error

Occurrence condition	Description	Error codes
Disc loading error	1. SW4 is not turned off. 2. SW3 is not turned on.	09 0011 09 0013
Eject error	1. SW# is not turned off.	01 0021
Error during standby for loading	1. In case SW2 has been positioned to "L" before starting loading during waiting for 15sec.	80 0031

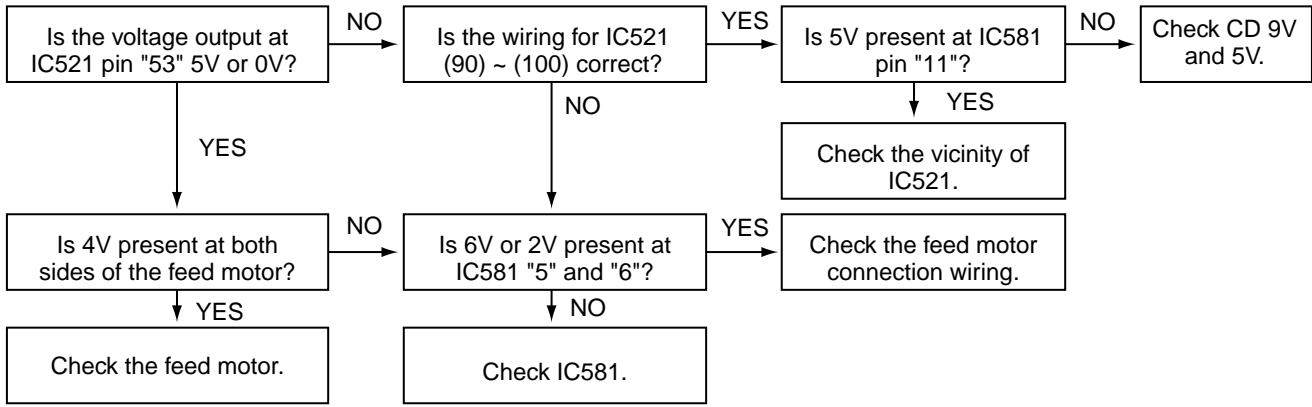

2. Display of CD error

Occurrence condition	Description	Error codes
Pickup feeding error 1. Inner peripheral feeding error (10sec.) 2. Outer peripheral feeding error (10sec.)	The pickup cannot returned to the inner peripheral, and the REST switch is not turned off. The pickup cannot be returned to the outer peripheral, and the REST switch is not turned off.	04 0051 04 0052
Focus search error In the case of focusing error after 3-way focus searching	In case the focus cannot be searched by one set of focus searching (3-way focus searching) after disc change and focus shock, judge that the focus searching system is in error.	81 0053
Tracking balance adjusting error In the case of time-over (1sec.) of timer	In case tracking balance cannot be adjusted even after elapse of 1sec. following execution of the adjusting command (TBA).	82 0054
TOC area searching error In the case of time-over (10sec.) of timer	In case TOC area searching is not ended even after elapse of 10sec.	82 0055
Reading error IN the case of time-over (30sec.) of timer	In case reading is not ended even after elapse of 30 sec. during TOC reading action.	84 0059
1st tracking access error In the case of time-over (10sec.) of timer	In case the first tracking access is not ended even after elapse of 10sec. following completion of TOC reading.	80 0060
Last tracking access error In the case of time-over (10sec.) of timer	In case the last tracking access is not ended even after elapse of 10sec. following completion of first tracking under the RUNNING mode.	80 0061
Q code reading error In the case of time-over (0.6sec.) of timer	In case the Q code cannot be read for 0.6sec. during playing TOC program area.	80 0062
TEXT data reading error	In case all TEXT data cannot be read.	80 0063

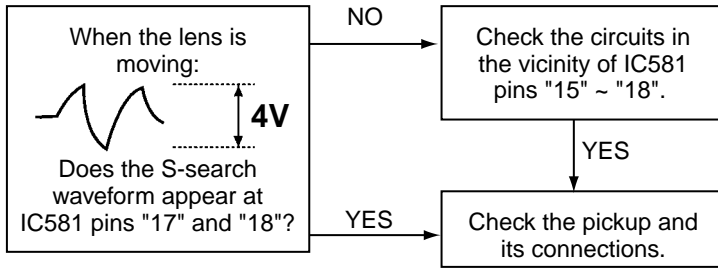

Flow of functional operation until TOC read

Maintenance of laser pickup

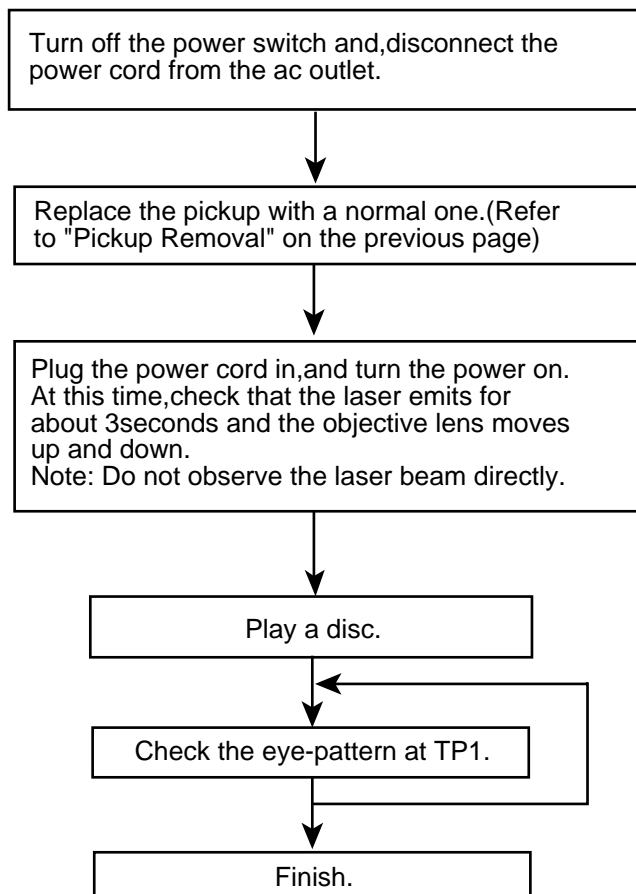

(1) Cleaning the pick up lens
 Before you replace the pick up, please try to clean the lens with a alcohol soaked cotton swab.

(2) Life of the laser diode
 When the life of the laser diode has expired, the following symptoms will appear.
 (1) The level of RF output (EFM output:amplitude of eye pattern) will be low.

Replacement of laser pickup

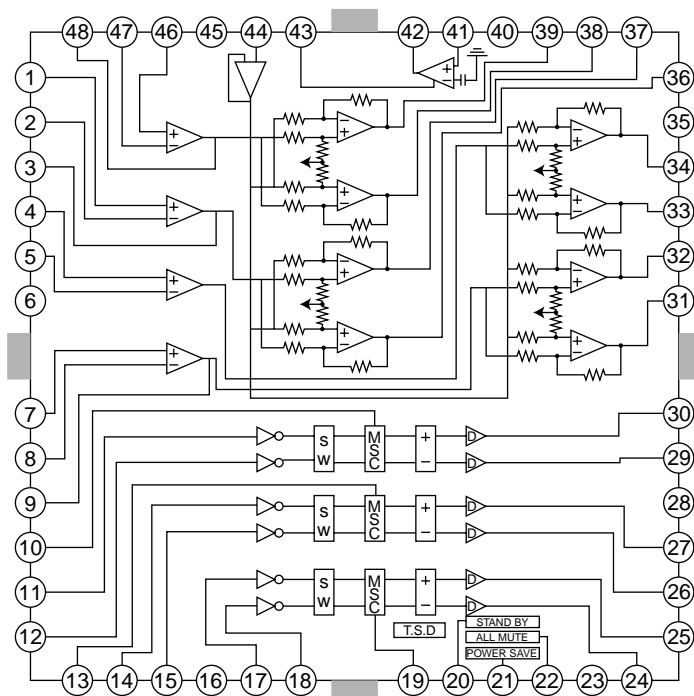

(3) Semi-fixed resistor on the APC PC board
 The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.
 If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.
 If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

Description of major ICs

30	SBAD	I	Sub-beam adder signal input terminal
31	TEI	I	Tracking error input terminal
32	TEZI	I	Tracking error signal zero-cross input terminal
33	FOO	O	Focus equalizer output terminal
34	TRO	O	Tracking equalizer output terminal
35	VREF	-	Analog reference power supply voltage terminal
36	RFGC	O	RF amplitude adjustment control signal output terminal
37	TEBC	O	Tracking balance control signal output terminal
38	SEL	O	APC circuit ON/OFF signal output terminal
39	AVDD3	-	Analog 3.3V power supply voltage terminal
40	FMO	O	Feed equalizer output terminal
41	DMO	O	Disc equalizer output terminal
42	Vss3	-	Digital GND terminal
43	VDD3	-	Digital 3.3V power supply voltage terminal
44	TESIN	I	Test input terminal
45	XVss3	-	System clock oscillator GND terminal
46	XI	I	System clock oscillator input terminal
47	XO	O	System clock oscillator output terminal
48	XVDD3	-	System clock oscillator 3.3V power supply voltage terminal
49	DVss3	-	DA converter GND terminal
50	RO	O	R-channel data forward output terminal
51	DVDD3	-	DA converter 3.3V power supply terminal
52	DVR	-	Reference voltage terminal
53	LO	O	L-channel data forward output terminal
54	DVss3	-	DA converter GND terminal
55	ZDET	O	1 bit DA converter zero data detection flag output terminal
56	Vss5	-	Microcontroller interface GND terminal
57	BUS0	I/O	Microcontroller interface data I/O terminal
58	BUS1	I/O	Microcontroller interface data I/O terminal
59	BUS2	I/O	Microcontroller interface data I/O terminal
60	BUS3	I/O	Microcontroller interface data I/O terminal
61	BUCK	I	Microcontroller interface clock input terminal
62	/CCE	I	Microcontroller interface chip enable signal input terminal
63	/RST	I	Reset signal input terminal
64	VDD5	-	Microcontroller interface 5V power supply terminal

HA13164 (IC961) : Regulator

1. Terminal layout

2. Block diagram

3. Pin function

Pin No.	Symbol	Function
1	EXTOUT	Output voltage is VCC-1 V when M or H level applied to CTRL pin.
2	ANTOUT	Output voltage is VCC-1 V when M or H level to CTRL pin and H level to ANT-CTRL.
3	ACCIN	Connected to ACC.
4	VDDOUT	Regular 5.7V.
5	SW5VOUT	Output voltage is 5V when M or H level applies to CTRL pin.
6	COMPOUT	Output for ACC detector.
7	ANT CTRL	L:ANT output OFF , H:ANT output ON
8	VCC	Connected to VCC.
9	BATT DET	Low battery detect.
10	AUDIO OUT	Output voltage is 9V when M or H level applied to CTRL pin.
11	CTRL	L:BIAS OFF, M:BIAS ON, H:CD ON
12	CD OUT	Output voltage is 8V when H level applied to CTRL pin.
13	ILM AJ	Adjustment pin for ILM output voltage.
14	ILM OUT	Output voltage is 10V when M or H level applies to CTRL pin.
15	GND	Connected to GND.

■ LA4743K (IC941) : Power amp

2. Terminal layout

3. Pin function

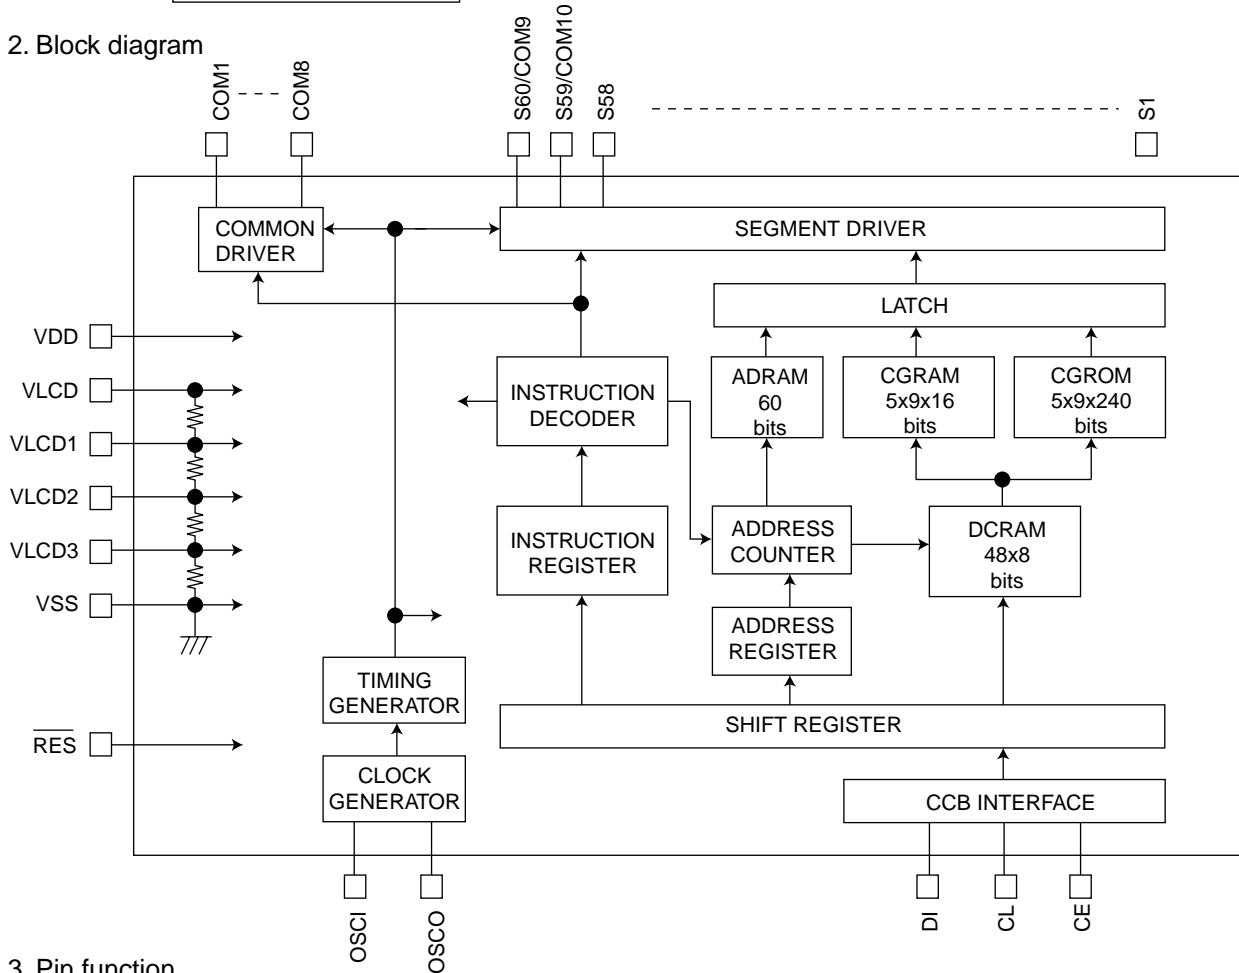

Pin No.	Symbol	Function
1	TAB	Header of IC
2	GND	Power GND
3	OUTRR-	Output (-) for front Rch
4	STBY	Stand by input
5	OUTRR+	Output (+) for front Rch
6	VCC1/2	Power input
7	OUTRF-	Output (-) for rear Rch
8	GND	Power GND
9	OUTRF+	Output (+) for rear Rch
10	RIPPLE	Ripple filter
11	INRF	Rear Rch input
12	INRR	Front Rch input
13	SGND	Signal GND
14	INLR	Front Lch input
15	INLF	Rear Lch input
16	ONTIME	Power on time control
17	OUTLF+	Output (+) for rear Lch
18	GND	Power GND
19	OUTLF-	Output (-) for rear Lch
20	VCC3/4	Power input
21	OUTLR+	Output (+) for front
22	MUTE	Muting control input
23	OUTLR-	Output (-) for front
24	GND	Power GND
25	NC	Non connection

■ LC75811W (IC602) : LCD driver

1. Pin layout

2. Block diagram

3. Pin function

Pin No.	Symbol	I/O	Function
1~58	S3~S60	O	Segment driver output terminal
59	COM0	O	Common driver output terminal
60~65	COM3~COM8	O	Common driver output terminal
66	COM1	O	Common driver output terminal
67	VDD	-	Power supply for logic section
68	VLCD	-	Power supply for LCD driver section
69~71	VLCD1~VLCD3	I	LCD voltage input terminal
72	VSS	-	Connect to ground
73	OSCO	O	Oscillation output terminal
74	OSCI	I	Oscillation input terminal
75	RES	I	Reset signal input terminal
76	CE	I	Chip enable input terminal
77	CL	I	Clock signal input terminal
78	DI	I	Serial data input terminal
79~80	S1~S2	O	Segment driver output terminal

■ **LC75823W (IC602) : LCD driver**

1. Pin Layout & Symbol

2. Pin Function

Pin No.	Symbol	I/O	Function
1 to 52	S1 to S52	O	Segment output pins used to display data transferred by serial data input.
53 to 55	COM1 to COM3	O	Common driver output pins. The frame frequency is given by : $t_0 = (f_{osc}/384)Hz$.
56	VDD	--	Power supply connection. Provide a voltage of between 4.5 and 6.0V.
57	\overline{INH}	I	Display turning off input pin. $\overline{INH} = "L"$ (Vss) ----- off (S1 to S52, COM1 to COM3="L") $\overline{INH} = "H"$ (VDD)----- on Serial data can be transferred in display off mode.
58	VDD1	I	Used for applying the LCD drive 2/3 bias voltage externally. Must be connected to VDD2 when a 1/2 bias drive scheme is used.
59	VDD2	I	Used for applying the LCD drive 1/3 bias voltage externally. Must be connected to VDD1 when a 1/2 bias drive scheme is used.
60	Vss	--	Power supply connection. Connect to GND.
61	OSC	I/O	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor at this pin.
62	CE		Serial data interface connection to the controller. CE : Chip enable
63	CL	I	CL : Sync clock
64	DI		DI : Transfer data

3. Pin function

Pin No.	Symbol	Function
1	Vcc/2	Vcc/2 output for microphone amp.
2	Amp+IN	Microphone amp. positive input terminal.
3	Amp-IN	Microphone amp. negative input terminal.
4	Amp OUT	Microphone amp. output terminal.
5	GND	Ground.
6	NC	Non connection.
7	VCA IN	VCA input terminal.
8	Vc	VCA control terminal.
9	VCA OUT	VCA output terminal.
10	Vcc	Power supply.

■ TA2147F-X (IC601) : Head amp

1. Pin layout & Block diagram

2. Pin function

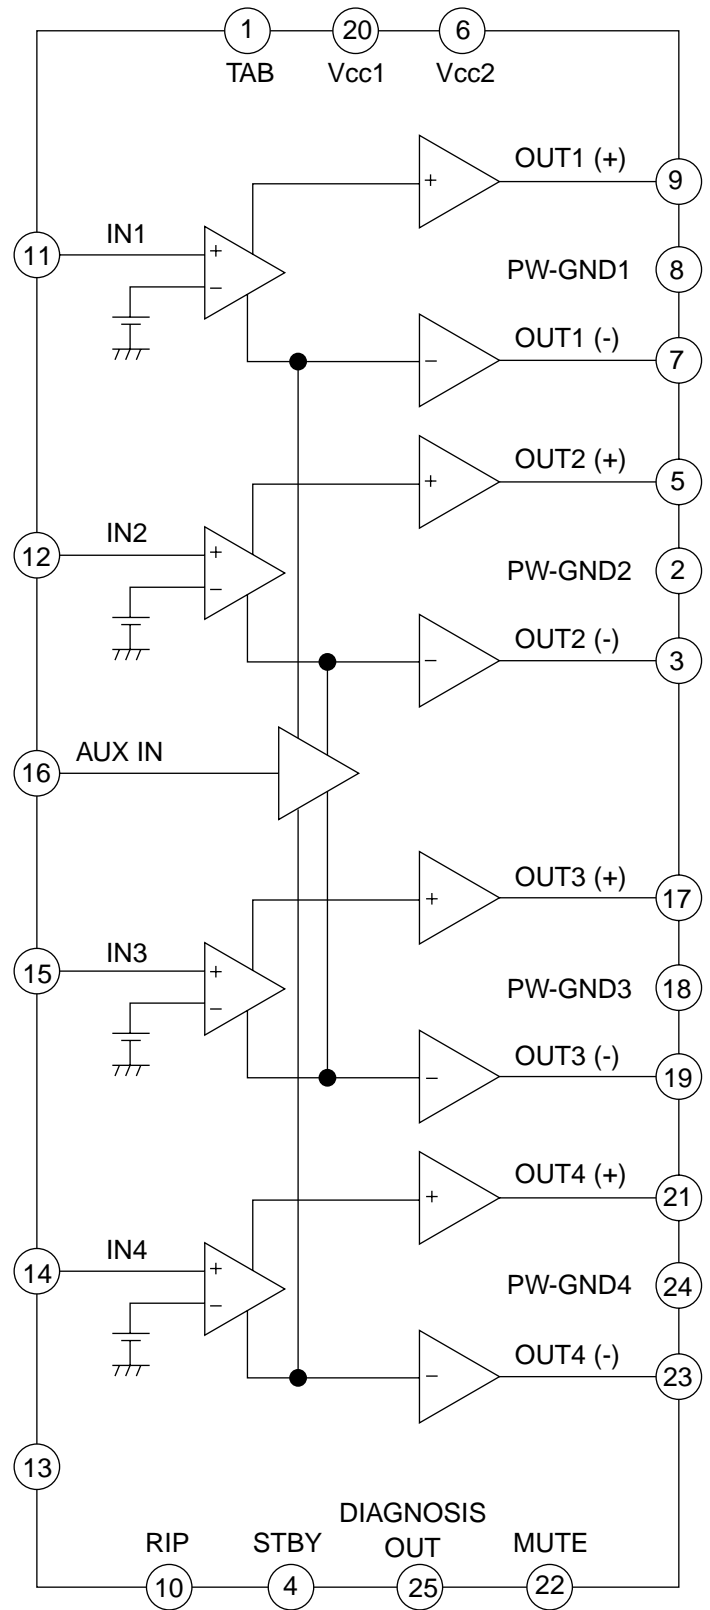

Pin No.	Symbol	I/O	Function
1	Vcc	-	3.3V power supply terminal
2	FIN	I	Main-beam amp input terminal
3	FPI	I	Main-beam amp input terminal
4	TPI	I	Sub-beam amp input terminal
5	TNI	I	Sub-beam amp input terminal
6	MDI	I	Monitor photo diode amp input terminal
7	LDO	O	Laser diode amp output terminal
8	SEL	I	APC circuit ON/OFF control signal, laser diode (LDO) control signal input or bottom/peak detection frequency change terminal
9	TEBC	I	Tracking error balance adjustment signal input terminal
10	TEN	I	Tracking error signal generation amp negative-phase input terminal
11	TEO	O	Tracking error signal generation amp output terminal
12	RFDC	O	RF signal peak detection output terminal
13	GVSW	I	AGC/FE/TE amp gain change terminal
14	VRO	O	Reference voltage (VRO) output terminal
15	FEO	O	Focus error signal generation amp output terminal
16	FEN	I	Focus error signal generation amp negative-phase input terminal
17	RFRP	O	Signal amp output pin for track count
18	RFRPIN	I	Signal generation amp input terminal for track count
19	RFGO	O	RF signal amplitude adjustment amp output terminal
20	RFGC	I	RF amplitude adjustment control signal input terminal
21	AGCIN	I	RF signal amplitude adjustment amp input terminal
22	RFO	O	RF signal generation amp output terminal
23	RFN	I	RF signal generation amp input terminal
24	GND	-	GND terminal
