

Question: Can I DIN Rail mount my STP-36 or STP-36 CJC?

Answer: Unlike the STP-37/C, the STP-36 and STP-36CJC do not come with the option of a DIN Rail mount case. However without much trouble, you can get the parts you need to do it yourself.

This can be accomplished by ordering the following Keithley part numbers that will all be part of a DIN Rail case for connection to a 35mm x 7.5mm DIN rail.

Quantity	Keithley part numbers
2	22587
2	22588
2	22589

These parts are from the Varioface line of Phoenix Contact.

When these parts are assembled, they will form a DIN Rail case around the STP-36 or STP-36CJC. Once the case is assembled, connection of the CAB-1284CC cable will be a tight fit. The lip of the DIN Case causes this, however, all of the connections on the cable will still make contact with the mating connector on the STP-36.

The other alternative would be to remove the portion of the lip of the case that is against the cable thus eliminating the tight connection.

Once the STP-36 has been enclosed in a case, it can be connected to a DIN Rail with the normal 'feet' attachments. These can be ordered from Keithley on part number: DIN-KIT.
