NOTE Indicates information that you should know.

See Indicates a reference to detailed information.

General Description

The SD009-PCR-LE package contains the following two software applications.

- Quick Immunity Sequencer 2 (QIS2)
- Wave Bank Memory (WBM)

Quick Immunity Sequencer 2

QIS2 is application software that uses the PCR-LE Series AC Power Supply to perform tests.

This software can simulate various phenomena that occur in AC power supply environments. It can be used to perform immunity tests with conditions that match the following standards on electrical and electronic devices that are connected to low frequency power distribution systems and on electrical and electronic devices that have a DC input power port. You can set test conditions that exceed the ranges defined in the standards, so this software can be used to perform preliminary tests before the tests for the standards, immunity allowance tests, and stress tests.

●Items that do not comply with the requirements of the standards

In QIS2, for test configurations that include hardware, there are items that do not comply with the requirements of the standards. For details, see the items of the appropriate specification.

●Data saving function

- You can save test conditions.
- You can save test results. You can specify the format of the test result file (text or comma-separated value).

Wave Bank Memory

WBM is application software that can be used to view and save the contents of the PCR-LE waveform banks.

Waveform banks are used in QIS2. Because the waveform data in the waveform banks will be overwritten, use WBM to view and save the waveform data that you have used on the PCR-LE.

- Reading data from waveform banks
- Transmitting data to waveform banks
- Saving data with a new file name
- Displaying waveforms
You can use the displayed waveforms to determine whether the load that is presently connected to the PCR-LE will be damaged.
- Specifying waveform banks (by number) and generating the waveforms in them from the PCR-LE
- Configuring PCR-LE panel settings (output voltage, frequency, and output on/off)
- Displaying an operation log

Test configuration

Hardware to use

The hardware to use is listed below.

■ PCR-LE Series AC Power Supply

■ IT01-PCR-L Immunity Tester

We recommend that you use the IT01-PCR-L in IEC61000-4-11 (voltage dips, short interruptions, and voltage variations) tests.

The IT01-PCR-L only supports the GPIB interface.

When you use the IT01-PCR-L:

- The standard's specifications for the voltage generator's voltage rise and fall times (1 μs to 5 μs) will be met. The voltage rise and fall times will be approximately 30 μs if you do not use the IT01-PCR-L.

■ PCR-LE interfaces

If you want to use an interface other than RS-232C, you need to use one of the following optional interfaces.

Interface	Optional interface board
GPIB	IB05-PCR-LE
USB	US05-PCR-LE
LAN	LN05-PCR-LE

Single-phase/three-phase operation

This section gives an outline of the single-phase/three-phase operation of the PCR-LE Series AC Power Supply. For details on how to connect the devices, see the operation manuals of the following products.

- PCR-LE Series AC Power Supply
- IT01-PCR-L Immunity Tester
- IB05-PCR-LE GPIB interface
- US05-PCR-LE USB interface
- LN05-PCR-LE LAN interface
- 2P05-PCR-LE Single-phase three-wire output driver
- 3P05-PCR-LE Three-phase output driver

■Single-phase two-wire operation 2

■Single-phase three-wire operation 1

■Three-phase three-wire operation 2

■Three-phase operation 1

■ Three-phase operation 2

CAUTION Risk of malfunction. Turn the IT01-PCR-L on and off only when the PCR-LE output is off.

VISA driver

To use the SD009-PCR-LE, you must install a VISA driver.

CAUTION Do not install multiple different VISA drivers, because they may not operate properly.

NOTE

- VISA
VISA (Virtual Instrument Software Architecture) is a standard developed by the VXIplug&play Systems Alliance that defines software specifications for communicating with instruments from a PC.
- VISA driver
A VISA-compliant driver software.
- KI-VISA
Kikusui original VISA driver compatible with VXIplug&play VISA.

The required VISA driver varies depending on the I/O interface that you want to use. Refer to the table below to select the VISA driver that you require.

VISA driver	Version and where to obtain the driver
KI-VISA	KI-VISA version 5.0.5 or later From the software CD-ROM or from the KIKUSUI Website
NI-VISA	Version 5.0.3 or later From the CD-ROM provided with the GPIB card or from the National Instruments Website
Agilent IO Libraries	Suite 16.1 or later From the CD-ROM provided with the GPIB card or from the Agilent Technologies Website

- If you want to use the USB interface, you can use any of the VISA drivers. However, you have to check the license conditions of each VISA driver.

- If you want to use the GPIB interface, you have to use the correct VISA driver. Otherwise, you will not be able to use the GPIB interface at all.
- KI-VISA supports the following GPIB models.

CONTEC CO.	GP-IB(PCI)L, GP-IB(PM), GP-IB(PCI)F, GP-IB(CB)F (we recommend API-GPIB driver version 4.01 or later) If you are using a GPIB card manufactured by CONTEC CO., use the normal API-GPIB driver, not the API-GLV driver (which is compatible with LabVIEW and the NI-488.2M API).
Interface Corporation	A PCI-4301 LabVIEW compatible version (we recommend GPC-4301 N driver version 1.21 or later) If you are using a GPIB card manufactured by Interface Corporation, use the GPC-4301N (which is compatible with LabVIEW and the NI-488.2M API), not the normal GPC-4301 driver.
National Instruments Corporation	GPIB-ENET/100, GPIB-USB-B, GPIB-USB-HS, or PCI-GPIB (NI-488.2M version 2.73)
Agilent Technologies	82350 (PCI-GPIB) (When using IO Libraries Suite 15.5, Agilent 488 option)

Configuring the PCR-LE interface

Refer to the PCR-LE communications interface manual to configure the interface that you want to use.

Starting the application software

The SD009-PCR-LE package contains the following two software applications. You cannot run both of these applications at the same time. You also cannot run multiple instances of the same software at the same time.

- Quick Immunity Sequencer 2
- Wave Bank Memory

Starting Quick Immunity Sequencer 2

1 To start QIS2, on the taskbar, click Start, All Programs, Kikusui Quick Immunity Sequencer 2, and then Quick Immunity Sequencer 2.

If the software fails to communicate with the PCR-LE immediately after QIS2 starts, the I/O Configuration dialog box is displayed. If the communication with the PCR-LE is successful, the configuration up to [step 2](#) is performed automatically.

QIS2 determines single-phase or three-phase from the connection and displays the appropriate dialog box.

Single-phase connection

Three-phase connection

■ If the device's ID string could be retrieved

Select an ID from the list, and click OK.

For USB, GPIB and LAN the string "USB", "GPIB" or "TCPIP" is displayed together with the retrieved strings.

Example: USB0::0x0B3E::0x1015::12345678::INSTR

■ If the device's ID string could not be retrieved

Check the interface cable, VISA setup and PCR-LE test configuration, and then start again from [step 1](#).

NOTE

If you are using the LAN interface with KI-VISA, the PCR-LE ID string may not be displayed in the list. In this situation, on the taskbar, click Start, Kikusui IO Software, KI-VISA, and then Instrument Explorer to start the Instrument Explorer. Then, click KI-VISA IO Config, select the LAN tab, and then click Search Instruments.

■ To use the IT01-PCR-L

Select the Use IT01-PCR-L check box.

When you are using the IT01-PCR-L, you have to turn the PCR-LE's output off to change the IT01-PCR-L settings.

■ Simulation

If you select the Simulation check box, you can simulate the operation of QIS2 without connecting it to a PCR-LE. You can select single-phase (1P) or three-phase (3P). In this manner, QIS2 can be used for demonstration.

2 QIS2 starts.

Starting Wave Bank Memory

1 To start WBM, on the taskbar, click Start, All Programs, Kikusui Quick Immunity Sequencer 2, and then Wave Bank Memory.

If the software fails to communicate with the PCR-LE immediately after WBM starts, the I/O Configuration dialog box is displayed. If the communication with the PCR-LE is successful, the configuration up to [step2](#) is performed automatically.

■ If the device's ID string could be retrieved

Select an ID from the list, and click OK.

For USB, GPIB and LAN the string "USB", "GPIB" or "TCPIP" is displayed together with the retrieved strings.

Example: USB0::0x0B3E::0x1015::12345678::INSTR

■ If the device's ID string could not be retrieved

Check the interface cable, VISA setup and PCR-LE test configuration, and then start again from [step1](#).

■ Simulation

If you select the Simulation check box, you can simulate the operation of WBM without connecting it to a PCR-LE. In this manner, WBM can be used for demonstration.
