On-line camera manual library

This is the full text and images from the manual. This may take 3 full minutes for the PDF file to download.

If you find this manual useful, how about a donation of \$3 to: M. Butkus, 29 Lake Ave., High Bridge, NJ 08829-1701 and send your e-mail address so I can thank you. Most other places would charge you \$7.50 for a electronic copy or \$18.00 for a hard to read Xerox copy.

This will allow me to continue to buy new manuals and pay their shipping costs. It'll make you feel better, won't it? If you use Pay Pal or wish to use your credit card, click on the secure site on my main page.

Velox now identifiable

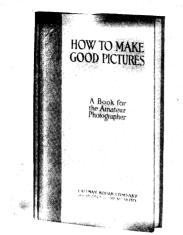

TO protect Kodak amateurs, and to protect Developing and Printing houses that endeavor to give their customers the best possible results, we have made Velox paper identifiable. The trade name "Velox" is printed, faintly, on the back of every sheet. Look for it.

Insist on Velox—the paper that exactly meets the requirements of amateur negatives—and know you're getting the best results possible from your films.

The Velox Book tells the working of a simple paper in simple terms—a valuable photographic help. Free from us or your dealer.

EASTMAN KODAK COMPANY Rochester, N. Y.

A PRACTICAL book for the amateur. It describes in a simple, understandable way every phase of photography that the amateur is likely to be interested in, such as developing, printing, etc. Profusely illustrated.

EASTMAN KODAK COMPANY At your dealer's Rochester, N. Y.

"KODAKERY"

A monthly magazine that teaches how to make better pictures, will be sent FREE OF CHARGE to anyone who obtains one of these amateur cameras, if this blank is filled out and sent to us within 30 days from the date the camera was received. The magazine will be sent for one year only on this offer, after that the subscription price will be sixty cents for one year or one dollar for two years, but you are not under the slightest obligation to renew.

EASTMAN KODAK COMPANY.

TO THE EASTMAN KODAK COMPANY, ROCHESTER, NEW YORK:

Accepting your offer, please put my name on the mailing list for "KODAKERY" (with the understanding that there is to be no cost to me), I having obtained a

Form No. 513.26.

Print your name and address plainly:

Order Film by Number

All Kodak Films are distinguished by the numbers on the ends of the cartons.

120 is the number of film for the No. 2 Cartridge Hawk-Eye Camera.

The number appears on the carton, on the cartridge, and on the camera.

Before Loading

B^{EFORE} taking any pictures with the No. 2 Cartridge Hawk-Eye Camera read the following instructions carefully. Make yourself familiar with the camera, taking especial care to learn how to operate the shutter (see page 12).

The first and most important thing for the beginner to bear in mind is that the light, which serves to impress the photographic image upon the sensitive film in a fraction of a second when it comes through the lens, can destroy the film as quickly as it makes the picture.

Loading the No. 2 Cartridge Hawk-Eye Camera

THE No. 2 Cartridge Hawk-Eye Camera can be loaded and unloaded in daylight. These operations should be done in a subdued light, *not* in the direct sunlight. Use film No. 120 for the No. 2 Cartridge Hawk-Eye Camera.

To Load

1. Push over the spring catches A-A, see Fig. I.

2. Pull up the winding key as shown in Fig. II.

3. Remove the roll holder, as in Fig. III.

It will be seen that at each forward corner, there is a recess to hold a spool of film.

There is an empty spool in the recess on the winding side; this is to be used as the reel.

The winding side may always be distinguished by the round opening in the roll holder, directly behind the exposure lever. The winding key is inserted in the reel through this opening.

Fig. III

4. Insert the spool of film in the recess opposite the winding side, drawing out one of the spring grips just enough to permit the spool to drop into place, as shown in Fig. IV.

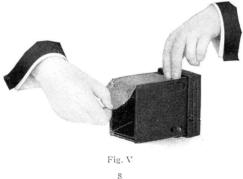

6

4

Fit the spool pins into the holes at each end of the spool, so the spool of film will revolve upon the pins.

Important

When inserting the spool of film, be sure to get the word "TOP," which is printed on the protective paper near the top of the spool, next to the side of the roll holder. which has the round opening through which the key is inserted in the reel; otherwise the film will come on the wrong side of the pro-

tective paper, when reeled off, and total failure will result

5. Remove the white band that holds the protective paper; pass the paper over the rollers and across the opening in the back of the roll holder (Fig. V). Unfold the end of the protective paper and thread it through the longer opening of the slit in the reel as far as it will go, as shown in Fig. VI, being

Fig. VI

very careful to have the paper drawn straight and true. Give the spool two or three forward turns to make the paper hold securely on the spool.

Caution

If too much of the protective paper is turned off, before the camera is closed, some of the film will be uncovered, fogged and ruined.

6. The camera must now be closed. When re-inserting the roll holder in the outside box remember that it must be inserted so that the slotted end of winding reel which shows through the round hole in the roll holder, will come next to the winding key in the outside box. Make sure that the two catches A-A illustrated in Fig. I, page 5, are securely fastened.

Fig. VII

7. Press in, and at the same time turn the winding key until it fits into position, the web at lower end of the key fitting into the slot in the spool end. Fig. VII.

8. Turn the key for about fifteen turns until a warning hand appears in the red window, then turn slowly until the figure 1 appears in the center of the window.

The film is now in position for the first picture.

Press in the winding key slightly when turning it to make sure that the web on the key stays within the slot in the top of the spool.

11

Making the Exposures "Snapshots"

THE No. 2 Cartridge Hawk-Eye Camera is a fixed-focus camera, therefore, objects nearby and at a distance will be sharp. Subjects that are about eight feet and farther from the camera will be sharp, and objects as near as six feet, while not as sharp, will be sharp enough for all practical purposes. Do not attempt to take pictures of subjects nearer to the camera than six feet, without using a Kodak Portrait Attachment, see page 19.

The shutter of this camera is released by pushing the exposure lever B (Fig. I), either up *or* down with the thumb. Push the lever *slowly* and in one direction only.

If the lever stands at the top of the slot simply push it to the bottom and *vice versa*.

If the lever is not pushed all the way to the other end of the slot, the shutter will not move, no "click" will be heard and no exposure made. Push the lever as far as it will go.

When making snapshots, the subject should be in the broad, open sunlight, but the camera must not. The sun should be behind the back or over the shoulder of the operator. If it shines directly into the lens it will blur and fog the picture.

Fig. II

Point the camera at the subject to be photographed and looking into the finder from directly over it, include what you want by changing the direction of the lens.

Only the objects that show in the finder will show in the picture.

All being ready:

Hold the camera steady and level as shown in illustration (Fig. II) and push the exposure lever B (Fig. I, page 13) once, as far as it will go. This makes the exposure. The exposure lever must be pushed *slowly*. If the camera is not held steadily the picture will be blurred.

Turn a New Section of Film into Position

Press in the winding key slightly and turn it slowly until the next number appears in the center of the red window.

The warning hand appears only before No. 1.

Repeat these operations for each exposure.

Important When making snapshots with any camera, hold it firmly against the body

as shown. When pushing the exposure lever, hold the breath for the instant.

Hold Camera Level

The camera must be held level. If all of the subject cannot be included in the finder without tilting the camera upwards, move backwards until it is all included with the camera held level.

6

Fig. III EFFECT PRODUCED BY TILTING THE CAMERA

Tilting the camera to bring in the top of a tall building produces the distorted effect shown in Fig. III. Sometimes a tall building can be photographed from a building opposite, at a level with the center of the subject.

If the subject is low like a small child or a dog, the camera should be held down level with the center of the subject.

Kodak Portrait Attachment

The Kodak Portrait Attachment is an extra lens, which, when slipped in the lens opening in the front of the camera, makes large head and shoulder portraits.

Place the Attachment in the lens opening. Compose the picture in the finder. The subject must be $3\frac{1}{2}$ feet from the lens.

The Attachment can also be used when making pictures of flowers and similar subjects.

Use *Kodak Portrait Attachment No. 1* with the No. 2 Cartridge Hawk-Eye Camera (Model C).

18

19

Kodak Diffusion Portrait Attachment

The Kodak Diffusion Portrait Attachment is a supplementary lens used in exactly the same manner as the regular Kodak Portrait Attachment. It produces a true, soft-focus effect free from objectionable "fuzziness" or out-of-focus appearance. By using this Attachment, portraits are made more artistic, due to the softening effect of diffusion.

With the No. 2 Cartridge Hawk-Eye Camera (Model C), use a Kodak Diffusion Portrait Attachment No. 1.

Removing the Film

 $T^{\rm HIS}_{\rm in \ daylight.}$ These operations should be done in a subdued light, not in direct sunlight.

It is a good plan to reload the camera as soon as an exposed film has been removed, to be ready for the next pictures.

1. When the last section of film has been exposed, give the winding key about eighteen extra turns. This covers the film with protective paper again.

2. Provide another spool of film (No. 120) to fit the camera, then in a subdued light, remove the roll holder as described on pages 5 and 6.

3. Hold the ends of the protective paper and the sticker together to prevent the paper from loosening on the reel. Draw out one of the spring grips just enough to release the spool and lift out the roll of exposed film, Fig. I, page 22. If the sticker has been wound under the roll, revolve the spool to bring it up.

4. Fold over about half-an-inch at the end of the protective paper (to make subsequent breaking of the seal easy), and then fasten with the sticker.

5. Wrap up the exposed film immediately to prevent the possibility of light being admitted. The roll of film is now ready for developing and printing.

6. Now transfer the empty spool to the recess on the winding side. The slotted

end of the spool should come next to the key hole.

7. Load as described on pages 5 to 11 inclusive.

Important

Film should be developed as soon as possible after exposure. The quality of the image on all sensitized products is retained by immediate development after exposure.

"Cinch" Marks

If the film and paper loosen up a trifle when taken from the camera, there is an inclination to take the cartridge in the hand and wind it as closely as possible, "cinching" it tightly with a twisting motion. There's nothing more likely to injure the negatives than this tight drawing of the film, as it rubs the surface, making fine parallel scratches running lengthwise of the film, which in some cases will ruin the negatives. Do not "cinch" the cartridge. It simply needs to be wound tightly enough to keep the protective paper within the flanges of the spool.

Keep Dust Out of the Camera

It is advisable to wipe out the inside of the camera occasionally with a slightly damp cloth, especially if the camera has not been used for some time.

Load your Hawk-Eye with Kodak Film. Look for this Trade Mark on the box:

"If it isn't Eastman, it isn't Kodak Film."

Finishing the Pictures

THERE are two distinct steps in the making of photographs—the picture *taking* and the picture *finishing*. To free our instruction books from all unnecessary details, which might be confusing, we furnish with the camera the directions for *picture taking* only.

The instructions in this booklet are ample for the handling of the camera under practically all conditions. Similarly, those who wish to do their own developing and printing will find equally full instructions accompanying the Kodak Film Tanks (for developing in daylight), or our Outfits for tray or darkroom use.

To develop film (No. 120) used in the No. 2 Cartridge Hawk-Eye Camera, obtain, preferably, a "Brownie" Kodak Film Tank. The film may be developed in the larger tanks, but not so economically.

The film (No. 120) may also be developed in daylight in the No. 2 Brownie Developing Box; the method of developing film in the Box is different than when using the Tank. If dark-room development is preferred, an Eastman A B C Developing and Printing Outfit should be obtained.

In keeping with our plan and purpose to provide the users of our cameras with every help in the production of good pictures, we will be glad to furnish such developing and printing instructions at any time, whether a tank or outfit is purchased or not.

With the Kodak Film Tank and Velox paper many amateurs find as great pleasure in the finishing of the pictures as in the taking of them, and are able to produce, by the simple methods we have perfected, work of the highest order.

We never lose interest in the user of a Hawk-Eye Camera. We are not only willing but are anxious at all times to help solve any problems that may be encountered, either by sending the necessary printed instructions or by individual correspondence, through our Service Department. Making use of the knowledge of our experts places you under no obligation. Kodak Service is free—and goes with every Kodak or Hawk-Eye Camera.
