

Close to You

MAUER Locking Systems offers 'More for less'

As a specialist manufacturer of builders hardware, safety locks and cylinders we are innovative and have complete control over our production. We are competitively priced and listen to the needs of our customers.

With the motto 'Close to You'

MAUER Locking Systems wants to work closely with our dealers and we offer substantial support where ever it is needed. Through the support of our dealers in 10 years we have developed into the company that we are today... that is well respected, innovative, quick and passionate about meeting our customers needs.

Own Production line

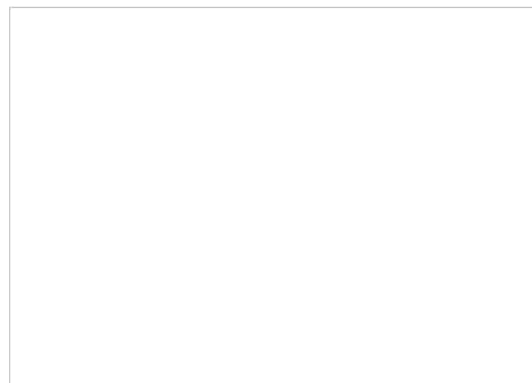

Since 1999 MAUER Locking Systems is located in Amersfoort where besides European sales, also the assembly is located. Products are created with own engineering and produced in Bulgaria, where MAUER Locking Systems have their own production facility.

Makes a difference

MAUER Locking Systems makes a difference by continuously introducing innovations on the market which directly fill in the needs of safety, efficiency, luxury and user comfort today.

- Campings
- Theatres
- Stores en Shopping Centres

MAUER electronic Cam-Lock:

This very compact lock has a modern design and many unique features and benefits. The ergonomic handle is easy to use and can also be used as a grip for the door. The green lens under the handle is easy to see and clearly indicates if the lock is free or occupied. The lock has 2 master codes; the first code can be used in the situation where the user has forgotten the code and the second code is a special one which leaves the user code in function.

Very simple mounting

The measurements of the Cam-Lock makes retrofit with standard Cam locks easy. Locker systems with key locks can be easily changed for ELL CAM without additional costs.

Benefits:

- Compatible with normal cam locks
- 4-digit pin code, changeable every time
- 6-digit 1e master code, for safety openings
- 6-digit 2e master code, for safety / privacy openings
- Penalty time after 4 wrong opening codes
- Emergency power by means of a 9 volt battery connection on the keypad
- Minimal 15.000 openings per (alkaline) battery
- Extreme low energy consumption
- Circuit board (pcb) with microprocessor, based on SMD technology.

User-friendly:

- Locker locks are independent from other lock systems (stand alone)
- No key management necessary
 - Responsibility with managers and users
 - Turn grip = Locking
 - Quick view on free lockers because of the green lens
 - Undesired reservation of lockers to be solved with master code
 - Master code can easily be changed
 - Solid construction
 - Successful testing results under extreme conditions
