

EAS Solutions • *Easiest to Install*

Features:

- **New** – Designed for the small cable operator
- **Lower cost 50/71/78/100/120 Channel Comb Filter Generator**
- **Compatible With All Headends**
- **Meets FCC Requirements**
- **Improved Picture Quality**
- **Up to 3 internal AM/FM/NOAA Radios**
- **Internal Character Generator**
- **Digital Solutions including SCTE 18 (DVS-644) and DVS-168**

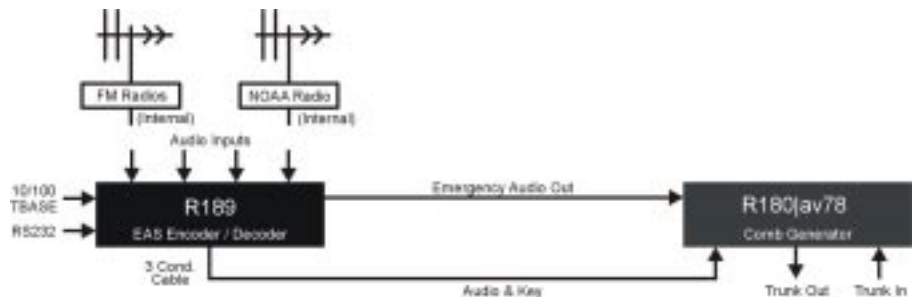

“The Complete Comb Filter Generator System”

Monroe Electronics introduces the new R180/AV78 Comb Filter Generator, which was developed in conjunction with Idea/onics, the masters of CATV comb generators. Many new features and a new lower cost make this an ideal full screen replacement EAS solution for systems under 78 channels, who want the easiest to install.

This complete system contains the Monroe One Net Encoder/Decoder, which was designed to meet the FCC's mandate for cable television system compliance with the Emergency Alert System rules. It can receive both national and local messaging via internal AM/FM or NOAA radios. The internal Character Generator creates a videotext of the EAS message as well as passing the EAS data bursts, alert tones and the EAS message audio to the Monroe R180/AV78 Comb Filter Generator. The R180/AV78 with New “Lynkisor” circuitry makes the inherent beats near invisible. Adapted for digital cable programming with the guard band (71MHz – 76MHz) baseline noise level greater than 40dB down. No additional filtering required. It also meets all FCC aeronautical band offset requirements. Complete with a two-year warranty.

(Note: Monroe has other Comb Generator Solutions available in 50/71/78/100/120 channel configurations)
