MONROE ELECTRONICS

LAN to RS485

model
R184/98

Specifications

Input: ETHERNET 10/100 BASE T

Output: RS485, simplex

Unit Power Requirement

Power Module Included.
Requires 110 VAC 60 Hz

Features

- **Includes LAN-RS485 Converter**
- **Wiring and Connectors Included**
- **Installation CD and Software included for all supported products.**
- **Supported products include R184 16X1 RF switch, R165 and R174 A/V switch panels**

Description

This device allows the local control of a model R184 16X1 RF switch, both as a single unit and in a multiple matrix configuration, from any Windows based computer via a LAN. Using the included software, the operator can control in real time - with options for scanning input ports - all aspects of the R184.

Control of one or more R165 or R174 A/V switch panels is also accomplished with this device.
