Service Software

General

To run the After Sales SW, a parallel port software protection device (PKD–1) has to be connected. TDF–4 box must connected to PC for flashing purposes. The user can use PC–locals functions in modules for testing NSC/W-1 mobile stations (MS). The test functions send test messages from PC to MS and receive results and show them in the PC display. The messages can be sent via M2BUS or FBUS.

Note: if this software is to be run on laptops, the power saving feature MUST be switched off.

Hardware requirements for Windows 3.1x

The recommended minimum hardware standard to run Service Software is any computer which is 386 33 MHz or greater with at least 4 MB of memory and VGA type display (640 x 480). This assumes that only the WinTesla with After Sales Support Modules is active, i.e. other Windows packages are not running in the background.

Hardware requirements for Windows 95

The recommended minimum hardware standard to run Service Software is any computer which has Pentium processor, memory 8 MB and meets HW requirements recommended by Microsoft.

Software Environment of the Support Modules

The Service Software user interface is intended for the following environments: Microsoft Windows 3.1x (enhanced mode) and Windows 95environment running in enhanced mode. Support for Microsoft NT may be added, if required. Detailed information about Windows and application usage can be found from the Microsoft Windows Version 3.1 Users Guide chapter one (Windows Basics) and chapter two (Application Basics).

As an ordinary Windows application, the main idea in the user interface is that selections are made with menus, push buttons and shortcut keys. Selections can be done by using keyboard and/or mouse. There is always a status bar displayed at the bottom of the main window which contains information about current actions.

Required Servicing Equipment

- Computer: At least IBM 80386 or compatible with one unused serial port (COM1 or COM2)^{*)}, one parallel port (LPT1), hard disk recommended
- Operating System: DOS Version 3.2 or later
- If PCLStart in use: DOS 6.22 and IBM 80486 or compatible
- Display: VGA type display (640 x 480)
- Service software version for 3.5" disk (product code: 0774099)
- Software protection key PKD-1 (product code: 0750018)
- Service MBUS Cable DAU-9P (product code: 0730109)
- Audio cable ADS-1 (product code: 0730011)
- External Antenna Cable XRC-2 (product code 0730180)
- Modular T-adapter (product code: 4626134)

*) Note: A number of PC's of an older generation use the Intel, National Semiconductor, or United Microelectronics IC 8250 as the serial port UART. This is a comparatively inefficient circuit for current purposes and does not necessarily support the M2BUS adapter at 9600 baud. The newer UART's NS16450 and NS16550AF of National Semiconductor offer solutions for these problems.

Installation

Mechanical Connections

- Caution: Make sure that you have switched off the PC and the printer before making connections.
- Caution: Do not connect the PKD–1 key to the serial port. You may damage your PKD–1 !

The software controls the phone via a separate adapter connected to the serial port of the PC, and to the telephone's M2BUS (DAU–9S).

Attach the dongle PKD-1 to the parallel port 1 (25-pin female D-connector) of the PC. When connecting PKD-1 to the parallel port, be sure that you insert the computer side of the PKD-1 to the PC (male side). If you use a printer on parallel port 1, install the PKD-1 between the PC and your printer cable.

The PKD–1 should not affect devices working with it. If some errors occur (errors in printing are possible) please try printing without the PKD–1. If printing is OK without the PKD–1 please contact your dealer. We will offer you a new PKD–1 in exchange for your old one.

Installing the Software on PC Hard Disk

The program is delivered on a diskette and is copy protected with a dongle PKD–1. It must be present in parallel port when using Service software.

The program can also be installed on the hard disk, which is recommended to obtain a maximal data access rate.

Keep the original diskette safe to enable upgrading of the program !

If you plan to use PCL Start service software, you must install it before installing Service software, see the PCL Start installation instructions.

To install the new Service software program, follow the steps below:

1.	insert the new Service software diskette		
	into drive A: of your computer		
2.	start Windows, and open File Manager		
	log into drive a:	type A: and press <enter></enter>	
3.	start INSTALL.EXE and	type C: and press <enter></enter>	
	install Service software to drive	C:	

Common Properties of the User Interface

This chapter describes how the User Interface CLF must appear to the user.

The User Interface MUST be capable of being driven without the use of a mouse, as the service engineer rarely has space on the bench to use a mouse.

Login Dialog

When the Service Software application is invoked, by clicking on the Service Software icon, the **Login** dialog box will be displayed on the screen.

NOKIA MOBILE PHONES	Service Software for Windows

11/200-	Service	Oserin	ienace L	JELIVersi	on 2.14		: 1999)	NU User			

Title bar

The *title bar* is located at the top of the window.

A title bar contains the following elements:

- Application Control-menu button
- Maximise button
- Minimise button
- Name of the application
- Restore button

The properties of these elements and their usage is described in Ref 3– Microsoft Windows Version 3.1 Users Guide chapter one (Windows Basics) and chapter two (Application Basics).

Menu bar

The *menu bar* is below the title bar and contains all available menu selections. The menu bar is a dynamic element and is dependent on the dongle type fitted, and whether a phone is connected.

Underlined characters in menu names and options indicates that the menu selection can be done by pressing *Alt+ <u>underlined character</u>*. Options can also be selected by activating menu bar with *Alt*– key (or *F10* key) and using arrow–keys to highlight the desired menu. In that case, selection is done by pressing *Enter*.

Menus can also be selected by using the mouse as described in Ref 3–Microsoft Windows Version 3.1 Users Guide

Status bar

The *status bar* is displayed at the bottom of the Service Software main window. The status bar contains information about the menu selections and events.

The left area of the status bar describes the actions of menu items as the user uses the arrow keys to navigate through menus.

The status bar texts are explained in detailed in each of command's description.

Description
Entered Login ID.
The Caps Lock key is latched down.
The Num Lock key is latched down.
The Scroll Lock key is latched down.

The right areas of the status bar indicate which of the following keys are latched down:

Tool bar

The *tool bar* is NOT defined and will not be implemented until specified by this document.

Menu Bar

The Service Software package will have two menu bar configurations. The first, is an abbreviated version that contains the minimum number of menus that allows package configurations when a phone is NOT connected. The second is described below:

The menu bar MUST only contain the following menus for the Service Software package when a phone is connected:

- <u>P</u>roduct*
- Configure*
- <u>T</u>uning
- Testing
- <u>S</u>oftware
- <u>D</u>ealer
- <u>V</u>iew
- <u>H</u>elp* (* always displayed, even if no phone is connected).

A menu is broken down into sections that are indicated with menu separators. Each sections identifies a logical difference from itself and other sections, i.e. between transmitter and receiver. Any items that are required to be added to a menu lists will be added on the bottom of the appropriate menu section list. If a new item is to be added which is common to two or more phone types, then that menu item will become a common menu item.

The menu lists will use the Microsoft [...] symbol after an item name to indicate that selecting that item will NOT initiate an operation immediately, i.e. a dialog box will be displayed for the user to select options or type in data and press the OK button before the operation is performed.

Product

The <u>P</u>roduct menu contains the following menu items:

		Ctrl+R	
• <u>N</u> ew		CITI+K	
• <u>O</u> pen			Product Config
• <u>C</u> lose			<u>N</u> ew Open
• <u>I</u> nitialise		F -	Close

- <u>A</u>bout WinTesla

<u>H</u> elp	
Index	
<u>G</u> eneral Help	F1
<u>U</u> sing Help	
<u>A</u> bout WinTesl	a

Mouse Cursors

The standards Windows pointer will be used as the mouse cursor.

During time consuming tasks e.g. communication to phone, an hour glass will be shown informing the user that a task is in progress. The application uses the hour glass cursor to inform user that the application has taken the control and any actions from user will be ignored.

When a function is initiated, the hour glass will be displayed and when the function has finished the mouse pointer will return to normal.

Reserved Keys

The following Hot keys and Short Cut keys are reserved either as Microsoft standard keys or as part of the Common Look and Feel specified by this document.

	Key	Description	Defined by
	F1	Context Sensitive Help	Microsoft
	F5	Normal Mode	NMP

Help Functions

The Help User Interface will be the standard Windows help tool called WinHelp.

The context sensitive help is activated with **F1**–key. Help contains also Using Help which describes how to use help facility. Refer to the Windows manual for detailed description on the Windows Help.

Dialog boxes

The Service Software application uses many different dialog boxes. Dialog boxes are used to display data and prompt the user for input.

Dialog boxes are opened from menus or with shortcut keys. Dialog boxes have different properties but some features are common.

All service dialog boxes must be modal, that is, the user will not be able to start another operation without first closing the present dialog box.

All dialog boxes will contain the following entities:

- Help button
- Title bar
- At least one button other than Help
- Application Control–menu Button

Common Dialog boxes

This sections describes the common dialog boxes used in the Service Software package, and the context in which they will be used.

Note Message Box

When the user has made an illegal selection, a *note message box* dialog will be opened and message text is displayed. The message box is also opened when the program has some information for the user. The size of the dialog box may vary. An information dialog box is recognized by the **!**–icon.

The dialog box will also contain an OK button and a Help button.

OK button (default key):

Acknowledge displayed information and continue. The dialog box is closed after selection.

Help button (Alt+H):

Opens context sensitive help as F1-key does.

Query Message Box

Confirmations and questions are asked in *a query message box*. A query dialog box is recognized by the **?**–icon.

The dialog box will also contain a Yes button, a No button, and a Help button.

Yes button (Alt+Y or Y) (default key):

Accepts confirmation or question.

No button (Alt+N or N):

Denies confirmation or question.

Help button (Alt+H):

Opens context sensitive help as F1-key does.

The buttons may also be OK and Cancel. The operation of these buttons are the same as in the Note dialog box.

Error Message Box

Error message dialog boxes use the Stop–icon. When a "Stop"–dialog box is shown, the current operation is terminated.

The dialog box has a description about the failed operation and reason. Pressing F1 (Help) application opens the appropriate help topic that gives information about recommended actions.

STOP

The dialog box will also contain an OK button and a Help button.

OK button (default key):

Acknowledges displayed information and terminate current operation. The dialog box is closed after selection.

```
Help button (Alt+H):
```

Open context sensitive help as F1-key does.

Custom Dialog boxes

All custom dialog boxes will contain the predefined buttons as defined below in the section – *Buttons.* However, it is recognised that features may require additional button types, but the addition of these non–standard buttons should be carefully considered to minimise any inconsistencies between implementations.

The buttons will be positioned down the right–hand side of the dialog boxes. The default action will be **OK**, except where that default action could result in an irretrievable failure.

All tuning dialogs that contain tuning results, will display the old tuned data read from the phone before the tuning was performed, as well as the newly tuned data.

List boxes will be used to display lists of data, such as tuning data, test results etc.

The use of Radio buttons should be limited and carefully considered. The use of radio buttons defines the number of possible choices available to the user, which may be acceptable for one project, but not for another.

Buttons

All buttons must be the Microsoft style of buttons.

In general, the default button will be the action button, the Close button or the Yes button, but this will depend on the context of the dialog box that the button is associated with.

(action) button:

Accepts and validates entered settings and values and closes the dialog. If the values have not been changed, then no action will be taken. The status bar will reflect the status. The user should only be queried, if the settings or values accepted will over-write data that CAN NOT be reproduced.

A greyed **OK** button indicates that settings selected by the user are not acceptable.

Close button:

Closes the current dialog box. Does not send or store anything and closes the dialog. The Close button is only used for dialogs that do not set or change any data.

Cancel button (Esc):

Cancel operation. Does not send or store anything and closes the dialog box.

A greyed **Cancel** button indicates that it is not possible to quit from this dialog box.

Yes button (ALT+Y or Y):

Replies Yes to a question asked of the user.

Service Software Instructions

No button (ALT+N or N):

Replies No to a question asked of the user.

```
Help button (ALT+H):
```

Opens context sensitive help as F1-key does.

Reporting Status

The status bar will be used to report the present status to the user. When a feature is initiated, the status bar will be updated with a brief description of the function. The status bar will also be updated at key points in a time consuming function.

If an error is to be reported to the user, it will be displayed in the status bar as well as displayed in a common error dialog box. This will mean the user is not delayed from progressing on to the next operation unless an error occurs, in which case, the user will have to acknowledge the error by pressing the OK button.

NSC/W-1 FEATURES

Menu bar

After Sales SW's menus follows the menu structure specified in WinTesla User Interface Specification. This specification will describe functionality that differs from WinTesla specification.

Product

New command

Activation Status Bar Text

Alt, P, N Rescan a new phone

Ctrl+R

If phone is changed (with same phone type only serial number is changed) phone will be initialised to local mode. If phone is changed to different phone type the current DLLs are unloaded and new ones are loaded for that phone.

If the Quick/RF Info view is open, window will be automatically updated.

If Phone Information view is open, it will be automatically updated.

Open... command

Activation	Status Bar Text
Alt, P, O	Force load phone specific functionality
Phone is set to lo	cal mode.

Initialise... command

Activation Status Bar Text	
----------------------------	--

Alt, P, I

Opens a submenu for Normal Mode and Local Mode

Service Software Instructions

Normal Mode

Activation	Status Bar Text

Alt, P, I, N Initialises phone to normal (cellular) mode

F5

When normal mode has been activated or program has been started, self-test results will be asked from MCU. If any fault was found in the tests, an error message is shown. If normal mode has been set successfully (no self test error has been found), and paging listening has been started, the used AFC value is requested from MS.

Initialisation routine checks phone's cellular type and if unsupported phone is detected, application unloads the DLLs.

The After Sales SW sets automatically the MS state to normal mode when needed.

If phone identification view is open, window will be automatically updated. Also if RF Information Window is open it will be updated to quick info view.

Local Mode

Activation	Status Bar Text
Alt, P, I, L	Initialises phone to local mode

Shift+F5

Selection will change the MS state to *local*. When user selects item from Testing or Tuning menus, the After Sales SW software will change automatically the MS state to local.

The After Sales SW sets automatically the MS state to normal mode when needed.

Also if quick info view is open it will be updated to RF Information view.

Faultlog command

Alt, P, F

Opens a submenu. Only enabled when user has logged in.

Activate Faultlog

Activation	Status Bar Text
Alt, P, F, A	
F9	
Activates the faultlo	g. Only enabled when user has logged in.

Edit Faultlog

Activation	Status Bar Text

Alt, P, F, E

Allows user to edit faultlog entries. Only enabled when a user has logged in.

FastNAM command

Activation	Status Bar Text
Alt, P, N	
F8	
This menu is or Tesla.	nly enabled when FastNAM functionality is included in Win-
_	

Exit command

Activation Status Bar Text

Alt, P, X

Exits the WinTesla application.

<u>T</u>uning

The tuning menu offers functions for ME adjustments.

AFC... command

Activation	Status Bar Text
Alt, T, A	Open AFC Tuning dialog box

The next automatic selections are made when this tuning function is activated: - Active Unit = TX

- Operation mode = Analog
- Channel 250 (low)
- Power level 4
- low band

The AFC Tuning dialog is opened.

fc Tuning				<u>o</u> k
I			Þ	<u>C</u> ancel
1024	Afc	-106	1023	RF <u>I</u> nfo.
				<u>H</u> elp

AFC tuning dialog box includes the following items:

Afc scroll bar

Set calibration value to phone

RF Info button (ALT+I):

The current rf state is shown

OK button (ALT+O):

Dialog box is closed and tuning *is saved* to phone.

Cancel button (ESC):

Dialog box is closed and tuning *is not saved* to phone.

Help button (Alt+H):

Opens context sensitive help.

VCTCXO... command

Starts Voltage Controlled Temperature compensated oscillator tuning

Activation Status Bar Text

Alt, T, V Open Tuning VCTCXO dialog box

The next automatic selections are made when this tuning function is activated:

- Active Unit = RX
- Operation Mode = Continuous digital
- low band
- Channel 301
- Power level OFF

EEPROM DAC value is shown.

The measurement is started when "meas" button is pressed and it is executed in two steps:

1. User is requested to put signal generator input level $-95~\mathrm{dB}$ and frequency $879.030~\mathrm{Mhz}$

T<u>x</u> Power... command

Activation	Status Bar Text	
------------	-----------------	--

Alt, T, X, H or L Open TX Power Tuning dialog box

Starts TX power tuning.

User is first requested to select with which values the tuning is started in **Start Tuning** dialog.

Start Tuning dialog includes the following items:

Current Values in PC memory

Tuning values are load from program's internal memory.

Phone EEPROM Values

Tuning values are load from ME's EEPROM.

The next automatic selections are made when this tuning function is activated:

- Active Unit = TX
- Operation Mode = Continuous digital
- Selected band
- Channel 190 (low) or 500 (high)
- Power level 6

Technical Documentation

The **TX Power Tuning** dialog will be activated automatically after value selection.

Calling cards... command

Activation	Status Bar Text

Alt D, L Open Calling card dialog box.

This dialog enables to program the calling card numbers and operator telephone numbers used in credit card calls.

1 🔹		
Card name:	Prefix:	
Access number:		
C <u>a</u> rd number:		
<u>Sending Order:</u>		
Access number +	phone no. + card	no. 💌
Read Phone	Write Phone	Close
A REAL PROPERTY OF A REAL PROPER	AND THE REAL PROPERTY OF A DESCRIPTION OF A	Him Margary Mersler, 1981.

Calling card numbers dialog includes the following items:

Calling Card drop list Card can be selected up to four Card name edit box (ALT+C) Card name can be edited. Prefix edit box (ALT+P) Card prefix can be edited. Access number edit box (ALT+B) Card access number can be edited Card number edit box (ALT+A) Card number can be edited Sending order drop list (ALT+S)

Sending order can be selected

Service Software Instructions

Read Phone... button (ALT+R):

Read calling card data from phone and update dialog items

Write Phone... button (ALT+W):

Write data to calling card data to phone

Close... button (ESC)

Closes the dialog button.

Save File... button (ALT+S)

Opens a Windows default File Save As dialog box and asks filename where to save settings.

Load File... button (ALT+L)

Opens a Windows default File Open dialog box and asks filename where to load settings.

Fa <u>v</u> ored alpha tag (and the second second second	File <u>L</u> oad
Neutral alpha tag (r	nax. 15) ROAM	Help

Intelligent roaming database dialog includes the following items:

Partner SOC list box (ALT+P)

Number of partner SOCs in soc_sid_list. The selected position is highlighted and can be edited.

Partner SID list box (ALT+S)

Number of partner SIDs in soc_sid_list. The selected position is highlighted and can be edited.

Favored SOC list box (ALT+F)

Number of favored SOCs in soc_sid_list. The selected position is highlighted and can be edited.

Service Software Instructions

Favored SID list box (ALT+I)

Number of favored SOCs in soc_sid_list. The selected position is highlighted and can be edited.

Forbidden SOC list box (ALT+O)

Number of forbidden SOCs in soc_sid_list. The selected position is highlighted and can be edited.

Forbidden SID list box (ALT+D)

Number of forbidden SIDs in soc_sid_list. The selected position is highlighted and can be edited.

IR_control edit box (ALT+T)

"1", only the systems broadcasting. HOME SID or SOC are accepted as a service providers.

"0", all other systems, except systems broadcasting SID or SOC set as a forbidden in a soc_sid_list, are accepted as a service providers.

Band order locked static

Band order which are not editable

Band order edit box (ALT+B)

The table tells which bands (cellular or/and PCS) and in what order the bands are searched.

a = 800 MHz b = 800 MHz A = 1900 MHz B = 1900 MHz C = 1900 MHz D = 1900 MHz E = 1900 MHz F = 1900 MHz 00 = NONE

Number of cellular edit box (ALT+ C)

Number of probability blocks to scan in cellular band.

Number of pcs edit box (ALT+ P)

Number of sub blocks to scan in PCS band

Rescan count edit box (ALT+T)

Rescan time in hyperframes (HF = 1,28 seconds).

Rescan loop edit box (ALT+C)

Defines when all the band in band_order are to be scanned

FREE SID/SOC static

Number of free elements in soc_sid_list

Home alpha tag edit box (ALT+H)

Alpha tag is shown on phone's display when on service with HOME SID or SOC. System is home system if the broadcasted SID or SOC or both of them matches with SID/SOC in a phone's NAM. Favored alpha tag edit box (ALT+V)

Alpha tag which is shown on the phone display when on service with PARTNER or FAVORED system.

System is PARTNER/FAVORED system when the broadcasted SID or SOC matches with PARTNER/FAVORED SID/SOC in a phone's soc_sid_list in IRDB.

Neutral alpha tag edit box (ALT+N)

Alpha tag which is shown on phone's display when on service with NEUTRAL.

System is NEUTRAL system when the broadcasted SID and SOC does not match the values in NAM and neither in soc_sid_list in IRDB.

Read Phone button (ALT+R):

Read values from the phone

Write Phone button (ALT+W):

Write values to phone and checks the validity of names and numbers.

Save File button (ALT+S):

Opens a default Windows File Save As dialog and asks filename where to save values.

Load File button (ALT+L):

Opens a default Windows **File Open** dialog and asks filename where from load values. Checks the validity of names and numbers.

Cancel button (ESC)

Exit without saving any changes

Appendix 1, Vocabulary

Abreviation	Description
ADC	Analog to Digital Converter
AFC	Automatic Frequency Control
AGC	Automatic Gain Control
ASIC	Custom circuit which for instance controls communication between MCU and DSP
BBD–3	Service battery
CLF	Common Look and Feel
CLI	Calling Line Identification
COBBA	Common Base Band Analog
DAC	Digital to Analogue Converter
DATA	DATA interface module
DAU-9S/P	MBUS/FBUS cable
DLL	Dynamic Link Library
DSP	Digital Signal Processor which controls radio interface and speech coding/decoding
EEPROM	Memory for adjustment parameters (Electrically Erasable and Programmable Read Only Memory)
ESN	Electrical Serial Number
FBUS	Fast serial bus
GPIB	General Purpose Instrument Bus, also know as HPIB. Specified by IEE488.2.
IMEI	International Mobile Equipment Identification code
IR	Infra Red transmitter
M2BUS	Serial communication bus which can be connected to accessory devices and test PC
MCU	Master Control Unit processor
MDI	MCU DSP Interface; message interface via ASIC registers
ME	Mobile Equipment
MODAL (dialog box)	A modal dialog box requires the user to complete interaction within a dialog box, and close it before continuing with any further interaction outside the window.
MODELESS (dialog Box)	A modeless dialog box allows the user to interact with other windows and applications.

Technical Documentation

MS	Mobile Station
PC	IBM PS/AT or compatible personal computer
PCI	Phone Controlling Interface SW for PC
PKD-1	Hardware protection key (DESKEY DK2) for protecting service software from illegal copying. The software will not work without this key !
RF	Radio Frequency parts
RSSI	Received Signal Strength Indication
RTC	Real Time Clock
SW	Software
TDF-4	Flash security box
Tesla	Acronym, stands for T est and S ervice Locals A pplication.
UI	User Interface
WinTesla	This Service Software program. Name copyright Nokia Mobile Phones (1996).
