

ONKYO SERVICE MANUAL

STEREO CASSETTE TAPE DECK MODEL TA-RW400

UDN, UDC, UD	120V AC, 60Hz
UG	220V AC, 50Hz
UW	120 or 220V AC, 50/60Hz
UQA, UQB	240V AC, 50Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK \triangle ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PARTS NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SPECIFICATIONS

Track System:	4-tracks, 2-channels
Erasing System:	AC erase
Tape Speed:	4.8 cmsec. (1-78 i.p.s.) 9.6 cmsec. (3-34 i.p.s.) (high speed dubbing)
Wow and Flutter:	0.07% (WRMS)
Frequency Response:	20-15,000Hz (Normal) (30-14,000Hz \pm 3dB) 20-16,000Hz (High) (30-15,000Hz \pm 3dB) 20-17,000Hz (Metal) (30-16,000Hz \pm 3dB)
SN Ratio:	Dolby NR off: 58dB (metal position tape) A noise reduction of 10dB above 5kHz and 5dB at 1kHz is possible with Dolby B NR. A noise reduction of 20dB at 5kHz is possible with Dolby C NR.
Input Jacks:	Line IN: 2 Input sensitivity: 60mV Input impedance: 50 kohms
Outputs:	Headphone jack: 1 Optimum load impedance: 8 to 200 ohms Line OUT: 2 Standard output level: 500mV (0dB) Optimum load impedance: over 50 kohms
Motors:	DC servo motor \times 2; DC motor \times 2
Heads:	RECPB: special hard permalloy \times 2; Erase head: ferrite \times 1
Power Supply Rating:	U.K. and Australian models: AC 240V, 50Hz European models: AC 220V, 50Hz U.S.A. and Canadian models: AC 120V, 60Hz Worldwide models: AC 120V and 220V switchable, 50/60Hz
Power Consumption:	32 watts
Dimensions:	435(W) \times 115(H) \times 334(D)mm (17-18" \times 4-12" \times 13-18")
Weight:	4.8 kg. (10.6 lbs.)

Specifications and external appearance are subject to change without notice because of product improvements.

SERVICE PROCEDURES

1. Replacement of power supply cord

There are two power supply cord outlets on the strainrelief. Insert them in prescribed direction to ensure safety. AS-UC-3 (UD<120V> model) should be inserted lengthwise and other types of cords should be inserted horizontally.

2. Insulating resistance measurement

Connect the insulating-resistance tester between the plug of power supply cord and chassis.

Specifications: 500V more than 10MΩ

HX PRO CIRCUIT OPERATION EXPLANATION

1. Regarding recording frequency characteristic and bias

Ordinarily, if the recording bias current is increased, REC/PB frequency response level in the high frequency region (about 10KHz and above) drops, and if the bias is decreased, the response rises.

2. Regarding the basic operation of HX PRO (Refer to Fig. 1)

The HX PRO uses the μ PC1297CA IC. The operation is in accordance with the following.

- 1) At (a), the recording bias is added onto the audio signal, and the recording signal is detected. This is the same as the recording head recording the signal on the tape.
- 2) The signal of 1) preserves the frequency response with the integrated circuit of (b)

$$\text{Frequency} = \frac{R450 + R448}{2\pi \times C426 \times R450 \times R448} \quad (2.1)$$

By means of the frequency of Fig. 1, the frequency which is effective from the beginning is determined. In the ordinary situation, this is half the audio band (10KHz), (10KHz ~ 7.5KHz).

- 3) At (c), in order to use the affected waveform after-ward, absolute detection is carried out.

- 4) At (d), the waveform peak value is detected. The output becomes the peak DC voltage.
- 5) At (e), the standard voltage and the voltage of (4) are compared.
- 6) With the output of (e), the frequency generation level is controlled (voltage controlled amplifier). That is, the bias size is varied.
- 7) Summing up 1) ~ 6):

At (a), the time constant (frequency) that is detected in the recording signal is preserved, and above a certain frequency and above a certain level, the VCA controls the bias current by causing its reduction. When this is done, in the manner shown in the explanation of Item 1 above, the frequency high region is raised. With this control, the audio signal is instantaneously dealt with.

3. Regarding the operating conditions of the HX PRO

- 1) With equation (2. 1) noted above, the effect begins at the frequency thus determined.
- 2) Above a certain level the effect begins.
(Substantially 0 dB: In the vicinity of 500mV line out)
The audio signal component level is dependent upon the waveform after point (c).

MECHANISM OPERATION

The mechanism in this set uses the power of a capstan motor to move the head up and down. It has one capstan motor, one reel motor and one solenoid.

The mechanism has three operating modes FWD PLAY, REV PLAY and STOP. The operating mode is selected by the solenoid timing. Typical timings are shown in fig. 2.

This mechanism is designed so that the solenoid is continuously held back in PLAY mode, so there is no longer any need to fit a PLAY switch for detecting head rise. When the solenoid stops being held back, the mechanism stops. This allows the mechanism to be initialized when the power is switched on by turning the capstan motor without holding back the solenoid. This allows that the mechanism to be returned to STOP mode, regardless of what state it was in when it was stopped.

FF and REW are handled by rotating the reel motor at high speed in STOP mode. Holding back the solenoid when moving from STOP to PLAY takes sometime, and the mechanism is structured to allow this. This is done because the capstan motor is designed to rotate at a constant speed. For double speed dubbing the capstan motor speed is switched when PLAY finishes.

Fig. 1 mechanism operating modes

STOP → FWD · PLAY → STOP

STOP → REV · PLAY → STOP

Fig. 2 Typical timings for PLAY modes

MICRO COMPUTER PORT NAMES AND FUNCTION

Pin no	Pin	Function	Port
1	×2 DUBB	Double speed dubbing display output	D
2,3	T1REV.T1FWD.	T1 direction display output	D
4	REC.MUTE	Record muting output	D
5		Not used (dropped to earth by resistance)	D
6	INPUT SEL.T2/ $\overline{\text{T1}}$	Input signal select output.T2 selected by logical 1, T1 selected by logical 0	D
7	BIAS CONT.	Bias oscillator control output (Service documentation)	D
8	T2 REC/ $\overline{\text{PB}}$	Audio record/playback output	D
9	SPEED ×2/ $\overline{\times 1}$	Capstan motor speed signal output. (for selecting audio line)	D
10~17		Control key switch inputs	D
18	T1 ROTATION SENSOR	T1 rotation signal input (for tape end sensing)	D
19	T2 ROTATION SENSOR	T1 rotation signal input (for tape end sensing)	D
20	T2 METAL POSITION	T2 Tape type sensor switch input (for detecting metal tape)	B
21	T2 SIDE-A REC.INH	T2 Side A record inhibit pit sensor switch input	B
22	$\overline{\text{T2 CASSETTE IN}}$	T2 cassette tape sensor switch input	B

64	DUBBING	Constant speed dubbing display output	

①Ports:

A: NMOS open drain. No pull-up MOS

B: NMOS open drain. With pull-up MOS

C: CMOS output

D: PMOS open drain. No pull-down MOS

MICRO COMPUTER (HD614088S-J46)

ADJUSTMENT PROCEDURES

PRECAUTIONS

- Before adjustment, clean the following parts with an alcohol moistened swab.
 - * record/playback head
 - * pinch roller
 - * erase head
 - * capstan
- Do not use magnetized screwdriver for adjustments.
- Demagnetize record/playback head with a head demagnetizer.

TEST EQUIPMENT/TOOLS REQUIRED:

- Audio oscillator
- Digital frequency counter
- Oscilloscope
- Attenuator
- AC voltmeter
- Non-magnetic screw driver
- Test tapes
 - VTT-658 : 10 KHz, -15dB
 - MTT-111 : 3 kHz, -10dB
 - MTT-150 : Dolby level calibration
400Hz, tone 200nWb/m
