SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SPECIFICATIONS

Format:	Auto reverse double deck
Track format:	4-tracks, 2-channels
Recording system:	AC bias
Erasing system:	AC erase
Tape speed:	4.76 cm/sec. (1-7/8 i.p.s)
Wow and Futter:	0.13 % (WRMS)
Frequency response:	
Metal position tape	30 Hz to 15 kHz \pm 3 dB
High position tape	30 Hz to 14 kHz \pm 3 dB
Normal position tape	30 Hz to 13 kHz \pm 3 dB
Signal to noise ratio:	56 dB (metal position tape/ Type IV, Dolby NR off)
	55 dB (high position/ Type II, Dolby NR off)
	50 dB (normal position/ Type I, Dolby NR off)
	Noise reduction of 10 dB above 5 kHz and 5 dB at 1 kHz possible with Dolby B.
	Noise reduction of 20 dB at 5 kHz possible with Dolby C.
Input Jacks:	
LINE IN:	2
Input sensitivity:	80 mV
Input impedance:	50 k ohm
Output Jacks:	
LINE OUT:	2
Standard output level:	500 mV
Output load impedance:	over 50 k ohm
Motors:	DC servo motor: 1+1
Heads:	
PB Head:	Special Hard Permalloy x 1
Rec/PB Head:	Special Hard Permalloy x 1
Erase head:	Ferrite x 1
Power supply rating:	North American: AC 120 V, 60 Hz European: AC 230 - 240 V, 50 Hz
Power consumption:	17 W
Standby power consumption:	
	North American: 7.0 W
	European: 0.6 W
Dimensions: (W x H x D):	
	435 mm x 121 mm x 303 mm (17-1/8" x 4-3/4" x 11-15/16")
Weight:	4.9 kg (10.8 lbs.)
Operation condition temperature/humidity:	
	5°C - 35°C/ 5% - 85% (no condensation)

Specifications and external appearance are subject to change without notice because of product improvements.

IC BLOCK DIAGRAM/TERMINAL DESCRIPTION

Q101 : BA3416BL DUAL PLAYBACK PRE_AMPLIFIER

HA12167FB/HA12169FB

Audio Signal Processor for Cassette Deck (Deck 1 Chip)

HITACHI

ADE-207-110B (Z)
3rd Edition

Description

HA12167FB/HA12169FB is silicon monolithic bipolar IC providing REC volume system, Level meter system and Dolby noise reduction system* in one chip.

Functions

- REC equalizer × 2 channel
- Equalizer volume × 2 channel
- Dolby B/C NR × 2 channel
- REC/PB input electronic volume × 2 channel
- Level Meter × 2 channel
- DAC for adjusting bias × 2 channel

Features

- Available to create characteristics of REC equalizer by changing external resistor, no coil
- Equalizer volume is available to calibrate recording automatically with micro-controller
- Electronic volume built-in is available to set the level of recording and play back automatically with micro-controller
- 4 types of input (3 out of 4 are by way of electronic volume)
- Input electronic control switching is irrelevant to REC/PB electronic control switching
- Dolby noise reduction system is available with double cassette decks (Unprocessed signal output available from recording out terminals during PB mode)
- Log-compressed level meter output is range from 0 V to 5 V (Usable as music search switchable gain of 0 dB and 20 dB respectively)
- Normal-speed/high-speed, normal/metal/chrome fully electronic control switching built-in
- NR-ON/OFF, Dolby B/C, MPX ON/OFF fully electronic control switching built-in
- Reduction of the number of pins by transfered serial data to electronic volume control switching and another control switching (Controllable from micro-controller directly)
- Small the number of external parts

Application Note

Power Supply Range

HA12167FB/HA12169FB are designed to operate on either single supply or split supply.

The operating range of the supply voltage is shown in table 1.

Table 1 Supply Voltage

Type No.	Single Supply	Split Supply
HA12167FB	12 V to 15 V	± 6.0 V to 7.5 V
HA12169FB	11 V to 15 V	± 6.0 V to 7.5 V

The lower limit of supply voltage depends on the line output reference level.

The minimum value of the overload margin is specified as 12 dB by Dolby Laboratories. HA12167 series are provided with two line output level, which will permit an optimum overload margin for power supply conditions.

Reference Voltage

For the single supply operation these devices provide the reference voltage of half the supply voltage that is the signal grounds. As the peculiarity of these devices, the capacitor for the ripple filter is very small about 1/100 compared with their usual value. The Reference voltage are provided for the left channel and the right channel separately. The block diagram is shown as figure 1.

Operating Mode Control

HA12167FB/HA12169FB provides fully electronic switching circuits. All switches are controlled by serial data.

Table 2 Threshold Voltage (VTH)

Pin No.	Lo	Hi	Unit
42	-0.2 to 1.5	3.5 to 5.3	V
39, 40, 41	-0.2 to 1.0	4.0 to 5.3	V

Notes: 1. Voltages shown above are determined by internal circuits of LSI when take pin 47 (DGND pin) as reference pin. On split supply use, same VTH can be offered by connecting DGND pin to GND pin.

This means that it can be controlled directly by micro processor.

2. Each pins are on pulled down with 100 k internal resistor. Therefore, it will be low-level when each pins are open.
3. Note on serial data inputting
 - (a) The clock frequency on CLK must be less than 500 kHz.
 - (b) Over shoot level and under shoot level of input signal must be the value shown below.

When connecting microcomputer or Logic-IC with HA12167FB/HA12169FB directly, there is apprehension of rash-current under some transition timing of raising voltage or falling voltage at V_{CC} ON/OFF.

For this countermeasure, connect 10 k to 20 k resistor with each pins. It is shown in test circuit on this data sheet.

In case of changing NR-ON/OFF at the C-mode, for the countermeasure of the noise of pop, perform the following processes.

In case of changing NR-OFF to NR-ON at C-mode. C-mode, NR-OFF → B-mode, NR-OFF → B-mode, NR-ON → C-mode, NR-ON.

In case of changing NR-ON to NR-OFF at C-mode. C-mode, NR-ON → B-mode, NR-ON → B-mode, NR-OFF → C-mode, NR-OFF.

Serial Data Formatting

14 bit shift register is employed.

CLK and data are stored during STB being high and data is latched when STB goes high to low.

Reset goes reset a state when reset low and high releases reset. (High fixed at use time)

Attention Point of Serial Interface

- Reset goes low condition when a power supply is ON or OFF.
- Characteristics select of Bias DAC is connected with equalizer tape selector.
- Bias DAC register is all low when a time of tape select.
- Bias DAC register is all low and Bias DAC out is dropped low level at compulsion by force.
- Input pin select, REC/PB select and Input volume gain select does not select at the same time.
- Input volume must go mute condition when selected of RPI is input pin select.

MPX ON/OFF Switch

MPX-OFF mode means that signal from input amp doesn't go through the MPX filter, but signal goes through the NR circuit after being attenuated 3 dB by internal resistor. Refer to figure 5. For not cause any level difference between MPX-ON mode and MPX-OFF mode, it is requested to use MPX-filter which has definitely 3 dB attenuated. And when applying other usage except figure 5,

take consideration to give bias voltage to NR-IN terminal by resistor or so on because internal of NR-IN terminal has no bias resistor.

Application as for the Dubbing Cassette Deck

HA12167FB/HA12169FB series has unprocessor signal from recording out terminals during playback mode. So, it is simply applied for dubbing cassette decks.

Figure 5 MPX ON/OFF Switch Block Diagram

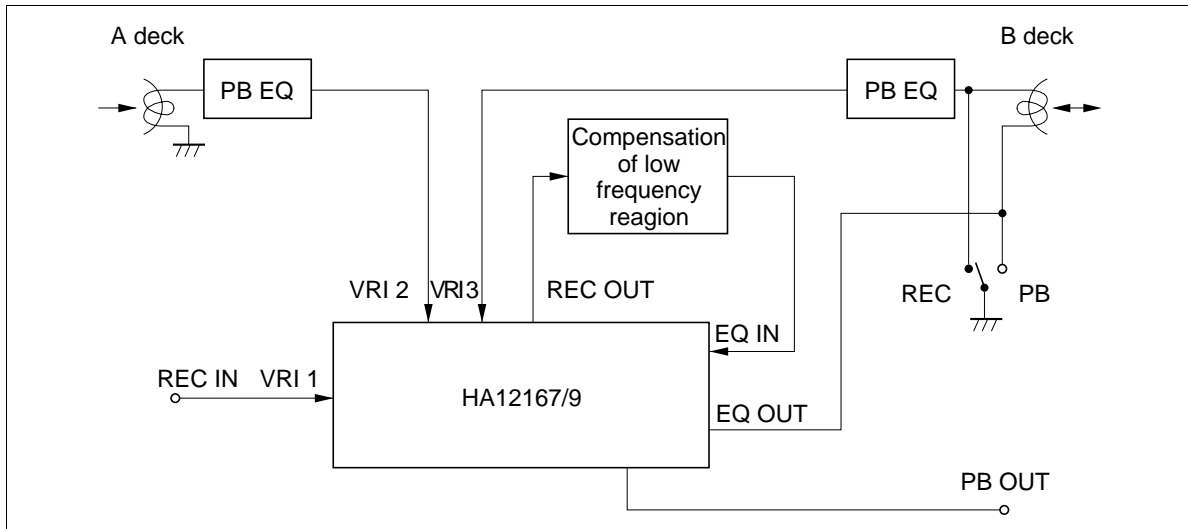

Figure 6 Application for Dubbing Deck

Injector Current

HA12167FB/HA12169FB has logic circuit which is fabricated by I²L into IC. To operate this circuit, it is required enough injector current. Injector current goes into from the INJ pin (pin 38) and external resistor is required to connect to this pin for adequate current. The value of external resistor is obtained by using following equations. And put them with ±10% tolerance value which is calculated. V_{INJ} can allow to connect to V_{CC} shown below. Large injector current fear to cause mis-operation of Logic under the condition of high temperature. Also, small injector current fear to cause mis-operation (stop operation). Under the condition of low temperature. Therefore, pay attention to have good stability of V_{INJ}.

$$R_{INJ} = \frac{V_{INJ} - 0.7}{3.6} \text{ [k}\Omega\text{]} \quad \text{Single supply}$$

$$R_{INJ} = \frac{V_{INJ} + V_{EE} - 0.7}{3.6} \text{ [k}\Omega\text{]} \quad \text{Split supply}$$

Gain Control of Electronic Volume

HA12167FB/HA12169FB is designed in order to change the gain by DAC fabricated into IC. To reduce the click noise when changing volume gain instantaneously, required to connect the capacitor and resistor (CR time constant) to CONT pin (pin 13, 48, 68, 73). These terminals are also be used as output pin of DAC. Therefore, by forcing voltage and current to these terminals, it is applicable to control volume gain directly. But, voltage forced to these terminals must be from V_{CC}/2 - 2 V to V_{CC}/2 (for split supply use, -2 V to 0 V) in this case. And, this case, change of a gain depending on a temperature gets large.

The Tolerances of External Components for Dolby NR-Block

For adequate Dolby NR tracking response, take external components shown below.

For C5, C6, C24, and C25, please employ a few object of the leak, though you can be useful for an electrolytic-capacitor.

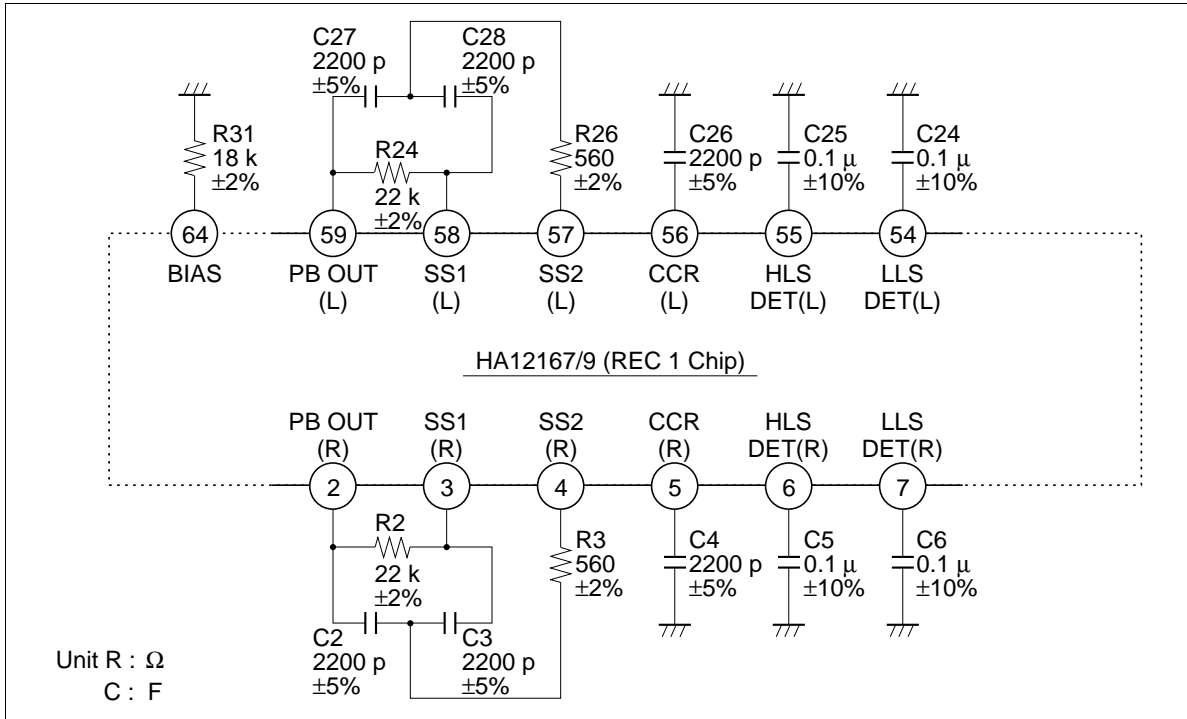

Figure 8 Tolerances of External Components

BIAS DAC

The full-scale of DAC is computed by the formula mentioned below.

$$V_{29} = \frac{2.4}{R_{14 \text{ to } 16}} \times R_{10} \text{ [V]}$$

$$V_{32} = \frac{2.4}{R_{14 \text{ to } 16}} \times R_{13} \text{ [V]}$$

R₁₄: Normal Tape (pin 35)

R₁₅: Metal Tape (pin 36)

R₁₆: Chrome Tape (pin 37)

The maximum source current of DAC output (pin 29, 32) is 2 mA. Therefore the Bias-osc is driven through external transistor of emitter-follower.

Level Meter

The coupling capacitor of LMIN pin (9 pin and 52 pin).

For these capacitors, please employ a small object of the leak.

Equalizer Characteristics Control Using a Bias DAC

When only one of the bias DAC channels is used, any one of the six parameters (FM, fQ, f/Q, GH, GL, and GP) that set the equalizer's characteristics can be controlled by the unused bias DAC.

The figure below gives one example.

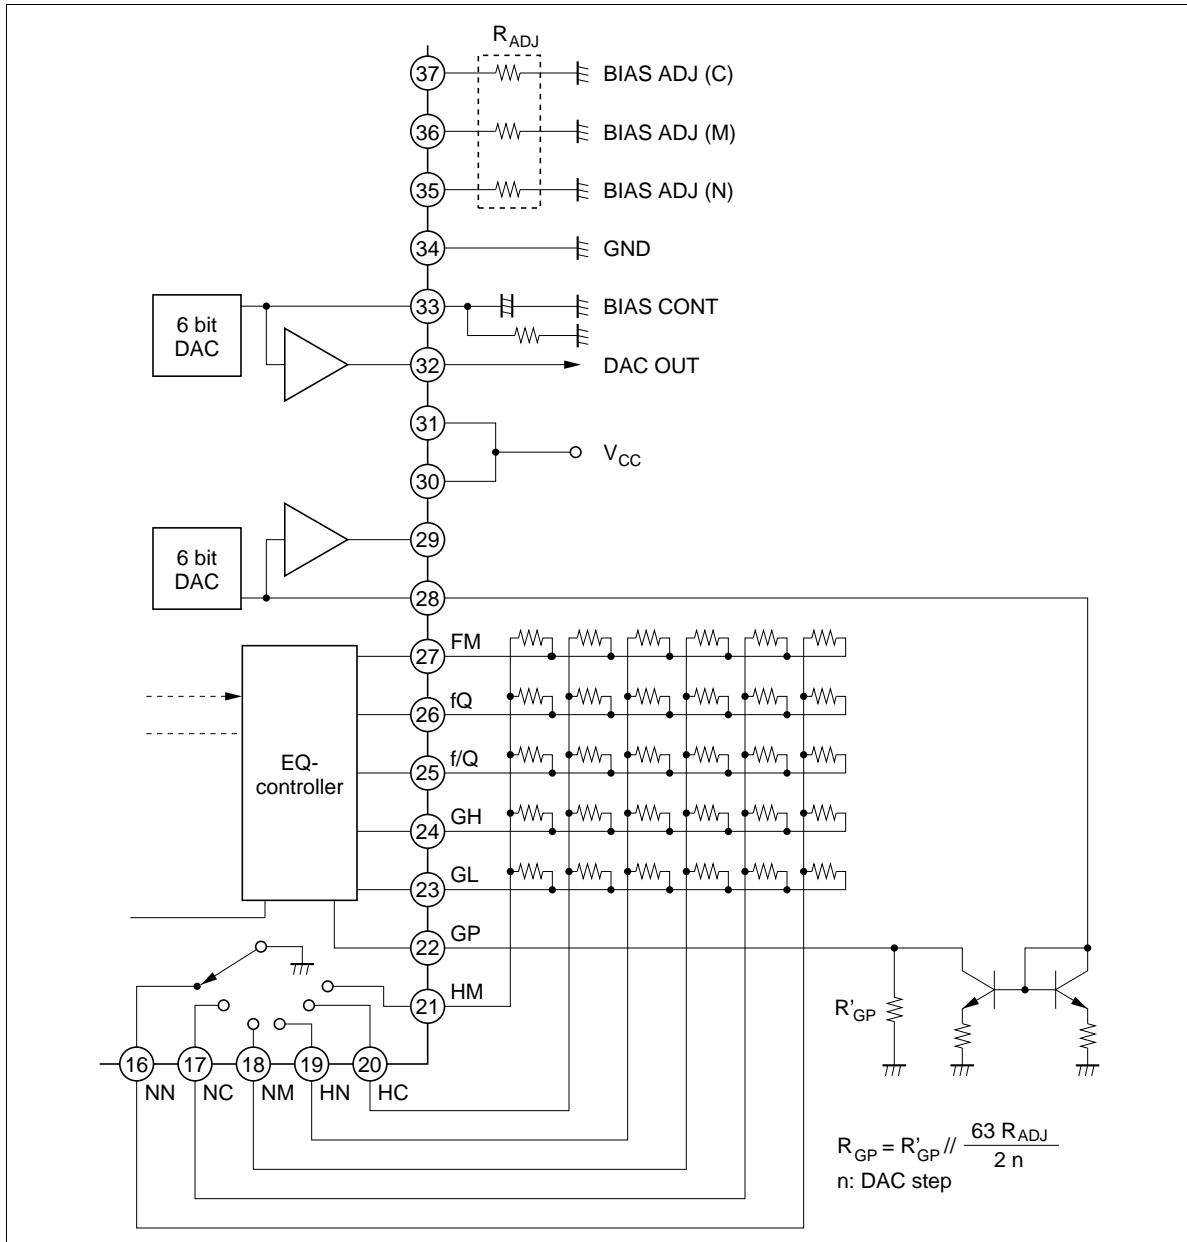

Figure 11 Bias DAC Control of the GP Parameter

Figures 12, 13, and 14 show the characteristics when GP is controlled by a bias DAC.

Figure 12 Equalizer Gain vs. Frequency

HA12167FB/HA12169FB

Figure 13 Equalizer Peak Gain vs. DAC Step Characteristics (1)

Figure 14 Equalizer Peak Gain vs. DAC Step Characteristics (2)

When the (variable) width of the DAC step is to be changed, the gain at step 0 or at step 63 must be changed. The step 0 gain can be changed using R'_{GP} as shown in figure 13. Also, R'_{GP} can be switched using the tape selector, as shown in figure 15. However, it is necessary to take into account that the value of R_{ADJ} , which sets the step 63 gain, is also used for the output bias. When the load resistance on pin 33 is R_L , the following formula gives the output bias, V_{BMAX} .

$$V_{BMAX} = 2.4 \times R_L / R_{ADJ}$$

Therefore, it is possible to compensate the output bias, V_{BMAX} for the R_{ADJ} setting by changing R_L .

Note: R_{ADJ} should be in the range 16 k to 75 k .

ADJUSTMENT PROCEDURE

Item	Connection of instrument	Line output	Test tape	Mode	Output Indicator	Adjustment point	Adjust	Remark
1	Tape speed Frequency counter to LINE output terminal		MTT-111N or TCC-111	PB	Frequency counter	DECK: R802 (H.S.) A R803 (N.S.) DECK: R817 (H.S.) B R818 (N.S.)	High speed 6000-6020Hz Normal speed 3000-3010Hz	High speed first. Refer to item FT MODE
2	Head azimuth AC voltmeter and oscilloscope to LINE output terminal		TCC-153 or MTT-114N	PB	AC voltmeter	Head azimuth screw FWD: right REV: left	Maximum and same phase at channels Lch and Rch	
3	Playback level AC voltmeter to terminals P205 (See to remarks)		MTT-150 or TCC-130	PB	AC voltmeter	DECK: R117 (Lch) A R118 (Rch) DECK: R119 (Lch) B R120 (Rch)	300mV	 L GND R P205
4	OSC block Frequency counter to P102, read loose coupling		METAL tape	REC	Frequency counter	L403	85KHz±1KHz	
5	Bias current	1KHz, -23dB and 12KHz, -23dB	Normal tape	REC/PB	AC voltmeter	R403 (Lch) R404 (Rch)	-0.5 to +1.0dB at 1KHz and 12KHz	
6	Record level	1KHz 350mV	Normal tape	REC/PB	AC voltmeter	R225 (Lch) R226 (Rch)	same level at REC/PB	

FT MODE

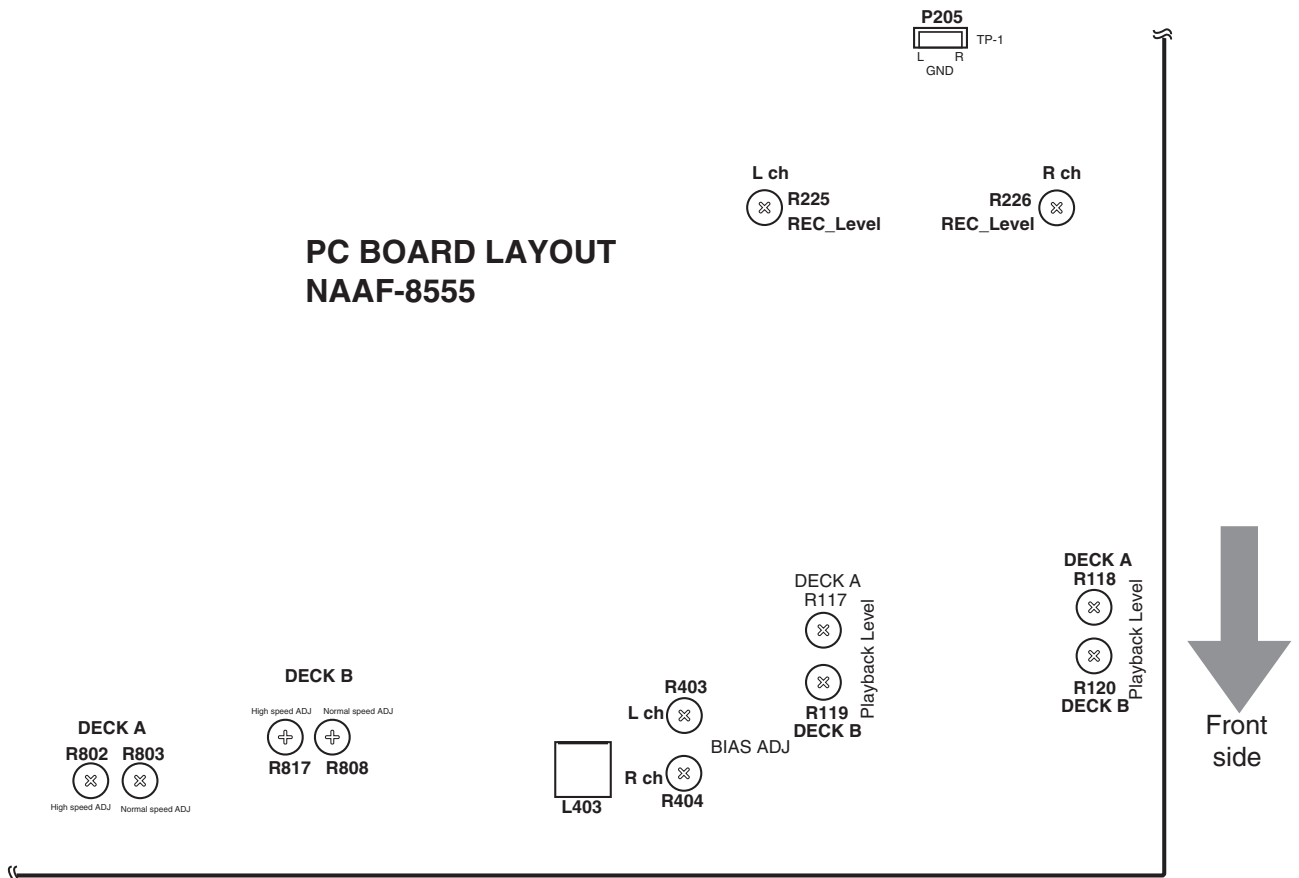

Test mode will be alive when P705 FT connect to GND.

When pressed the PLAY key in the same direction as that for replay while replaying, the tape speed will be increase to high speed. And if pressed the same key while running at high speed, the speed will be set back to normal one.
