# Operating Instructions

	<b>CAUTION</b> <b>RISK OF ELECTRIC SHOCK</b> <b>DO NOT OPEN</b>	
<b>CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.</b>		

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (service) instructions in the literature accompanying the appliance.

**ATTENTION:**

The product you have purchased is powered by a nickel cadmium battery which is recyclable. At the end of its useful life, under various state and local laws, it is illegal to dispose of this battery into your municipal waste stream.

Please call 1-800-8-BATTERY for information on how to recycle this battery.

Replace battery with part No. CR2032 only. Use of another battery may present a risk of fire or explosion. Caution—Battery may explode if mistreated. Do not recharge, disassemble or dispose of in fire.

**FCC NOTE:**

This device complies with Part 15 of the FCC Rules. To assure continued compliance follow the attached installation instructions and do not make any unauthorized modifications.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**CAUTION:**

**TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD AND ANNOYING INTERFERENCE, USE THE RECOMMENDED ACCESSORIES ONLY.**

**WARNING:**

**TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS EQUIPMENT TO RAIN OR MOISTURE.**

**CAUTION:**

**TO REDUCE THE RISK OF FIRE OR SHOCK HAZARD, REFER MOUNTING OF THE OPTIONAL BOARD TO AUTHORIZED SERVICE PERSONNEL.**

 is the safety information.

# General and Features

---

The AJ-D810A combines a color video camera, which features a 410,000-pixel high-sensitivity IT 3-CCD configuration and an on-chip lens, with a DVCPRO format VTR which in turn features the latest compression technology in a single unit.

The AJ-D810A is particularly compact and light weight with low power consumption, and realizes the optimal functions and performance for an electronic news gathering (ENG) VTR-integrated camera such as high picture quality and sensitivity, mobility, dustproofing and dampproofing, etc. In addition, both the camera section and the VTR employ a digital signal processing system which further improves picture quality and realizes a system for controlling setting menu and subject data by using world standard memory cards.

## Features of the Camera Section

The camera section of the AJ-D810A has the following features.

- High sensitivity: 2000 lux (F11)
- High S/N ratio: 62 dB (typical)
- Ultra-low smear
- Ultra-low flare

### Digital signal processing

Signal processing is digitized by a 14.3 MHz (typ.) 10-bit AD/DA converter. This improves picture quality, stability and reliability, and allows the viewfinder screen displays as well as numerous adjustment and setup items to be converted to menus.

### Setting menu

The setting menu is displayed on the viewfinder screen, and controls the status displays, messages, marker displays, etc. Whether or not to display each item, as well as the display conditions when items are to be displayed, can be selected according to the user's convenience. For example, display ON/OFF for the ! lamp display which informs the user that the unit has entered irregular status can be selected for 7 different conditions.

The setting menu is also used to select various settings and functions and execute memory card operations, etc.

### Setup cards

Setting menu and subject data can be stored on SRAM memory cards with a capacity of 64 kilobytes or greater which conform to PCMCIA standard ratings as setup cards. Stored data can be saved individually or according to the shooting conditions, allowing the same setup conditions to be easily reproduced and assisting in standardizing setup conditions between individual data.

An ATA flash memory card with a memory size of 4 MB or more is required to operate the Picture Link (Pix Link) function sold as an optional accessory.

### High-function electronic shutter

Using the built-in electronic shutter achieves steady images even of quickly moving subjects. In addition, the following special operation modes can also be selected.

- Synchro scan mode: This mode is suited for shooting personal computer and workstation monitor screens and provides images with little horizontal stripe noise.
- High vertical resolution (Super V) mode: This mode provides images with high vertical resolution compared to standard mode.

### Wide range of video gain selections

Gain values can be selected from  $-3$  dB to  $+30$  dB using the setting menu and the GAIN switch. The high S/N ratio allows images with little noise to be obtained even when the gain is increased for shooting in dark locations. Using the SUPER GAIN switch provided specially to implement the super gain function, the video gain can be set to 30, 36, 43 or 46 dB.

### Automatic adjustment and memory functions for black balance/white balance

The black set, black balance and white balance can be automatically adjusted by simple switch operations. Adjustment values are held in the memory even if the power for the unit is turned off, so there is no need to readjust the balance each time the power is turned on.

There are two memory systems for white balance which can hold four adjustment values each for the CC and ND filters, making a total of eight adjustment values. When adjustment values matching the illumination conditions are selected from among the values stored in the memory, the unit is automatically adjusted to the corresponding white balance. (A menu setting also allows adjustment of only two values instead of the values for each filter.) In addition, when the unit is shipped from the factory, the white balance value for 3200K is stored in the memory as a preset value. This value can be called when there is no time to adjust the white balance, etc.

## **Character display function**

The unit is equipped with a function that displays switch settings, the automatic adjustment status for black balance and white balance, warning displays, etc. on the viewfinder screen.

In addition, when using an Anton Bauer Digital Magnum series battery as the unit's power supply, the remaining battery level can be displayed numerically on the viewfinder screen.

## **Warning system for displaying the VTR section status**

The unit informs of VTR trouble, the end of the tape, battery wear, etc. with various warning lamps and a warning tone. The remaining tape time can also be checked by the character display inside the viewfinder.

## **Four filter disks as standard equipment**

The filter setting best suited to the brightness of the subject and lighting conditions can be selected.

## **Fine adjustment of the automatic iris reference value**

The reference value for automatic iris adjustment can be finely adjusted by setting menu operations.

## **Auto close function**

The unit is equipped with an auto close function which automatically closes the lens in the following cases.

- When the black balance is automatically adjusted.
- When the power is turned off in the auto iris mode.

## **Generation of SMPTE/SNG color bar and reference audio signals**

The camera section contains a circuit which generates an SMPTE type color bar signal to facilitate color monitor adjustments, and a circuit which generates a reference level audio signal to facilitate audio level adjustments.

The unit also contains a circuit for generating SNG color bar signals which come in handy for sending signals to communication satellites.

## **Functions and circuits for assuring high picture quality**

The AJ-D810A is equipped with the following functions (and circuits) in order to assure high picture quality and is designed to make the fullest use of the advantages of the high-performance CCD.

- A built-in AUTO KNEE circuit achieves a wide dynamic range which allows large signals to pass through.
- A built-in 2-line image enhancer
- A built-in shading compensation function for use with a lens extender
- A built-in sawtooth wave generator for adjustments
- A zebra pattern ON/OFF selector switch which selects three types of zebra patterns including spot zebra from two levels of zebra patterns.

## **Audio functions**

- A phantom power supply type super-cardioid microphone (option) can be attached and it can also be detached from the main unit for use in interviews.
- Microphone can also be connected, and can be attached to the main unit using the AJ-MH700P microphone holder (option).
- The audio CH1 recording level can be easily adjusted at the front panel of the unit.

# Features

---

## **Recording by an external VTR**

When an external VTR is connected using the 26-pin/12-pin output adaptor (option, AJ-YA900P), recording can be performed by the external VTR instead of the internal VTR.

## **Remote control**

Connecting the Extension Control Unit (option, AQ-EC1) allows a portion of the camera section functions to be operated by remote control.

# Features

---

## Features of the VTR section

### **Digital system**

The VTR section features a component digital recording system that employs the latest compression technology and non-compressed PCM recording for audio. This system provides superior S/N, frequency band and waveform characteristics as well as reproduction of detailed areas, etc., and realizes even higher picture and sound quality.

### **Rec review function**

By automatically rewinding and playing back the last two to ten seconds or so of the recording, this function enables what has been recorded to be promptly checked out.

### **Playback function**

This function enables the playback picture (black-and-white picture) to be seen on the viewfinder screen. In addition, color playback pictures can be output from the unit's VIDEO OUT connector.

### **Built-in time code generator/reader**

Time code information can be recorded and played back on a dedicated subcode track.

### **Locking of the time code to an external source**

The built-in time code generator can be locked to an external generator. Also, the built-in time code generator uses a lithium battery as its back-up power supply, allowing time codes to be backed up for approximately one year even if power is not supplied to the unit.

### **Built-in DOLBY NR System\***

A Dolby B Noise Reduction System is built in for audio recording in the longitudinal direction.

### **Successive shooting**

Images can be shot successively within an accuracy of 0—+1 frame simply by pressing the VTR START button or the lens VTR button.

# System Configuration

# Controls and Their Functions

---

## Power Supply Section

- ① Battery holder**  
The battery pack (option) made by Anton Bauer is mounted onto this holder.
- ② DC IN (external power input) connector (XLR, 4P)**  
The AJ-B75 AC adaptor (option) is plugged into this socket when the unit is to be operated by AC power. An external battery is plugged in when an external battery is to be used to operate the unit.
- ③ BREAKER (circuit breaker) button**  
In order to protect the equipment, the circuit breaker is tripped and the power is automatically turned off when an excessively high level of power flows inside. Upon completion of the internal inspection and adjustments, push this button back in. The power will come back on provided that there is no trouble inside the unit.
- ④ POWER switch**  
**ON:** Set to this position to turn on the unit's power.  
**OFF:** Set to this position to turn off the unit's power.

# Controls and Their Functions

---

## Accessory Mounting Section

- ⑤ Hook for mounting shoulder belt**  
Attach the accessory shoulder belt to this hook.
- ⑥ Light shoe**  
Mount the video light, etc. onto this shoe.
- ⑦ Lens mount (bayonet type)**  
Mount the lens here.
- ⑧ Lens clamping lever**  
Insert the lens into the lens mount ⑦, and turn the lens mount ring using this lever to clamp the lens.
- ⑨ Lens mount cap**  
Press up the lens clamping lever ⑧ to remove this cap. Keep the cap in place if the lens is not going to be mounted.
- ⑩ Lens cable clamp**  
This is for clamping the lens cable.
- ⑪ Tripod mount**  
When the unit is to be secured to a tripod, mount the tripod attachment (SHAN-TM700) which is available as an optional accessory.
- ⑫ LENS connector (12-pin)**  
Hook up the lens connecting cable to this connector. Consult with your dealer concerning the lens which you are going to use.
- ⑬ Shoulder pad**  
Adjust this pad to facilitate operation when carrying the unit on your shoulder. Its position can be brought forward or backward and adjusted by loosening the two set screws.

# Controls and Their Functions

The accessory control knob can be attached to the AUDIO LEVEL CH1 control.

## Audio Function Section (1)

### 14 AUDIO LEVEL CH1 (audio channel 1 recording level) control

When the AUDIO SELECT CH1/CH2 switch 17 is set to MAN, the recording level of audio channel 1 can be adjusted by this control in addition to the AUDIO LEVEL CH1 control 16 on the side panel.

### 15 MIC IN (microphone input) jack (XLR, 3-pin)

Connect an optional microphone to this jack. The power for the microphone is supplied from this jack.

### 16 AUDIO LEVEL CH1/CH2 (audio channel 1/2 recording level) controls

When the AUDIO SELECT CH1/CH2 switch 17 is set to MAN, the audio level of audio channels 1 and 2 can be adjusted using these controls.

However, the audio CH1 level can also be adjusted using the AUDIO LEVEL CH1 control 14 on the front panel.

### 17 AUDIO SELECT CH1/CH2 switch (audio channel 1/2 auto/manual level adjustment selector) switch

This selects the method used to adjust the audio levels of audio channels 1 and 2.

**AUTO:** For adjusting the levels automatically.

**MAN:** For adjusting the levels manually.

### 18 AUDIO IN (audio input selector) switch

This selects the input signals to be recorded on audio channels 1 and 2.

**FRONT [MIC]:** The microphone input signals connected to the MIC IN jack 15 are recorded.

**REAR [MIC]:** The microphone input signals connected to the AUDIO IN CH1/CH2 connectors 21 are recorded.

**REAR [LINE]:** The line input signals connected to the AUDIO IN CH1/CH2 connectors 21 are recorded.

### 19 REAR MIC POWER switch

**ON:** The phantom power is supplied to the rear microphone.

**OFF:** The phantom power is not supplied to the rear microphone.

### 20 CUE switch

**CH1:** The audio CH1 signals are recorded on the cue track.

**1/2:** The signals of audio CH1 and CH2 are mixed together and recorded on the cue track.

**CH2:** The audio CH2 signals are recorded on the cue track.

### 21 AUDIO IN CH1/CH2 (audio input channel 1/2) connectors (XLR, 3P)

An audio component or microphone is connected here.

### 22 AUDIO OUT connector (XLR, 3P)

This is connected to an audio component. The audio channels are coupled to the MONITOR SELECT switch 27 and switched in tandem.

### 23 DC OUT (DC power output) connector

This is the DC 12 V output connector. A current of approximately 100 mA can be taken out.

# Controls and Their Functions

## Audio Function Section (2)

### 24 ALARM (warning tone volume) control

This adjusts the warning tone volume heard from the speaker 26 or the earphone connected to the PHONES jack 29. When it is set to the lowest position, the warning tone is not audible. However, by making changes to the inside parts, the tone can be made audible even when the control is at its lowest position.

### 25 MONITOR (volume) control

This adjusts the volume of the sound other than the warning tone—the sound from the speaker 26 or earphone 29. When it is set to the lowest position, no sound is heard.

## Audio Function Section (3)

### 26 Speaker

During recording, the EE sound can be monitored; during playback, the playback sound can be monitored.

The warning tone is heard through the speaker in synchronization with the flashing or lighting of the warning lamp and warning display.

The speaker sound is automatically muted when an earphone is connected to the PHONES jack 29.

### 27 MONITOR SELECT (audio channel selector) switch

This selects the audio channel whose sound is to be heard through the speaker 26, AUDIO OUT connector 22, or earphone.

**CH1:** The audio channel 1 sound is output.

**1/2:** The sound produced by mixing the audio channel 1 and 2 sound or the stereo sound is output. However, only the mixed sound is output from the speaker 26 and AUDIO OUT connector 22.

**CH2:** The audio channel 2 sound is output.

### 28 MONITOR (sound selector) switch

This selects the sound of the earphone when 1/2 is selected with the MONITOR SELECT switch 27.

**ST:** The stereo sound of audio channels 1 and 2 is output.

**MIX:** The mixed sound of audio channels 1 and 2 is output.

### 29 PHONES (earphone) jack (mini-jack)

When an earphone (option) is connected to this jack, the sound selected by the MONITOR switch 28 can be heard. The warning tones relating to the unit's operation or status can also be heard. An earphone enabling a sufficiently high volume of sound to be heard is recommended. When the earphone is connected, speaker 26 sound is automatically muted.

# Controls and Their Functions

---

(The viewfinder shown in the illustration is the AJ-VF10P.)

## Shooting (Recording)/Playback Function Section (1)

### 30 Viewfinder (optional accessory)

Black-and-white images can be seen in the viewfinder during recording and playback. Warnings and messages relating to the unit's operating status and settings, zebra pattern, markers (safety zone marker, center marker), etc. can also be seen.

### 31 PEAKING control

This is used to adjust the contours of the images inside the viewfinder to facilitate focusing. It does not affect the camera's output signals.

### 32 CONTRAST control

This is used to adjust the contrast of the screen inside the viewfinder. It does not affect the camera's output signals.

### 33 BRIGHT control

This is used to adjust the brightness of the screen inside the viewfinder. It does not affect the camera's output signals.

### 34 ZEBRA (zebra pattern) switch

This displays the zebra pattern inside the viewfinder.

**ON:** The zebra pattern is displayed.

**OFF:** The zebra pattern is not displayed.

When the unit is shipped from the factory, the zebra pattern is set in such a way that those parts with an IRE video level from approx. 70% to 85% are displayed. The displaying of parts with a level ranging from 50% to 110% or more or with a certain level can also be set on the setting menu.

### 35 Diopter control knob

This is adjusted in such a way that the images on the viewfinder screen are seen most clearly in accordance with the dioptric power of the camera's operator.

### 36 Eyepiece

### 37 Viewfinder forward-backward/left-right position clamp lever

Loosen this lever to adjust the position of the viewfinder 30 in the forward-backward or left-right direction.

### 38 Eyepiece forward-backward movement ring

Turn this ring to adjust the position of the eyepiece 36 in the forward-backward direction.

### 39 Viewfinder stopper screw

To detach the viewfinder 30 from the camera, loosen this screw and then detach the viewfinder.

# Controls and Their Functions

(The viewfinder shown in the illustration is the AJ-VF10P.)

## Shooting (Recording)/Playback Function Section (2)

### 40 CC/ND FILTER (filter selector) knob

This selects the filter to match the light source which is illuminating the subject.

If the setting of this knob is changed when the menu display mode has been set to "3" (default setting), the new setting will appear on the setting change message display area of the viewfinder screen.

■ The knob and filter settings are listed below.

■ Examples of filter setting to match shooting conditions

FILTER knob setting	Description
1	3200K
2	5600K+1/4ND
3	5600K
4	5600K+1/16ND

Filter	Shooting condition
1	Sunrise, sunset, inside a studio
2	Outdoors under a clear sky
3	Outdoors under a cloudy or rainy sky
4	Snow scenes, high mountains, coastlines and other extremely clear and bright scenes

### 41 Synchro scan adjustment switches

These switches are used to adjust the synchro scan speed. Pressing the "–" switch reduces the shutter speed; pressing the "+" switch increases the shutter speed. Set these switches to a position where the side bar noise in the viewfinder is minimal during personal computer monitor shooting, etc.

<Note>

When these switches are used for UB/TC/CTL settings while the SET position has been selected as the TCG switch position, they will not serve their function as synchro scan adjustment switches. The TCG switch must be set to F-RUN or R-RUN for these switches to serve their function.

### 42 WHITE BAL (white balance memory selector) switch

**PRST:** Set to this position when there is no time to adjust the white balance. The white balance value for 3200K is stored in the memory.

**A or B:** When the AUTO W/B BAL switch 45 is pressed to the AWB side, the white balance is automatically adjusted in accordance with the setting position of the filter knob 40, and the adjustment value is stored in memory A or memory B.

When the FILTER knob and the WHITE BAL switch are set to the same positions as the ones set when the adjustment was made, the adjustment value stored in the memory is called, and the unit is automatically adjusted to the white balance which corresponds to this value.

If the setting of this switch is changed when the menu display mode has been set to "3" (default setting), the new setting will appear at the WHITE BAL switch display position on the viewfinder screen. (Example: "A")

# Controls and Their Functions

## Shooting (Recording)/Playback Function Section (3)

### 43 OUTPUT (output signal selector)/AUTO KNEE switch

This switch selects the video signals which are to be output from the camera unit to the VTR unit, viewfinder and video monitor. The AUTO KNEE function can be used when the images shot by the camera have been selected.

#### ■ OUTPUT/AUTO KNEE switch setting positions

BARS	Color bar signals are output. The AUTO KNEE circuit is not activated. Set the switch to this position in the following cases: <ul style="list-style-type: none"> <li>●When adjusting the video monitor</li> <li>●When recording color bar signals</li> </ul>
CAM, AUTO KNEE OFF	The images shot by the camera are output. The AUTO KNEE circuit is not activated. The default setting is "MANUAL KNEE".
CAM, AUTO KNEE ON	The images shot by the camera are output. The AUTO KNEE circuit is activated.

### 44 GAIN (gain selector) switch

This is used to change the video amplifier's gain in accordance with the lighting conditions during shooting. The gain values corresponding to the L, M and H settings are assigned beforehand on the setting menu. When the unit is shipped from the factory, these settings are: L=0 dB, M=9 dB and H=18 dB.

If the setting of this switch is changed when the display mode has been set to "3", the new setting will appear at the gain display position on the viewfinder screen. (Example: "12 dB")

### 45 AUTO W/B BAL (white balance/black balance automatic adjustment) switch

**AWB:** Set to this position for automatically adjusting the white balance. When the WHITE BAL switch 42 is now set to "A or B", the adjusted value will be stored in memory A or memory B.

**ABB:** Set to this position for automatically adjusting the black balance. When this switch is held down for at least 10 seconds at the ABB position, the auto black shading will be compensated automatically.

### 46 SHUTTER switch

Set this to ON when using the electronic shutter. When it is pressed to the SEL side, the shutter speed and mode displays change in the ranges preset on the setting menu. If the setting of this switch is changed when the display mode has been set to "2" or "3", the new setting will appear at the shutter display position on the viewfinder screen. (Example: "1/250", "1/60.3")

## 1) AUTO KNEE function

When the level is adjusted to people, scenes, etc. for shooting against a very bright background, the background will be whited out and the buildings or scenes in the background will become blurred. If the AUTO KNEE function is activated in cases like these, the background can be reproduced in clear detail. This function is especially effective for shooting in the following conditions:

- When shooting people in shade under a clear sky
- When simultaneously shooting people in vehicles or indoor and the outdoor scenery seen through the windows
- When shooting scenes with a high contrast

## Controls and Their Functions

---

**47 ECU REMOTE (remote control) connector (6-pin)**

Connect the AQ-EC1 extension control unit (option) here.

<Note>

The POWER switches on unit and extension control unit must be set to OFF before the remote control cable is connected or disconnected.

**48 26-pin/12-pin output adaptor** (See page 104 for mounting method.)

The 26-pin/12-pin output adaptor AJ-YA900P (option) is mounted on this section. When the portable VTR is connected as the external VTR, recording can be performed simultaneously with the unit's built-in VTR.

Furthermore, by connecting the SHAN-C12TCA multi-connector cable (optional accessory) to the 12-pin connector, it is possible to output the sound of audio channels 1 and 2 separately.

**49 VIDEO OUT connector (BNC)**

This outputs the video signals (75 $\Omega$  termination, rated level) to be monitored. During recording, EE images can be monitored; during playback, playback images can be monitored.

While performing settings on the menu, the setting menu can be superimposed onto the shot images appearing on the monitor screen so that the settings can also be checked.

**50 CAM OUT (camera output) connector (BNC)**

This outputs the composite video signals (75 $\Omega$  termination, rated level). When a video monitor is connected, the images shot by the camera can be monitored. Even while the VTR is playing back, the camera's images are output at all times.

## Shooting (Recording)/Playback Function Section (4)

### 51 VTR START button

When this pressed, recording commences; when it is pressed again, recording stops. This button has the same function as the VTR button on the lens side.

### 52 VTR SAVE/STBY (tape protection) switch

This selects the power supply status while the VTR recording is temporarily stopped (REC PAUSE).

**SAVE:** This is the tape protection mode. The cylinder is stopped in the half-loading status. Compared with the STBY position, less power is consumed and the unit can be operated longer using the battery. It takes longer for recording to commence after the VTR START button 51 is pressed in the SAVE position than in the STBY position.

When the switch is set to this position, the VTR SAVE lamp inside the viewfinder lights.

**STBY:** Recording commences immediately when the VTR START button is pressed.

#### <Note>

This unit will automatically go into SAVE mode when the designated time for standby (STBY) condition is exceeded. To return to standby mode, press the VTR SAVE/STBY switch once to select SAVE mode, then once again to return to STBY mode.

### 53 MODE CHECK button

While this button is kept depressed, the camera's setting status is displayed in the viewfinder. It does not affect the camera's output signals.

### 54 SUPER GAIN button (inside sliding cover)

The super gain mode is forcibly established when this button is pressed, and each time the button is pressed when all the super gain values have been set using "SUPER GAIN" on the MAIN menu 2 of 4 screen, the gain is switched by one level in the following sequence: 30 dB→36 dB→43 dB→46 dB→OFF→30 dB, etc. However, the DTL and other menu settings cannot be performed.

### 55 SUPER IRIS button (inside sliding cover)

This is used when backlight compensation (or the super black function\*) is to be provided. When it is pressed, the switch settings are displayed inside the viewfinder for 3 seconds. When it is pressed again, backlight compensation (or the super black function\*) is released.

\*1See Main Menu Screen 2 of 4 on page 126 for details on the super black function.

---

**Super gain:** When 30 dB is allotted to the SUPER IRIS button, DTL and other menu settings cannot be performed for this 30 dB.

## Controls and Their Functions

---

**56 MARK button**

This is used when the Picture Link (Pix Link)\*1 function is to be used. Each time it is pressed M1 (MARK1), M2 (MARK2) or no display appears in the viewfinder.

\*1Picture Link adaptor board (AJ-YAP900) is sold as an option.

**57 EJECT (cassette eject) button**

Press this to insert or eject the cassette.

**58 REW (rewind) button**

Press this to rewind the tape. Its lamp lights during rewinding.

If this button is pressed during playback, the playback images are rewound at approximately quadruple speed while the button is held down.

**59 FF (fast forward) button**

Press this to fast forward the tape. Its lamp lights during fast forwarding.

If this button is pressed during playback, the playback images are fast forwarded at approximately quadruple speed while the button is held down.

**60 PLAY/PAUSE button**

Press this to view the playback images on the viewfinder screen or color video monitor. Its lamp lights during playback.

If this button is pressed again during playback, playback is paused and the lamp goes off. After playback has been paused for 2 minutes, the unit automatically switches to stop status (STOP).

**61 STOP button**

Press this to stop the tape travel.

**62 EMERGENCY screw (inside the rubber cap)**

For details, refer to the "emergency eject" function (on page 149).

# Controls and Their Functions

---

## Menu Operation Section

**63 Setup card insertion slot**

The optional setup cards are inserted into this slot.

**64 MENU SET/OFF switch**

This displays the setting menu on the viewfinder screen through VIDEO OUT connector.

**SET:** The page on which the previous setting menu operations were completed appears on the viewfinder screen. (When the menu is used for the first time, the first of the pages which can be displayed appears.)

**OFF:** The setting menu is not displayed on the viewfinder screen through VIDEO OUT connector.

**65 SHIFT/ITEM button**

Each time this button is pressed, the cursor moves on the setting menu page now displayed. Use it when selecting items.

<Note>

This switch functions differently depending on the operation item. Check the function by operating the menu item by item.

**66 UP button**

This is used to increment the setting of the item selected on the setting menu by 1 level each time it is pressed or to switch the setting between ON and OFF.

**67 DOWN button**

This is used to decrement the setting of the item selected on the setting menu by 1 level each time it is pressed or to switch the setting between ON and OFF.

**68 PAGE button**

This is used to select the setting menu page.

## Time Code-Related Section (1)

**69 GENLOCK IN/(VIDEO IN) connector (BNC)**

The reference signal is supplied to this connector when the camera section is to be subject to genlock operation or when the time code is to be locked externally. This connector serves as an external video input connector when REC SIGNAL: VIDEO has been selected on the setting menu.

**70 TC IN connector (BNC):**

The time code serving as the reference is input when the time code is locked to an external source.

**71 TC OUT connector (BNC):**

Connect this to the time code TC IN connector on the external VTR when locking the external VTR's time code to this unit's time code.

## Time Code-Related Section (2)

**72 HOLD button**

The time data appearing on the counter display at the instant when this button is pressed is held. (The time code generator will still continue to run.) When the button is pressed again, the hold status is released. Use the button to ascertain the time at which a particular scene was shot, for example.

**73 RESET button**

This resets the time data on the counter display to "00:00:00:00". When the TCG switch **77** is set to SET and this button is pressed, the time code or user's bit can be reset to "00:00:00:00" or "00 00 00 00".

**74 DISPLAY switch**

The time code, CTL or user's bit is made to appear on the counter display depending on the setting positions of this switch and the TCG switch **77**.

**UB:** The user's bit is displayed.

**TC:** The time code is displayed.

**CTL:** CTL is displayed.

**75 UP button, DOWN button**

When setting the time code or user's bit, these buttons increment or decrement by 1 the figure of the digit made to flash by the SHIFT/ITEM button **76**.

**76 SHIFT/ITEM (digit advance) button**

When setting the time code or user's bit, this button is used to cause the digit which is to be set to flash.

# Controls and Their Functions

## 77 TCG (time code selector) switch

This is used to set the running mode of the internal time code generator.

**F-RUN:** This position is used when the time code is to be advanced continuously regardless of the VTR's operation.

Set to this position when aligning the time code with the actual time or locking the time code to an external source.

**SET:** This position is used for setting the time code or user's bit.

**R-RUN:** This position is used when the time code is to be advanced only while recording is in progress. The time code will be recorded continuously on a tape with a succession of unedited shots.

## Warning/Status Display Section

### 78 Tally lamp

This is activated when the TALLY switch 79 is at HIGH or LOW, and it lights during recording by the VTR section. It flashes in the same way as the REC lamp inside the viewfinder to warn the operator. The brightness when lighted can be selected using the TALLY switch (HIGH or LOW).

### 79 TALLY switch

This controls the tally lamp 78.

**HIGH:** The tally lamp is made brighter.

**OFF:** The tally lamp is extinguished.

**LOW:** The tally lamp is made darker.

### 80 Back tally lamp

This functions in the same way as the tally lamp 78 when the back tally switch 81 is set to ON.

### 81 Back tally switch

This controls the back tally lamp 80.

**ON:** The back tally lamp operates.

**OFF:** The back tally lamp does not operate.

### 82 WARNING lamp

This flashes or lights when trouble occurs in the VTR section.

### 83 LIGHT switch

**ON:** This illuminates the display window 84.

**OFF:** This extinguishes the display window illumination.

### 84 Display window

The warnings related to the VTR section, remaining battery level, sound level, time data, etc. are displayed in this window.

# Power Supply

---

Power can be supplied to the unit using a battery pack or AC power supply.

## Using a battery pack

A battery pack which is made by any of the four following manufacturers can be used:  
① Panasonic, ② Anton Bauer, ③ Sony or ④ IDX.

Before using a battery pack, be sure to charge it completely using a battery charger.

• See the Handling Instructions for the battery pack and battery charger for a detailed explanation of charging methods.

## Using an Anton Bauer Battery Pack

- 1 Mount the battery pack.  
Insert the battery pack in the direction of the arrow and then slide it into place.

- 2 When detaching the battery, hold down the detachment lever of the battery holder and slide the battery pack in the direction of the arrow.

### <Note>

The AJ-D910WA supports the intelligent battery system and the ultra-light system. Automatic detection can be performed for intelligent batteries with a remaining battery level of 10% or more. At this time, the remaining battery level is displayed numerically (percentage display) inside the viewfinder. If the power is turned on with a remaining battery level of 10% or less, the voltage is displayed. When external power is supplied after intelligent battery sensing, the remaining battery charge display switches to the externally supplied voltage display.

# Power Supply

## Using the Panasonic AU-BP402 Battery Pack

- 1 Detach the battery mounts.

- 2 Connect the unit's connectors with the connectors of the AU-M402H battery case.

- 3 Mount the AU-M402H battery case.  
Open the battery case cover and lift up the rubber cap to expose the screw holes. Tighten the screws with a screwdriver and mount the case to the unit. Be sure to tighten the screws completely.

### <Notes>

- Do not pull strongly on the rubber cap.
- Take care not to catch the connection cord between the battery case and the main unit.

## Power Supply

---

- 4 Connect the battery pack plug to the connector inside the case and insert the battery pack.

**<Note>**

The unit's power must be set to OFF before the plug is inserted or removed.

# Power Supply

## Using a Sony Battery Pack

- 1** Remove the battery mounts.  
See page 24.
- 2** Mount the accessory battery mounting connector.

- 3** Mount the Sony battery holder.  
Mount the battery case with the cover detached first, and then mount the detached cover as shown in the figure.
  - ① Tighten the mounting screws.
  - ② Tighten the power supply contact screws.
  - ③ Insert the top of the detached cover in the direction of the arrow.
  - ④ Align the hole at the bottom (metal part) of the cover with the hole at the bottom of the case and mount the cover to the battery mounting connector with the screw of the battery holder.

**<Note>**

Take care when attaching the battery holder that the wires are not pinched.

# Power Supply

## Using the Sony BP-90 Battery Pack

- 1** Mount the accessory battery mounting connector.  
(See the preceding page.)
- 2** Mount the BP-90 battery case.
  - ① Tighten the mounting screws.
  - ② Tighten the power supply contact screws.
  - ③ Insert the top of the detached cover in the direction of the arrow.
  - ④ Align the hole at the bottom (metal part) of the cover with the bottom of the case and mount the cover to the battery mounting connector with the screw.

## Using the Sony BP-L60/BP-L90 lithium-ion Battery Pack

- 1** Attach the supplied battery mounting terminals.
- 2** Attach the lithium-ion battery holder.
  - ① As shown in the figure, remove the battery clamp, and attach the holder using the mounting screws.
  - ② Tighten the power supply contact screws.
  - ③ Put the battery clamp back into place.

### <Notes>

- The unit's power must be set to OFF before the plug is inserted or removed.
- Take care when attaching the battery case/battery holder that the wires are not pinched.

# Power Supply

## Using an AC Power Supply (When using the AJ-B75 AC Adaptor)

- 1 Connect the unit's EXT DC IN socket with the DC OUT connector of the AJ-B75 AC adaptor.

- 2 Set the AC adaptor's power to ON.

- 3 Set the unit's power switch to ON.

### <Notes>

- When using an external power supply other than the AJ-B75 AC adaptor, check the pin signal of the EXT DC IN socket.
- When both a battery pack and AC adaptor are connected, power is supplied from the AC adaptor.
- When using an AC adaptor, the AC adaptor's power must be set to ON before the unit's POWER switch is set to ON. If this sequence is reversed, the AC adaptor's output voltage will rise slowly and may cause the unit to malfunction.

Pin No.	Signal
1	GND
2, 3	—
4	+12 V

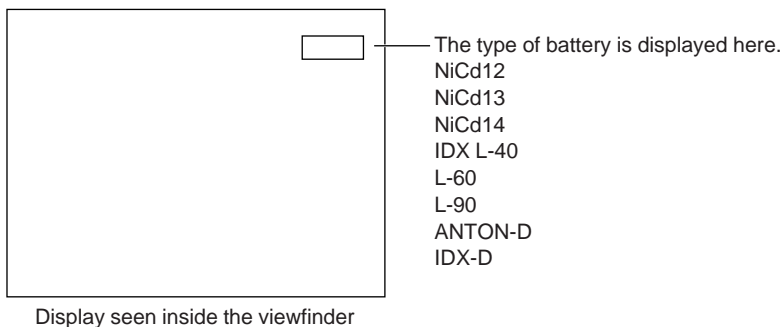

# Checking and Selecting the Type of Battery

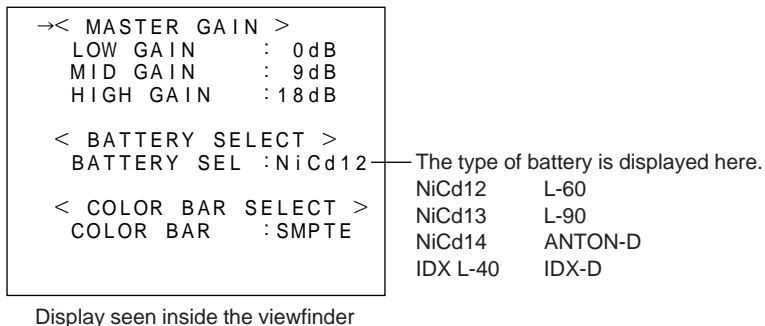

## To check the type of battery

- 1 Press the MODE CHECK button.  
While this button is held down, the type of battery is displayed in the remaining battery charge display area.

## To select the type of battery

- 1 When the MENU SET/OFF switch is set to SET while the HOLD button is pressed, the battery selection menu appears on the screen.
- 2 Press the SHIFT/ITEM button, and move the arrow (cursor) to BATTERY SEL.
- 3 Press the UP or DOWN button to select the type of battery.

# Mounting the Lens

- 1 Raise the lens clamping lever and remove the mount cap.

- 2 Align the indentation at the top center of the lens mount with the center mark of the lens and mount the lens.

- 3 Lower the lens clamping lever and clamp the lens.

- 4 Press the cable into the cable clamp and connect it to the LENS connector.

• See the Handling Instructions provided with the lens for lens handling.

## <Note>

The lens and camera adjustments listed below may be necessary depending on the lens to be mounted.

1. Lens flange back adjustment
2. Lens auto iris adjustment
3. Lens white shading adjustment (with this unit)

# Adjusting the Lens Flange

---

When images are not clearly focused at both the telephoto and wide-angle positions during zoom operations, adjust the flange back (the distance from the lens mounting surface to the image formation surface).

Once adjusted, the flange back does not need to be readjusted as long as the lens is not changed.

## Adjustment method

Check the position of each part of the lens which must be operated in order to adjust the flange back with the lens Handling Instructions.

## Adjusting the Flange Back

- 1** Set the lens iris to manual.
  - 2** Open the iris. Position the flange back adjustment chart about 10ft (3 m) from the lens and illuminate it so that an appropriate image output level is obtained.  
Use the filter and/or shutter if the video level is too high.
  - 3** Loosen the Ff ring clamping screw.
  - 4** Set the zoom ring to the telephoto position manually or by electric drive.
  - 5** Shoot the flange back adjustment chart and turn the distance ring to bring the chart into focus.
  - 6** Set the zoom ring to the wide-angle position.
  - 7** Turn the Ff ring to bring the chart into focus.  
At this time, take care not to move the distance ring.
  - 8** Repeat this operation four to seven times until the lens is in focus at both the telephoto and wide-angle positions.
  - 9** Firmly tighten the Ff ring clamping screw.
- Refer to the Operating Instructions of the lens.

# Adjusting the White Shading

Follow the procedure outlined below when the white shading needs to be re-adjusted.

## White shading adjustment procedure

- 1** Mount a lens to the camera.  
Be sure to also connect the lens cable.
- 2** Set the electronic shutter to OFF and the gain to L (0 dB).

- 3** If the lens has an extender, remove the extender.
- 4** Set the MENU SET/OFF switch from OFF to SET while holding down the SHIFT/ITEM and UP buttons to open the menu.  
Press the PAGE button until the MAIN menu screen 2 of 4 appears.  
Press the SHIFT/ITEM button to move the cursor to the VF DISPLAY position.  
Press the UP or DOWN button to open the VF DISPLAY page.  
Set ZEBRA1 DETECT to 70%, ZEBRA2 DETECT to 85% and ZEBRA2 to SPOT. (Initial setting mode)  
Return the MENU SET/OFF switch from SET to OFF to close the menu.  
Set the viewfinder's ZEBRA switch to ON.

- 5** Shoot an evenly white paper.  
Flickering occurs easily when fluorescent or mercury lamps, etc. are used for lighting. Therefore, use a light source which does not produce flickering such as sunlight or halogen lamps, etc.
- 6** Set the lens iris to manual and adjust the iris so that the ZEBRA pattern covers the entire screen. If the light strikes the subject in an uneven manner, the ZEBRA pattern will not cover a part of the screen. Therefore, adjust the position of the light source, etc. as necessary.  
Check that the lens iris is between F4 to F11. If the lens iris is not within this range, adjust the position of the light source, etc.  
(Be sure to set the electronic shutter to OFF.)

# Adjusting the White Shading

- 7** Set the WHITE BAL selector switch to A or B execute AWB. Next, execute ABB and then execute AWB again.

- 8** Repeat step 6.
- 9** Set the MENU switch from OFF to SET while holding down the SHIFT/ITEM and UP buttons to open the menu. Press the PAGE button until the MAIN menu screen 4 of 4 appears. Press the SHIFT/ITEM button to move the cursor to the AUTO SHADING position. Press the UP or DOWN button to open the AUTO SHADING page. Press the SHIFT/ITEM button to move the arrow at the far left to WHITE, and then press the UP or DOWN button. ACTIVE appears on the viewfinder to indicate that white shading automatic adjustment is operating. Adjustment is completed when the ACTIVE display disappears. Return the MENU switch from SET to OFF to close the menu.

- 10** When the lens to be used has an extender, insert an extender and repeat steps 6 to 9.
- 11** If the lens used comes with a ratio converter, insert the ratio converter and repeat steps 6 and 7.

This completes white shading adjustment.

The adjustment value is stored in the non-volatile memory, so there is no need to readjust the white shading even if the power for the unit is turned off.

### <Notes>

1. The white shading can be adjusted for general lenses using the above method. However, this method may not apply for extremely special lenses.
2. Vertical coloring may occur near the open position of the lens iris even after performing the above adjustments. However, this is characteristic of the optical system of the lens, and does not indicate a malfunction.

# Adjusting the Viewfinder

---

## Adjusting the Position

- 1 Lift up the viewfinder forward-backward/left/right position clamp lever to release the lock.

- 2 Adjust the position of the viewfinder in the forward-backward and left-right directions.

- 3 Tighten the viewfinder forward-backward/left-right position clamp lever to the locked position.

# Adjusting the Viewfinder (The viewfinder shown in the illustration is the optional AJ-VF10P.)

## Adjusting the Diopter and Screen

### Adjusting the diopter

- 1 Set the POWER switch to ON. A picture will appear in the viewfinder.
- 2 Turn the diopter adjustment ring to adjust the diopter so that the viewfinder picture can be clearly seen.

### Adjusting the screen

Adjust the condition of the viewfinder screen.

- Brightness:** Adjust the BRIGHT control  
**Contrast:** Adjust the CONTRAST control  
**Contour:** Adjust the PEAKING control

- 1 Set the POWER switch to ON.
- 2 Set the OUTPUT switch to CAM.
- 3 Turn the viewfinder BRIGHT and CONTRAST controls to adjust the picture brightness and contrast. Turning the PEAKING control makes the picture appear softer or sharper. A sharp picture facilitates focusing the lens.

## Adjusting the Eyepiece Position

Turn the eyepiece forward-backward movement ring to adjust the position of the eyepiece in the forward-backward direction.

# Adjusting the Viewfinder (The viewfinder shown in the illustration is the optional AJ-VF10P.)

## Detaching the Eyepiece

Detaching the eyepiece allows the entire screen to be seen clearly even when shooting with your eye removed from the viewfinder. This also facilitates the removal of dust which has adhered to the CRT screen and mirror.

<Note>

Absolutely do not wipe the mirror surface as it has been specially treated. Dust which has adhered to the mirror should be blown away with a blower, etc.

- 1 Press the lock button.
- 2 Turn the lock ring as far as possible in the counter-clockwise direction and line up the alignment marks on the lock ring and viewfinder barrel.

- 3 Detach the eyepiece.

## Remounting the eyepiece

1. Line up the alignment marks on the lock ring and the viewfinder barrel, and then insert the eyepiece.
2. Turn the eyepiece as far as possible in the clockwise direction. The lock button latches with a clicking sound, and remounting is completed.

# Adjusting the Viewfinder (The viewfinder shown in the illustration is the optional AJ-VF10P.)

## Detaching the Viewfinder

- 1 Check that the POWER switch is set to OFF.
- 2 Disconnect the plug from the viewfinder cable connector.  
<Note>  
Use both hands to detach the viewfinder. The viewfinder may not detach smoothly with one hand, resulting in damage to the viewfinder.
- 3 Loosen the viewfinder stopper screw and detach the viewfinder by pulling it straight up.

## Mounting the Viewfinder

- 1 Press down the viewfinder.
- 2 Tighten the viewfinder stopper screw firmly. If it is difficult to insert the screw, press down the viewfinder once again.
- 3 Connect the plug to the viewfinder connector and secure the viewfinder cable with the clamp.  
<Note>  
Insert the plug firmly when connecting it to the viewfinder connector.

# Audio Input Preparations

(The viewfinder shown in the illustration is the optional AJ-VF10P.)

## Using the Microphone Mounted to the Main Unit

Using the AJ-MC700P microphone kit (option) or the AJ-MH700P microphone holder (option) allows a microphone to be mounted to the main unit.

- See the Handling Instructions for the microphone holder.

## Using the AJ-MC700P Microphone Kit (Option) Microphone Mounted to the Main Unit

- 1 Mount the microphone holder.

- 2 Mount the microphone.

- 3 Connect the microphone connecting cable to the unit's MIC IN jack.

# Audio Input Preparations

---

## Mounting the AJ-MH700P Microphone Holder (Option)

- 1 Remove the microphone holder mounting screws.

- 2 Mount the AJ-MH700P microphone adaptor (option) to the main unit.

- 3 Mount the microphone to the microphone holder and tighten the screws.

- 4 Connect the microphone connecting cable to the MIC IN jack.

- 5 Set the AUDIO IN switch to FRONT [MIC] in accordance with the audio channel to be recorded.

# Audio Input Preparations

## Using the Microphone not Mounted to the Main Unit

To the MIC IN Connector

**AUDIO IN switch:** Set the AUDIO IN switch for the audio channel you wish to record to FRONT [MIC].

**<Note>**

When extending the microphone, use a cable which supports the phantom power supply type of microphone.

## Using the Microphone not Mounted to the Main Unit

Up to two external microphones can be connected to the AUDIO IN CH1/CH2 Connectors. Phantom power supply can also be supported by setting the MIC POWER switch to the ON position.

**AUDIO IN Switch:** Set the AUDIO IN Switches of the channels to which microphones are connected to REAR [MIC].

# Audio Input Preparations

## Mounting a Wireless Microphone

When using the Panasonic wireless microphone system, mount the WX-RA700 wireless receiver.

When detaching the wireless microphone, press up the lever on the bottom of the camera attachment (1) and detach the microphone in the upward direction (2).

- See the Handling Instructions for the WX-RA700 wireless receiver for wireless receiver operations.

## Connecting an Audio Component

When using an audio component as the line input signal source, connect the audio component to the unit's AUDIO IN CH1/CH2 connectors.

# Mounting the Unit to a Tripod

When mounting the unit to a tripod, use an optional tripod attachment.

- 1** Mount the tripod attachment (SHAN-TM700) onto the tripod.  
Select the attachment hole in consideration of the unit's and tripod attachment's center of gravity. In addition, check that the diameter of the selected hole matches the diameter of the universal head's camera mounting screw.

- 2** Mount the camera to the tripod attachment.  
Slide the unit forward along the grooves until a clicking sound is heard.

## When detaching the tripod attachment

Hold down the red lever and move the black lever in the direction of the arrow.

### <Note>

When the tripod attachment pin does not return to its original position after the camera has been detached, hold down the red lever and move the black lever in the direction of the arrow again to return the pin to its original position.

Care should be taken as the camera cannot be mounted if the pin remains in the center.

# Mounting the Shoulder Belt

---

To remove the shoulder belt, open the hooks and then remove the belt.

**<Note>**

When mounting and removing the shoulder belt, press on the top of the hooks to check that the belt is securely mounted.

# Adjusting the Shoulder Pad Position

---

The shoulder pad can be slid up to  $\frac{5}{8}$ " in the forward-backward direction from the center position (the position when shipped from the factory). Adjust the shoulder pad position to facilitate operation of the unit.

- 1** Loosen the two screws.
- 2** Slide the pad in the forward-backward direction to select an appropriate position.
- 3** Tighten the screws to clamp the pad.

**Bottom**

# Attaching the Rain Cover

---

Attach the rain cover as shown in the figure below.

Tighten the Cord.

Secure the surface fastener.

Secure the surface fastener.

When mounting the unit to the tripod attachment, mount the unit using this hole.

# Connecting the AQ-EC1 Extension Control Unit (Option)

Connecting the AQ-EC1 extension control unit (option) allows a portion of the camera section functions to be operated by remote control.

When the AQ-EC1 is connected and the POWER switches of the unit and AQ-EC1 are set to ON, the unit automatically enters remote control mode.

The handling instructions included with the AQ-EC1 describe operations for when the AQ-EC1 is connected to an AQ series digital camera.

When the AQ-EC1 is connected to the AJ-D810A, some functions differ, and some features cannot be used.

## <Notes>

- The POWER switches of the unit and AQ-EC1 must be set to OFF before the 6-pin cable is connected or disconnected.

- When OFF has been set for ECU DATA SAVE on the SUB menu CAMERA SW MODE page of MAIN menu screen 2 of 4

All adjustments and settings made using the switches and controls on the menu setting section of the AQ-EC1 are erased when the unit's POWER switch is set to OFF. Neither is it possible to save any of the adjustments and settings—except for the menu settings—performed using the AQ-EC1's switches and controls on the setup card. However, when the AQ-EC1 is connected again, these settings return to the AQ-EC1 settings.  
(Menu contents set with the menu setting section are saved.)

- When ON has been set for ECU DATA SAVE on the SUB menu CAMERA SW MODE page of MAIN menu screen 2 of 4

The adjustments and settings performed using the switches and controls on the AQ-EC1's menu setting area will not be lost even when the unit's POWER switch is set to the OFF position.

## <Note>

The functions of the AQ-EC1 are limited as follows.

- The STORE switch does not function.

(If the menu settings are changed while the AQ-EC1 is connected to the AJ-D810A, the new menu settings are saved automatically as soon as the changes are made.)

Note that the AQ-EC1 gain switch displays -3, 0 and 9 correspond to L, M and H, and the OUTPUT switch settings CAMERA, TEST and BAR to CAM/AUTO KNEE ON, CAM/AUTO KNEE OFF and BAR for each main unit.

- The Synchro scan and Super V modes cannot be used while the AQ-EC1 is connected to the unit.

- The lens iris (IRIS) control of the AQ-EC1 is valid only when the lens iris AUTO/MANUAL selector is set to AUTO.

# Displaying Menus on the Viewfinder Screen

## Displaying the Setting Menu Inside the Viewfinder

The setting menus are displayed on the viewfinder screen when the MENU SET/OFF switch is set to the SET position.

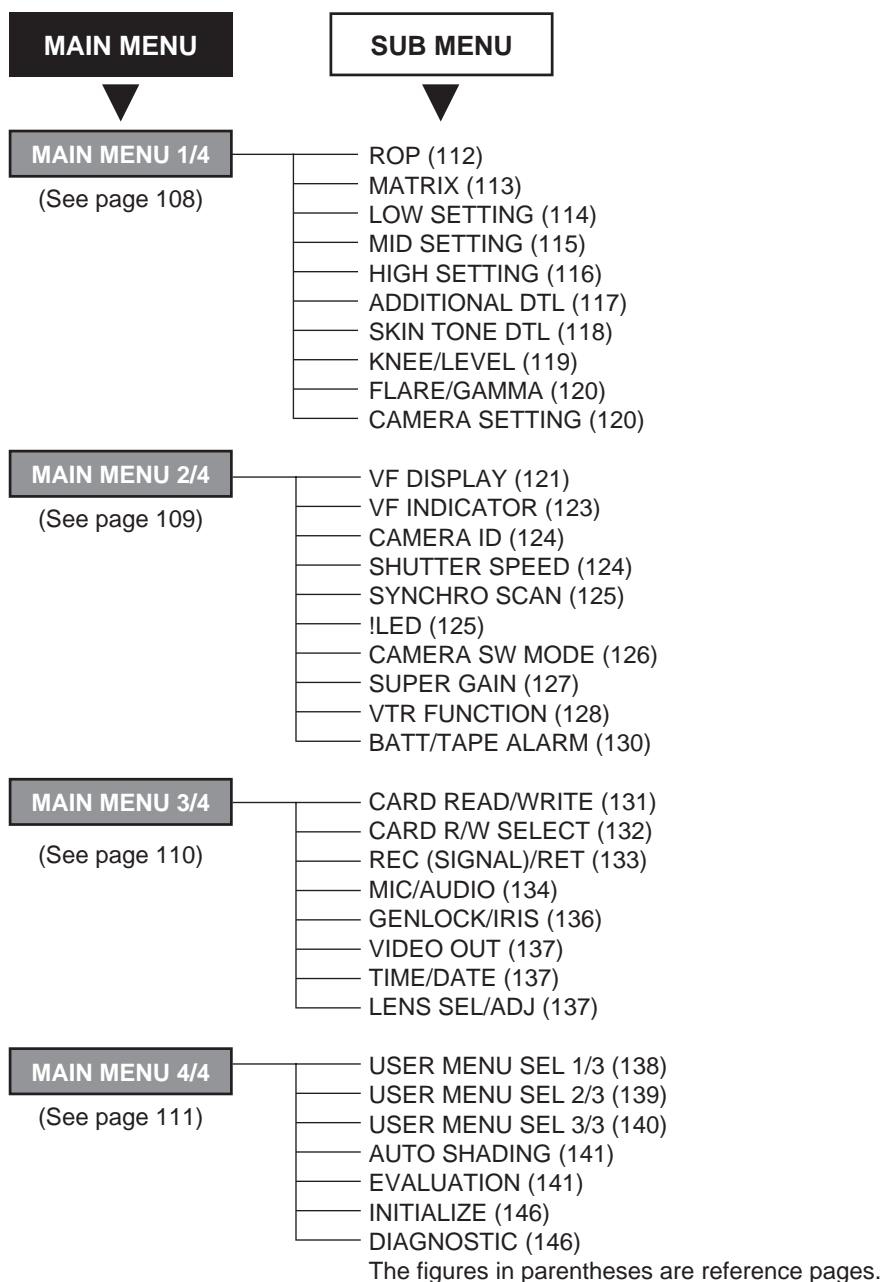

There are two types of setting menus, MAIN menus and SUB menus.

Setting menus are displayed in 1-page increments.

All the pages contained in the setting menus and how each page is configured are shown in the table below.

The menu configuration can be changed to suit a particular objective.

## Setting Menu Configuration

# Checking and Selecting the Master Gain Settings

---

## Checking and selecting the master gain setting

- 1** The menu shown in the figure below is displayed when the MENU SET ON/OFF switch is set to SET while the HOLD button is held down.
- 2** The current low, mid and high gain settings are displayed.
- 3** Press the SHIFT/ITEM button, and move the arrow (cursor) to the LOW, MID or HIGH GAIN menu item.
- 4** Set the gain by pressing the UP or DOWN button. Any value from  $-3$  dB to  $+30$  dB can be set.

```
→< MASTER GAIN >
  LOW GAIN      : 0dB
  MID GAIN      : 9dB
  HIGH GAIN     : 18dB

< BATTERY SELECT >
  BATTERY SEL  : NiCd12

< COLOR BAR SELECT >
  COLOR BAR    : SMPTE
```

# Selecting the Color Bar Setting

---

## Selecting the color bar setting

- 1** The menu shown in the figure below is displayed when the MENU SET ON/OFF switch is set to SET while the HOLD button is held down.
- 2** To select the color bar menu item, press the SHIFT/ITEM button, and move the arrow (cursor) to COLOR BAR.
- 3** Select the color bar setting by pressing the UP or DOWN button. The SMPTE or SNG setting can be selected.

```
< MASTER GAIN >
  LOW GAIN      : 0dB
  MID GAIN      : 9dB
  HIGH GAIN     : 18dB

< BATTERY SELECT >
  BATTERY SEL  : NiCd12

< COLOR BAR SELECT >
->COLOR BAR    : SMPTE
```

# Checking the DIAGNOSTIC Screen Setting

---

- 1** Set the MENU SET ON/OFF switch to SET while the HOLD button is held down.
- 2** Press the PAGE button.
- 3** The menu screen shown in the figure below appears, and it is now possible to check the DIAGNOSTIC screen settings.
- 4** To close the menu screen, return the MENU SET ON/OFF switch to OFF.

```
< DIAGNOSTIC >
OPERATION      :00000 x10h
DRUM RUNNING:  :00000 x10h
THREADING      :00000 x10

VTR SYSCON     Ver<P1.00>
CAM SYSCON     Ver<1.0>1.0
DATA ROM       Ver<1.0>
DV             Ver<1.00  >
                xx.xx.xx
```

# Displaying Menus on the Viewfinder Screen

## Changing the setting menu configuration

The setting menu can be configured by selecting only the pages necessary for the application. Pages are selected using the MENU SELECT page of the engineer menu mode.

When using the engineer menu, switch the unit to engineer mode as described below.

The unit is switched to user mode by setting the MENU SET/OFF switch to "SET".

The unit is switched to engineer mode by holding down the SHIFT/ITEM and UP buttons simultaneously and setting the MENU SET/OFF switch to SET.

The user and engineer modes differ as follows.

**User mode:** Only the selected pages the setting menu can be used. The data set on each page is written to the non-volatile memory, allowing it to be stored for extended periods of time.

**Engineer mode:** All pages contained in the setting menu can be used. In addition, the data set at each page is written to the non-volatile memory, allowing it to be stored for extended periods of time.

If, upon completion of the adjustments and settings in the engineer mode, the menu is set to be configured only with the frequently used pages, the pages which are often needed can be called promptly.

(Select the method using the user menu selection procedure described on pages 138 to 140.)

### <Note>

The engineer menu will always open if the AQ-EC1 extension control unit (optional accessory) is connected to the unit and the unit is operated from an external source.

## Transferring to the MAIN menus and SUB menus

- To select a page in a SUB menu, first move to the MAIN menu and then select the desired SUB menu.
- Changes are made to the settings on the SUB menus.

# Displaying Menus on the Viewfinder Screen

## Basic Setting Menu Operations

The setting menu is operated using the MENU SET/OFF switch and the SHIFT/ITEM, UP, DOWN and PAGE buttons.

### To display a SUB menu directly (user mode)

- 1 Set the MENU SET/OFF switch to the SET position.  
The status displays at the top and bottom of the viewfinder screen are cleared, and the page on which the previous setting menu operation was completed now appears on the screen. When a menu is used for the first time, the page with the lowest number among the selected pages appears on the screen.

### To display a MAIN menu directly (engineer mode)

- 1 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.  
MAIN menu screen 1 of 4 now appears.

The pages can also be selected using the UP and DOWN buttons in combination with the PAGE button as indicated below.

- **PAGE+UP:** When the UP button is pressed while the PAGE button is held down, operation advances to the next menu and the menu next to it and so on for as long as the button is held down.
- **PAGE+DOWN:** When the DOWN button is pressed while the PAGE button is held down, operation is returned to the previous menu and the menu before it and so on for as long as the button is held down.

# Displaying Menus on the Viewfinder Screen

## To select a MAIN menu page

- 1 Press the PAGE button to select a particular MAIN menu.  
Each time the button is pressed, the MAIN menu screen is advanced by one page (1→2→3→4→1→, etc.).

## To transfer from a MAIN menu to a particular SUB menu

- 1 Press the SHIFT/ITEM button.  
When this button is pressed, the cursor (arrow) indicating the selected item moves to the SUB menu.

- 2 Press the UP or DOWN button.  
Operation is now switched to the selected SUB menu.

## To transfer from a SUB menu to the MAIN menu

- 1 Press the PAGE button.  
Operation moves to the MAIN menu.

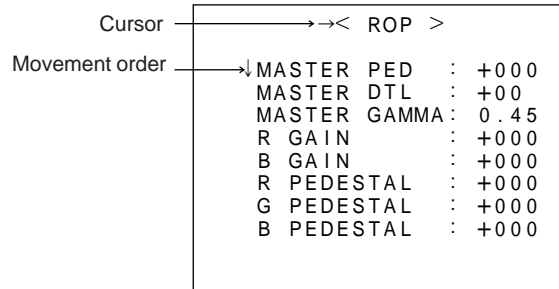

# Displaying Menus on the Viewfinder Screen

## Operations on SUB menus

### Selecting the desired item

- 1 Press the SHIFT/ITEM button.  
Each time this button is pressed, the cursor (arrow) which indicates the selected item moves to the next item.

The item can also be selected using the UP and DOWN buttons as follows.

### Changing the settings

Press the UP button to increase the setting.

- The setting is incremented by 1 level each time the UP button is pressed.

Press the DOWN button to decrease the setting.

- The setting is decremented by 1 level each time the DOWN button is pressed.

### Changing the ON/OFF selection

The setting switches to ON or OFF each time the UP (or DOWN) button is pressed.

### Returning to the default settings

Align the arrow with READ FACTORY DATA on the "INITIALIZE" SUB menu page of the MAIN menu screen 4 of 4.

When the UP (or DOWN) button is now pressed, the initial (factory) settings will be restored. However, care should be taken as the camera ID cannot be returned to the default settings.

### Quitting the menu

Set the MENU SET/OFF switch to OFF.

- The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

# Lamp Displays Inside the Viewfinder

The viewfinder (optional AJ-VF10P) displays are as follows.

## 1. REC (recording) lamp

This lamp lights (red) during recording, and flashes when warnings are issued.  
 • See “Warning System” (page 147, 148) for a detailed description.

## 2. BATT (battery) lamp

When the battery voltage has dropped, this lamp begins flashing several minutes before the unit can no longer be operated, and lights when the unit can no longer be operated. To prevent operation from being interrupted, exchange the battery quickly before the battery runs out.  
 • See “Warning System” (page 148) for a detailed description.

## 3. ! (irregular operation status warning) lamp

This lamp lights when the unit enters irregular operation status for any of the items set to ON at the ! LED page of the setting menu. Applicable items are as follows.

Setting item	Setting contents
Gain (0 dB)	The gain is set to a value other than 0 dB.
Gain (-3 dB)	The gain is set to a value other than -3 dB.
SHUTTER switch	The switch is set to ON.
WHITE PRESET switch	The switch is set to PRESET.
Lens extender	The lens extender is being used.
Filter control	The control is set to a value other than 1.
SUPER V switch	The switch is set to ON.

• See “Setting the ! Lamp Display” (next page) for selecting ! lamp display items.

## 4. VTR SAVE (VTR power saving) lamp

This lamp lights when the VTR SAVE/STBY switch is set to SAVE. It is not lighted during recording.

### <Note>

The SAVE status is automatically established and the lamp lights regardless of the VTR SAVE/STBY switch position at the time set by the pause timer (pause time) when the unit is in the recording pause mode or when 2 minutes have elapsed since the unit was placed in the playback pause mode.

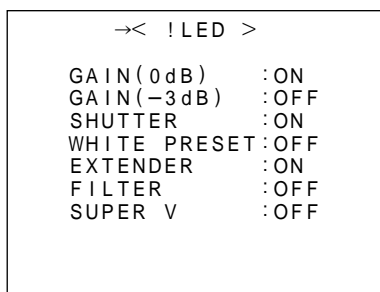

# Lamp Displays Inside the Viewfinder

## Setting the ! Lamp Display

The items subject to the ! lamp display are selected on the “! LED” SUB menu page on the MAIN menu screen 2 of 4. (Under the factory setting, the “! LED” page is not displayed.) To perform operations on the “! LED” page, either switch the unit to the engineer mode or select the “! LED” page on the USER MENU SEL page 2 of 3 on the MAIN menu screen 4 of 4.

•For details on selecting the engineer mode and display page, refer to Setting Menu Configuration (page 51).

- 1 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2 Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3 Repeatedly press the SHIFT/ITEM button to move the cursor to the “! LED” position.
- 4 Press the UP or DOWN button to open the ! LED page.

- GAIN (0 dB):** This selects whether the ! lamp is to light when the gain is set to a value other than 0 dB.
- GAIN (-3 dB):** This selects whether the ! lamp is to light when the gain is set to a value other than -3 dB.
- SHUTTER:** This selects whether the ! lamp is to light when the SHUTTER switch is set to the ON position.
- WHITE PRESET:** This selects whether the ! lamp is to light when the white balance memory channel is set to PRST.
- EXTENDER:** This selects whether the ! lamp is to light when the lens is in the EXTENDER mode.
- FILTER:** This selects whether the ! lamp is to light when the filter is set to a position other than 3200K. (1)
- SUPER V:** This selects whether the ! lamp is to light when SUPER V is set to ON.

- 5 Repeatedly press the SHIFT/ITEM button to move the cursor to the position of the desired item.
- 6 Press the UP or DOWN button at the selected item to select whether the ! lamp is to be set ON or OFF.  
**To select ON:** Press the UP button.  
**To select OFF:** Press the DOWN button.  
To select ON or OFF for another item, repeat steps 5 and 6.
- 7 When the menu operations are completed, return the MENU SET/OFF switch to the OFF position.  
The setting menu is cleared from the viewfinder screen, and the unit's current statuses appear at the top and bottom of the viewfinder screen.

# Status Displays Inside the Viewfinder Screen

In addition to images, messages indicating the unit's settings and operating status appear on the viewfinder screen. The center marker and safety zone marker, etc. are also displayed.

When the MENU SET/OFF switch is set to OFF, items set to SET at the VF DISPLAY page of the setting menu and using related switches appear at the top and bottom of the screen.

Messages informing of the setting contents or of the adjustment course or results can also be displayed for approximately 3 seconds when settings are changed, during the course of adjustments, or after adjustments have been completed.

- See "Selecting Display Items" (page 60) for selecting display items, "Display Mode and Setting Change Message" (page 61) for the setting change message, and "Setting the Marker Displays" (page 62) for the marker displays.

The display positions of all items which can be displayed are shown in the figure below.

- ① Extender display
- ② Shutter speed/mode display
- ③ Remaining tape length display
- ④ Remaining battery level display
- ⑤ Filter display
- ⑥ White balance memory display
- ⑦ Gain value display
- ⑧ Audio level display
- ⑨ Iris value display
- ⑩ Warning display
- ⑪ Safety zone marker
- ⑫ Center marker
- ⑬ Super iris ON or super black ON display
- ⑭ MARK1/MARK2/TAKE display
- ⑮ TCG (Time Code Generator) display
- ⑯ Master gain & super gain setting display
- ⑰ Battery setting display

**<Note>**

When in SUPER V mode, "SUP.V" is displayed at shutter speed position ② in the Viewfinder screen.

# Status Displays Inside the Viewfinder Screen

---

## 1 Extender display

This is displayed when the lens extender is being used.

## 2 Shutter speed/mode display

This displays the shutter speed or shutter mode setting.

**OFF (OFF is not displayed):**

The shutter is not used.

**1/100, 1/120, 1/250, 1/500, 1/1000, 1/2000:**

Shutter speeds (seconds) during standard mode.

**1/60.3–1/250 (SYNCHRO SCAN):**

Synchro scan mode is selected.

**SUPER V:**

High vertical resolution mode is selected.

## 3 Remaining tape length display

This indicates the remaining tape length (minutes) for the VTR during recording.

Remaining tape length display

Display	Remaining tape length
F-60	Full to 60 minutes
60-55	60 to 55 minutes
55-50	55 to 50 minutes
50-45	50 to 45 minutes
45-40	45 to 40 minutes
40-35	40 to 35 minutes
35-30	35 to 30 minutes
30-25	30 to 25 minutes
25-20	25 to 20 minutes
20-15	20 to 15 minutes
15-10	15 to 10 minutes
10-5	10 to 5 minutes
5-0	5 to 0 minutes

The "5-0" display flashes when there is less than 2 minutes of tape remaining.

## 4 Remaining battery level display

When an Anton Bauer Digital Magnum Series battery is used to supply power to the unit, the remaining battery level is displayed numerically (%).

<Note>

When a Digital Magnum series battery made by Anton Bauer is used to supply external power to the unit near the battery end, the remaining battery level display will show the external voltage, and the unit will be operated by the external power supply.

## 5 Filter display

This displays the type of filter selected.

## 6 White balance memory display

This displays the selected white balance automatic adjustment memory.

**A:** The WHITE BAL switch is set to A.

**B:** The WHITE BAL switch is set to B.

**P:** The WHITE BAL switch is set to PRST.

## 7 Gain value display

This displays the image amplifier gain setting (dB) set by the GAIN switch.

# Status Displays Inside the Viewfinder Screen

---

## 8 Audio level display

This displays the audio CH1 level.

During sine wave input, the audio level display corresponds roughly to the VTR level meter display as follows.

## 9 Iris value display

This displays the approximate iris setting (F number).

## 10 Warning display

This displays the black balance, white balance, auto knee function, super iris, super gain and other warning displays.

## 11 Safety zone marker

This indicates the safety zone to be the 80% or 90% (factory setting) range of the viewfinder screen area.

The ratio of this area to the total screen area is selected on the VF DISPLAY page of the setting menu.

•Refer to “Setting the Marker Displays” (page 62) for further details.

## 12 Center marker

This indicates the center of the viewfinder screen.

The marker appears when its display is set to ON on the VF DISPLAY page of the setting menu.

## 13 Super iris ON display

This indicates that the super iris is ON.

## 14 MARK1/MARK2/TAKE display

If the MARK switch is pressed while the Picture Link function is used, M1 or M2 appears to indicate the significance of the information concerned.

Nothing will appear if this function is not required.

Alternatively, T\_ (TAKE) appears when the RET switch of the lens is used as the TAKE function.

## 15 TCG display

This displays the time code generator value.

## 16 Master gain & super gain setting display

When the MODE CHECK button is pressed, the current GAIN L/M/H and SUPER GAIN settings are displayed.

## 17 Battery setting display

This indicates the type of the battery currently being used.

---

### 1) Iris value display

The iris value is displayed when using a lens with the iris value display function.

# Status Displays Inside the Viewfinder Screen

## Selecting Display Items

The items which are to be displayed on the viewfinder screen can be selected by setting ON or OFF for each item on the VF INDICATOR page. The items which can be selected are as follows.

- Extender display
- Shutter speed/mode display
- Remaining tape length display
- Remaining battery level display
- Filter display
- White balance memory display
- Gain value display
- Level meter display
- Iris value/super iris ON status display
- Camera ID display

•The camera ID is displayed when recording the color bar according to the OUTPUT/AUTO KNEE switch setting. See "Setting the Camera ID" (page 63) for a detailed description.

### Select the items to be displayed on the viewfinder screen.

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the "VF INDICATOR" position.
- 4** Press the UP or DOWN button to open the VF INDICATOR page.

- 5** Press the SHIFT/ITEM button to move the cursor to the position of the desired item.
- 6** Press the UP and DOWN buttons to choose whether to display (ON) or not display (OFF) the selected item on the viewfinder screen.  
The setting switches to ON or OFF each time the UP (or DOWN) button is pressed.  
Repeat steps 5 and 6 when setting display ON/OFF for other items.
- 7** When menu operations have been completed, set the MENU SET/OFF switch to OFF.  
The setting menu disappears from the viewfinder screen and the displays indicating the settings of the selected items appear.

# Status Displays Inside the Viewfinder Screen

## Display Mode (DISP MODE) and Setting Change Message

Messages informing of the contents of changed settings and adjustment results can be limited to part of the displayed items or not displayed for all items.

The conditions under which messages are displayed and the corresponding display modes are shown in the table below.

### Setting change/adjustment results messages and display modes

Conditions under which messages are displayed	Message	Display mode setting		
		1	2	3
When the filter selection is changed.	Filter: n (n=1, 2, 3, 4)	×	×	○
When the gain setting is changed.	GAIN: n dB (n=-3, 0, 3, 6, 9, 12, 15, 18, 21, 24, 30, 36, 43, 46)	×	×	○
When the WHITE BAL switch setting is changed.	WHITE: n (n=ACH, BCH, PRESET)	×	×	○
When the OUTPUT/AUTO KNEE switch is set to AUTO KNEE or OFF*)	AUTO KNEE: ON (or OFF)	×	○	○
When the shutter speed/ mode setting is changed.	SS: 1/100 (or 1/120, 1/250, 1/500, 1/1000, 1/2000, S. SCAN, SUPER V)	×	○	○
When the white balance is adjusted (AWB)	Ex.) AWB: OK ● See "Adjusting the White Balance" (page 70) for a detailed description.	×	○	○
When the black balance is adjusted (ABB)	Ex.) ABB: OK ● See "Adjusting the Black Balance" (page 75) for a detailed description.	×	○	○

○: Message displayed

×: Message not displayed

\*) The message is displayed for approximately 3 seconds immediately after the power for the unit is turned on.

#### <Note>

Whether a message is displayed or not also depends on the status of other menu settings.

For instance, even when the display mode (DISP MODE) is set to 1, the filter number will be displayed if FILTER is set to "ON" on the VF INDICATOR page.

# Status Displays Inside the Viewfinder Screen

---

## Changing the Display Mode

The display mode setting appears on the “VF DISPLAY” SUB menu page of MAIN menu screen 2 of 4.

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the “VF DISPLAY” position.
- 4** Press the UP or DOWN button to open the VF DISPLAY page.

```
→< VF DISPLAY >
DISP CONDITION: NORMAL
DISP MODE      : 3
SAFETY ZONE    : 3
CENTER MARK    : ON
VF OUT         : Y
VF DTL        : 2
ZEBRA1 DETECT : 070%
ZEBRA2 DETECT : 085%
ZEBRA2        : SPOT
LOW LIGHT LVL : 45%
```

- 5** Press the SHIFT/ITEM button to move the cursor to the “DISP MODE” position.
- 6** Press the UP (or DOWN) button to switch to the desired display mode.
- 7** When the menu operations are completed, set the MENU SET/OFF switch to the OFF position.  
The setting menu is cleared from the viewfinder screen, and the unit’s current statuses appear at the top and bottom of the viewfinder screen.

## Setting the Marker Displays

ON or OFF is selected for the center mark and safety zone mark display and a ratio of 80% or 90% of the total screen area is set for the safety zone range on the “VF DISPLAY” SUB menu page of MAIN menu screen 2 of 4.

- 1** Perform steps 1 to 4 under “Changing the Display Mode” described above so that the VF DISPLAY page appears on the viewfinder screen, and align the cursor with SAFETY ZONE or CENTER MARK.
- 2** Press the UP (or DOWN) button to switch to the desired display mode.
- 3** When the menu operations are completed, set the MENU SET/OFF switch to the OFF position.  
The setting menu is cleared from the viewfinder screen, and the unit’s current statuses appear at the top and bottom of the viewfinder screen.

# Status Displays Inside the Viewfinder Screen

---

## Setting the Camera ID

The camera ID can be set at the CAMERA ID page of the setting menu.

A camera ID of up to ten characters including English letters, symbols and spaces can be used. The camera ID is recorded when the OUTPUT/AUTO KNEE switch is set to BARS and the color bar signal is being recorded. It is also displayed on the viewfinder screen.

**<Note>**

When the setting menu is displayed, the camera ID is not displayed even if the color bar signal is output.

## Setting the Camera ID

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the "CAMERA ID" position.
- 4** Press the UP or DOWN button to open the CAMERA ID page.

: The cursor is moved to the right (max. 10 spaces) by the SHIFT/ITEM button.

: Alphanumerics, symbols and spaces are selected by the UP and DOWN buttons.

- 5** Keep pressing the UP (or DOWN) button until the character to be set appears. Each time the UP button is pressed, the character display changes in the following order: space (□)→english letters (A to Z)→numbers (0 to 9)→symbols (space, >, <, ), (, ', ' , , --, \_ , ~, /, !). Pressing the DOWN button changes the character display in the reverse order.
- 6** Press the SHIFT/ITEM button to move the cursor to the next position, and return to step 5 to set the characters.
- 7** When the menu operations are completed, set the MENU SET/OFF switch to the OFF position. The setting menu is cleared from the viewfinder screen, and the unit's current statuses appear at the top and bottom of the viewfinder screen.

**<Note>**

When CAMERA ID on the VF INDICATOR page has been set to ON, the above camera ID setting will be recorded along with the color bars.

# Displays

## Remaining Battery Level and Audio Level Displays

**Remaining tape length**  
When the amount remaining on the tape is more than 21 minutes long, all seven segments up to the "F" position appear lighted. When it is less than 21 minutes long, one segment will go off for every 3-minute reduction in the length.

The main display unit features a digital time display (00:00:00:00) with labels 'h', 'min', 's', and 'frm'. Below it are two progress bars: 'TAPE' and 'BATT', each with 'E' and 'F' markers. To the right is an 'EMPHASIS' audio level meter with two channels (CH1 and CH2) and a scale from 0 to -∞ dB. A label 'Audio CH level meter' points to the right side of this meter.

**Remaining battery level**  
When the digital display (% display) battery is used, the 7 segments light up all the way to the "F" position if the remaining battery level is more than 70%. If the remaining battery level is under 70%, one of the segments goes off for each further 10% reduction in the remaining level.

## VTR Section Operation/Status-Related Displays

**Lights**  
DF  
SLAVE  
TCG  
HOLD

**Error code:**  
Indicated in the display window.

The main display unit is identical to the one above but includes arrows pointing to the top-left corner (warning lights) and the digital display area (error code).

- Warning display**
- RF:** Lights when video head clogging occurs.
  - SERVO:** Lights when the servo is out of order.
  - HUMID:** Lights when condensation occurs on the head drum.
  - SLACK:** Lights when tape wind-up trouble occurs.
- See "Warning System" (page 149) for a detailed description.

# Displays

## Time Code-Related Displays

These lamps light to indicate the time code, CTL and real time displays.

**DF:** This lamp lights during drop frame mode

**SLAVE:** This lamp lights when the time code is locked to an external source.

**HOLD:** This lamp lights when the time code generator is held (when the HOLD button is pressed).

**Time counter display:** This displays the time code, CTL, user bit and real time.

• See below for the relationship between displayed items and switch settings.

### Relationship between the TCG and DISPLAY switch setting positions and the time counter display

The item displayed in the time counter display is determined by the TCG switch and DISPLAY switch settings.

#### Time code-related switch settings and display items

TCG switch position	DISPLAY switch position	Displayed item
SET	TC or CTL	Time code
	UB	User bit
F-RUN or R-RUN	CTL	CTL
	TC	Time code
	UB	User bit

# Adjusting the Time and Date

---

## Adjustment and setup using the setting menu

- 1 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2 Press the PAGE button to display the MAIN menu screen 3 of 4.
- 3 Press the SHIFT/ITEM button to move the cursor to the "TIME/DATE" position.
- 4 Press the UP or DOWN button to open the TIME/DATE page.

```
→< TIME / DATE >
YEAR   : 99
MONTH  : 01
DAY    : 01
HOUR   : 00
MINUTE : 00
      ■ TIME / DATE SET
```

- 5 Press the SHIFT/ITEM button to select the item to be changed.
- 6 Press the UP (or DOWN) button to change the setting value.  
The number is incremented by +1 each time the UP button is pressed and decremented by -1 each time the DOWN button is pressed.

```
< TIME / DATE >
YEAR   : 99
MONTH  : 01
DAY    : 01
HOUR   : 00
→MINUTE : 00
      ■ TIME / DATE SET
```

- 7 When the settings have been completed, press the SHIFT/ITEM button to select TIME/DATE SET and then press the UP (or DOWN) button. The time starts from when the button is pressed.

```
      ■ TIME / DATE SET
```

- 8 When menu operations have been completed, set the MENU SET/OFF switch to OFF.  
The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

<Note>

The seconds cannot be set and always start from 0 seconds.

# Adjustments and Setup During Recording

---

## Adjustments and Setup Using the Setting Menu

Adjustments and setup operations during recording are performed at the setting menu. Setting menu operations are basically performed according to the procedures described on page 52.

However, these procedures vary slightly according to the item.

Items which can be adjusted or set up at the setting menu are as follows.

### Adjustment/setup items at the setting menu

Adjustment/setup item	Page name	Operation reference
Setting the gain selector value	SETTING (LOW/MID/HIGH)	Setting the Gain Selector Value, Setting the DTL and gamma, etc.
Selecting the shutter speed/ mode to be used	SHUTTER SPEED	Setting the Electronic Shutter
Setting the synchro scan mode shutter speed	SYNCHRO SCAN	Setting the Electronic Shutter
Selecting the required VTR functions	VTR FUNCTION	Selecting Functions
Shading adjustment	AUTO SHADING	Shading Adjustment
Setup card data operations	SET UP CARD	Setup Card Operations

# Adjustments and Setup During Recording

---

## Setting the Gain Selector Value

When shooting in locations without sufficient brightness, bright images can be obtained by raising the gain. However, care should be taken as raising the gain also increases the noise.

The gain value for the image amplifier is selected by the GAIN switch. The gain values corresponding to the L, M and H positions of the GAIN switch are set at the MASTER GAIN page of the setting menu.

### Setting the gain selector value

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 1 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the position of the setting page on which the gain is to be set.
- 4** Press the UP or DOWN button to open the setting page.

```
→< LOW SETTING >
■MASTER GAIN   : 0dB
H.DTL LEVEL   : 10
V.DTL LEVEL   : 10
DTL CORING    : 05
H.DTL FREQ.   : 03
DARK DTL      : 00
LEVEL DEPEND. : 00
MASTER GAMMA  : 0.45
■BLACK STRETCH: OFF
■MATRIX TABLE: A
```

- 5** Press the SHIFT/ITEM button to move the cursor to the "MASTER GAIN" position.
- 6** Press the UP or DOWN button to set the gain value.  
Any gain value can be set regardless of whether it is high or low from among the -3, 0, 3, 6, 9, 12, 15, 18, 21, 24 and 30 dB setting options.  
  
To reset the gain values to their factory settings (LOW=0dB, MID=9dB, HIGH= 18dB), select READ FACTORY DATA on the "INITIALIZE" SUB menu page on MAIN menu screen 4 of 4, and press the UP or DOWN button.
- 7** When the menu operations are completed, set the MENU SET/OFF switch to the OFF position.  
The setting menu is cleared from the viewfinder screen, and the unit's current statuses appear at the top and bottom of the viewfinder screen.

# Adjustments and Setup During Recording

---

## Selecting Functions

The VTR's operation functions can be selected on the "VTR FUNCTION" page of the setting menu.

### To select the required functions

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the "VTR FUNCTION" position.
- 4** Press the UP or DOWN button to open the VTR FUNCTION page.

```
→< VTR FUNCTION >
HUMID OPE      :OFF
26P CONTROL   :OFF
REC START     :NORMAL
TC MODE       :DF
UB MODE       :USER
PAUSE TIMER   :30
BATTERY SEL   :NiCd12
TCG VF DISP   :OFF
TCG SET HOLD  :OFF
FIRST REC TC  :REGEN
```

- 5** Press the SHIFT/ITEM button to move the cursor to the position of the function to be changed.
- 6** Press the UP (or DOWN) button to change the setting of the selected function. If settings for other functions are also to be changed, return to step 5.
- 7** When menu operations have been completed, set the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

# Adjusting the White Balance/Black Balance

## Adjusting the White Balance

Adjusting the white balance and black balance in the order of AWB (white balance adjustment)→ABB (black balance adjustment)→AWB will provide a better picture.

The black balance does not normally need to be readjusted even when the power is turned off and then turned back on.

However, the white balance must be readjusted when the lighting conditions change.

If black balance and white balance adjustments are started when the display mode is set to “2” or “3”, messages informing of the adjustment course and results will appear on the viewfinder screen. Set the display mode to “1” to not display these messages.

- See “Display Mode and Setting Change Message” (page 61) for a description of setting the display mode.

### <Notes>

- The white balance and black balance cannot be adjusted while the setting menu appears on the viewfinder screen. Therefore, be sure to set the MENU SET/OFF switch to OFF.
- The auto black balance (ABB) must be readjusted without fail when the MASTER GAIN value has been changed on the “LOW SETTING”, “MID SETTING” or “HIGH SETTING” SUB menu pages of MAIN menu screen 1 of 4, when the super gain setting has been selected using the SUPER GAIN button, and when the GAMMA setting (ON/OFF) on the “CAMERA SETTING” SUB menu page of MAIN menu screen 1 or 4 has been switched.
- With artificial lights, particularly with fluorescent lights and mercury-arc lamps, the strength of the R, G and B colors changes in synchronization with the power line frequency even if the brightness of these lights appears to be constant. Especially in areas where the power line frequency is 50 Hz, the vertical synchronizing frequency (approx. 60 Hz) of the NTSC and the frequency (50 Hz) of the lighting tend to interact. This gives rise to flicker and to a phenomenon where the hue changes along with the passage of time, and it is impossible to obtain the proper white balance.

These phenomena can be reduced by setting the shutter speed to 1/100. For this reason, wherever the unit is used under fluorescent or mercury-arc lamps and at a frequency of 50 Hz, the shutter speed must be set to 1/100 and the white balance obtained. This shutter speed of 1/100 should also be used during shooting.

- 1 Set the switches as shown in the figure.

When the positions of the GAIN and WHITE BAL switches are changed, a message informing the operator of the new settings will appear on the setting change message display area of the viewfinder screen. (However, this display appears only when the display mode is set to “3”.)

- 2 Select the FILTER knob setting in accordance with the lighting conditions.
  - Refer to the description of the  FILTER knob (page 15) in the Shooting and Recording/Playback Function Section for examples of the FILTER knob settings. If the FILTER knob setting is changed, a message informing the operator of the new setting will appear on the setting change message display area of the viewfinder screen. (However, this display appears only when the display mode is set to “3”.)

# Adjusting the White Balance/Black Balance

- 3** Place the white pattern over a location with the same conditions as the light source illuminating the subject and zoom up to project white on the screen. A white object (white cloth, white wall) near the subject can also be used. The white area required is as shown below.

- 4** Adjust the iris of the lens.
- 5** Press the AUTO W/B BAL switch to the WHT side and release the switch. The switch returns to the center and the white balance is automatically adjusted.

- 6** During the adjustment, the following message appears on the viewfinder screen. (However, the message appears only when the display mode is set to "2" or "3".)

- 7** The adjustment is completed in several seconds (and a message such as the one shown in the figure appears). The adjustment value is automatically stored in the memory (A or B) which was selected in step 1.

# Adjusting the White Balance/Black Balance

---

- 8** The messages shown in the figures below will be displayed if the color temperature of the subject is lower than 2500K or higher than 5600K. The down [ ↓ ] arrow indicates a color temperature which is lower than the one displayed; conversely, the up [ ↑ ] arrow indicates a color temperature which is higher than the one displayed.

Message displayed when color temperature is lower than 2500K

Message displayed when color temperature is higher than 5600K

**<Note>**

If a lens equipped with the automatic iris function is used, the iris may experience hunting<sup>1)</sup>. In these cases, adjust the iris gain knob (the knob marked IG, IS, S, etc.) on the lens.

- See the Handling Instructions for the lens for a detailed description.

---

**1) Hunting:** The auto iris responds repeatedly causing the image to become darker and brighter.

# Adjusting the White Balance/Black Balance

## When the White Balance Cannot be Automatically Adjusted

An error message will appear on the viewfinder screen.

(The message appears when the display mode is set to “2” or “3”.)

The displayed messages are as follows.

### Error messages related to white balance adjustment

Error message	Meaning	Treatment
COLOR TEMP. HIGH	The color temperature is too high.	Select an appropriate filter
COLOR TEMP. LOW	The color temperature is too low.	Select an appropriate filter.
LOW LIGHT	There is insufficient illumination.	Increase the illumination or gain.
LEVEL OVER	There is too much illumination.	Decrease the illumination or gain.
UNSTABLE CONDITION	The shooting conditions are unstable (shooting is taking place under fluorescent lighting or the camera is not being held or pointed properly, etc.).	If flickering is a problem, turn the SHUTTER switch to ON and stabilize the shooting conditions.

If the above error messages appear, carry out the respective treatment attempt to adjust the white balance again.

If the error message continues to appear even after repeated attempts, consult your dealer.

#### <Notes>

- The white balance will not be adjusted while the setting menu is displayed on the viewfinder screen.  
The MENU SET/OFF switch must be set to the OFF position to make this adjustment.
- In rare instances the white balance adjustment may not be possible and an NG display will appear.  
In a case like this, proceed with the white balance adjustment again.

## When there is no Time to Adjust the White Balance

Set the WHITE BAL switch to PRST.

The white balance for the filter is automatically adjusted according to the setting position of the FILTER knob (outside).

### White balance memories

The white balance memories fall into two categories, A and B.

The number of A and B memories is limited to 1 each when FILTER INH is set to ON (default setting) on the “CAMERA SW MODE” SUB menu page of MAIN menu screen 2 of 4.

In this case, the contents of the memories are not linked to the filter.

However, when FILTER INH is set to OFF, the adjustments values for each filter can be automatically stored in the memory corresponding to the WHITE BAL switch setting (A or B).

This unit contains 4 filters, making a total of 8 (4×2) adjustment values which can be stored.

# Adjusting the White Balance/Black Balance

---

## When the ON setting has been selected for FILTER INH

When the automatic white balance is adjusted, the color temperature and filter number at the time are displayed.

When the filter is now turned, the new color temperature and filter number are displayed.

The white balance is almost perfectly adjusted if the subject is illuminated by a light with a color temperature close to the one displayed.

### (Display example)

AWB A OK 3 . 2K

Use filter (1) to adjust the AWB for objects with an illumination color temperature of 3200K.

5 . 2K ( 1 )

Change to filter (3).

“5.2K (1)” (see Note) appears on the display.

**Note:**

This display indicates that the AWB was adjusted using filter (1).

If the color temperature of the subject in this state is close to 5.2K, the white balance is adjusted, and so operation is now possible.

3 . 2K ( 1 )

Return to filter (1).

“3.2K (1)” appears on the display denoting the status when the AWB was first adjusted.

# Adjusting the White Balance/Black Balance

The black balance must be adjusted in the following cases.

- When the unit is used for the first time
- When the unit is first used after an extended period of non-use
- When the unit is used under conditions where the ambient temperature has changed by a wide margin
- When the gain selector value is changed
- When the super gain setting has been selected using the SUPER GAIN button
- When the gamma ON/OFF is changed

## Adjusting the Black Balance

- 1** Set the switches as shown in the figure.

- 2** Press the AUTO W/B BAL switch to the ABB side and then release the switch. The switch returns to the center and the black balance is automatically adjusted.

- 3** During the adjustment, the following message will appear on the viewfinder screen. (However, the message appears only when the display mode is set to "2" or "3".)

Message during adjustment

- The lens iris automatically goes to the "CLOSE" position during the adjustment.

## Adjusting the White Balance/Black Balance

---

- 4** Adjustment is completed after a few seconds (the following message appears) and the adjustment value is automatically stored in the memory.

Message after adjustment is completed

### <Notes>

- Check that the lens connector is connected and that the iris of the lens is set to CLOSE.
- During black balance adjustment, the iris automatically goes to the shaded status.
- During black balance adjustment, the gain selector circuit switches automatically.  
In addition, flicker and noise may appear on the viewfinder screen, but this does not indicate a malfunction.
- The black balance cannot be adjusted while the setting menu is displayed on the viewfinder screen. Therefore, be sure to set the MENU SET/OFF switch to OFF.
- If the black shading is not satisfactory even when the "ABB OK" message appears, open the "AUTO SHADING" SUB menu page of MAIN menu screen 4 of 4, and adjust the black shading. (See page 141.)
- The black shading adjustment is performed automatically when the AUTO W/B BAL switch is held down at the ABB position for 10 or more seconds.
- When the super gain is set to ON, the black balance is performed at the preset position in the white balance memory.

# Setting the Electronic Shutter

---

## Shutter Modes

The shutter modes which can be used with the unit's electronic shutter and the shutter speeds which can be selected are as follows.

### Shutter modes and shutter speeds which can be selected

Mode	Shutter speed	Application
Standard	1/100, 1/120, 1/250, 1/500, 1/1000 and 1/2000 (seconds)	This mode is used to shoot clear images of quickly moving subjects.
SYNCHRO SCAN	Range from 60.3 Hz to 250 Hz	This mode is used to reduce horizontal stripe patterns for monitor screens with a vertical scanning frequency of 60 Hz or more.
SUPER V		This mode is used to increase the vertical resolution.

#### <Notes>

- Increasing the shutter speed lowers the camera sensitivity regardless of electronic shutter mode.
- If the iris is set to AUTO, the iris opens and the depth of the focuses decreases as the shutter speed rises.

# Setting the Electronic Shutter

## Setting the Shutter Mode/Speed

- The shutter speed during shutter mode and standard mode is set by the SHUTTER switch.
- During SYNCHRO SCAN mode, the shutter speed can be set beforehand at the SYNCHRO SCAN page of the setting menu. In the SYNCHRO SCAN mode, the shutter speed can easily be changed using the SYNCHRO (“+” and “-”) buttons. (It can also be set using the UP or DOWN button.)
- The shutter speed selection range can be limited to the required range and whether to use special operation modes (SYNCHRO SCAN or SUPER V) can be selected at the SHUTTER SPEED page of the setting menu.

**1** Set DISP MODE on the “VF DISPLAY” SUB menu page of MAIN menu screen 2 of 4 to “2” or “3” by following the steps outlined in “Changing the Display Mode” (page 62).

**2** Press the SHUTTER switch from the ON position to the SEL side. The current shutter setting appears in the setting change message display position on the viewfinder screen.

Ex.: 1/120, 1/60.3, etc.

**3** Press the SHUTTER switch to the SEL side repeatedly until the desired mode or speed appears. When all modes and speeds can be displayed, the display changes in the order shown below. If the required shutter speeds and modes have been designated beforehand, only the designated speeds or modes appear.

- When the unit is shipped from the factory, SUPER V mode is not specified and is therefore not displayed.

# Setting the Electronic Shutter

---

## Setting the Synchro Scan Mode

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the “SYNCHRO SCAN” position.
- 4** Press the UP or DOWN button to open the SYNCHRO SCAN page.

- 5** Press the UP (the value increases) or DOWN (the value decreases) button repeatedly to display the desired frequency. The frequency can be switched continuously within the range of 60.3 Hz to 250 Hz.
- 6** When menu operations have been completed, set the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen. Pressing the SYNCHRO (“+” and “-”) buttons in the SYNCHRO SCAN mode results in the same operation which is performed when the UP and DOWN buttons mentioned above are pressed.

# Setting the Electronic Shutter

---

## Changing the Shutter Speed/Mode Selection Range

The shutter speed selection range can be limited to the required range and whether to use a special operation mode can be selected at the SHUTTER SPEED page of the setting menu. The unit is set so that the SHUTTER SPEED page is not displayed when shipped from the factory. To operate the SHUTTER SPEED page, switch the unit to engineer mode or select the SHUTTER SPEED page at the MENU SELECT page beforehand.

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 2 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the “SHUTTER SPEED” position.
- 4** Press the UP or DOWN button to open the SHUTTER SPEED page.

**<Note>**

The ON/OFF status for each item is indicated by displaying an asterix (\*) or period (·) in front of the item on the screen.

- 5** Press the SHIFT/ITEM button repeatedly to move the cursor to the position of the mode or shutter speed to be set.
- 6** The selected mode or speed changes from used (ON) to not used (OFF) and vice versa each time the UP (or DOWN) button is pressed.
- 7** When menu operations have been completed, set the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

**<Note>**

When operating the unit from the AQ-EC1 extension control unit (option), even if the SHUTTER SPEED page is operated from the unit, the switches of the AQ-EC1 have priority regarding the actual shutter speed.

- See “Setting Menu Configuration” (page 51) for a description of engineering mode and selecting display pages.

---

## Changing the Iris Automatic Adjustment Reference Value

---

To change one of the reference values, use the UP or DOWN button to change the A.IRIS LEVEL, A.IRIS PEAK/AVE and/or A.IRIS MODE value on the “GENLOCK/IRIS” SUB menu page of MAIN menu screen 3 of 4.

# Adjusting the Audio Level

If the AUDIO SELECT CH1/CH2 selector switch is set to AUTO, the input levels of audio CH1 and CH2 are automatically adjusted. If are the level of audio channels 1 and 2 to be manually adjusted, perform the following operations.

## Manually Adjusting the Audio Level

- 1 Set the AUDIO SELECT CH1/CH2 selector switch to MAN.
- 2 Turn the AUDIO LEVEL CH1 control at the bottom of the front panel completely to the right.
- 3 Turn the AUDIO LEVEL CH1/CH2 controls to adjust the audio level so that the level meter appears up to 0 dB at the maximum volume.

## Limiter

When the audio level is adjusted manually, the limiter circuit operates with respect to excessive input. The limiter circuit is turned ON or OFF on the “MIC/AUDIO” SUB menu page of MAIN menu screen 3 of 4. (The factory setting is “OFF”.)

## Adjusting the Audio CH1 Level from the Viewfinder

The audio CH1 level can be adjusted by the AUDIO LEVEL CH1 control at the bottom of the front panel while watching the viewfinder.

- 1 Set the AUDIO SELECT CH1 switch to MAN.
- 2 Turn the AUDIO LEVEL CH1 control on the side panel completely to the right.
- 3 Set LEVEL METER to “CH1” on the “VF INDICATOR” SUB menu page of MAIN menu 2 of 4. The audio level display now appears on the viewfinder screen.

# Adjusting the Audio Level

---

- 4** Turn the AUDIO LEVEL CH1 control at the bottom of the front panel to adjust the input volume so that the audio level display appears as shown below.
- When the input volume is normal, the audio level display turns ON up to the seventh of the eight level display bars from the left.
  - When the rightmost (0 dB) turns asterisk (\*) mark, the input volume is excessive. Adjust the level so that the display bar does not turn \* mark.

**When the optimal level cannot be set**

The maximum attenuation of the AUDIO LEVEL CH1 control at the bottom of the front panel is about 20 dB. When the optimal level cannot be set within this range, adjust the level using the AUDIO LEVEL CH1 control on the side panel.

**Using the AUDIO LEVEL CH1 controls at the bottom of the front panel and on the side panel**

Normally, the control at the bottom of the front panel is turned completely to the right and the recording level is adjusted using the control on the side panel.

The control at the bottom of the front panel is used to throttle the level when the input level increases suddenly during recording.

# Setting the Time Data

## Setting the Time Code

When using both the user bit and the time code, set the user bit first. If the time code is set first, the time code generator will stop while the user bit is being set, causing the set time code to become inaccurate. The time code can be set within the range of 00:00:00:00 to 23:59:59:29.

- 1** Set the DISPLAY switch to TC.
- 2** Set the TCG switch to SET.
- 3** Set TC MODE to "DF" or "NDF" on the "VTR FUNCTION" SUB menu page of MAIN menu 2 of 4. Select DF when the time code is to be advanced during drop frame mode, and NDF when the time code is to be advanced during non-drop frame mode.
- 4** Set the time code using the SHIFT/ITEM, UP and DOWN buttons.  
**SHIFT/ITEM button:** This is used to cause the digit which is to be set to flash. Each time it is pressed, the flashing digit moves to the right.  
**UP button:** This increments by 1 the figure of the flashing digit.  
**DOWN button:** This decrements by 1 the figure of the flashing digit.
- 5** Set the TCG switch.  
Set the switch to F-RUN when the time code is to be advanced regardless of the VTR's operation.  
Set the switch to R-RUN when the time code is to be advanced only while recording is in progress.

### Time code status during battery replacement

The back-up mechanism functions even while replacing the battery to allow the time code generator to continue operating for extended periods of time (approx. 1 year).

#### <Note>

The time code backup accuracy is approx. +/-2 frames when the POWER switch is set to ON, OFF and back ON.

# Setting the Time Data

## Setting the User Bit

Setting the user bit allows up to 8 digits of hexadecimal data such as memos (date, time), etc. to be recorded in the sub code track.

- 1 Set the DISPLAY switch to UB.
- 2 Set the TCG switch to SET.
- 3 Select UB MODE on the “VTR FUNCTION” SUB menu page of MAIN menu 2 of 4.
- 4 Set the user bit using the SHIFT/ITEM, UP and DOWN buttons.  
**SHIFT/ITEM button:** This is used to cause the digit which is to be set to flash. Each time it is pressed, the flashing digit moves to the right.  
**UP/DOWN buttons:** These increment/decrement by 1 the figure of the flashing digit.

The hexadecimal characters A to F appear as follows.

Hexadecimal	A	B	C	D	E	F
Display	<i>A</i>	<i>b</i>	<i>Ɔ</i>	<i>d</i>	<i>E</i>	<i>F</i>

- 5 Set the F-RUN/R-RUN switch to F-RUN or R-RUN.

### User bit memory function

The user bit setting (except for the real time) is automatically stored in the memory and held even after the power is turned off. However, care should be taken as the settings are not stored in the memory if the time from when the power was turned on until the setting operations are completed and the power is turned off is less than 20 seconds.

#### <Notes>

- When REAL has been selected for UB MODE, the values set for HOUR and MINUTE on the TIME/DATE page apply.
- Whatever is on the LCD display will be held on the display when the MENU SET/OFF switch is set to the SET position while “REAL” is set for the UB MODE and the DISPLAY switch is at the UB position.

# Setting the Time Data

## Locking the Time Code to an External Source

The time code generator of the VTR section can be locked to an external generator.

### Example of connections for external locking

#### Example 1: Locking the time code to an external signal

#### Example 2: When a multiple number of AJ-D810A units are connected with one unit serving as the master unit and the others as the slave units

## External Lock Operation Procedure

- 1 Set the POWER switch to ON.
- 2 Set the F-RUN/R-RUN switch to F-RUN.
- 3 Set the DISPLAY switch to TC.
- 4 Supply reference time code and reference video signals, whose phases correlate in a way that meets the time code standards, to the TC IN and GENLOCK IN/(VIDEO IN) connectors, respectively.

# Setting the Time Data

---

This locks the built-in time code generator to the reference time code. After about 10 seconds have passed since the time code generator was locked, the external lock status is maintained even if the external reference time code is disconnected. However, if the reference time code is disconnected during recording (REC), the servo lock will be thrown out of order.

**<Note>**

When the external locking operation is performed, the time code is locked instantly to the external time code and the same value as the external code value appears in the counter display position. Do not set the VTR to recording mode for several seconds until the sync generator has stabilized.

## Setting Time Data

### User bit setting during external locking

When the time code is locked to an external source, only the time data is locked to the time data of the time code from the external source. Accordingly, the user bit can be set independently for each unit. The user bit can also be locked to the user bit of the time code from the external source.

•Consult your dealer for a detailed explanation.

### Releasing the external lock

Stop supplying the external time code and then set the F-RUN/R-RUN switch to R-RUN.

### Switching the power supply from the battery to an external power supply during external locking

In order to maintain power supply continuity for the time code generator, connect the external power supply to the DC IN connector before unplugging the battery pack. If the battery pack is unplugged first, the external locking continuity of the time code cannot be assured.

### Synchronizing the camera section to an outside source during external locking

During external locking, the camera section is genlocked by the reference video signal which is supplied to the GENLOCK IN/(VIDEO IN) connector.

# Using the user data

---

The setting menu contents can be saved in the user area of the camera's memory so that they can be loaded as and when required. This data enables the suitable setup statuses to be re-established without delay.

## User data operation

A menu is used to save the data settings in the user area of the camera's memory or to load them.

### Saving the user data

- 1 The menu's INITIALIZE screen is used to save the user data.
- 2 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 3 Press the PAGE button to display the MAIN menu screen 4 of 4.
- 4 Press the SHIFT/ITEM button to move the cursor to the "INITIALIZE" position.
- 5 Press the UP or DOWN button to open the INITIALIZE page.  
When the SHIFT/ITEM is pressed to align the arrow with WRITE USER DATA and the UP or DOWN button is pressed, the data settings will be saved in the user area of the camera's memory.
- 6 After the settings have been saved, set the MENU SET/OFF switch to the OFF position.

### Loading the user data

- 1 The menu's CARD READ/WRITE screen is used to set the unit to the status in which the data settings were saved in the user area of the camera's memory.
- 2 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 3 Press the PAGE button to display the MAIN menu screen 3 of 4.
- 4 Press the SHIFT/ITEM button to move the cursor to the "CARD READ/WRITE" position.
- 5 Press the UP or DOWN button to open the CARD READ/WRITE page.  
Press the SHIFT/ITEM to align the arrow with READ USER DATA, and press the UP or DOWN button.  
The data settings, which were saved in the user area of the camera's memory, are now loaded, and the settings are completed.
- 6 Set the MENU SET/OFF switch to the OFF position.

# Setup Card Operations

---

Setting menu contents can be stored using setup memory cards (SHL-064HSRVS, option). This data can then be used to quickly recreate the appropriate setup conditions. Subject data, etc. can also be stored on setup cards. See the Setup Card Application Instructions for a detailed description.

- Optional cards include the general purpose memory card (SRAM 64KB or more) which is used as the setup card and the ATA flash memory card (4MB or more) which is used for the Picture Link function. (However, the AJ-YAP900 Picture Link adaptor board, which is available as an optional accessory, is required when using the ATA flash memory card.)

## Setup Card Handling

### Ejecting setup cards

Lift up on the lower edge of the cover to open the cover and remove the setup card.

#### <Note>

Take care not to touch the connectors at the front of the setup card.

### Inserting setup cards

Position the unit so that the panel with the logo faces you, insert the setup card into the setup card insertion slot and then close the cover.

#### <Note>

Check that the unit is positioned with the logo facing you and that the characters are facing the correct direction, and then insert the card. Be sure to insert the card in the correct direction. If the card is difficult to insert, the card may be backwards or upside-down. In these cases, do not attempt to force in the card, but check whether the card is backwards or upside-down and then reinsert the card.

### Usage and storage precautions

The following points should be observed when using and storing setup cards.

- Avoid high temperatures and humidity.
- Do not expose setup cards to water.
- Avoid electrostatic charges.

Store setup cards inserted in the unit with the cover closed.

# Setup Card Operations

## Setup Card Data Operations

Operations to store setting data on setup cards and read out stored data are performed at the "CARD READ/WRITE" SUB menu page of MAIN menu screen 2 of 4.

<Note>

When operating the unit with a remote controller, the CARD READ/WRITE page cannot be operated from the unit.

### Formatting setup cards

- 1 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2 Press the PAGE button to display the MAIN menu screen 3 of 4.
- 3 Press the SHIFT/ITEM button to move the cursor to the "CARD READ/WRITE" position.
- 4 Press the UP or DOWN button to open the CARD READ/WRITE page.

```
→< CARD READ/WRITE >
READ
  SELECT          1
WRITE
  SELECT          1
CARD CONFIG
READ USER DATA
```

- 5 Press the SHIFT/ITEM button repeatedly to move the cursor to the CARD CONFIG. position.
- 6 A menu shown below appears when the UP (or DOWN) button is pressed.

```
< CARD READ/WRITE >
READ
  SELECT          1
WRITE
  SELECT          1
→CARD CONFIG
READ USER DATA

CONFIG? (Y:UP.N:DOWN)
```

- 7 Press the UP button to format the set up card. When the setup card has been formatted, the message shown below appears.

<Note>

When setup cards are formatted, the setting conditions at that time are also input simultaneously.

```
< CARD READ/WRITE >
READ
  SELECT          1
WRITE
  SELECT          1
→CARD CONFIG
READ USER DATA

FORMAT OK
```

- 8 When menu operations have been completed, return the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

# Setup Card Operations

---

## When data is not written

If the following error messages appear when the UP button is pressed in step 7, the data is not written.

### Data format error messages

Error message	Condition	Countermeasure
<b>WRITE PROTECT</b>	The write protect switch on the side of the card is set to ON.	Set the write protect switch on the side of the card to OFF.
<b>NO CARD</b>	A setup card is not inserted.	Insert a card.
<b>ERROR</b>	The disk cannot be formatted.	The card may be defective. Replace the card.

# Setup Card Operations

---

## Writing set data to cards

- 1** Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2** Press the PAGE button to display the MAIN menu screen 3 of 4.
- 3** Press the SHIFT/ITEM button to move the cursor to the "CARD READ/WRITE" position.
- 4** Press the UP or DOWN button to open the CARD READ/WRITE page.

```
→< CARD READ/WRITE >
  
READ
  SELECT          1
WRITE
  SELECT          1
CARD CONFIG
READ USER DATA
```

- 5** Press the SHIFT/ITEM button repeatedly to move the cursor to the WRITE position.
- 6** A menu shown below appears when the UP (or DOWN) button is pressed.

```
< CARD READ/WRITE >
  
READ
  SELECT          1
→WRITE
  SELECT          1
CARD CONFIG
READ USER DATA
  
WRITE? (Y:UP,N:DOWN)
```

- 7** Press the UP button to write data on the set up card. When writing is complete, the message shown below appears.

```
< CARD READ/WRITE >
  
READ
  SELECT          1
→WRITE
  SELECT          1
CARD CONFIG
READ USER DATA
  
WRITE OK
```

- 8** When menu operations have been completed, return the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status appear at the top and bottom of the viewfinder screen.

# Setup Card Operations

---

## Protecting stored data

If the setup card's WRITE PROTECT switch is set to ON, data is not rewritten even if the UP button is pressed in step 7.

## When data is not written

If the following error messages appear when the UP button is pressed in step 7, the data is not written.

### Data writing error messages

Error message	Condition	Countermeasure
<b>NO CONFIG</b>	The setup card is not formatted.	Format the card.
<b>NO CARD</b>	A setup card is not inserted.	Insert a card.
<b>WRITE PROTECT</b>	The write protect switch on the side of the card is set to ON.	Set the write protect switch on the side of the card to OFF.
<b>ERROR</b>	Data cannot be written on the card.	The card may be defective. Replace the card.

# Setup Card Operations

## Reading out data stored on cards

- 1 Set the MENU SET/OFF switch to the SET position while the SHIFT/ITEM button and UP button are held down together.
- 2 Press the PAGE button to display the MAIN menu screen 3 of 4.
- 3 Press the SHIFT/ITEM button to move the cursor to the "CARD READ/WRITE" position.
- 4 Press the UP or DOWN button to open the CARD READ/WRITE page.
- 5 Press the SHIFT/ITEM button to move the cursor to the "READ" position.
- 6 Press the UP (or DOWN) button. A message such as the one shown in the figure below appears on the screen.

```
< CARD READ/WRITE >
→READ
  SELECT      1
  WRITE
  SELECT      1
  CARD CONFIG
  READ USER DATA

READ? ( Y : UP . N : DOWN )
```

- 7 Press the UP button to read data from the set up card. When readout is complete, the message shown below appears.

```
< CARD READ/WRITE >
→READ
  SELECT      1
  WRITE
  SELECT      1
  CARD CONFIG
  READ USER DATA

READ OK
```

- 8 When menu operations have been completed, set the MENU SET/OFF switch to OFF. The setting menu disappears from the viewfinder screen and the displays indicating the unit's current status based on the data read out from the setup card appear at the top and bottom of the viewfinder screen.

## When data is not read out

If the following error messages appear when the UP button is pressed in step 7, the data is not read out.

### Data readout error messages

Error message	Condition	Countermeasure
<b>NO CONFIG</b>	The setup card is not formatted.	Format the card.
<b>NO CARD</b>	A setup card is not inserted.	Insert a card.
<b>ERROR</b>	Data cannot be read out.	Data written by devices other than this unit cannot be read out.

# Cassettes

## Inserting and Ejecting Cassettes

### Inserting cassettes

- 1 Check that there are no cables, etc. around the cassette holder and the top panel and then set the POWER switch to ON.

If condensation has occurred inside the unit, the HUMID display lights. In these cases, wait until the display goes off before proceeding to step 2.

- 2 Press the EJECT button. The cassette holder opens.

- 3 Check there is no slack in the tape, insert the cassette, then press the "PUSH" display on the cassette holder to close the cassette holder firmly.

### Checking that there is no slack in the tape

Press the reel in with your finger and turn it lightly in the direction of the arrow. If the reel does not turn, there is no slack in the tape.

# Cassettes

---

## Ejecting cassettes

With the power turned on, press the EJECT button to open the cassette holder and eject the cassette. If a cassette is not to be inserted immediately after ejecting the cassette, close the cassette holder.

## Ejecting cassettes when the battery has run out

Set the POWER switch to OFF to turn off the power, then turn on the power again and immediately hold down the EJECT button. If there is still power remaining in the battery, the cassette will be ejected. However, this operation should not be repeated.

## Preventing Accidental Erasure

Set the tab on the cassette to the SAVE side to prevent the recorded contents of tapes from being accidentally erased.

# Recording

## Basic Procedures

This section describes the basic operating procedures for shooting and recording. When starting to shoot actual images, inspect the unit beforehand to check that all systems are functioning normally.

- See the “Inspections Before Shooting” (page 151) for a description of inspection procedures.

### Procedures from power supply preparations to inserting a cassette

- 1** Insert a charged battery pack.
- 2** Set the POWER switch to ON and check that the HUMID display does not appear and that five or more bars of the remaining battery level display are lighted.
  - If the HUMID display appears, wait until the display goes off.
  - If five or more bars of the remaining battery level display are not lighted, replace the battery pack with a sufficiently charged battery pack.
- 3** Check that there are no cables, etc. around the cassette holder and top panel and then press the EJECT button to open the cassette holder.
- 4** Check the following items, and then insert a cassette and close the cassette holder.
  - The cassette is not set to write protect status.
  - There is no slack in the tape.

# Recording

---

## Procedures from adjusting the white balance and black balance to stopping recording

Turn on the power, insert a cassette, and then set the various switches as follows.

## Shooting images

**1-1** Select the filter in accordance with the lighting conditions, and when the white balance has already been stored in the memory, set the WHITE BAL switch to “A” or “B”.  
**When the white balance and black balance have not been stored in the memory and there is no time to adjust the white balance:**  
Set the WHITE BAL switch to PRST and the FILTER knob to “1”.  
A 3200K white balance is now achieved.

**1-2** To adjust the white balance on site, select the filter which corresponds with the lighting conditions, set the WHITE BAL switch to “A” or “B”, and adjust the white balance by following the steps below.

- (1) Press the AUTO W/B BAL switch to the AWB side to adjust the white balance.
- (2) Press the AUTO W/B BAL switch to the ABB side to adjust the black balance.
- (3) Press the AUTO W/B BAL switch to the AWB side to adjust the white balance.

For details on how to adjust the white balance, read through the section entitled “Adjusting the white balance/black balance” (page 70).

**2** Aim the camera at the subject and adjust the focus and zoom.

**3** When using the electronic shutter, set the shutter speed and operation mode.  
•See “Setting the Electronic Shutter” (page 77) for a detailed description.

**4** Press the VTR START button of the unit or the VTR button of the lens to start recording. The REC lamp inside the viewfinder lights during recording.

**5** Press the VTR START button again to stop recording. The REC lamp inside the viewfinder goes off.

### Tape operation buttons

The tape operation buttons (EJECT, REW, FF, PLAY/PAUSE and STOP) do not function during recording.

# Recording

---

## Successive Shooting

Successive shooting with an accuracy of within 0—+1 frame can be performed simply by pressing the VTR START button of the unit or the VTR button of the lens while recording is paused.

### While recording is paused

The unit automatically searches for the successive shooting point. However, the time until recording starts differs according to the setting of the VTR SAVE/STBY switch.

- If the VTR SAVE/STBY switch is set to SAVE, recording starts about 2 seconds after the VTR START button is pressed.
- If the VTR SAVE/STBY switch is set to STBY, recording starts immediately after the VTR START button is pressed.

### Successive shooting when the power is turned off while recording is paused

- 1** Turn the power back on.
- 2** Press the VTR START button of the unit or the VTR button of the lens to start recording.

# Recording

---

## Successive Shooting in Other Cases

If successive shooting is to be performed after the tape has been run, the cassette has been ejected, or when using a tape which has only been recorded part-way, follow the procedures outlined below.

- 1** While monitoring the viewfinder screen, press the PLAY/PAUSE button to play back the tape.
- 2** At the place where a new recording is to continue on from the existing recording, press the PLAY/PAUSE (or STOP) button again to stop the tape.
- 3** Press the RET button on the lens. Preparations for frame-to-frame continuity are made about two seconds later.
- 4** Press the VTR START button of the unit or the VTR button of the lens to start recording.

# Playback—Checking Recorded Contents

---

Pressing the PLAY/PAUSE button allows black-and-white images to be viewed on the viewfinder screen. Playback images can also be viewed in two other ways.

- **Rec review:** When the RET switch has been set to “REC CHECK” on the “REC (SIGNAL)/RET” setting menu, it is possible to view the last two seconds of the recording in the form of black-and-white images on the viewfinder screen.

- **Color playback:** Connecting a color monitor to the unit’s VIDEO OUT connector allows color playback images to be viewed on the monitor.

The playback signal is output to the viewfinder even during rewind (REW) and fast forward (FF). Audio output selection and volume adjustment for the playback signal are performed by the MONITOR switches and knobs on page 13.

## Rec Review

If recording is paused and the RET button on the lens is pressed, the tape is automatically re-wound and the playback images for the last two seconds appear on the viewfinder. This allows the recording status to be checked.

After playback, the unit returns to the recording start standby status. Holding down the RET button rewinds and plays back up to 10 seconds of the tape.

<Note>

The rec review function cannot be used unless recording has been performed for more than 1 second.

## Color Playback

Connecting a color monitor to the VIDEO OUT connector of the unit allows color playback images to be viewed on the monitor.

# Connection With an External VTR

---

The unit is equipped with an interface which enables recording to be performed by an external VTR.

- Mounting the AJ-YA900P 26-pin/12-pin output adaptor (option) and connecting the 26-pin cable (option) to the unit allows recording to be performed by the VTR section (internal VTR) of the unit and an external VTR. The component video signal is output from the 26-pin interface.

## Precautions When Connecting an External VTR

- Set 26P CONTROL on the “VTR FUNCTION” setting menu to “BOTH” or “ON”. (The factory setting is “OFF”.)
- Set SW201 on the CAM ENC board to ON. (Before the unit was shipped from the factory, this switch was set to OFF.)

### Power supply

Power is not supplied or received between the unit and the external VTR, so special power supplies should be provided for each unit. The BATT lamp and remaining battery level display function inside the viewfinder indicate the power supply status only for the internal VTR. The power supply status for the external VTR should be checked at the external VTR.

### TALLY lamp and REC lamp operation

The unit's TALLY lamp and the REC lamp inside the viewfinder indicate the REC status of the unit when 26P CONTROL is set to BOTH. When 26P CONTROL is set to ON, these lamps indicate the REC status of the external VTR.

### Warning tone

External VTR-related warning tones are not output from the unit's speaker or PHONES jack.

### Note on connecting cables

The signals may not be connected properly with some cables.

The signal assignments for the 26-pin/12-pin output adaptor AJ-YA900P (optional) are shown in the following table. Use this table as a reference for connection with an external VTR.

Pin No.	Signal	Pin No.	Signal
1	Composite video signal	9	CAM MIC (H)
2	Composite video GND	10	CAM MIC (C)
3	Y GND	11	CAM MIC (GND)
4	Y signal	12	VTR START/STOP
5	P <sub>R</sub> signal	15	REC TALLY
6	P <sub>R</sub> GND	18	RET VIDEO
7	P <sub>B</sub> signal	19	RET VIDEO GND
8	P <sub>B</sub> GND	B	GND

# Recording Simultaneously with the Internal VTR and an External VTR

---

## Connections

Mount the AJ-YA900P 26-pin/12-pin output adaptor (option) to the unit, connect the external VTR with the 26-pin cable, and set the audio input level selector switch of the external VTR to “–60 dB”.

SW201 on the CAM ENC Printed Circuit Board of the unit must be set to ON side.

(See page 104.)

Audio input level selector switch: –60 dB

Portable VTR  
(Set the audio input level  
selector switch to –60 dB.)

To the 26-pin connector of the  
AJ-YA900P (See page 104 for mounting the  
26-pin/12-pin output adaptor)

## Checking the Function Settings

Check that the function to control the 26-pin interface has been set to “BOTH” or “ON” on the “VTR FUNCTION” SUB menu page of the MAIN menu screen 2 of 4. See “Selecting Functions” for a description of the various function settings.

## Starting Recording

- 1 Operate the external VTR and set it to recording paused status.
- 2 Press the VTR START button of the unit or the VTR button of the lens. The internal and external VTRs start recording simultaneously. Pressing the button again sets both VTRs to the recording paused status.

## If One VTR Comes to the End of its Tape During Recording

Even if one VTR comes to the end of its tape and stops, the other VTR continues recording operation.

### Returning the VTRs to simultaneous recording status

- If the internal VTR came to the end of its tape, replace the cassette and press the VTR START button of the unit or the VTR button of the lens. The external VTR continues recording operation during this time.
- If the external VTR came to the end of its tape, replace the cassette and operate the external VTR to restart recording. The internal VTR continues recording operation during this time.

### <Note>

Care should be taken as the internal VTR will assume recording paused status if the VTR START button of the unit or the VTR button of the lens is pressed after replacing the external VTR's cassette.

# Recording Simultaneously with the Internal VTR and an External VTR

---

## Functions of the Unit's VTR SAVE/STBY Switch

### **Tape running mode**

Pressing the unit's STOP, REW or FF buttons sets the internal VTR to stop, rewind or fast forward modes, respectively. However, the external VTR is set to recording paused status in all cases.

### **Viewing playback images on the viewfinder**

Pressing the PLAY/PAUSE button allows black-and-white images from the tape of the internal VTR to be viewed on the viewfinder screen.

To view return images of an external VTR on the viewfinder screen, set RET SW on the "REC (SIGNAL)/RET" SUB menu page to "CAM RET", and press the RET button on the lens.

# Recording With an External VTR Instead of the Internal VTR

## Using the 26-pin/12-pin Output Adaptor

### Connections

The method of connecting the external VTR is the same as that described in "Recording Simultaneously with the Internal VTR and an External VTR".

• See "Connections" on page 101.

### Mounting the 26-pin/12-pin output adaptor

• Consult your local dealer when mounting the adaptor.

- 1 Set the unit's internal switches.
  - 1 Remove the side panel on the display window side.
  - 2 Remove the printed circuit board holder, and take out the CAM ENC (2) printed circuit board.
  - 3 Set SW201 to the ON side.
  - 4 Take out the SYNC (3) printed circuit board.
  - 5 Set SW1 (26PIN) to the ON side.
  - 6 To set the audio level to  $-20$  dB, set the SW4701 DIP switch accordingly.

Pin No.	-60 dB (default setting)	-20 dB
	1	Not used
2	ON (NR ON/OFF)	
3	ON	OFF
4	OFF	ON
5	ON	OFF
6	OFF	ON

# Recording With an External VTR Instead of the Internal VTR

---

- 2** Mount the 26-pin/12-pin output adaptor.

### Controlling the external VTR with the unit's switches

Setting the 26P CONTROL function as indicated below on the "VTR FUNCTION" SUB menu page of the MAIN menu screen 2 of 4 prevents the internal VTR from being operated and enables only the external VTR to be controlled by the VTR START button on the unit or by the VTR button on the lens.

- 26P CONTROL: ON
- See "Selecting Functions" (page 69) for a description of the VTR FUNCTION page operations.

### Switching from the internal VTR to the external VTR

If the internal VTR should develop a problem (such as an entangled tape or condensation) during operation and it can no longer be operated, the VTR START button on the unit and the VTR button on the lens will cease to function.

In these cases, it will be possible to operate the external VTR in place of the internal VTR using the VTR START button on the unit and the VTR button on the lens if the 26P CONTROL function on the VTR FUNCTION page is set as indicated above.

### Starting recording

Operate the external VTR to set it to recording paused status and press the VTR START button of the unit or the VTR button of the lens. The external VTR starts recording. Pressing the button again sets the VTR to the recording paused status.

### Output level of the 26-pin/12-pin output adaptor

The output level factory settings are  $-60$  dBu/balanced for audio and SONY level for component video. When the built-in SW4701 switch is set, the audio output level can be changed to  $-20$  dBu/unbalanced, and when both 1 and 2 of SW1 are set to ON, the component video output level can be changed to the MII level. (See previous page)

# RET Button

The images recorded on the VTR or the return video signals which have been supplied to the GENLOCK IN/(VIDEO IN) connector can be viewed on the viewfinder screen either when the RET (return) button is pressed or while it is held down.

What appears on the viewfinder screen differs as shown in the table below depending on the RET SW setting selected on the "REC (SIGNAL)/RET" SUB menu page of MAIN menu page 3 of 4 and on the VTR status.

**<Note>**

However, when VIDEO has been selected as the REC SIGNAL setting on the "REC (SIGNAL)/RET" SUB menu page (when externally input signals are recorded), the external input will appear on the viewfinder screen except while the RET button is held down: in the latter case, the camera image will appear instead on the viewfinder screen.

**■ Lens RET button functions**

RET switch setting	Internal VTR mode	Description of what appears on viewfinder screen
REC CHECK	Recording	Images shot by camera. RET button does not function.
	Recording paused	What has been recorded (2-second rec review) can be checked.
	Playing	Internal VTR's playback images. RET button does not function.
	Playback paused	Search operation for successive shooting.
CAM RET	Recording	Return video signal which has been supplied to GENLOCK IN/(VIDEO IN) connector.
	Recording paused	Return video signal which has been supplied to GENLOCK IN/(VIDEO IN) connector.
	Playing	Picture played back by internal VTR (RET button does not function).
	Playback paused	Still picture played back by internal VTR.
MARK*	Recording	Switch functions as the MARK switch for the Picture Link function.
	Recording paused	Switch functions as the MARK switch for the Picture Link function.
	Playing	Picture played back by internal VTR (RET button does not function).
	Playback paused	Still picture played back by internal VTR (RET button does not function).

\*This is displayed when the Picture Link adaptor board (AJ-YAP900, optional accessory) has been installed.

When the RET SW has been set to the REC CHECK mode and this board has been installed, this switch will operate as the TAKE function for the Picture Link operation while recording is in progress.

# Replacing the Backup Battery

---

The unit is shipped from the factory with a backup battery already mounted. When the battery runs out, the TCG time code value indicates 00:00:00:00. At this time, the time code value cannot be backed up. In addition, the “BACK UP BATT EMPTY” display appears in the viewfinder for 3 seconds when the POWER switch is set to ON to indicate that the battery must be replaced. Consult your dealer when replacing the battery.

# Setting Menu Screens (MAIN menu)

The MAIN menu consists of menus on four menu screens, 1 of 4 to 4 of 4.

Each of these screens is a page screen for opening the sub menus.

To open a SUB menu screen, press the SHIFT/ITEM button to select the SUB menu, and then press the UP or DOWN button. Press the PAGE button to return from a SUB screen to the MAIN menu screen.

## MAIN menu screen 1 of 4

This screen displays the sub menu items on MAIN menu 1 of 4.

```

→****MAIN MENU1/4****
ROP
MATRIX
LOW SETTING
MID SETTING
HIGH SETTING
ADDITIONAL DTL
SKIN TONE DTL

## LOW SETTING screen

The low level gain settings are performed on this screen.

-< LOW SETTING >	
■	MASTER GAIN : 0dB
	H.DTL LEVEL : 10
	V.DTL LEVEL : 10
	DTL CORING : 03
	H.DTL FREQ. : 03
	DARK DTL : 00
	LEVEL DEPEND. : 00
	MASTER GAMMA : 0.45
■	BLACK STRETCH : OFF
■	MATRIX TABLE : A

■ indicates an ON/OFF setting.

Item	Variable range	VF display	Remarks
MASTER GAIN	-3 dB ⋮ 0 dB ⋮ 30 dB	ENG	This sets the gain to -3, 0, 3, 6, 9, 12, 15, 18, 21, 24 or 30 dB.
H.DTL LEVEL	0 ⋮ <u>10</u> ⋮ 31	ENG	This sets the H.DTL (detail) level.
V.DTL LEVEL	0 ⋮ <u>10</u> ⋮ 31	ENG	This sets the V.DTL (detail) level.
DTL CORING	0 ⋮ <u>3</u> ⋮ 15	ENG	This sets the DTL coring.
H.DTL FREQ.	1 ⋮ <u>3</u> ⋮ 5	ENG	This selects the H.DTL frequency. 1: 2.5 MHz    4: 4 MHz 2: 3 MHz      5: 4.5 MHz 3: 3.5 MHz
DARK DTL	0 ⋮ 5	ENG	This sets the dark detail. This boosts the detail of the black areas.
LEVEL DEPEND.	<u>0</u> ⋮ 15	ENG	This sets LEVEL DEPEND. This eliminates the detail only in the dark areas when the Y detail is boosted. The higher the number selected, the wider the range across which the detail is eliminated.
MASTER GAMMA	0.35 ⋮ <u>0.45</u> ⋮ 0.75	ENG	This sets the master gamma in 0.01 increments.
BLACK STRETCH	ON <u>OFF</u>	ENG	This selects ON or OFF for the mode in which low-illumination blackouts are compensated for.
MATRIX TABLE	<u>A</u> B OFF	ENG	This selects the color compensation matrix table.

### <Note>

DARK DTL and LEVEL DEPEND serve opposite purposes: LEVEL DEPEND is automatically set to 0 when DARK DTL is set to a value other than 0 and, conversely, DARK DTL is automatically set to 0 when LEVEL DEPEND is set to a value other than 0.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

## ADDITIONAL DTL screen

The special detail settings of the camera are performed on this screen.

-< ADDITIONAL DTL >	
■ C DTL COMPE.	: OFF
CHROMA DTL	: 0
■ KNEE APERTURE	: ON
■ SLIM DTL	: OFF
■ CORNER DTL	: ON
DTL GAIN(+)	: 00
DTL GAIN(-)	: +16
DTL CLIP	: 00
H.DTL LINE MIX	: 1H

■ indicates an ON/OFF setting.

Item	Variable range	VF display	Remarks
C DTL COMPE.	ON <u>OFF</u>	ENG	This selects ON or OFF for the chroma DTL.
CHROMA DTL	<u>0</u> -2	ENG	This sets the chroma DTL. This detects the chroma edge and superimposing it onto Y to boost the H detail. The higher the number selected, the greater the level of compensation provided.
KNEE APERTURE	<u>ON</u> OFF	ENG	This selects ON or OFF for the knee aperture. This boosts the detail above the knee point.
SLIM DTL	ON <u>OFF</u>	ENG	This selects ON or OFF for mode in which the detail is made finer.
CORNER DTL	<u>ON</u> OFF	ENG	This selects ON or OFF for mode which increases the resolution at the edges of the screen.
DTL GAIN (+)	-31 ⋮ <u>0</u> ⋮ +31	ENG	This changes the H detail level in the "+" direction.
DTL GAIN (-)	-31 ⋮ <u>+16</u> ⋮ +31	ENG	This changes the H detail level in the "-" (downward) direction.
DTL CLIP	<u>0</u> ⋮ 31	ENG	This changes the clipping of the detail signals in the "+" direction.
H.DTL LINE MIX	0H <u>1H</u> 2H	ENG	This sets the addition of the scanning lines for generating H detail signals.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

## SKIN TONE DTL screen

The camera's skin tone detail settings are performed on this screen.

->< SKIN TONE DTL >	
■ SKIN TONE DTL	: OFF
SKIN TONE HUE	: 103
SKIN TONE LEVEL	: 25
SKIN TONE WIDTH	: 15
SKIN TONE CORING	: 05
■ SKIN TONE ZEBRA	: OFF

■ indicates an ON/OFF setting.

### <Note>

All the displays except the change data are cleared while the hue, level, width and coring data of the skin tone is being changed.

The underlining in the variable range column indicates the setting in the preset mode.

Item	Variable range	VF display	Remarks
SKIN TONE DTL	ON <u>OFF</u>	ENG	This selects ON or OFF for the skin tone detail.
SKIN TONE HUE	<u>103</u> : 143	ENG	This sets the skin tone hue (for setting the phase of the skin tone detection range). The hue is changed in the phase direction.
SKIN TONE LEVEL	1 : <u>25</u> : 50	ENG	This sets the skin tone level (for setting the intensity of the colors in the skin tone detection range). The level is changed in the amplitude direction.
SKIN TONE WIDTH	1 : <u>15</u> : 30	ENG	This sets the skin tone width This sets the range of colors to be treated as the skin tone from among the colors set by SKIN TONE HUE and LEVEL. The higher the number selected, the wider the skin tone range.
SKIN TONE CORING	1 : <u>5</u> : 15	ENG	This sets the skin tone coring. The amount of detail in the skin tone range is changed.
SKIN TONE ZEBRA	ON <u>OFF</u>	ENG	This selects ON or OFF for ZEBRA in the skin tone range. This changes the coring in the range across which ZEBRA can be seen.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

## CAMERA ID screen

The camera ID settings are performed on this screen. Each time the UP button is pressed, the character display changes in the following order: space (□)→english letters (A to Z)→numbers (0 to 9)→symbols (space, >, <, ), (, ', ' , , --, -, ~, /, !). Pressing the DOWN button changes the character display in the reverse order.

Item	Variable range	VF display	Remarks
ID:*****	—	USER ENG	This is for inputting the camera ID.

**<Note>**

Whether this setting is to be mixed is selected by setting “CAMERA ID” on the VF DISPLAY screen to ON or OFF.

## SHUTTER SPEED screen

The shutter speed settings are performed on this screen.

Before each screen item is an asterisk (“\*”) or dot (“.”) which respectively indicates whether the setting is ON or OFF.

Item	Variable range	VF display	Remarks
SYNCHRO SCAN	<u>ON</u> OFF	ENG	This sets the synchro scan shutter speed.
SUPER V	ON <u>OFF</u>	ENG	This sets the super V mode (vertical high-resolution mode).
1/100	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/100 setting.
1/120	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/120 setting.
1/250	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/250 setting.
1/500	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/500 setting.
1/1000	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/1000 setting.
1/2000	<u>ON</u> OFF	ENG	This selects ON or OFF for the shutter speed 1/2000 setting.

**<Note>**

The SUPER V mode setting is linked to the “CAMERA SW MODE” menu setting.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

# MAIN Menu Screen 2 of 4 (SUB menus)

## SYNCHRO SCAN screen

The synchro scan settings are performed on this screen.

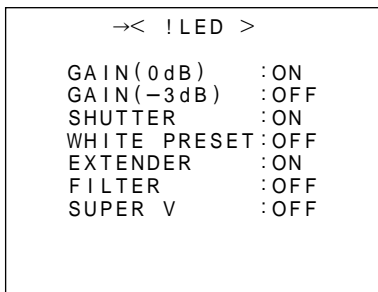

Item	Variable range	VF display	Remarks
SYNCHRO SCAN	<u>1/60.3</u> ⋮ 1/250	USER ENG	This selects the synchro shutter speed.

## ! LED screen

The ON/OFF settings for the ! LED displays inside the viewfinder are performed on this screen.

Before each screen item is an asterisk ("\*") or dot (".") which respectively indicates whether the setting is ON or OFF.

Item	Variable range	VF display	Remarks
GAIN (0 dB)	<u>ON</u> OFF	ENG	This selects whether the LED is to light up when the gain has a value other than 0 dB.
GAIN (-3 dB)	ON <u>OFF</u>	ENG	This selects whether the LED is to light up when the gain has a value other than -32 dB.
SHUTTER	<u>ON</u> OFF	ENG	This selects whether the LED is to light up when the shutter is ON.
WHITE PRESET	ON <u>OFF</u>	ENG	This selects whether the LED is to light up when the AWB CH is PRESET.
EXTENDER	<u>ON</u> OFF	ENG	This selects whether the LED is to light up when the lens is in the EXTENDER mode.
FILTER	ON <u>OFF</u>	ENG	This is for selecting whether the LED is to light at all times except when 3200K and CLEAR are used in combination for the filter.
SUPER V	ON <u>OFF</u>	ENG	This selects whether the LED is to light up when SUPER V is ON.

### <Note>

The ! LED lights when both the GAIN (0 dB) and GAIN (-3 dB) items are set to ON unless the gain is set to -3 dB or 0 dB.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

## CAMERA SW MODE screen

The camera's switch modes are set on this screen.

->< CAMERA SW MODE >	
FILTER INH	: ON
SHOCKLESS AWB	: NORMAL
COLOR BAR	: SMPTE
S.GAIN OFF	: L/M/H
S.IRIS/S.BLK SW	: INH
S.BLK LVL	: -10
ECU DATA SAVE	: OFF

Item	Variable range	VF display	Remarks
FILTER INH	<u>ON</u> OFF	ENG	This switches whether the AWB memory (A and B channels) data is to be stored for each filter. <b>ON:</b> The data is stored in the A and B channel memories (2 memory units) only regardless of the filter. <b>OFF:</b> The data is stored for each filter. (4×2=8 memory units)
SHOCKLESS AWB	OFF <u>NORMAL</u> SLOW FAST	ENG	This selects ON (NORMAL/SLOW/FAST) or OFF for shockless AWB. "Shockless AWB" ensures that a shock will not result when the A, B or PRST setting of the WHITE BAL switch is changed. FAST (high speed), NORMAL (normal speed) or SLOW (low speed) can be set as the selection time. FAST (approx. 0.5 sec), NORMAL (approx. 1 sec), SLOW (approx. 3 sec)
COLOR BAR	<u>SMPTE</u> SNG	ENG	This selects the type of color bars. <b>SMPTE:</b> SMPTE color bars <b>SNG:</b> SNG (split) color bars
S.GAIN OFF	S.GAIN <u>L/M/H</u>	ENG	This selects the method used to release the super gain mode. <b>S.GAIN:</b> The mode is released by the super gain switch only. <b>L/M/H:</b> The mode is released by changing the L/M/H switch setting.
S.IRIS/ S.BLK SW	S.IRIS S.BLK <u>INH</u>	ENG	This allocates the function of the side panel switch. <b>S.IRIS:</b> The switch works as a super iris function. <b>S.BLK:</b> The switch works as a super black function.* <b>INH:</b> Both the super iris and super black functions are inhibited.
S.BLK LVL	-10 -20 -30	ENG	This sets the super black level.
ECU DATA SAVE	ON <u>OFF</u>	ENG	<b>ON:</b> The data controlled by ECU is stored in the memory. <b>OFF:</b> The data is not stored in the memory.

\*S.BLK is a function which enables the master pedestal to be set lower than the pedestal level. It is used when the black figures displayed on the screen have become lighter due to mist, etc.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

# MAIN Menu Screen 2 of 4 (SUB menus)

## SUPER GAIN screen

The super gain values to be allocated to the SUPER GAIN switch are set on this screen.

\*: ON  
.: OFF

Item	Variable range	VF display	Remarks
30 dB	<u>ON</u> OFF	ENG	This selects the gain when the SUPER GAIN switch is pressed.
36 dB	ON <u>OFF</u>	ENG	This selects the gain when the SUPER GAIN switch is pressed.
43 dB	ON <u>OFF</u>	ENG	This selects the gain when the SUPER GAIN switch is pressed.
46 dB	ON <u>OFF</u>	ENG	This selects the gain when the SUPER GAIN switch is pressed.

### <Note>

- Each time the SUPER GAIN switch is pressed when all the super gain values have been allocated, the gain is switched by one level in the following sequence: 30 dB→36 dB→43 dB→46 dB→OFF→30 dB, etc.
- To use the unit, set the WHITE BAL switch to PRST (preset) and proceed with ABB (auto black balance).

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

# MAIN Menu Screen 2 of 4 (SUB menus)

## VTR FUNCTION screen

The VTR's functions are set on this screen.

->< VTR FUNCTION >	
HUMID OPE	: OFF
26P CONTROL	: OFF
REC START	: NORMAL
TC MODE	: DF
UB MODE	: USER
PAUSE TIMER	: 30
BATTERY SEL	: NiCd12
TCG VF DISP	: OFF
TCG SET HOLD	: OFF
FIRST REC TC	: REGEN

Item	Variable range	VF display	Remarks
HUMID OPE	ON <u>OFF</u>	ENG	This selects the VTR operation when condensation has formed. <b>ON:</b> Operation continues as usual. <b>OFF:</b> All operations are disabled except for the POWER switch and EJECT button.
26P CONTROL	<u>OFF</u> BOTH ON	ENG	This selects 26P remote control. <b>OFF:</b> Unit only (no 26P control). <b>BOTH:</b> Unit and 26P remote control (tally LED displays unit's REC status). <b>ON:</b> 26P remote control only (tally LED displays 26P VTR's REC status).
REC START	ALL <u>NORMAL</u>	ENG	This selects in what VTR mode REC is to be acknowledged when the VTR is started or stopped. <b>ALL:</b> REC is acknowledged in any VTR mode. <b>NORMAL:</b> REC is acknowledged only in the STOP (power save) mode and REC PAUSE mode.
TC MODE	<u>DF</u> NDF	ENG	This sets DF or NDF for the time code. <b>DF:</b> Drop frame mode <b>NDF:</b> Non-drop frame mode
UB MODE	<u>USER</u> DATE TIME EXT GPS*	ENG	This selects how LTC UB is to be used. <b>USER:</b> User setting (fixed setting) <b>DATE:</b> For year/month/day/hour real-time operations. <b>TIME:</b> For hour/minute/second real-time operations. <b>EXT:</b> The UBG value is slave-locked when an external TC signal has been input. (The user setting is used when there is no external input.) <b>(GPS):</b> GPS is placed on UB when the Picture Link function is used.
PAUSE TIMER	10 20 <u>30</u>	ENG	This selects the time for which the REC/PAUSE status is to be maintained. <b>10/20/30:</b> Status is to be held for 10, 20 or 30 minutes.
BATTERY SEL	<u>NiCd12</u> NiCd13 NiCd14 IDX-L-40 L-60 L-90 ANTON-D IDX-D	ENG	This selects the battery type. <b>NiCd12:</b> When a 12V NiCd battery is used <b>NiCd13:</b> When a 13V NiCd battery is used <b>NiCd14:</b> When a 14V NiCd battery is used <b>IDX-L-40:</b> When the L-40 battery made by IDX is used <b>L-60/L-90:</b> When a battery made by Sony is used <b>ANTON-D:</b> When a battery made by Anton Bauer is used <b>IDX-D:</b> When a battery made by IDX is used digitally

\*This is displayed when the Picture Link adaptor board (AJ-YAP900, optional accessory) has been installed.

### <Notes>

- Set SW201 on the CAM ENC board to ON when the 26P remote control function is to be used.
- Change the time on the TIME/DATE menu screen when the REAL setting is to be used for the UB MODE item.

The underlining in the variable range column indicates the setting in the preset mode.

## MIC/AUDIO screen

The MIC/AUDIO items are set on this screen.

-< MIC/AUDIO >	
FRONT POWER	: ON
FRONT MIC	: -40 dB
REAR MIC CH1	: -60 dB
REAR MIC CH2	: -60 dB
LINE CH1/CH2	: +4 dB
REAR AUDIO	: STEREO
MIC LOW CUT CH1	: FRONT
MIC LOW CUT CH2	: FRONT
EMPHASIS	: OFF
LIMITER	: OFF
TEST TONE	: NORMAL

Item	Variable range	VF display	Remarks
FRONT POWER	<u>ON</u> OFF	ENG	<b>ON:</b> The phantom power is supplied to the front microphone. <b>OFF:</b> The phantom power is not supplied to the front microphone.
FRONT MIC	-40/-50/ <u>60</u> dB	ENG	This selects the camera mic input level.
REAR MIC CH1	-40/-50/ <u>-60</u> dB	ENG	This selects the mic level of the rear AUDIO CH1 input jack.
REAR MIC CH2	-40/-50/ <u>-60</u> dB	ENG	This selects the mic level of the rear AUDIO CH2 input jack.
LINE CH1/CH2	<u>+4</u> /0/ -6 dB	ENG	This selects the line input level of the rear AUDIO CH1 and CH2 input jacks.
REAR AUDIO	<u>STEREO</u> MONO	ENG	This selects the rear jack AUDIO CH1 and CH2 input method. <b>STEREO:</b> Stereo input is selected. (The CH1 input signals are recorded on CH1 and the CH2 input signals are recorded on CH2.) <b>MONO:</b> Monaural input is selected. (The CH1 and CH2 input signals are mixed, and the mixed signals are recorded on both CH1 and CH2.)
MIC LOWCUT CH1	<u>FRONT</u> REAR F&R OFF	ENG	<b>FRONT:</b> The CH1 input high-pass filter is set to ON only when FRONT is selected. <b>REAR:</b> The CH1 input high-pass filter is set to ON only when REAR is selected. <b>F&amp;R:</b> The CH1 input high-pass filter is set to ON regardless of whether FRONT or REAR is selected. <b>OFF:</b> The CH1 input high-pass filter is set to OFF.
MIC LOWCUT CH2	<u>FRONT</u> REAR F&R OFF	ENG	<b>FRONT:</b> The CH2 input high-pass filter is set to ON only when FRONT is selected. <b>REAR:</b> The CH2 input high-pass filter is set to ON only when REAR is selected. <b>F&amp;R:</b> The CH2 input high-pass filter is set to ON regardless of whether FRONT or REAR is selected. <b>OFF:</b> The CH2 input high-pass filter is set to OFF.

<Note>

- The frequency response when ON is selected for the MIC LOWCUT item setting is 200 Hz to 10 kHz.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

## MAIN Menu Screen 3 of 4 (SUB menus)

-< MIC/AUDIO >	
FRONT POWER	: ON
FRONT MIC	: -40dB
REAR MIC CH1	: -60dB
REAR MIC CH2	: -60dB
LINE CH1/CH2	: +4dB
REAR AUDIO	: STEREO
MIC LOW CUT CH1	: FRONT
MIC LOW CUT CH2	: FRONT
EMPHASIS	: OFF
LIMITER	: OFF
TEST TONE	: NORMAL

Item	Variable range	VF display	Remarks
EMPHASIS	ON <u>OFF</u>	ENG	This selects ON or OFF for the emphasis during recording. The EE output signals are also linked with the setting of this switch.
LIMITER	ON <u>OFF</u>	ENG	This selects ON or OFF for the audio limiter. <b>ON:</b> The audio limiter will be activated. <b>OFF:</b> The audio limiter will not be activated.
TEST TONE	<u>NORMAL</u> ALWAYS CHSEL OFF	ENG	<b>NORMAL:</b> The test tone signal is output when the CAM/BAR switch is set to BAR and the AUDIO IN switch CH1 is set to FRONT. <b>ALWAYS:</b> The test tone signal is output when the CAM/BAR switch is set to BAR. <b>CHSEL:</b> The test tone signal is output to the selected channel when the CAM/BAR switch is set to BAR and the AUDIO IN CH1 and/or CH2 switch is set to FRONT. <b>OFF:</b> The test tone signal is not output.

### <Notes>

- The LIMITER item initiates the limiter operation at a level equivalent to 3 dB below the peak (+18 dB).
- The AUDIO SELECT initiates the limiter operation at the MAN setting and the AGC operation at the AUTO setting.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

M.PED	-100 ⋮ <u>+0</u> ⋮ +100	ENG	This adjusts the master pedestal.
VIDEO OUT	ENC <u>Y</u> R G B	ENG	This switches the VIDEO OUT.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

# MAIN Menu Screen 4 of 4 (SUB menus)

## INITIALIZE screen

The MENU display item settings are reset on this screen. Align the arrow (→) with the item and press the UP or DOWN button to initiate the corresponding operation.

```

->< INITIALIZE >
READ FACTORY DATA
WRITE USER DATA
    
```

Item	Variable range	VF display	Remarks
READ FACTORY DATA	—	ENG	This returns the menu data to the factory settings.
WRITE USER DATA	—	ENG	This saves the menu data inherent to the user in the camera's memory.

**<Note>**

The camera ID is not returned to the factory setting.

## DIAGNOSTIC screen

The unit's operating statuses and software version are displayed on this screen.

```

< DIAGNOSTIC >
OPERATION      : 00000 x10h
DRUM RUNNING  : 00000 x10h
THREADING      : 00000 x10
VTR SYSCON    Ver<P1.00>
CAM SYSCON    Ver<1.0>1.0
DATA ROM      Ver<1.0>
DV            Ver<1.00 >
                xx.xx.xx
    
```

Item	Variable range	VF display	Remarks
OPERATION	—	ENG	Unit's operating time with the power ON
DRUM RUNNING	—	ENG	Rotating time of the drum
THREADING	—	ENG	Number of times the tape has been loaded
VTR SYSCON	—	ENG	Software version display
CAM SYSCON	—	ENG	Software version display
DATA ROM	—	ENG	Software version display
DV	—	ENG	Software version display

- The DIAGNOSTIC screen can be displayed on the viewfinder when the MENU SET/OFF switch is set to SET while the HOLD button is held down, and the PAGE switch is pressed.

The underlining in the variable range column indicates the setting in the preset mode.

**USER menu:** The USER menu appears when the MENU switch is set to SET.

**ENG menu:** The ENG menu appears when the MENU switch is set to SET while the SHIFT/ITEM button and UP button are held down together.

# Warning System

If trouble is detected immediately after the power is turned on or during operation, the display window (LCD), WARNING lamp, lamps inside the viewfinder, and warning tones from the speaker and earphone inform the operator of trouble.

Item	Display window (LCD)				Lamps		Warning tone	Warning contents	VTR (section) operation	Countermeasures
	Warning display	Warning display status	Remaining battery level display	Remaining tape length display	WARNING lamp	REC lamp				
RF	RF	Lighted *1)			Flashes 4 times per second	Flashes 4 times per second	Emitted 4 times per second *1)	Video head clogging, recording system trouble	Head clogging is detected and a warning tone emitted. Images may not be recorded properly.	Clean the heads. If images still cannot be recorded properly after the heads are cleaned, consult your dealer.
SERVO	SERVO	Lighted			Flashes 4 times per second	Flashes 4 times per second	Emitted 4 times per second	The servo is out of order.	Recording continues, but images may not be recorded properly.	Turn off the power and consult your dealer. (Lamps may flash briefly and then go off when tape running starts, but this does not indicate trouble.)
HUMID	HUMID	Lighted			Lighted	Flashes 4 times per second	Emitted 4 times per second *1) Continuous tone *2)	Condensation	Recording continues, but stops if tape sticking occurs. Playback, fast forward and rewind operation stops.	If tape running stops and the HUMID display does not go off even when the power is turned off and then on again, wait until the display goes off.
SLACK	SLACK	Flashes			Flashes 4 times per second	Flashes 4 times per second	Continuous tone	Tape wind-up trouble	An error code appears in the time code display position of the display window (LCD) and the VTR stops.	Check the error code in the display window (see page 149) and consult your dealer.

\*1) During recording

\*2) During playback, fast forward or rewind

## <Note>

If a cleaning tape is not available to deal with video head clogging, etc., first establish the STOP mode and then press the STOP button again while the RESET button on the side panel is kept depressed. While these buttons are held down, the cleaning roller will clean the heads for a maximum of 10 seconds.

# Warning System

Item	Display window (LCD)				Lamps		Warning tone	Warning contents	VTR (section) operation	Countermeasures
	Warning display	Warning display status	Remaining battery level display	Remaining tape length display	WARNING lamp	REC lamp				
TAPE END	E TAPE F	Flashes *1)		1 of the 7 bars displayed; 5-0 display inside the viewfinder flashes	Flashes 1 time per second*1)	Flashes 1 time per second	Emitted 4 times per second	The tape is nearing its end.	Operation continues.	Replace the tape as necessary.
		Flashes		All 7 bars displayed	Lighted	Flashes 4 times per second	Continuous tone	The tape has reached its end.	Recording, playback or fast forward operation stops.	Replace the cassette or rewind the tape.
BATTERY END	E BATT F	Flashes	1 of the 7 bars displayed		Flashes 1 time per second	Flashes 1 time per second	Emitted 4 times per second*1)	The battery has almost run out.	Operation continues.	Replace the battery as necessary.
		Flashes	All 7 bars displayed		Lighted	Flashes 1 time per second*3)	Continuous tone	The battery has run out.	Operation stops.	Replace the battery.

\*1) During recording

\*2) During playback, fast forward or rewind

\*3) During recording, the REC and BATT lamps flash in alternation.

When recording is paused (REC/PAUSE), the REC and BATT lamps flash together.

## <Notes>

- When trouble occurs with the external VTR connected to the unit, warnings are displayed only by the unit's REC and TALLY lamps.
- When connecting the external VTR to the 26-pin/12-pin output adaptor and recording simultaneously with the internal and external VTRs, the REC and TALLY lamps flash if trouble occurs in either VTR. Check the warning displays of each VTR to confirm the error contents.

Warning system priorities are as follows.

- 1 SLACK
- 2 BATTERY END
- 3 TAPE END
- 4 HUMID
- 5 SERVO
- 6 RF
- 7 BATTERY NEAR END
- 8 TAPE NEAR END

# Emergency eject

If the cassette cannot be ejected by pressing the EJECT button, use a screwdriver or similar tool to press and turn the EMERGENCY screw. This enables the cassette to be removed.

- 1** Set the power to OFF.
- 2** Remove the rubber cap where shown in the figure. Insert a Phillips head screwdriver into the cross-shaped part of the EMERGENCY screw (red).
- 3** While pushing in with the screwdriver, turn the EMERGENCY screw counterclockwise until the tape is ejected.
  - 1 This screw needs to be rotated through about 30 turns after the first turn until the unloading can be started.
  - 2 This screw needs to be rotated through about 120 turns after the first turn until the tape is ejected.
- 4** Remove the cassette.
- 5** Return the rubber cap to its original position.

**<Notes>**

1. Do not turn the EMERGENCY screw except in an emergency.
2. Do not turn the screw clockwise. Stop turning the screw as soon as the tape is ejected. Otherwise, the mechanism may be damaged.
3. After the tape is ejected, the cassette holder will not lock into place even when an attempt is made to close it. Be sure to turn the power off and turn it back on to reset the mechanism's operation, and then close the cassette holder.
4. A clicking sound will be heard when the EMERGENCY screw is turned: this sound is made by the real drive operation and is therefore not indicative of a malfunction.

- ① Set the power to OFF.
- ② Push in and turn at the same time.
  - 1 This screw needs to be rotated through about 30 turns after the first turn until the unloading can be started.
  - 2 This screw needs to be rotated through about 120 turns after the first turn until the tape is ejected.

# Error Codes

When an error occurs in the unit for some reason or other, the following error codes appear in the display window.

Code No.	Contents
7	Recording signal trouble
8	Solenoid trouble
9	The servo is not locked.
A	Condensation has occurred.
B	Supply reel trouble
C	Take-up reel trouble
D	Capstan trouble
E	Cylinder trouble
F	Loading trouble

# Maintenance

---

## Condensation

If the unit is moved from a cold location to a warm location or used in areas with high humidity, the moisture in the air may adhere as water droplets on the head drum. This is called condensation, and if the tape is run under these conditions, it will easily stick to the drum. Therefore, the following points should be observed.

- If the unit is moved under conditions where condensation may occur, eject the tape.
- Before inserting the tape, set the POWER switch to ON and check that the HUMID display in the display window is not lighted. If the HUMID display is lighted, do not insert the tape until the display goes off.

### <Note>

To ensure safe operation, MID continues to flash for 80 minutes after the condensation detection has been released. During this period, the function buttons will not respond even when they are operated.

## Cleaning the Video Heads

Use the AJ-CL12MP cleaning cassette when head cleaning is required. Improper use of the cleaning cassette may damage the video heads. Therefore, read the Handling Instructions for the cleaning tape carefully before use.

## Cleaning the Viewfinder

- Do not use thinner or other solvents to remove dirt from the viewfinder.
- Wipe the lens with lens cleaner available on the market.
- Absolutely do not wipe the mirror. If dirt, etc. has adhered to the mirror, remove it using an air blower available on the market.

## Characteristic Phenomenon of CCD Cameras

### Smear

Smear occurs when shooting high-intensity subjects, and occurs more easily as the electronic shutter speed increases.

# Inspections Before Shooting

Perform the following inspections before shooting to check that all systems are operating properly. Checking the image with a color monitor is recommended.

## Inspection Preparations

- 1** Insert a charged battery pack.
- 2** Set the POWER switch to ON and check that the HUMID display does not appear and that five or more bars of the remaining battery level display are lighted.
  - If the HUMID display appears, wait until the display goes off.
  - If five or more bars of the remaining battery level display are not lighted, replace the battery pack with a sufficiently charged battery pack.
- 3** Check that there are no cables, etc. around the cassette holder and top panel, and then press the EJECT button to open the cassette holder.
- 4** Check the following items, and then insert a cassette and close the cassette holder.
  - The cassette is not set to the write protect status.
  - There is no slack in the tape.

## Inspecting the Camera Section

Set the switches as follows.

# Inspections Before Shooting

---

## Inspecting the Viewfinder

- 1** Adjust the position of the viewfinder.
- 2** Check that the color bar appears on the viewfinder screen, and then adjust the BRIGHT, CONTRAST and PEAKING controls so that the color bar appears clearly on the viewfinder.
- 3** Check the following items.
  - (1) Press the PAGE button, and check that the setting MAIN menu appears on the viewfinder screen.
  - (2) Press the PAGE button, and check that the setting MAIN menu page changes.
  - (3) Press the SHIFT/ITEM button, and check that the cursor moves on the page.
  - (4) Press the UP or DOWN button, and check that one of the SUB menus opens.
  - (5) Press the SHIFT/ITEM button, and check that the cursor moves on the page.
  - (6) Press the UP or DOWN button, and check that the setting or ON/OFF display of the item selected by the cursor changes.
- 4** Set the OUTPUT/AUTO KNEE switch to CAM, and change the filter knob settings. Check that the number of the FILTER display on the viewfinder screen changes in accordance with the knob position.
- 5** Perform the following operation and check that the (!) lamp lights when the items set to ON on the “(!) LED” SUB menu page of MAIN menu screen 2 of 4 are operated.
  - (1) Set the gain to any value other than 0 dB with the GAIN switch.
  - (2) Set the SHUTTER switch to ON.
  - (3) Set the WHITE BAL switch to PRST.
  - (4) Insert the lens extender.
  - (5) Set the FILTER knob to any position other than “1”.
- 6** Press the SHUTTER switch repeatedly from the ON position to the SEL side and check that the shutter setting on the viewfinder screen changes.
- 7** Aim the lens at an appropriate subject and turn the focus ring to bring the subject into focus. Check the image appearing in the viewfinder.
- 8** Set both the AUDIO IN CH1 and CH2 switches to “FRONT MIC”, and set LEVEL METER on the “VF INDICATOR” SUB menu page of the MAIN menu screen 2 of 4 to “CH1”.  
Check that the audio level appears on the viewfinder screen when sound is input from the microphone which has been connected to the MIC IN jack on the front panel.  
Check that the audio level display is cleared from the viewfinder screen when LEVEL METER on the “VF INDICATOR” SUB menu page of the MAIN menu screen 2 of 4 is set to “OFF”.
- 9** Check that the zebra pattern appears on the viewfinder screen when the ZEBRA switch is set to ON, and disappears when the ZEBRA switch is set to OFF.

**<Note>**

Depending on the setting conditions, the items and functions in steps 3 to 6 may not operate. If this is the case, switch the unit to the engineer mode, set DISPLAY MODE on the “VF DISPLAY” menu page to “3”, and set the required items on the SHUTTER SPEED, (!) LED and USER MENU SELECT pages 1 of 3 to 3 of 3.

# Inspections Before Shooting

---

## Inspecting the Iris and Zoom Functions

- 1** Set the zoom to electric zoom mode and check the electric zoom operation. Check that the image changes to telephoto and wide angle.
- 2** Set the zoom to manual zoom mode and check the manual zoom operation. Turn the manual zoom lever and check that the image changes to telephoto and wide angle.
- 3** Set the iris to automatic adjustment mode and aim the lens at subjects with differing brightness to check that the automatic iris adjustment functions.
- 4** Set the iris to manual adjustment mode and turn the iris ring to check the manual iris adjustment.
- 5** Hold down the instant iris automatic adjustment button and aim the lens at subjects with differing brightness to check the instant iris automatic adjustment performance.
- 6** Return the iris to automatic adjustment mode and change the GAIN switch setting to L, M and H to check the following items.
  - The iris is adjusted with respect to subjects with the same brightness in accordance with the switch setting.
  - The gain value display on the viewfinder screen changes in accordance with the switch setting.
- 7** When a lens with an extender is mounted, set the extender to the used position to check that the extender functions properly.

Perform “(1) Tape Running Inspections” to “(4) Earphone and Speaker Inspections” below consecutively.

## Inspecting the VTR Section

### (1) Tape Running Inspections

- 1** Set the VTR SAVE/STBY switch to SAVE and check that the VTR SAVE lamp inside the viewfinder lights.
- 2** Set the VTR SAVE/STBY switch to STBY and check that the VTR SAVE lamp goes off.
- 3** Set the F-RUN/R-RUN switch to R-RUN.
- 4** Set the DISPLAY switch to CTL.
- 5** Press the unit’s VTR START button and check the following items.
  - The tape reels turn.
  - The counter display number changes.
  - The REC lamp inside the viewfinder lights.
  - The RF and SERVO lamps in the display window do not light.
- 6** Press the unit’s VTR START button again. Check that the tape stops and the REC lamp inside the viewfinder goes off.
- 7** Check the same operations as in steps 5 and 6 using the VTR button of the lens.
- 8** Press the RESET button and check that the counter display number changes to “00:00:00:00”.
- 9** Set the LIGHT switch to ON and check that the display window is illuminated.
- 10** Press the REW button to rewind the tape for a few moments, and then press the PLAY/PAUSE button. Check that the recording, playback and rewind operations are performed properly.
- 11** Press the FF button and check that fast forward operation is performed properly.

# Inspections Before Shooting

---

## (2) Inspection of Audio Level Automatic Adjustment Functions

- 1 Set the AUDIO SELECT CH1/CH2 switch to AUTO.
- 2 Set the AUDIO IN CH1/CH2 switch to FRONT [MIC].
- 3 Aim a microphone connected to the MIC IN jack at an appropriate sound source and check that the level display for both CH1 and CH2 changes in accordance with the sound level.

## (3) Inspection of Audio Level Manual Adjustment Functions

- 1 Set the AUDIO IN CH1/CH2 switch to FRONT [MIC].
- 2 Set the AUDIO SELECT CH1/CH2 switch to MAN.
- 3 Turn the AUDIO LEVEL CH1/CH2 controls and check that the level display increases when the controls are turned to the right.

## (4) Earphone and Speaker Inspections

- 1 Set the VTR SAVE/STBY switch to STBY.
- 2 Turn the MONITOR control and check that the speaker volume changes.
- 3 Connect an earphone to the PHONES jack. Check that the sound to the speaker is cut off and that the microphone sound can be heard from the earphone.
- 4 Turn the MONITOR control and check that the earphone volume changes.

## (5) Inspections when Using an External Microphone

- 1 Connect an external microphone to the AUDIO IN CH1 and CH2 connectors.
- 2 Set the AUDIO IN CH1/CH2 switch to REAR [MIC].
- 3 Aim the microphone at a sound source and check that the audio level meter in the display window and the audio level display inside the viewfinder change in accordance with the sound level. Each channel can also be checked separately by connecting a single microphone to each channel.

## (6) Time Code and User Bit-Related Inspections

- 1 Set the user bit as necessary.
  - See “Setting the User Bit” (page 84) for a description of setting methods.
- 2 Set the time code.
  - See “Setting the Time Code” (page 83) for a description of setting methods.
- 3 Set the F-RUN/R-RUN switch to R-RUN.
- 4 Press the VTR START button.  
Check that the tape runs and the counter display number changes.
- 5 Press the VTR START button again.  
Check that the tape stops and the counter display number stops changing.
- 6 Set the F-RUN/R-RUN switch to F-RUN.  
Check that the counter display number changes regardless of the tape running status.
- 7 Set the DISPLAY switch to UB.  
Check that the set user bit is displayed.

# Specifications

## General

<b>Power supply voltage:</b>	DC 12 V
<b>Power consumption:</b>	24 W

**Operating temperature:** 32°F to 104°F (0°C to 40°C)  
**Storage temperature:** -4°F to 140°F (-20°C to 60°C)  
**Operating humidity:** Less than 85% (relative humidity)  
**Continuous operating time:** Approx. 90 min. (using 1 Anton Bauer Trimpac 14 battery)  
**Weight:** 14.52 lbs (6.6 kg) (incl. main unit, viewfinder, lens, battery pack, tape and microphone)  
**Dimensions:** 4<sup>13/16</sup>" (W) × 8<sup>1/16</sup>" (H) (excluding grip) × 12<sup>3/8</sup>" (D)  
122.5 × 204 × 313 mm

## Camera Section

**Pick-up devices:** 2/3-inch on-chip IT type of CCD  
**System:** RGB 3-CCD system  
**Picture elements:** 410,000 pixels  
**Spectral system:** F1.4 prism system  
**Built-in filters:**  
1; 3 200 K  
2; 5 600 K+1/4 ND  
3; 5 600 K  
4; 5 600 K+1/16 ND  
**Quantization:** 10-bit A/D (R, G and B channels each)  
**Digital signal processing:** 16-bit long operation, 14.3 MHz/28.6 MHz  
**Horizontal drive frequency:** 14.3 MHz  
**Programmable gains:** Any 3 position settings from -3, 0, 3, 6, 9, 12, 15, 18, 21, 24 and 30 dB  
**Super gain:** 30, 36, 43, 46 dB, selectable  
**Shutter speeds:** 1/100, 1/120, 1/250, 1/500, 1/1000, 1/2000 sec.  
Synchro scan mode; 1/60.3 sec. to 1/250 sec.  
**Lens mount:** 2/3" Bayonet type  
**Sensitivity:** F11 (2000 lux, 89.9% reflection)  
**Minimum subject brightness:** Approx. 0.16 lux (at +46 dB, using F1.4 lens)  
**Image S/N ratio:** 62 dB (typ)  
**Horizontal resolution:** 750 lines (center, typ)  
**Vertical resolution:** 400 lines/450 lines (SUPER V mode)  
**Sampling frequency:** 14.3 MHz  
**Registration:** Below 0.05% (entire range) (excluding lens distortion)  
**Geometric distortion:** Below measurable limit (excluding lens)

## Viewfinder (AJ-VF10P, optional accessory)

**CRT:** 1.5" monochrome  
**Horizontal resolution:** 600 lines (center)  
**External controls/switches:** Controls; BRIGHT, CONTRAST, PEAKING  
Switches; TALLY, ZEBRA

REAR MIC; Phantom +48 V/+12 V (selectable using internal switch), balanced, 3 kilohms Menu setting to −60, −50, −40 dBu

##### GENLOCK IN/

##### (VIDEO IN) (BNC):

1.0 Vp-p, 75 ohms (signals can be monitored on EVF and recorded by menu selection)

##### TIME CODE IN (BNC):

0.5 V to 18 Vp-p, 10 kilohms

#### Output

##### CAMERA OUT (BNC):

1.0 Vp-p, 75 ohms

##### VIDEO OUT (BNC):

1.0 Vp-p, 75 ohms

##### AUDIO OUT

##### (XLR, 3 pins, male):

+4 dBu, balanced, low impedance CH1, CH2 or MIX selectable

##### TIME CODE OUT (BNC):

1.5 Vp-p, 75 ohms

##### PHONES (stereo mini jack×2)

#### Other

##### DC IN (XLR, 4 pins, male):

DC 12 V

##### DC OUT (4 pins):

DC 12 V, 100 mA

##### LENS (12 pins)

##### ECU (6 pins)

## Accessories

Shoulder belt (×1), battery connector (including screws) for supporting Sony battery, AUDIO LEVEL CH1 control knob (including screw) (×1), Holder for an Anton Bauer battery (already mounted on main unit)
