On-site Frequency Calibration

The CNT-85 frequency counter from Pendulum brings cal lab accuracy to field measurements. With the (optional) ultra-stable oven timebase and a high 10 digits resolution in just one second, it delivers high-accuracy measurements instantly. An overflow mode displays also the 11th and 12th digits, when needed. The CNT-85 is easy to use, compact and has a unique, smart automatic input triggering for any type of signal. A very short warm-up time of the oven oscillator, gives you ppb-performance after only 10 minutes.

CNT-85R - The Ultimate Frequency Counter/Calibrator

The CNT-85R from Pendulum is the most accurate portable frequency calibrator on the market. It offers all the functionality of the CNT-85, plus the stability and accuracy of a built-in Rubidium atomic reference.

This instrument is ideal for high-accuracy frequency calibration, inside as well as outside the cal lab environment, such as in digital communication systems.

The short warm-up time means that the CNT-85R is instantly ready for use after a change of location.

GSM Network Operators

Depending on the internal procedures and budgets of the network operator, the requirement for master clock calibration in base stations, can be fulfilled with the following solutions from Pendulum.

- CNT-85 with oven oscillator (option 40), offers a low initial cost solution. With 3 month calibration intervals the counters margin to GSM specification is 5:1, and 1 year calibration intervals give a margin of 3:1.
- CNT-85R, provides low cost of ownership, (10 year adjustment interval, for a margin of better than 50:1 to the GSM specification).
