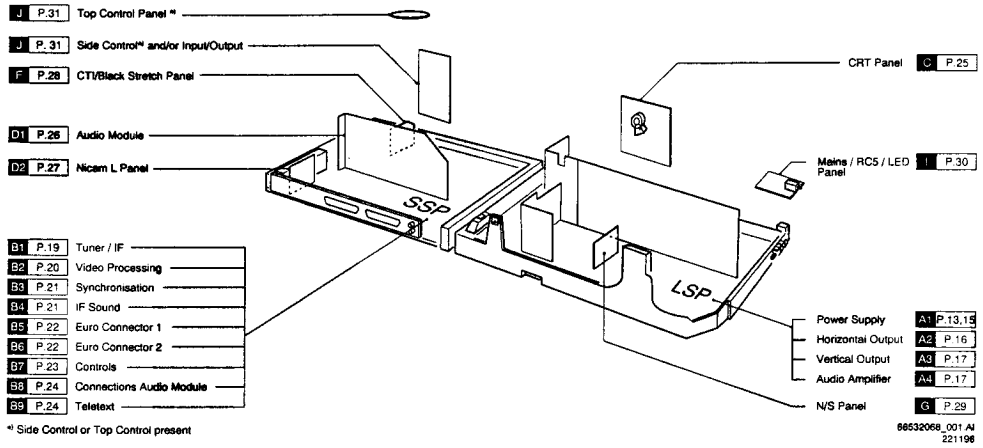
4	-	C ⊖ (0,3V_{pp}/75Ω)



3. Safety instructions for repairs, Maintenance instructions, Warnings and Notes

Safety instructions for repairs

1. Safety regulations require that during a repair:
   - the set should be connected to the mains via an isolating transformer;
   - safety components, indicated by the symbol ▲ should be replaced by components identical to the original ones;
   - when replacing the CRT, safety goggles must be worn.

2. Safety regulations require that after a repair the set must be returned in its original condition. In particular attention should be paid to the following points:
   - As a strict precaution, we advise you to resolder the solder joints through which the horizontal deflection current is flowing, in particular:
     - all pins of the line output transformer (LOT);
     - fly-back capacitor(s);
     - S-correction capacitor(s);
     - line output transistor;
     - pins of the connector with wires to the deflection coil;
     - other components through which the deflection current flows.

Note:
This resoldering is advised to prevent bad connections due to metal fatigue in solder joints and is therefore only necessary for television sets older than 2 years.
- The wire trees and EHT cable should be routed correctly and fixed with the mounted cable clamps.
- The insulation of the mains lead should be checked for external damage.
- The mains lead strain relief should be checked for its function in order to avoid touching the CRT, hot components or heat sinks.
- The electrical DC resistance between the mains plug and the secondary side should be checked (only for sets which have a mains isolated power supply).
  This check can be done as follows:
  - unplug the mains cord and connect a wire between the two pins of the mains plug;
  - set the mains switch to the on position (keep the mains cord unplugged !);
  - measure the resistance value between the pins of the mains plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be between 4.5 MΩ and 12 MΩ;
  - switch off the TV and remove the wire between the two pins of the mains plug.
- The cabinet should be checked for defects to avoid touching of any inner parts by the customer.

Maintenance instructions

It is recommended to have a maintenance inspection carried out by a qualified service employee. The interval depends on the usage conditions:
- when the set is used under normal circumstances, for example in a living room, the recommended interval is 3 to 5 years;
- when the set is used in circumstances with higher dust, grease or moisture levels, for example in a kitchen, the recommended interval is 1 year.

The maintenance inspection contains the following actions:
- execute the above mentioned "general repair instruction";
- clean the power supply and deflection circuitry on the chassis;
- clean the picture tube panel and the neck of the picture tube.

Warnings

1. In order to prevent damage to ICs and transistors, all high-voltage flashovers must be avoided. In order to prevent damage to the picture tube, the method shown in Fig. 3.1 should be used to discharge the picture tube.
   Use a high-voltage probe and a multimeter (position DC-V). Discharge until the meter reading is 0V (after approx. 30s).

2. ESD

   All ICs and many other semiconductors are sensitive to electrostatic discharges (ESD). Careless handling during repair can drastically shorten the life. Make sure that during repair you are connected by a pulse band with resistance to the same potential as the earth ot the unit.
   Keep components and tools also at this same potential.

3. Together with the deflection unit and any multipole unit, the flat square picture tubes used form an integrated unit. The deflection and the multipole units are set optimally at the factory. Adjustment of this unit during repair is therefore not recommended.

4. Be careful when taking measurements in the high-voltage section and on the picture tube.

5. Never replace modules or other components while the unit is switched on.

6. When making settings, use plastic rather than metal tools. This will prevent any short circuits and the danger of a circuit becoming unstable.

Notes

1. The direct voltages and oscillograms should be measured with regard to the tuner earth (⊥), or hot earth (⊥ϟ) as this is called.

2. The direct voltages and oscillograms shown in the diagrams should be measured in the **Service Default Mode** (see chapter 8) with a colour bar signal and stereo sound (L:3 kHz, R:1 kHz unless stated otherwise) and picture carrier at 475.25 MHz.

3. Where necessary, the oscillograms and direct voltages are measured with (⏉) and without aerial signal (⨯).
   Voltages in the power supply section are measured both for normal operation (Ⓓ) and in standby (⏻). These values are indicated by means of the appropriate symbols.

4. The picture tube PWB has printed spark gaps. Each spark gap is connected between an electrode of the picture tube and the Aquadag coating.

5. The semiconductors indicated in the circuit diagram and in the parts lists are completely interchangeable per position with the semiconductors in the unit, irrespective of the type indication on these semiconductors.

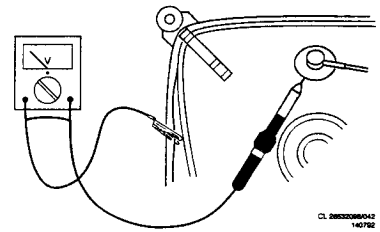


Figure 3.1

6. DOLBY SURROUND PRO • LOGIC

Manufactured under license from Dolby Laboratories Licensing Corporation.

DOLBY, the double-D symbol ⧈ and PRO LOGIC are trademarks of Dolby Laboratories Licensing Corporation.

4. Mechanical instructions

The MD1.2E chassis has two different mechanical executions.

4.1 Styling with top control and side input/output (also applicable for MD1.1E Widescreen)

Removing the rear cover

1. First all screws on the rear cover have to be removed.
   - 4 Screws are located at each corner of the cabinet.
   - 2 Screws are located at the left and right bottom corners of the rear cover.
   - 4 Screws are fixed at the 4 corners of the I/O panel with the Euroconnectors and aerial input.
2. The rear cover is now held in position by 6 clicks between the cabinet and the rear cover. There are 2 clicks at the left, 2 at the right and 2 at the top. After loosening all clicks (by releasing them with a screwdriver), the rear cover can be removed.
3. The cover plate on the I/O panel with the Euroconnectors and aerial input can be removed in the following way: remove the screw in the middle, release the click connection at the bottom and lift the cover plate.

Process position

The process position provides easier access to the entire chassis.

1. Release the mains cord from its fixation brackets.
2. Push back the clicks between bottom plate and rear cover and pull the cabinet at the same time backwards.

For some service positions cables may have to be removed from their cable clamps and channels.
Afterwards, put the cables back in their original position.

Service positions

Small Signal Panel (SSP) component side (Figure 4.1)

1. Push down the clicks of the SSP bracket (1) and shift the SSP to the left.
2. Pull up the SSP and tilt the SSP counter clockwise to a horizontal position (180° with Large Signal Panel (LSP)).
3. Put the SSP in the clicks (2) marked "Service" on the bottom plate.

When all cables on the SSP are disconnected, the SSP can also be removed from its bracket (**Figure 4.2**), providing better access to component and copper side.

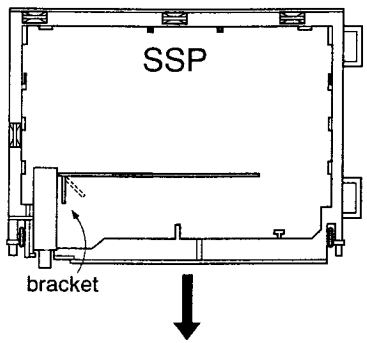

Figure 4.2

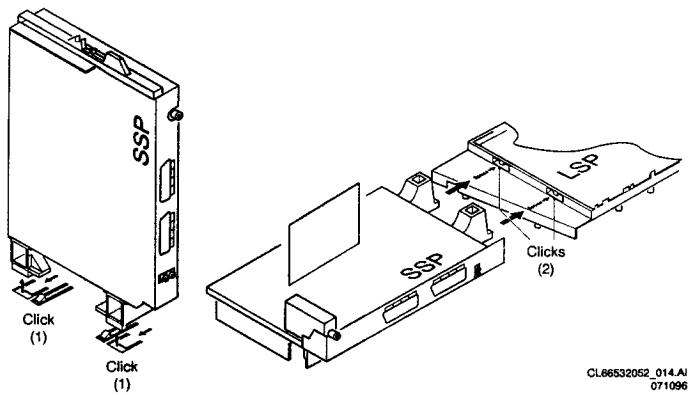

Figure 4.1

Tel:- 01844-351694 Fax:- 01844-352554
Email:- enquiries@mauritron.co.uk

LSP component side (Figure 4.3)

1. Put the SSP in the horizontal service position as described above.
2. Remove screw (3) from the LOT bracket.
3. Remove the bracket by releasing click (4) and pulling the bracket upwards.
4. Release clicks (5) and (6).
5. Lift the LSP PWB out of its bracket (indicated by the arrow) and pull it a little back.

Warning! *The heat sinks are not connected to ground.*

LSP copper side *with table/workbench* (Figure 4.4)

1. Disconnect the cable to the degaussing coil (yellow connector L02 on LSP).
2. If necessary, disconnect the cable on the left loudspeaker.
3. Lift the LSP from its bracket as described above (LSP component side).
4. Turn the LSP underneath the CRT panel (keep cable S15/L15 UNDER the audio module) as indicated by the arrow (7).

The LSP now rests on the bottom plate, held in place by the cable clamp on the heat sink and the LOT bracket.

Warning! *Be careful not to damage the CRT-panel or picture tube neck.*
The heat sinks are not connected to ground.

SSP and LSP copper side *without table/workbench* (Figure 4.5)

For this service position MD1 cable extension kit (service code number 4822 320 11695) is required.

1. Break the service pin (marked M1 - see Figure 4.3) from its position at the right hand side of the bottom plate.
2. Disconnect the cable to the degaussing coil (yellow connector L02 on LSP) and the cable on the left loudspeaker.
3. Remove cables S10/L10, S11/L11 and S15/L15 from LSP to SSP and cable I28/L28 from Audio module to LSP.
4. Lift the LSP from its bracket as described earlier (LSP component side).
5. Put the LSP to the vertical position (Figure 4.5), copper side at the right hand, LOT above (8). For this position, special grooves are made in the bottom plate of the cabinet.
6. Fix the position of the LSP by putting the service pin between LSP (heat sink) and bottom plate (9). There are special holes in the heat sink and the bottom plate to put the service pin in.
7. Reconnect cable I28/L28.
8. Use the cables from the MD1 cable extension kit to reconnect connectors S10/L10, S11/L11 and S15/L15.

Warning! *All cables should be reconnected correctly.*

After use the service pin can be placed in the spare hole at the right hand side in the bottom plate.

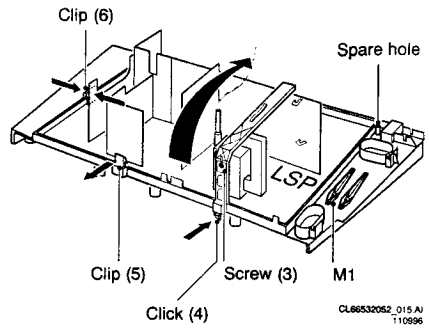

Figure 4.3

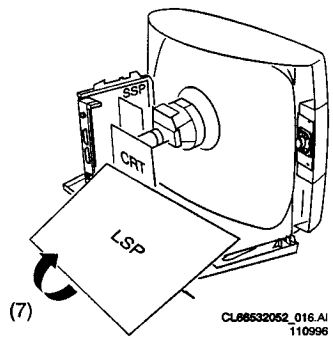

Figure 4.4

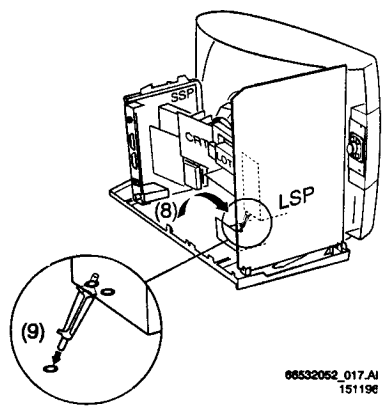

Figure 4.5

Accessing the module with mains switch, LED and RC5 receiver (Fig. 4.6)

1. Cut the tie rap of the degaussing coil at the left hand bottom side (10). Remove the degaussing coil in the left bottom corner from its fixation bracket (11) to get more space to handle the mains module.
2. Remove the red mains panel bracket by lifting the end and pulling it backwards (12).
3. To get more movement space, the left top of the cabinet can be pushed or pulled upwards (13).
4. The mains panel can now be removed.

Afterwards the degaussing coil should be retied at position (10).

4.2 Styling with side control and side input/output (no top control)

Removing the rear cover

1. First all screws on the rear cover have to be removed.
   - 6 Screws are located at the corners of the cabinet.
   - 2 Screws are located at the left and right bottom of the rear cover.
   - 3 Screws are located just above, under and left of the cover plate of the I/O connections.

For some service positions cables may have to be removed from their cable clamps and channels. Afterwards, put the cables back in their original position.

Process position

The process position provides easier access to the entire chassis during the service positions.

1. The chassis can be lifted, pulled forward (± 5cm) and fixed in the bottom plate.
2. When the clicks between bottom plate rear cover are pushed back, the chassis and the bottom plate can be pulled backwards.

Service positions

SSP copper and component side, module servicing (Figure 4.7)

1. Release the click construction (14) between the SSP and LSP.
2. Lift the SSP a little and turn it to an angle of 135° (15) or 180° (16) from the LSP.
   This provides better access to the component side of the SSP and also allows for the removal of modules.

Service position with table/workbench (Fig. 4.8)

1. Disconnect the cable to the degaussing coil (yellow connector L02 on the LSP).
2. Lift the chassis from the bottom plate and pull it backwards (17).
3. Turn the entire chassis around the CRT panel (18).
   The chassis rests on the SSP with the copper side of the LSP backwards.

Warning! *Be careful not to damage the CRT-panel or picture tube neck.*
The heat sinks are not connected to ground.

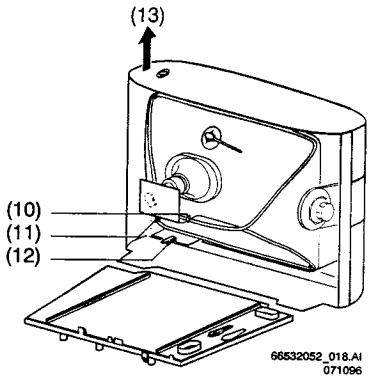

Figure 4.6

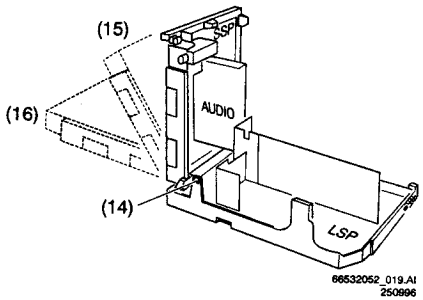

Figure 4.7

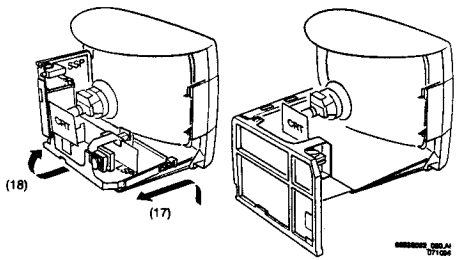

Figure 4.8

Service position (LSP copper side) without table/ workbench (Fig. 4.9)

1. Disconnect the cable to the degaussing coil (yellow connector L02 on the LSP).
2. Lift the chassis from the bottom plate and turn it counter clockwise (19).
3. The SSP can be fixed with a screwdriver to the bottom plate (20). The copper side of the LSP can now be accessed.

Warning! *Be careful not to damage the CRT-panel or picture tube neck.*
The heat sinks are not connected to ground.

Small Signal Panel (Fig. 4.2)
First, remove all cables connected to the Small Signal Panel. The SSP can be removed by sliding it out of the SSP bracket (in the direction of the arrow).

Large Signal Panel (Fig. 4.10)
After removing the screw (21), and pushing back the clips (22), the LSP can be lifted out the bracket as indicated by the arrow.

Accessing the panel with mains switch, LED and RC5 receiver
The mains module is located in the middle of the set, below the picture tube.

1. Push the clicks between bottom plate and rear cover back and pull the chassis back as far as possible.
2. Release the click construction (14 - Fig. 4.7) between the SSP and LSP, lift the SSP a little and turn it to an angle of 180° (16 - see Fig. 4.7) from the LSP.
   The mains panel can now be accessed when reaching over the SSP/LSP.
3. Remove the 2 screws left and right on the mains panel bracket.
   The complete mains panel can now be removed by pulling it backwards

6. Service Modes, DST, Error messages, Protections, Faultfinding and Repair tips

In this chapter the following paragraphs are included:

6.1 Test points

The MD1 chassis is equipped with test points in the service printing. These test points are referring to the functional blocks:

* A1-A2-A3, etc.: Test points for the audio processing circuitry
* C1-C2-C3, etc.: Test points for the control circuitry
* F1-F2-F3, etc.: Test points for the frame drive and frame output circuitry
* L1-L2-L3, etc.: Test points for the line drive and line output circuitry
* P1-P2-P3, etc.: Test points for the power supply
* T1-T2-T3, etc.: Test point for the teletext circuitry
* V1-V2-V3, etc.: Test points for the video processing circuitry

6.2 Service modes and Dealer Service Tool (DST)

For easy installation and diagnosis the dealer remote control RC7150 is introduced. The RC7150 can be used for all new TV sets, including all set of the MD1 chassis. The RC7150 is also called Dealer Service Tool or DST. The ordering number of the DST (RC7150) is 4822 218 21232.

6.2.1 Installation features for the dealer

The dealer can use the RC7150 for programming the TV-set with presets, TV-settings, Dish settings.

10 Different program tables can be programmed into the DST via a GFL or MD2 TV-set (downloading from the GFL or MD2 to the DST; see GFL or MD2 service manuals) or by the DST-I (DST/PC interface; ordering code 4822 218 21277). For explanation of the installation features of the DST, the directions for use of the DST are recommended (For the MD1 chassis, download code 4 should be used).

6.2.2 Diagnose features for the servicer

The MD1.2 sets can be put in the two service modes via the DST RC7150. These are the Service Alignment Mode (SAM) and the Service Default Mode (SDM). SDM can also be entered by short circuiting the "service" pins on the SSP.

6.2.2.1 Service Default Mode (SDM)

Entering the SDM:
- By transmitting the "DEFAULT" command with the RC7150 Dealer Service Tool.
- By temporarily shorting pins S42 and S43 on the Small Signal Panel.

Exiting the SDM:
- Switch the set to stand-by (the error buffer is also cleared).

Note: *When the mains power is switched off while the set is in SDM, the set will enter to SDM immediately when the mains is switched on again.*

The SDM has the following pre-defined conditions for all microprocessor controlled tuning and linear functions:
- For recognition of the SDM "SER" is displayed at the top of the screen.
- Tuning at 475.25 MHz (Secam on Multi-France sets (with Nicam L), PAL on other sets).
- Volume level is set to 25% (of the maximum volume level). Other picture and sound settings are set to 50%.
- Auto switch off disabled (normally the set is automatically switched off when no video signal (IDENT) was received for 15 minutes).
- Sleep timer is disabled.
- All other controls operate normally.
- *When the microprocessor supports the "blinking LED" procedure (See 6.3) and an error code is present in the error buffer, the LED will blink the number of times, equal to the value of the last error code.*
  This function will also work when there is no sound or picture.

6.2.2.2 Service Alignment Mode (SAM)

Entering SAM:
- By transmitting the "ALIGN" command with the RC7150 Dealer Service Tool (this works both while the set is in normal operation mode or in the SDM).
- By pressing the "MENU" and "-" key on the local keyboard simultaneously when the set is in SDM.

Exiting SAM:
- Switch the set to stand-by.

Note: *When the mains power is switched off while the set is in SAM, the set will enter SDM immediately when the mains is switched on again.*

In the SAM the following information is displayed on the screen:
- Software version (the software version of the microprocessor in the set is displayed. This software version identification corresponds with the software versions in the Software Survey as published in the Product Survey.
- Error code buffer (see paragraph 6.3).
- Options (see paragraph 8.4).
- Alignment and geometry information (see paragraph 8.2.1, 8.3.1 and 8.3.2).

(1) Software version
(2) Error buffer
(3) Options
(4) Alignments and geometry

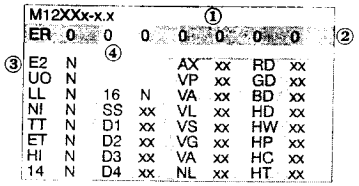

Figure 6.1 Screen of the Service Alignment Mode (SAM)

6.3 Error codes and "blinking LED" procedure

The error code buffer contains all errors detected since the last time the buffer was erased. The buffer is written from left to right.

- The last error detected (actual) is the error at the left side
- The error buffer will be reset in the following cases:
  1. exiting the SAM with the "standby" command on the remote control
  2. transmitting the commands "DIAGNOSE 9 9 OK" with the DST
- By leaving the SAM with the mains switch, the error buffer is not reset.

Examples:

ERROR:	0 0 0 0 0 0:	No error code detected
ERROR:	3 0 0 0 0 0:	Error code 3 is the last and only detected error
ERROR:	5 3 0 0 0 0:	Error code 3 first and error code 5 last detected

The contents of the error buffer can also be made visible through the "blinking LED" procedure. This is especially useful when there is no picture. There are two methods:

1. When the SDM is entered, the LED will blink the number of times, equal to the value of the *last* error code. The LED will stay off briefly and blink again the number of times, equal to the value to the *last* error code
2. With the DST *all* error codes in the error buffer can be made visible. While in SDM, transmit the command: "DIAGNOSE *x* OK" where *x* is the position in the error buffer to be made visible *x* ranges from 1, (the last (actual) error) to 7 (the first error)

   The LED will operate in the same way as in point 1, but now for the error code on position *x*.

Example:

Error code position	*1 2 3 4 5 6 7*
Error buffer	2 4 1 0 0 0 0

- *after entering SDM*

blink (2x) - *pause* - blink (2x)

- *after transmitting* "DIAGNOSE 2 OK" *with the DST*

blink (4x) - *pause* - blink (4x)

- *after transmitting* "DIAGNOSE 3 OK" *with the DST*

blink - *pause* - blink

- *after transmitting* "DIAGNOSE 4 OK" *with the DST*

nothing happens

Note! *Note that it may take up to 7 seconds before the set respons to a DIAGNOSE command. Interruption of the blinking sequence may lead to incorrect results.*

Important! *Not all software versions of the MD1.2E chassis support the blinking LED procedure and the DIAGNOSE 99 command. Software versions NOT supporting the blinking LED procedure are M12BAx-x.x and M12COx-3.x.*

Error code	Error description	Blinking LED	Possible defective components
0	No error detected	—	—
1	BIMOS (TDA8366) error	1x	IC7119 (SSP)
2	MSP3400/3410 error	2x	IC7353 (SSP)
3	I²C bus error	3x	All I²C-related components
4	Wrong EEPROM	4x	IC7685 (SSP)
5	EEPROM defective	5x	IC7685 (SSP)
6	Tuner error	6x	U1000 (SSP)
7	TXT error	7x	IC7702 (SSP)
8	Histogram Proc. error	8x	IC7210 (reserved)
9	16:9 processor error	9x	IC7440 (16x9 module)
10	WSSB module error	10x	IC7540 (WSSB module)
11	Dolby processor error	11x	IC7600 (Audio module)

Table 6.1 Error code list

Protections, Faultfinding and Repair tips

6.4 Protections

6.4.1 In the MD 1.2E the following protections are possible:

Protections generated by the power supply:

- Overload protection → Hick up mode
- Underload → Hick up mode
- Over voltage → Hick up mode
- Under voltage → Hick up mode

Deflection:

- Horizontal Protection → Supply to standby
- EW-Protection → Supply to standby
- Vertical Protection → BIMOS standby mode

Software protection

- BIMOS IC7119 defective → (Error code 1)
  Set can be switched between standby and ON, but there is no picture, no OSD, sound is only noise.
- SDA or SCL shorted → (Error code 3)
  Set is switched to standby via standby line, set tries to restart.
- No +5Db or +8Sc at µC → Set is switched to standby via standby line, set tries to restart.

6.4.2 Power supply protections

The power supply will go to a very good audible hick-up mode in the following situations:

- Overload protection
- Under load
- Over voltage
- Under voltage

In hick-up mode
Pin 1 of IC7520 starts up from the start circuit for approximately 2 seconds, immediately after that the protection is activated. This cycle is constantly repeated in hick-up mode. When the set is in hick-up mode a short squeak is audible every 2 seconds.

6.4.3 Horizontal-protection

When the beam current becomes too high for a long period the voltage across C2450 will drop. D6450 will start conducting and as soon as the voltage drop across R3456 is 0V7, TS7450 will conduct, making PROT high.
Via the hold-circuitry of the power supply, the set will stay in the protection mode (standby) and can only be reset by switching the set off and on via the mains switch. If the fault is still present, the set will switch to standby (protection mode) again.

6.4.4 EW-protection (not for 21" sets)

The East/West protection switches the power supply to standby via the signal line STANDBY-SUPPLY PROTECTION. Via the hold-circuitry of the power supply, the set will stay in the protection mode (standby) and can only be reset by switching the set off and on via the mains switch. If the fault is still present, the set will switch to standby (protection mode) again.

The East/West protection detects when the current throug the East/West power output stage with TS7480 is too high

Note: *A current through the East/West stage tha is too high can be caused by a defective part in the line-deflection circuitry!*

The current through the East/West stage is measured on the LSP via 2 precision resistors (R3483 and R3484).
In case of a line problem, the east/west-current becomes too high and the voltage across resistors R3483 and R348 rises. When the voltage level exceeds 0.6V, D6480 starts to conduct and STANDBY-SUPPLY PROTECTION becomes HIGH. When the voltage across C2480 is very high
(e.g. when a line problem is already present when the set is switched on with the mains switch), D6481 and D6482 conduct and EW-PROTECTION is activated very fast.

The East/West protection becomes active in the following cases:

1. Bad contacts of horizontal deflection circuit:
   - bad contacts of horizontal deflection coil
   - bad contacts of linearity corrector coil L5421
   - bad contacts of S-correction capacitor C2427
2. Bad contacts of flyback capacitor C2425.
3. Shorted flyback diode D6421 or D6423.
4. Shorted S-correction capacitor C2427.
5. Bad solder contacts in the line output stage.

When EW-protection has been active, the line output transistor 7420 may also be defective.

6.4.5 Vertical-protection

The vertical output stage creates VERTICAL-PROTECTION pulses at every flyback pulse when it is functioning correctly. These pulses are sensed by the BIMOS IC7119-4D on pin 37. When the pulse train is interrupted, the BIMOS will switch to BIMOS STANDBY mode. In the BIMOS STANDBY mode, the BIMOS switches off the VDRIVE+ and VDRIVE- while the RGB outputs are blanked. Circuit breaker 1463 may be open. Probably, the line output stage will not work and the power supply will switch to hick-up mode (under voltage protection).

6.4.6 Software protection

The software protection is managed by the microprocessor. It continuously verifies the presence of the +5 and +8 supply voltages on pin 34 and the activity of the I²C bus. When the protection becomes active, the software will switch the power supply on and off continuously via the STANDBY line. In this situation the power supply produces a squeaking sound.

I²C protection
The I²C bus is controlled at each I²C-command. Therefore every I²C command has a defined start/stop condition. When the defined start/stop condition is repeatedly incorrect, error 3 is placed in the error buffer and the set switches to software protection.
I²C-protection is generated in the following situations:
- SDA shorted to earth
- SCL shorted to earth
- SDA and SCL shorted

When SCL or SDA is shorted, the set tries to restart and the LED lights in a clearly recognisable pattern.
- SDA/SCL shorted when the set is switched ON with the mains switch:
  LED is 8 seconds RED, 8 seconds GREEN, flashes RED, 8 seconds GREEN, flashes RED, 8 seconds GREEN, flashes RED, etcetera.
- SDA/SCL shorted during operation
  LED is 8 seconds GREEN, flashes RED, 8 seconds GREEN, flashes RED, etcetera.

- +5Db and +8Sc protection of the microprocessor
  +5Db and +8Sc are the main supply voltages of the entire small signal processing of the set. At pin 34 the microprocessor senses whether the supply voltages +5SDb or +8Sc coming from the power supply are present. When one or both the supply voltages are missing, the set switches to software protection.

6.5 Fault finding and repair tips

Note that for 21" sets, voltages and wave forms may differ.

6.5.1 General

LED indication after start-up procedure is completed
- No LED
  Set is switched OFF, supply problem or microprocessor problem.
- LED continuously
  Set is in standby, control part defective, standby mode defective.
- LED blinking
  Set in SDM, transmitting error buffer.

Audible checks
- Demagnetisation audible: mains voltage is present at LSP.
- EHT audible: supply is operational (line output stage only works in case VOS (+140V for 25 & 29"; +95V for 21") is present.
- Hick-up sound power supply audible: power supply is shorted. Check the LOT (item 5430) and the line output transistor TS7420.

6.5.2 Fault finding in the power supply

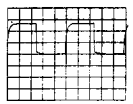
In case of a power supply problem, the power supply can be simplified to a stand **alone power supply at low voltages** (low risk) as follows:

Control part of the power supply
1. Disconnect the SSP (as a result the line will not function any more and therefore will no longer be a load of the power supply) or disconnect the line by removing jumper 9400 and R3400 (if present) on the LSP.
2. Connect an external DC power supply between supply pin 1 IC7520 (via a diode - e.g. BYD33D - with cathode to supply pin 1 IC7520) and hot earth (e.g. earth of the big smoothing capacitor C2505).
3. Connect a oscilloscope to test point P4 at pin 3 IC7520.
4. Turn up the external DC supply voltage slowly to 17V DC.

Remark: *The IC starts at a supply voltage of 14V DC, after that the supply voltage can drop to approx. 9V DC. At approximately 18V DC, over voltage protection becomes active, resulting in a supply voltage drop below 7V DC before a new start-up is performed by turning up the supply voltage above 14V DC.*

5. The correct (measured) situation is displayed in . Other results indicate a defect in the power supply control part (IC7520 or peripheral components at pins 10 or 11).

Figure 6.2:
5V/div; 5uS/div
→ 40KHz pulse

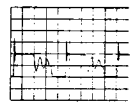


Energy transfer of the power supply (only if control part is OK)
6. Apply action 1, 2 and 4 as described earlier.
7. Connect a lamp of 230V/100W across the VOS output capacitor C2569.
8. Connect a 1kΩ resistor between the +5STANDBY (connector 7L10) and the STANDBY line (connector 8L10) to switch the power supply to normal operation.
9. Connect the mains connector to a VARIAC but leave it at 0.
10. Connect a voltmeter across C2569 and an oscilloscope between the drain of TS7541 (25 & 29") or TS7540 (21") and hot earth.
11. Slowly increase the mains input voltage by the VARIAC (in this way further damage to the power supply can be avoided).

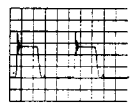
The wave forms for the following mains voltage are given:

Mains in voltage
10V AC: 20kHz and VOS 7V5
20V AC: 40kHz and VOS 30V
40V AC: 40kHz and VOS 80V
65V AC: 40kHz and VOS 140V
> 65V AC: Stable situation, so 40kHz and 140V
In case of a feedback problem, the situation will not stabilise or the voltage will exceed 140V (95V with 21")

1. Figure 6.3:
   Mains in 10V AC
   10V/div; 10us/div

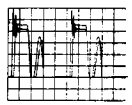


2. Figure 6.4:
   Mains in 20V AC
   20V/div; 5uS/div
   → 40kHz pulse
   → VOS 30V



3. Figure 6.5:
   Mains in 40V AC
   50V/div; 5uS/div
   → 40kHz pulse
   → VOS 80V

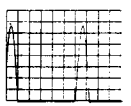
4. Figure 6.6:
   Mains in 65V AC
   50V/div; 5uS/div
   → 40kHz pulse
   → VOS 140V



6.5.3 Fault finding of the horizontal circuitry

When the horizontal circuitry itself is defective, it can be simplified to a stand alone "switched mode supply" at low voltages (low risk) as follows:
1. Disconnect the set from mains.
2. Disconnect the SSP by removing all cables to the SSP.
3. Connect an external 50V DC (or 40V DC) supply with current measurement possibility across C2400.
4. Replace the HDRIVE by an external LF generator (TTL level (between 0 and 5V); duty cycle 50%) with a 16 kHz pulse at the base of TS7410 (near LOT at the side of the PCB).
5. Connect a oscilloscope to test point L1 (collector of line output transistor 7420).

Possibilities:
1. Figure 6.7:
   L3; test point at collector line output transistor (7420)
   50V/div; 10µS/div
   Current from external DC supply approx. 100mA



Observation: *normal 16kHz pulses and 100mA supply current*

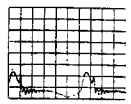
Correct horizontal circuitry
Note that the amplitude of the signal strongly depends on the frequency of the generator.

2. Figure 6.8:
   L3; test point at collector line output transistor (7420)
   50V/div; 10µS/div

Line deflection open:
Current from external DC supply is approximately 100mA.

Observation: *small pulse followed by wide pulse and 100mA supply current*
Causes: *horizontal deflection coil open*
linearity coil L5421 open
S-correction C2427 open

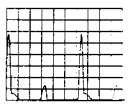
3. Figure 6.9:
   L3; test point at collector line output transistor (7420)
   50V/div; 10µS/div
   Current from external DC supply approx 500mA !!



Observation: *fast oscillations and 500mA supply current*
Cause: *horizontal deflection shorted (e.g. line deflection coil shorted)*

When the line deflection is not completely shorted but only a number of windings are shorted, the wave form does not show the oscillation and the current of the external DC supply is approximately 200mA.

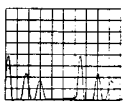
4. Figure 6.10:
   L3; test point at collector line output transistor (7420)
   100V/div; 10µS/div



Current from external DC supply is approximately 150mA

Observation: *flyback time is shorter, one extra pulse in between, 150mA supply current*
Cause: *flyback capacitor C2425 open*

5. Figure 6.11:
   L3; test point at collector line output transistor (7420)
   100V/div; 10µS/div



Current from external DC supply > 1A

Observation: *2 pulses per cycle extra and supply current from more than 1A*
Cause: *short-circuit in picture tube (e.g. EHT to Aquadag)*

6.5.4 Fault finding "no picture, no protection" (problem in the video controller IC part TDA8366-4C)

When there is no picture and no protection, it is most likely that there is a problem with the BC_INFO caused by the TDA8366, the RGB amplifiers or the picture tube.

For measuring, connect a video generator (e.g. PM5518) at the aerial input with a white pattern to the tuner. Trigger the oscilloscope field frequent. A stable picture is obtained if triggered with VDRIVE+ at pin 4 S11.

Normal start up procedure

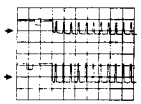
1. First phase of start up; 4 white measuring lines (lines 15, 16, 17, 18) and the main picture is muted (wave forms are better visible if the picture tube is cold);

   Figure 6.12:
   Red (pin 8 of connector R43 on the CRT panel) and green gun (pin 6)
   100V/div DC;
   100µs/div

   
   The total beam current is measured and fed back to pin 16 TDA8366 (IC7119)
   The TDA8366 checks the voltage at pin 16 of the TDA8366 during these lines
   < 4.5V : set remains in this phase
   ≥ 4.5V : set continues with start up phase 2

2. Second phase of start up; each beam is separately measured and the main picture is still muted. Line 15 is Red, line 16 is Green and line 17 is Blue. BC_INFO is measured.
   - differences between the lines (guns) are compensated
   - when the differences are minimal the set continues with phase 3, otherwise it remains in phase 2

   Figure 6.13:
   Red (lower line) (pin 8 of connector R43 on the CRT panel) and green (upper line) gun (pin 6)
   50V/div AC;
   100µs/div

3. After start up the picture is present and differences in cut-off points of the R, the G and the B gun are compensated continuously.

Repair procedure

Typical situation: no picture and no error codes
- Switch the set on.
- In a 4:3 set, press "picture size" to switch the set to "16:9 compressed" mode.
- In a 16:9 set, shift down the picture with the cursor keys.

The start up phase of the set can be identified:

1. **A bright white horizontal line at the top; the rest of the picture is dark**
   (set hangs in first phase of start up procedure)
   Oscilloscope picture of the voltage over the guns looks like figure 6.12.

   TDA8366 (IC7119), picture tube and RGB amplifiers are OK

   There should be 4.5V at pin 16 TDA8366.

   Possible problem: if there is no 4.5V present at pin 16 of TDA8366, there is a defect (in one or more of the components) in the BC_INFO feedback loop.

2. **Small horizontal red, green and blue lines at the top; the rest of the picture is dark**
   (set hangs in second phase of start up procedure)

   TDA8366 is OK

   Possible problem: one or more of the guns of the picture tube are bad
   Measure at pin 16 TDA8366 which feedback line(s) (the R or G or B line) is/are smaller; the corresponding amplifier(s) or gun(s) is/are faulty.

3. **No lines visible (picture dark)**
   Measure pin 16 TDA8366; possible measurements:
   - 0V : Check TDA8366 (sandcastle and the supply voltage)
   - 5V : Check RGB amplifiers
     Short pin 16 TDA8366 to ground, now there will be measuring lines (at continuously 5V, phase 1 and 2 is bypassed)
   - Pulses : there is a measuring line, so the TDA8366 is OK
     Measure on cathode on the CRT panel if the measuring lines are present:
     Yes → BC_INFO circuit is open or no HEATER voltage
     No → RGB amplifier problem

8. Electrical alignments

General: the Service Default Mode (SDM) and Service Alignment Mode (SAM) are described in chapter 6.

Alignment conditions:
All electrical adjustments should be performed under the following conditions:
- Power supply voltage: 240V ± 10%, 50Hz ± 5%
- Warm-up time: ~ 10 minutes
- The voltages and oscillograms are measured in relation to the tuner earth.
- Test probe: Ri > 10MΩ; Ci < 2,5 pF.

8.1 Adjustments on the large signal panel

8.1.1 95V/140V supply voltage

For 21" TV-sets
Connect a voltmeter to the cathode of D6567.
With the aid of R3532 adjust the power supply voltage to 95V ± 0,5V.

For sets 21"
Connect a voltmeter to the cathode of D6567.
With the aid of R3559 adjust the power supply voltage to 140V ± 1V.

8.1.2 VG2 adjustment

Connect a pattern generator displaying a full black picture. Switch the TV-set to the service default mode (see chapter 6). Connect an oscilloscope to the picture tube cathodes for red, green and blue (pins 6, 8 en 11 of the picture tube socket). Set the oscilloscope to DC, 50V/div and 2 ms/div. Measure the DC level of the measuring pulses at the end of the frameblanking (see fig. 8.1). Using the Vg2 potentiometer on the linetransformer (bottom potentiometer) the measuringpulse with the highest level must be set to +160V ± 2V.

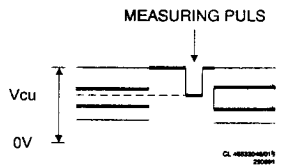

Figure 8.1

8.1.3 Focusing

Is aligned using the focuspotentiometer on the linetransformer (top potentiometer).

8.2 Alignments on the small signal panel

8.2.1 40.4 MHz IF filter (only for sets with SECAM LL' reception)

Using a signal generator (e.g. PM5326) and a capacitor of 5,6 pF supply a 40,4 MHz signal to pin 17 of the tuner. Connect an oscilloscope to pin 1 of filter 1016. Switch on the set and select in the installation menu MANUAL; SYSTEM EUR.W. Align coil L5117 for maximum DC output voltage.

8.2.2 AFC

Switch the set to service default mode (see chapter 8). Using a pattern generator (e.g. PM5518) supply a signal on a frequency of 475,25 MHz
Align coil L5114 for optimal picture quality.

8.2.3 Picture demodulator (only for sets with SECAM LL' reception)

Using a signal generator (e.g. PM5326) supply a 32.95MHz signal via a 5,6 pF capacitor to pin 17 of the tuner.
Align the signal level of the generator so that the DC-voltage on pin 5 of the tuner is 5V.
Switch on the set and select in the installation menu MANUAL; SYSTEM FRANCE. Align capacitor C2106 for minimal voltage on pin 5 of the tuner.

8.2.4 RF-AGC

If the signal of a strong local transmitter is distorted, align the value for AX (AGC crossover) in the service menu (see chapter 8) until the picture is no longer distorted.

8.2.5 Audio demodulator (Not for sets with LL' and NICAM reception possibility)

Using a signal generator (e.g. PM5326) supply a 38.9MHz signal via a 5,6 pF capacitor to pin 17 of the tuner.
Connect an oscilloscope (2ms/div) to pin 12 of IC7033 (TDA3845). Align coil L5030 for minimal amplitude.

8.3 Picture tube alignments

8.3.1 Whitebalance

Connect a pattern generator and select a white picture. Set contrast to maximum (63) for 21" or to 40 for 21" tv-sets. Use the ↑ / ↓ keys to select an alignment and the ← / → keys to change the value. Set GD to 50, RD to 57 and BD to 45.
If necessary change the settings for RD and BD for a correct white balance.

8.3.2 Geometry adjustments (for software versions M12COx-3.x and M12BAx-x.x)

Connect a pattern generator and select a geometry pattern (signal at 475.25 MHz)
- Switch to the Service Default Mode, then to the Service Alignment Mode.
- Select the desired alignment with the ↑ / ↓ keys.
- Change the selected alignment with the ← / → keys.
- A value between 0 and 63 can be selected.
- Changed values are stored immediately.

Vertical
VP : Vertical Shift
Set this for the correct vertical position.
VA : Picture height
Set this for the correct picture height.
VL : Vertical linearity
Set this so that the vertical centre of the picture is at the centre of the tube.
VS : Vertical S-correction
Set this so that the height of the squares in the top of the picture equal the height in the bottom of the picture.

Horizontal
HD : Horizontal shift.
Set this so that the horizontal centre of the picture is on the centre of the tube.

For sets with a screen size larger than 21", the following alignments can be done as well. For 21" sets these alignments have no function.
HW : East-west width
Align the picture width with this.
HP : East-west parabola correction
Set this so that the vertical lines at the sides of the screen are straight.
HC : East-west corner-correction.
Set this so that the vertical lines are straight in the corners.
HT : Trapezium correction
Set this so that the vertical lines are as vertical as possible.

Adjustments for 16:9 sets (reserved)
16 = N 4:3 tube (options SS, D1, D2, D3 and D4 not available (blue))
16 = Y 16:9 tube (options SS, D1, D2, D3 and D4 available)

8.4 Options

E2 : Number of Euro/Scart connectors (options N or Y)
N 1 Euro/Scart connector present
Y 2 Euro/Scart connectors present
UO : Tuner type
N UHF/VHF tuner (item 1000 is UV916S)
Y UHF tuner (item 1000 is UV944S).
Used in the United Kingdom (/05 sets)
LL : Nicam L (options N or Y)
N Nicam L not present
Y Nicam L present (Nicam L panel required and item 7353 is MSP3410)
NI : Nicam (stereo) sound (options N or Y)
N Only 2CS stereo, no Nicam (item 7353 is MSP3400)
Y 2CS and Nicam stereo (item 7353 is MSP3410)
TT : Teletext (options N or Y)
N No Teletext present
Y Teletext present
ET : (Eastern Europe) teletext type (options N or Y)
N No Eastern Europe teletext
Y Eastern Europe teletext (/58 sets)
14 : 14:9 Picture format supported by 4:3 tube (options N or Y)
N Not supported
Y Supported
HI : Histogram (not with software version M12BAx-x.x)
N No Histogram present (options VG, VA and NL not available (blue))
Y Histogram present (options VG, VA and NL available)
M2 : MD1.1E or MD1.2E chassis (only with software version M12BAx-x.x)
N MD1.1E chassis
Y MD1.2E chassis

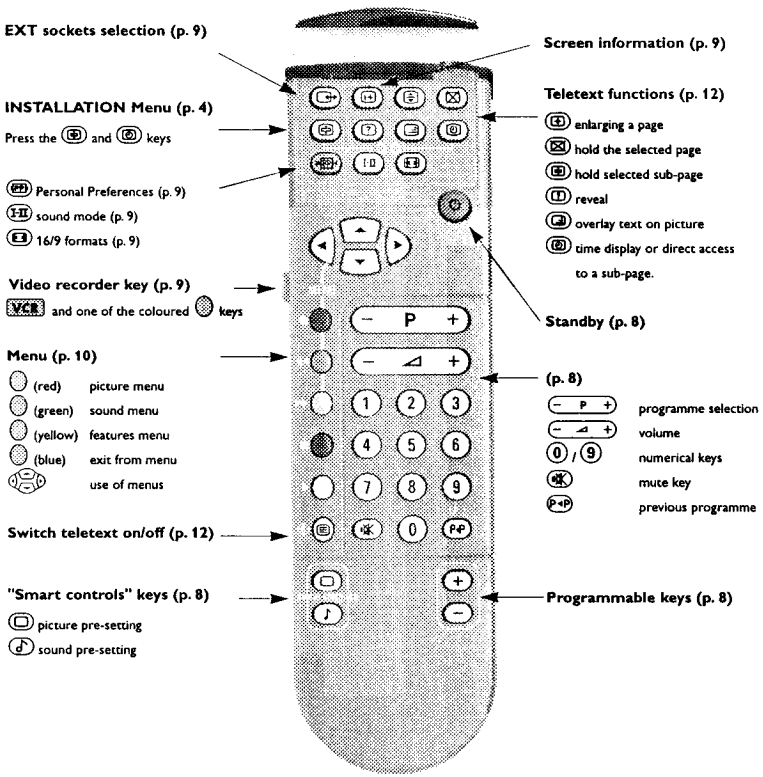
Remote control keys



The keys on the TV set

The television has 3 keys: MENU, - and +. These keys are located on the top, front or side of the set, (if on the front or side of the set they may be concealed by a flap). The MENU key is used to select the function to be altered. The - and + keys are used select programmes or modify the selected MENU item.

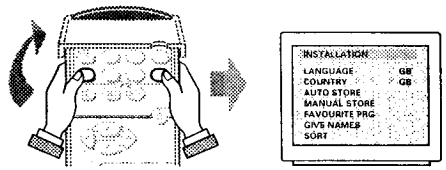
Installation Menu

This Menu enables you to tune in the channels on the TV set.

To call up the INSTALLATION menu:

Open the cover



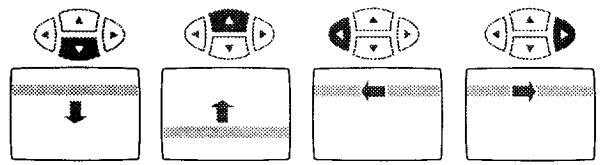
Press the and keys at the same time.

The INSTALLATION menu appears on the screen.

If the menu display is not stable, press the key.

To use the menus:

These 4 keys allow you to move around in the menus, make adjustments and access the sub-menus.



To exit from the menus

- Press the blue key.

Selecting the menu language

From the INSTALLATION menu:

- Select the LANGUAGE adjustment using the keys.
- Select the language you wish to use by means of the or keys.
- The text for all the menus will appear in the language you have chosen.

Selecting the country

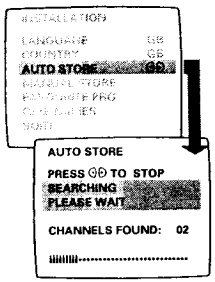
- Select the COUNTRY adjustment using the keys
- Select your country using the or keys (GB for Great Britain).

Warning: It is essential for correct channel tuning that these two adjustments are set correctly.

Tuning-in the TV channels

There are two ways the television can be tuned in : automatic store or manual store (tuning - in channel by channel).

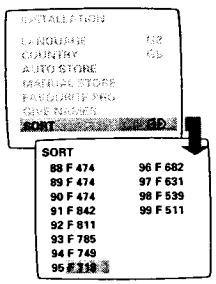
Automatic store



From the INSTALLATION menu (⊕ and ⊖ keys)
(after ensuring LANGUAGE and COUNTRY have been set correctly)

- Select AUTO STORE (⌃⌄ keys) and press .
- ▸ The AUTO STORE menu appears. Searching begins. The message SEARCHING PLEASE WAIT appears on the screen.
  The TV set searches through the complete frequency range in your local region and stores all the programmes it finds. The search operation takes a few minutes. When the search is complete, the INSTALLATION menu reappears automatically.
  This TV set is equipped with an Easy Tune system which automatically sorts the programmes by name.
- ▸ If the transmitter emits the correct signal, the programmes are correctly numbered.
  In certain cases, the system may ask you to indicate your local region using keys 0 to 9.
- ▸ If no signal is emitted, the programmes will be numbered in descending order starting from 99, 98, 97,.. Should this occur, the SORT menu should be used to re-number the programmes.
  If no picture is found, refer to the chapter entitled "Tips" (page 17).

Sort



This menu allows you to re-number the programmes in the order you prefer.

- Select SORT (⌃⌄ keys) and press .
- ▸ The SORT menu appears.
  The menu provides a list of all the programme numbers with their names (where provided), or frequencies or channels.

1 Using the ⌃⌄ keys, select the programme to be re-numbered.
If, for example, you want to re-number programme 96 as 2: Select 96 using ⌃⌄ keys (or type 9 6).
The number chosen (96) will appear in blue in the list.

2 Press the key to enter.
A yellow rectangle appears on the name of the programme (or on its frequency or channel).

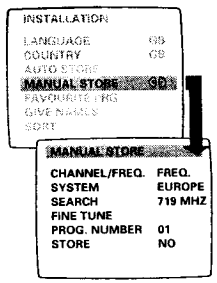
3 Enter the new number using keys 0 to 9.
In our example, type 2. Programme 02 appears.
The number (02) appears in blue in the list.

4 Press the key to enter (can be used to cancel).
The exchange of numbers is now complete. In our example, programme No. 96 has become No. 02 (and programme No. 02 has become No. 96).
Repeat this operation for other programmes you wish to re-number

■ To exit from the menu

- Press the blue ○ key.

Manual store



From the INSTALLATION menu (⊕ and ⊖ keys).

- Select MANUAL STORE (⌃⌄ keys) and press .
- ▸ The MANUAL STORE menu appears.

1 Select channel or frequency mode

For certain countries this adjustment is not available.

- Select CHANNEL/FREQUENCY (⌃⌄).
- Use the ⌁⌁ keys to select tuning mode.
  FREQ. (frequency search) or CHAN.C and CHAN.S (channel search if you know the channel numbers on which the programmes are broadcast).

2 Selecting the TV system

- Select SYSTEM (⌃⌄).
- Use ⌁⌁ to select EUROPE, EUR. W, EUR. E, UK or FRANCE (according to model).
  Selecting EUROPE guarantees automatic detection, with the exception of transmissions from France (standard LL': select FRANCE) or in certain cases of poor reception where EUR. W (BG), EUR. E (DK) or UK (I) should be selected.
  For more information see glossary on p. 18

3 Search

- Select SEARCH (⌃⌄) and press .
- ▸ The search begins. As soon as a programme is found, the search will stop. Go to section 4.
- If you know the frequency (or the channel) of the programme you wish to receive, you can enter its number in directly using keys numbered 0 to 9.
  If no picture is found, refer to "Tips" chapter (page 17).
  If you want to rerun the search, press again.

Fine tuning

If reception is not satisfactory, you can use the fine tuning function.

- Select FINE TUNE (⌃⌄).
- Hold down the ⌁⌁ keys to adjust.

4 Programme number

- Select PRG NUMBER (⌃⌄)
- Use the ⌁⌁ keys or the 0 to 9 keys to enter the required number.

5 Store

- Select STORE (⌃⌄) and press .
- ▸ The OK message appears. The programme and its name (if it has one) are stored.

repeat **3, 4, 5** for each programme to be stored.

■ To exit from the menu:

- Press the blue ○ key.

For Service Manuals Contact
MAURITRON TECHNICAL SERVICES

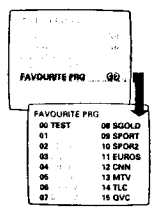
Email:- enquiries@mauritron.co.uk

Favourite Programmes



This menu allows you to choose which programmes can be accessed using the (- P +) key on the remote control.
From the INSTALLATION menu:

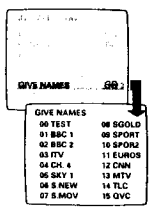
- Select FAVOURITE PRG (⊖⊕ keys) and press
- ▸ The FAVOURITE PRG menu appears. All programmes found during the search are automatically included in the menu and appear in green.
- Use the ⊖⊕ keys to select any programme you wish to remove from the list of favourites.
- Press to de-activate (or activate) a programme.
- ▸ The de-activated programmes appear in white, the activated programmes appear in green.

Only the programmes and EXT sockets that are displayed in green in this menu can be accessed using the (- P +) key.
Warning: If all programmes are de-activated, the (- P +) key will cease to function.

■ To exit from the menu:

- Press the blue O key.

Programme names



This menu allows you to name and modify names for programmes and EXT sockets.
From the INSTALLATION menu:

- Select GIVE NAMES (⊖⊕ keys) and press
- ▸ The GIVE NAMES menu appears with the list of programmes found automatically during installation.

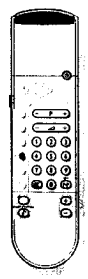
Certain programmes may not be named (the signal needed for identification is not always transmitted) or may be inappropriately named (only 5 characters are displayed).

- Use the (- P +) key to select the required programme.
- Use the ⊖⊕ keys to move to the area in which the programme name appears (up to 5 characters)
- ▸ A yellow rectangle appears in the chosen area.
- Use the ⊖⊕ keys o to select the character to be modified.
- Use the ⊖⊕ keys to modify the selected character.
- Use the (- P +) keys to move around in the next programme.

■ To exit from the INSTALLATION menu:

- Press the blue O key twice.

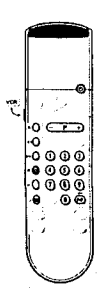
Using the remote control



Press:		Result:
⏻	Standby	The TV set is switched off and the red indicator lights up. To switch the TV set on again, press (- P +) or keys ⓪ to ⑨. *For further information, see "Tips" (p. 17)*
(- P +)	Selecting TV programmes	Move up or down a programme. *N.B: Only programmes activated in the* FAVOURITE PRGS *menu can be accessed (see p. 7).*
(- 🔊 +)	Volume	The volume is adjusted.
⓪ / ⑨	Numerical keys	Choose a programme. The number (and name if it exists) appears on the screen. For a 2 figure number, the second figure must be entered before the dash disappears.
🔇	Mute key	Disables or enables the sound.
P⇔P	Previous programme	Return to the last programme watched.
▢	"Smart Controls" keys	To access the presets of the TV set. Picture presets: (▢ key). Each time it is pressed, a different picture preset is selected: RICH, SOFT, NATURAL or MANUAL. Sound presets: (♪ key). Each time it is pressed, a different sound preset is selected: SPEECH, MUSIC, THEATRE or MANUAL. *The values corresponding to these presets are given in the* PICTURE *and* SOUND *menus (see p. 10).*
♪		
⊕	Programmable keys	These allow direct access to any adjustment made in the PICTURE and SOUND menus (see p. 10) To program the keys: If, for example, you wished to gain direct access to the BRIGHTNESS adjustment. Display the PICTURE menu (red O key) and select BRIGHTNESS (⊖⊕). Use keys ⊖ and ⊕ to adjust, rather than the ⓪⑨ keys. The keys are now programmed. Exit from the menu (blue O key). Press ⊖ and ⊕ again. This will give you direct access to the brightness adjustment. Repeat for any other adjustment you may wish to make.
⊖		

Other functions

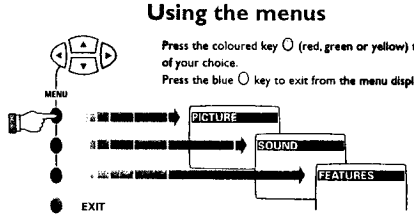
Press:		Result:
⊡	Select EXT sockets	Pressing this key selects E1 (EXT1), E2 (EXT2) and E2 Y/C in turn (see p. 15).
ⓘ	Screen information	Press for 3 seconds to activate/de-activate the continuous display of the programme number. Press briefly to display the number, name (if there is one), sound mode and time remaining (see SLEEPTIMER p. 11).
🕒	Time display	The time is displayed in the top right-hand corner of the screen. *This function only exists if the programme broadcasts teletext*
PP	Personal Preferences	Restores the settings made in the FEATURES menu (see p. 11)
I-II	Sound mode	Pressing this key allows you to switch from STEREO to MONO sound (in case of stereo transmission), or to choose between language I or language II (in case of bilingual transmissions). For TV sets fitted with NICAM reception, the DIGITAL message appears when a NICAM broadcast is received. The I-II key allows you to switch from DIGITAL STEREO to MONO or, for bilingual transmissions, to choose between DIGITAL I, DIGITAL II or MONO.
16:9	16/9 Formats	Movies and other programmes may be broadcast in a wide screen format. These may have an aspect ratio of 14/9 or 16/9, pressing this button vertically squeezes the picture to adapt the aspect ratio to that of the transmission. Pressing the button again returns the screen format to 4/3. *For more information, see glossary (p. 18).*



VCR	Video recorder keys	Press the VCR key and one of the following keys simultaneously.
	● O	record,
	◀◀ O	rewind,
	▶▶ O	fast forward,
	■ O	stop,
	▶ O	play,
	◴ 🔒	programming (on certain models),
	-/-- 0-9	1- or 2- digit programmes,
	(- P +)	programme selection,
	⓪ to ⑨	enter a programme number,
	⏻	standby

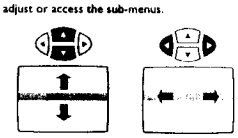
These keys function with video recorders in our range and with all models which use the RC5 signalling standard.

Using the menus

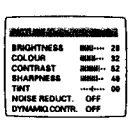


Press the coloured key O (red, green or yellow) to display the menu of your choice.
Press the blue O key to exit from the menu displayed.

Use the ⊖⊕ keys to select your adjustments and the ⓪⑨ keys to adjust or access the sub-menus.



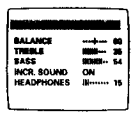
Picture



- Display PICTURE menu (red O key).
- Use ⊖⊕ to select the adjustments and ⓪⑨ to adjust.
- ▸ You can now access the adjustments BRIGHTNESS, COLOUR, CONTRAST, SHARPNESS and TINT. Sharpness adjusts the clarity of the picture, Tint adjusts the colour temperature of the picture from "cool" (blue white) to "warm" (red white).

NOISE REDUCT. Useful in case of poor reception to reduce picture noise (snowy picture).
DYNAMIC. CONTR. (only on certain models)
Automatically adapts the contrast to suit the picture content.
For picture adjustment see also "Tips" (p. 17).

Sound



- Display SOUND menu (green O key).
- ▸ You can now access the BALANCE, TREBLE, BASS, HEADPHONES adjustments and activate the INCR. SOUND option. INCR. SOUND enhances the stereo effect, giving the impression that the speakers are positioned further apart. For mono transmissions a stereo effect is created.

HEADPHONES: Allows you to adjust the headphones volume independently from the loud-speakers on the TV set.

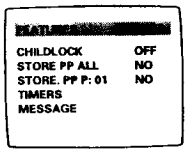
■ To exit from the menus:

- Press the blue O key.

Directions for use

Features

Child Lock



The child lock function is an electronic lock which disables the keys on the TV set.

- Display the FEATURES menu (yellow ○ key).
- Select CHILD LOCK (⌓⌔ keys).
- Use ◁▷ keys to switch to ON.
- Switch off the TV set and remove the remote control. The television can no longer be used.

▸ The TV set can only be switched on using the remote control.

■ **To cancel:** Return CHILD LOCK to OFF in the features menu.

Storing adjustments

This function allows you to store your own picture and sound adjustments. The adjustments are restored every time your set is switched on, or by pressing the green ⓓ key on your remote control.

General storing

First carry out your PICTURE and SOUND adjustments and adjust the volume (− ◢ + key) and then:

- Display the FEATURES menu (yellow ○ key).
- Select STORE PP ALL (⌓⌔ keys) and press .

▸ The message OK appears. All the PICTURE and SOUND menu adjustments as well as the volume are stored.

Storing adjustments for each programme

This function allows you to correct any differences in levels which may exist between TV channels and/or EXT sockets. It allows you to store BRIGHTNESS, COLOUR, SHARPNESS, NOISE REDUCT. and volume adjustments (− ◢ + key).

Carry out desired corrections to settings for the programme (or EXT connection), and then:

- Display the FEATURES menu (yellow ○ key).
- Select STORE PP P: _ _ (⌓⌔ keys) and press .

▸ The message OK appears. The adjustments are stored.

Repeat for each programme that needs correcting.

Programming

Sleeptimer

- From the FEATURES menu (yellow ○ key).
- Select PROGRAMMING (⌓⌔) and press .

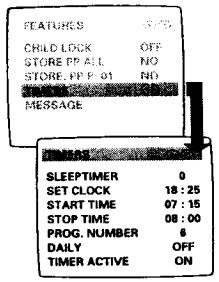
▸ The PROGRAMMING menu appears.

- Select SLEEPTIMER and use ◁▷ to enter the length of time after which the TV will switch to standby mode (up to 180 mins).

Press the ⓓ key to display the length of time remaining.

■ **To cancel:** Switch SLEEPTIMER back to 0.

Programmed Switch on



The following adjustments allow you to program the TV to automatically switch on with the programme of your choice.

- Select the adjustments using ⌓⌔ keys:

SET CLOCK: Use keys ⓪ to ⑨ or the ◁▷ keys.

N.B.: Every time the TV is switched on the clock is automatically updated on the basis of the teletext information in programme No. 1.
If the TV set does not feature teletext, this update will not occur.

START TIME: Use keys ⓪ to ⑨ or ◁▷ keys.

STOP TIME: Use keys ⓪ to ⑨ or ◁▷ keys.

PRG NUMBER: Use keys ⓪ to ⑨ or ◁▷ keys.

DAILY: Set this option to ON (key) if you want the programming to apply every day.

TIMER ACTIVE Set this option to ON to activate the timer.

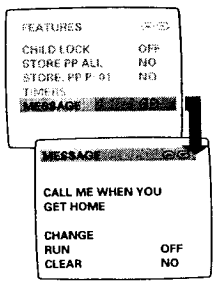
- Press the blue ○ key to exit from menu.

If you now switch the TV set onto standby (⏻ key), it will automatically switch on at the time programmed.

■ **To cancel:** Switch TIMER ACTIVE back to OFF.

N.B.: For programming to function correctly do not use the on/off key on the front of the TV set to switch off the TV.
The programmed switch on-off can be used together with the child lock function in order to limit the use of the TV set to a certain length of time.

Message



This menu allows you to leave a message which will appear on the screen when the TV is switched on (e.g.: "call me when you get home").

- From the FEATURES menu (yellow ○ key).
- Select MESSAGE (⌓⌔) and press .

▸ The MESSAGE menu appears. Select the adjustments using ⌓⌔ keys:

CHANGE: Press the key to display CHANGE menu.

- Use the ◁▷ keys to select the positioning of the characters (44 characters spaced over 2 lines).
- Use the ⌓⌔ keys to select each character.

When the message has been entered:

- Press the blue ○ key to return to previous menu.

RUN: Press the key to switch to ON.

- Exit from the menu by pressing the blue ○ key.

▸ The message will remain on the screen.

To erase the message: Press the blue ○ key.

N.B.: The message will reappear every time the TV is switched on.

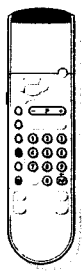
■ **To cancel:** Switch RUN back to OFF.

CLEAR: Press key to erase message.

■ **To exit:** Press the blue ○ key repeatedly.

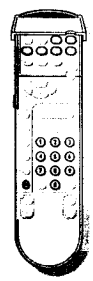
Teletext

Teletext is an information system, broadcast by certain TV channels, which can be consulted in the same way as a newspaper.
It also provides subtitles for the hard of hearing or people who are unfamiliar with the broadcast language (cable TV network, satellite channels, etc.).



Press:	Result:
Switch teletext on/off	Display or exit from teletext. The main index page presents a **list of subjects** to which you have access. Each subject has a corresponding **page number** (always 3 digits). *If the selected TV channel does not broadcast teletext, P100 is displayed and the screen remains black (if this is the case, switch off teletext and choose another TV channel).*
0 / 9 Selecting a teletext page	To type in the page number required. E.g. page 120, type 1 2 0. The number is displayed in the top left-hand corner of the screen, the page counter starts searching and then the page selected is displayed. Repeat to consult another page. *If > xxx < flashes briefly or the counter continues searching, this means the page selected is not broadcast or is not available. If this is the case, choose another number.*
Previous page/ Next page selection	To consult the previous page (-) or the next page (+).
Direct access to a subject	Coloured zones are displayed at the bottom of the screen. The coloured keys O allow access to the subjects or their corresponding pages.
Main index	To return to the main index (generally on page 100), press the white key O.
Previous page	To return to the page displayed previously.

Teletext (special features)

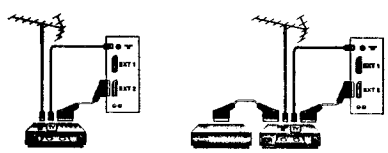


Press:	Result:
Temporary interruption of the display	To stop or return to the teletext display. The ■ symbol is displayed, and the television programme reappears on the screen. This function allows you to wait when the search for pages takes a long time.
Enlarging a page	To display the upper part, the lower part and then to return to the normal page size.
Overlaying teletext on the TV picture	To activate/de-activate the screen overlay.
Reveal	To reveal/conceal hidden information (solutions to games or questions/answers).
Stop the sequence of sub-pages (hold)	Certain pages have sub-pages which follow on automatically. If this is the case, this key will allow you to stop or start the sequence. The message ⏸ appears on the top left-hand corner of the screen.
Direct selection of a sub-page	To access a sub-page directly, press . The page number followed by four dashes will appear in the bottom left-hand corner of the screen. Type the number of the sub-page required using 4 numbers, e.g. type 0002 to consult sub-page 2. The page counter searches and then the sub-page is displayed. Press to return to current page.
0 / 9 Subtitles	Consult the main index to find out the page number for subtitles. Enter the subtitles page number (e.g. 888). The page counter searches and then the subtitles appear on screen. If no subtitles are available the page counter will continue to search. To exit from subtitles, press . *When subtitling is switched on, you have to switch off teletext (key) to be able to change programmes.*

Connecting peripheral equipment

The EXT1 socket has audio and video inputs/outputs and RGB inputs.
The EXT2 socket has audio and video inputs/outputs and S-VHS inputs.
For further information, see glossary (p. 18).

Video recorder ...with Decoder

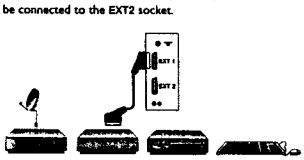


- If your video recorder has a euroconnector socket, carry out the above connections. Euroconnector sockets ensure better picture quality.
- If your video recorder does not have a euroconnector socket (or if this is already being used by another device), then the only connection possible is via the aerial cable. Your video recorder is then considered as a TV programme by your TV set. You will therefore need to tune in your video recorder's test signal and assign it programme number 0 (see manual store chapter, p. 5).

To reproduce the video recorder picture, press the key.
Refer to your video recorder's operating instructions concerning the test signal (the video recorder must be equipped with an HF modulator).

Connecting other equipment

(satellite receiver, decoder, CDV/CDI, games...)
Connect to EXT1 socket. If the external product produces S-VHS signals, it should be connected to the EXT2 socket.



■ To select connected equipment

- Use key to select E1 (EXT1), E2 (EXT2) or, for S-VHS or Hi-8 equipment, E2 Y/C.

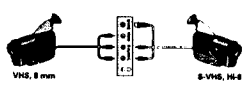
Most equipment (decoder, video recorder) carries out the switchover itself.

Front connections

Carry out one of the following connections and then:

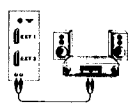
- Use the key to select E2 (for VHS or 8mm cameras) or E2 Y/C (S-VHS or Hi-8 cameras).

N.B: If a peripheral is connected to EXT2, it is advisable to switch it off while using a front S-VHS connection.



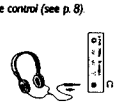
Amplifier

Use an audio connection cable and connect the sockets "L" and "R" on the set to the "AUDIO IN" "L" and "R" input on your hi-fi amplifier.



Headphones

To adjust the headphones volume, use the HEADPHONES adjustment in the SOUND menu (p. 10). To adjust the volume on the TV set, use the or keys.
You can also access the HEADPHONES adjustment directly using programmable keys and on the remote control (see p. 8).

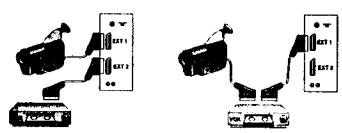


■ To make a copy of recordings:

Carry out one of the following connections, then:

- Press to select E1.
- On the video recorder, select the euroconnector socket as the recording source.

N.B: Copying is not possible using front connections.



11. List of abbreviations

AC	Alternating Current
AF_AMP	Audio frequency amplifier
AGC	Automatic gain control
AM	Amplitude modulation
ATS	Automatic Tuning System
AQUADAG	Earth from the CRT
AUD_TERR_AM	Audio (AM) from the antenna
AUD1_TERR_AM	Audio (AM) from the antenna
AUDIO L	Audio left
AUDIO R	Audio right
AUDIO_L	Left to DBE module
AUDIO_R	Right to DBE module
B	Blue signal to CRT panel
B_IN	Blue signal input
BC_INFO	Beam current information
B_SC_INPUT	Blue input from Euro connector
B_TXT	Blue Teletext signal
(B-Y) IN	B-Y input signal
(B-Y) OUT	Colour difference signal out
BC_INFO	Black current info from CRT panel
BG DK STEREO	System PAL BG DK; stereo sound
BG LI NICAM	System PAL BGI; NICAM sound
BG LI STEREO	The stereo signal from PAL BGI or SECAM L
BG_ST/NIC	System BG stereo with NICAM sound
Bk	Burst key pulse
BLANK	Blanking signal
BLK	Black stretch
BLKSTR	Black stretch
BLS	Black line S
BLKSCREEN	Blank screen, signal from the microcomputer
BM	Black matrix
B_OSD	Blue on screen display signal
C_AFU	Centre signal to module
C_FILTER	Chrominance filter
C_FRONT	Chrominance signal from separate controls panel
C_INPUT	Chrominance from Euro connector 2
CRT	Cathode ray tube
CRT..	Indicator for different CRT types
CTI	Colour transient improvement
CURR.SENZE	Current sense to detect current
CUT_OFF	Signal to align the black level of the RGB signals
CVBS	Composite Video Blanking Synchronisation
CVBS/Y_FRONT	CVBS or luminance from separate controls
CVBS/Y_SC2/FRONT_INPUT	CVBS/luminance signal from Euro connector/front input
CVBS_COMB/TXT	CVBS signal to teletext
CVBS_SC1_INPUT	CVBS signal from Euro connector 1
CVBS_SC2	CVBS signal from Euro connector 2
CVBS_SC2_OUT	CVBS outgoing signal from Euro connector 2
CVBS_SECAM	CVBS signal to SECAM IC
CVBS_TERR	CVBS from the antenna
CVBS_TERR/SAT	CVBS Signal from antenna or from satellite
CVBS_TXT	CVBS to Teletext
CVBS_SAT	CVBS signal from satellite tuner
D/A	Digital to analogue converter
DACA_L	Left output signal from DFP to headphone (independent volume controlled)
DACA_R	Right output signal from DFP to headphone (independent volume controlled)
DACAM_L	Left output signal from DFP to loudspeaker
DACAM_R	Right output signal from DFP to loudspeaker
DC	Direct Current
DEGAUSS	Degaussing
DELAY	Luminance delay
DET	Detector
DFP	Digital Sound Processor
DEMOD	Demodulator

EAR1	Earth 1 (ground)
EARTH	Earth (ground)
EAST EU	East Europe
EHT	Extra high tension
EHTINFO	Voltage related to beam current
EHTINFO1	Voltage related to beam current to CRT panel
EW	East-west
EW_COMP	East-west compensation
EWD	East-west drive
FBL_IN	Fast blanking in
FBL_OFF	Fast blanking off
FBL_PRESENT	From Euro connector, detects if there is a full page RGB at the Euro connector or OSD or a MENU from an external source
FILA_CRT	Filament for the CRT
FM	Frequency modulation
FOLDB	Foldback
FRAMEDEFL_R	Frame deflection right signal
FRONT_DETECT	Signal to detect if on separate controls panel video signals are present
FRONT_INPUT	Input from separate controls panel at front side of the TV set
G_IN	Green signal in
G_OSD	Green (on screen display) signal
G_SC_INPUT	Green input from Euro connector
G_TXT	Green Teletext signal
G-Y	Colour difference signal
G_Y MATRIX	RGB luminance matrix
GND..	Ground ..
GND_AUDIO	Ground
GND_KEYBOARD	Ground of keyboard
GND_LIGHTNING	Ground on mains module
GND_LINE_SS	Ground from SS-panel for line drive
GND_SOUND_SUPPLY	Ground to the audio amplifier
GND_VO	Ground to the deflection
GNDB	Ground B
GNDD	Ground D
G/V	Green signal to CRT panel
H	Horizontal pulse
HDRIVE	Horizontal drive signal
HEATER	Output voltage to the tube heater
HFBL	Feedback from line deflection
HPULSE	From deflection module, horizontal pulse for OSD synchronisation
HIST	Histogram
I/BG	To Sound module, selects the audio system
IDENT	Identification
I NICAM	System NICAM/PAL I
IF	Intermediate-frequency
INT/EXT	Internal or external switching
IRQ	From the Satellite or Teletext module, interrupt signal from these modules
ITT	Type indication Sound module
I²C	Inter IC bus
I/O	Input/Output
LED	Light emitting diode
LF	Low frequency
L/L	To BIMOS module and Sound module, switches between the L and L' system
LINEDEFL_CS	Connection for geometry correction panels
LINEDEFL_LIN	Connection for geometry correction panels
LOT	Line output transformer
NC	Not connected
NICAM	Near Instantaneous Compending Audio Multiplex (digital sound system)
NICAM L	System L-NICAM
NO NORDIC	Not used in set for Nordic countries
NTSCM/BG	Switching signal
OK	Correct
OSC	Oscillator

List of abbreviations

PAL	Phase Alternating Line (colour system)
P_GND	Audio power ground
PHASE COMP	Phase compensation
PLL	Phase lock loop
POR	Power-on reset
PROT	Protection
R	Red signal to CRT panel
RC5	Remote Control signal
R-IN	Red input signal
(R-Y)IN	Colour difference (R-Y) input signal
R_OSD	Red (on screen display) signal
R_SC_INPUT	Red input from Euro connector
R_TXT	Red Teletext
R_Y OUT	Colour difference signal out
RGB	Red Green Blue
SAND	Sand castle
SAND1	Sand castle signal to Scan module
SBUS	Sound bus
SCART_L	Sound signal L from Euro connector
SCART_R	Sound signal R from Euro connector
SAT	Satellite
SCL	I²C Clock signal
SCLI	Serial clock pulse
SDA	I²C data
SDAa	To every other module, serial data
SDAI	Serial data pulse
SECAM	SEquentiel Coleur A Memoire (colour system)
SECAM L	System L-SECAM
SELECT	Selection signal for Euroconnectors or separate controls
SEP CTRL	Separate controls
SF	Super flat
SIF	Sound IF
SIF_SAT	Sound IF from satellite tuner
SNDL	Sound left,
SNDL_CL_OUTPUT	Left sound to CL output from sound module
SNDL_FRONT	Left sound signal from separate controls panel
SND_HEADP_OUTPUT	Output sound left to the headphone connector
SNDL_SC1_INPUT	Left sound output signal from the audio module
SNDL_SC1_OUTPUT	Output signal, sound left to Euro connector 1
SNDL_SC2_/FRONT_INPUT	Input signal sound L from Euro connector 2 or front input
SNDL_SC2_OUTPUT	Output signal sound L to Euro connector 2
SNDL__SPEAKER	Sound L signal to loudspeaker
SNDR	Sound right
SNDR_CL/VL_OUTPUT	Right CL/VL audio signal from Dolby
SNDR_CL_OUTPUT	Sound right, constant level output to rear cinches
SNDR_FRONT	Sound right from separate controls panel
SNDR_HEADP_OUTPUT	Output sound right to the headphone connector
SNDR_SC1_INPUT	Input signal, sound right to Euro connector 1
SNDR_SC1_OUTPUT	Output signal sound R to Euro connector 1
SNDR_SC2_OUTPUT	Right sound to Euro connector 2 output from sound module
SNDR+_SPEAKER	Sound R signal to loudspeaker
SNDR_SUBW	Sound R signal to subwoofer
SOUND_ENABLE	To the Audio Amplifier module, switches on and off the amplifier
SOUND_SUP	Supply voltage of amplifier
STANDBY	To supply module, switches the set in and out of standby
STATUS1	Status signal from Euro connector input to control module
STATUS2	Status signal from Euro connector 2 input to control module
STD..	Indicator for different standards
SVHS	Super VHS
SYNC	Synchronisation signal
SYNC_TXT	Synchronisation signal from Teletext
SYS	System switching signal
SYS..	Indicator for different systems
1SC	One carrier sound
2SC	Two carrier sound

TCLK	Teletext clock signal
TDATA	Teletext data signal
TUNING	Tuning voltage
TUN	Indicator for different tuners
VDRIVE	Vertical drive
VDRIVE+/VD	Vertical drive positive side
V0S	140 Volt (95 Volt for 21")
VFRAME (+ or -)	Positive or negative supply voltage for frame amplifier
VG1_CRT	VG1 input to the picture tube
VG2	G2 input to the picture tube
VIF	Video intermediate frequency
VDD	Supply voltage
V0D	Voltage used in horizontal output stage
V0D1	Voltage used in horizontal output stage
V0LOT	Voltage to line output transformer
V0CONN	Voltage to Scan module
VP	Video processor
VPROT	Protection voltage
VPULSE	From deflection module, vertical pulse for OSD synchronisation
VSS	Ground
VSCAVEM	Supply voltage for SCAVEM
VT	Tuning voltage
Y_COMB	Y (or CVBS) signal to TDA8366
Y_FRONT	Luminance signal from separate controls panel
Y_OUT	Luminance signal out
YUV_ON/OFF	To Histogram/black stretch module, switch on & off
UPR	Indicator for different control systems
WEST-EU	West Europe
21" EUR	21" Europe
+	Present, in diversity tables
-	Not present in diversity tables

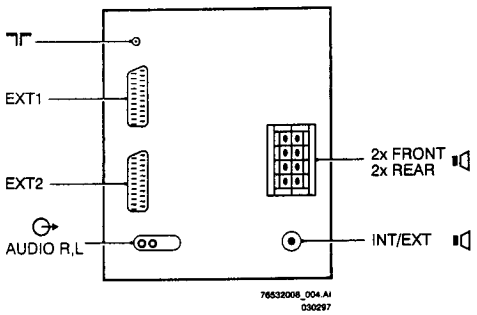
2. Connection facilities

DOLBY SURROUND
PRO • LOGIC

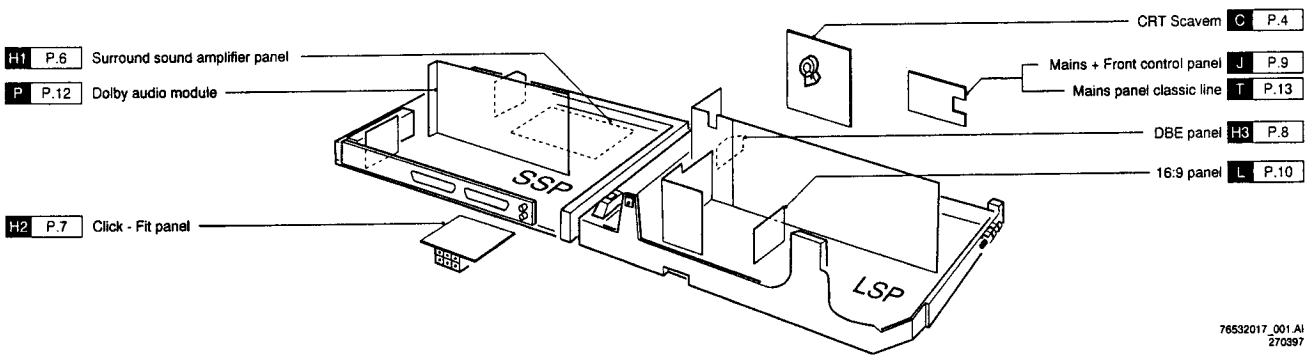
Manufactured under license from Dolby Laboratories Licensing Corporation.

DOLBY, the double-D symbol and PRO LOGIC are trademarks of Dolby Laboratories Licensing Corporation.

Rear connections (Dolby Pro Logic)



PWB location drawing



4. Mechanical instructions

The service positions for the MD1.2E are described in Service Manual MD1.2E AA. Here are several supplements for 16:9 and Dolby sets.

4.1 16:9 sets with rotation coil

To put sets with a rotation coil into the various service positions the connection between the rotation coil and connector F93 on the 16:9 panel has to be disconnected. The set will continue to function normally, but the picture can no longer be tilted.

4.2 Dolby Pro Logic sets

4.2.1 Click-fit panel

The click-fit panel is fitted to the cover plate by screws located above and below the loudspeaker connections.

4.2.2 DBE module

The DBE module can be removed for repair, module replacement, or for making repairs to the LSP in the vicinity of the DBE module. If the DBE is removed the set will continue to function normally but without sound.

4.2.3 Surround Sound Amplifier (Fig. 4.1)

The Surround Sound Amplifier panel can be removed from the bracket in the following manner:

1. Press click (1) inwards;
2. Pull bracket (2) outwards;
3. The Surround Sound Amplifier panel can now be pulled forward (3).

4.2.4 Component side Small Signal Panel (SSP)

To access the component side of the SSP it is necessary to remove the Surround Sound Amplifier, including the bracket:

1. Press the click (4) inwards;
2. Lift the bracket and pull it forward (5).

The component side of the SSP is now accessible.

8. Alignments

See Service Manual MD1.2E AA for a description of the basic alignments for the MD1.2E AA software.

Software version:
M12BAx-4.x
M12COx-3.2 4:3 sets (NO flashing LED procedure, replaced by M12COx-4.0)
M12COx-4.0 4:3 sets (WITH flashing LED procedure, replaces M12COx-3.2)

In the Service Default and Service Alignment Mode widescreen sets switch to WideScreen format. All the geometry alignments also have to made in the WideScreen mode.

In this supplement the additional options for 16:9 and Dolby Pro Logic sets with the following software are described:
M12COx-5.1
(or later) 16:9 sets (also suitable for 4:3 sets)
M12DOx-1.0
(or later) Dolby Pro Logic sets (4:3 and 16:9)

8.1 Options and alignments

HI Histogram option. This option is not used and is not selectable.

WB Format detection for 4:3, 14:9 or 16:9 picture (16:9 sets only) and Dolby Pro Logic sound (Dolby Pro Logic sets only) by the teletext IC.
Y Automatic detection on
N Automatic detection off
Automatic 16:9 detection via the Scart cable also functions if 'WB N' is set.

16 Picture tube aspect ratio
Y 16:9 picture tube
N 4:3 picture tube
If '16 N' is set, parameters WB*, RT, SS, D1, D2, D3 and D4 automatically become blue and are made non-selectable.

* In Dolby Pro Logic sets the WB option can be selected independently of the 16 option, as the automatic sound detection can also be switched on and off in this manner.

RT Rotation coil (picture tilt)
Y Rotation coil present; An option to tilt the picture appears under the YELLOW key in the operating menu.
N No rotation coil present.

D1 HD-value deviation in 4:3, Zoom 14:9 and Zoom 16:9 in relation to WideScreen mode.

D2 HD-value deviation in SuperWide (panorama) format in relation to WideScreen mode.

D3 HP-value deviation in 4:3, Zoom 14:9 and Zoom 16:9 in relation to WideScreen mode.

D4 HP-value deviation in SuperWide (panorama) format in relation to WideScreen mode.

The alignment settings are dependent on picture tube format:

Picture tube format	20"	24"	28"	32"
D1	12	9	9	8
D2	2	3	3	5
D3	10	9	9	8
D4	7	9	9	8

SS Picture dimension and rotation coil dependent setting.

SS	Picture tube / rotation coil
1	32" with rotation coil
2	28" with rotation coil
3	24" with rotation coil
4	32" without rotation coil
5	28" without rotation coil
6	24" without rotation coil

9. Circuit description

16/9 Module circuit description

4 functions are located on the 16/9 module:

- Blanking line and frame
- Picture rotation
- Panorama mode
- Line DC shift

IC 7440 (I^2C control of functions) controls the picture rotation, panorama mode switching and the blanking enable signal.

9.1 Line and frame blanking (Fig. 9.1 & 9.2)

9.1.1 Line blanking (Horizontal blanking)

Horizontal blanking is used to completely blank-out the left and right bars in case of 4:3 or 14:9 view-mode. This is realised by making a wider fast blanking pulse FBL (signal 'A'). This wider pulse is creating by starting the pulse earlier (indicated by extra pulse-width '3') and delaying the pulse stop (indicated by a additional pulse '2'). The delay on the blanking pulse (time slot '2') causes blanking at the left side of the picture, the earlier start of pulses causes blanking at the right side of the picture. The corrected (= widened) FBL pulse is supplied to the video controller pin 24 IC7119-4C that controls the blanking of the RGB-outputs.

A 0V at the 'BLANKING 16/9' line (connector F92-4) blanks the video signal. This is the case when TS7405 is conducting.

9.1.1.1 Blanking during the normal sandcastle pulse (1)

During the normal sandcastle pulse the picture has to be blanked; If the base of TS7420 is high (sandcastle present), TS7420 and TS7402 are conducting. In this way the collector of TS7403 is connected to ground by D6401. This will force TS7404 out of conduction and TS7405 in conduction. If TS7405 is conducting the picture will be blanked.

9.1.1.2 Blanking the left side of the picture (2)

To blank the left side of the picture, the sandcastle pulse has to be present longer. If TS7402 is conducting, C2404 is discharged (resetted). If the sandcastle pulse at the base of TS7420 is gone, TS7402 will block and C2404 is charged via R3413, R3449 and R3450. This will create a sawtooth shaped voltage over C2404. This Voltage is also present at the collector of TS7403. The picture is blanked till the voltage on the collector of TS7404 is 0V7 higher than the voltage on the emitter of TS7404. During the time that TS7404 is out of conduction the picture is blanked. By regulating the voltage on the emitter of TS7404 with R3409 (if present), the time to blank the left-side of the picture can be adjust.

9.1.1.3 Blanking the right side of the picture (3)

To blank the right of the picture, the sandcastle pulse has to start earlier; Because the positive charged side of C2403 (the side connected to C2404) is connected to ground, the sawtooth on point B is shifted to a negative voltage. Now the voltage on the negative point (C) will increase (following point B). This goes on until the voltage on point C is 0V7.
Then TS7403 starts to conduct and TS7404 will block; the picture will be blanked. So prior to the normal sandcastle pulse, point C exceeds the 0V7 and starts to blank the picture.

9.1.2 Frame-blanking (vertical blanking)

Vertical blanking is used to avoid vertical overscan (scanning against the top and bottom of the CRT, outside the visible area) in 14:9 and 16:9 WIDESCREEN view-mode. Scanning outside the visible area should be avoided since it influences the EHT-INFO (and thus white limiting), leading to unwanted contrast reduction. It can even lead to EHT-losses (line output stage loaded to heavy) and röntgen-radiation.
The vertical blanking is controlled by the sawtooth on pin 8F92. This sawtooth is symmetrical around 0V. The value of the sawtooth is shifted between 0V and 1V4 by capacitor C2406. In normal conditions (writing of the picture) TS7406 and TS7409 are conducting. This will cause a voltage drop over R3423 and force TS7411 in conduction. This will bring TS7410 and TS7404 in conduction. No blanking will take place at this moment because the base of TS7405 is 'low'.
If the sawtooth voltage becomes very high or very low TS7409 or TS7406 are driven out of conduction. If the sawtooth voltage is higher than the emitter voltage of TS7409, TS7409 is blocked. Consequentially, there is no voltage drop across R3424 and TS7411 is out of conduction. TS7410 and TS7404 are also out of conduction. Now the base of TS7405 is supplied by R3417; TS7405 goes in conduction, resulting in blanking of the picture.

9.2 Frame rotation

To compensate the frame rotation caused by the earth magnetism, a frame rotation circuitry can be applied. The circuitry compensates the earth magnetism with an equal but opposite magnetic force. For this purpose a coil is fitted to the picture tube through which a current flows; the strength and direction of this current is adjustable.
This circuitry is situated on the 16:9 module around IC 7440 and the circuitry with TS7401, TS7407, TS7408 and TS7412.

Operation

IC7440 is an I/O-expander. Left or right tilting is realised by driving TS7407 (and thus TS7408) or TS7412 (and thus TS7401) (more or less) into conduction. Combinations of driving both TS7407 and TS7412 are also possible.

In total there are 9 states:

Side A or B represent an upward correction on the left or right side of the picture (direction depends on the polarity of the deflection coil).

A	B	C	D	Correction
0	0	0	0	No correction at all
0	1	0	0	Small correction to side A
1	0	0	0	Medium correction to side A
1	1	0	0	High correction to side A
0	0	0	1	Small correction to side B
0	0	1	0	Medium correction to side B
0	0	1	1	High correction to side B
0	1	1	0	Small correction to side A corrected by medium correction to side B, so in total a very small correction to side B (smaller than at 0001)
1	0	0	1	Medium correction to side A corrected by small correction to side B, so in total a very small correction to side A (smaller than at 0100)

The other 7 states of the 16 states true table are not valid as they do not give other correction states:

0000 = 0101 = 1010 = 1111 → 0101, 1010 and 1111 not used
1110 = 0100 et 1101 = 1000 → 1110 and 1101 not used
1011 = 0001 et 0111 = 0010 → 1011 and 0111 not used

9.3 Panorama mode

An additional capacitor (C2400) is add to the diode modulator by thyristor 6406. This is controlled by transistor TS7400 which is controlled by the I/O expander. In this way the S-correction can be installed. In SUPERWIDE mode C2400 is disconnected from the diode-modulator. This results in more deflection at the edges of the screen than in the middle of the screen.
When transistor TS7400 is conducting, T6406 can not be triggered. This means that C2400 is not added to the diode modulator. When flyback takes places, a part of the flyback-pulse is present at the gate of the thyristor. This will trigger the thyristor and C2400 is added to the diode modulator. During the first part of the line scan the thyristor is conducting. In the second part of the scan, the current changes direction and C2400 is added to the diode modulator by diode 6410.

9.4 DC-shift

In case of bad centring of the picture, a DC-current can be injected in the line network through L5402. The direction of the current can be chosen by connecting pin 2F90 to 3F90 or to 1F90. If this is not enough, an extra DC shift module can be add on connector F94.

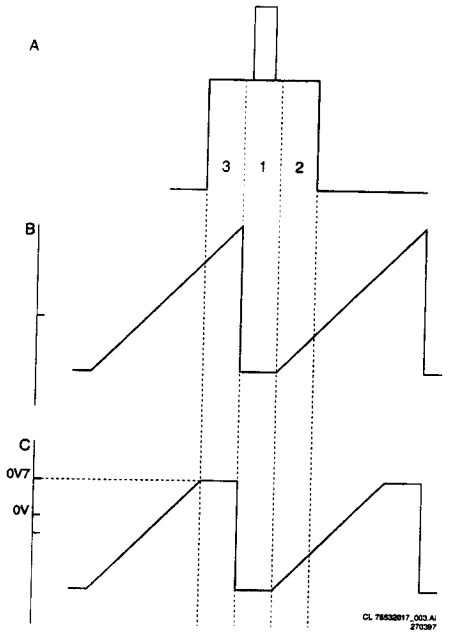

Fig. 9.1

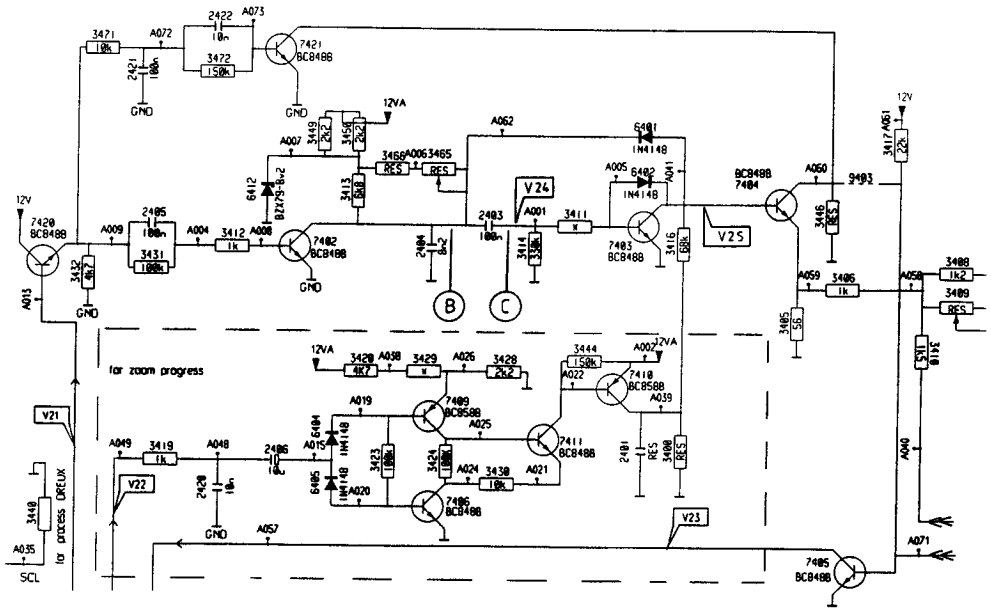

Fig. 9.2

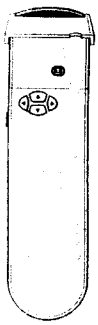
16/9 Function



The pictures you receive may be transmitted in 16:9 format (wide screen) or 4:3 format (conventional screen). 4:3 pictures sometimes have a black band at the top and bottom of the screen (letterbox format). This function allows you to optimise the picture display on screen.

Automatic switching

This TV set is also equipped with automatic switching which will select the correct-screen format, provided the specific signals are transmitted with the programmes.

This automatic format can also be modified manually.

Using the different screen formats

Press the ◁▷ keys to select the different modes:
4:3, ZOOM 14:9, ZOOM 16:9, SUBTITLE ZOOM, SUPER ZOOM and WIDE SCREEN.

These settings may also be accessed using the ⓔ key under the flap on your remote-control.

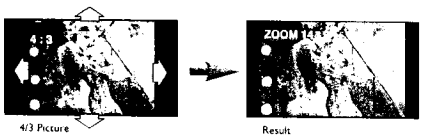
4:3 Mode

The picture is reproduced in 4:3 format and a black band is displayed on either side of the picture. The picture may be progressively enlarged using the △▽ keys.

4/3 Picture

ZOOM 14:9 Mode

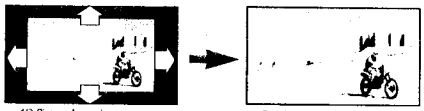
The picture is enlarged to 14:9 format, a thin black band remains on both sides of the picture. The △▽ keys allow you to increase or decrease the section at the bottom of the picture where sub-titles may be displayed.



4/3 Picture Result

ZOOM 16:9 Mode

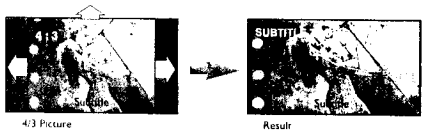
The picture is enlarged to 16:9 format. This mode is recommended when displaying pictures which have black bands at the top and bottom (letterbox format). Use the △▽ keys if you wish to display sub-titles.



4/3 Picture Letterbox Result

SUBTITLE ZOOM Mode

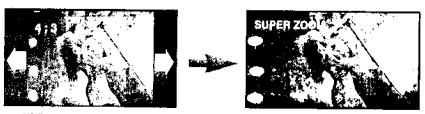
This mode is used to display 4:3 pictures using the full surface of the screen leaving the sub-titles visible. Use the △▽ keys to increase or decrease the section at the bottom of the picture.



4/3 Picture Result

SUPER ZOOM Mode

This mode is used to display 4:3 pictures using the full surface of the screen by enlarging the sides of the picture.



4/3 Picture Result

WIDE SCREEN Mode

This mode restores the correct proportions of pictures transmitted in 16:9 using full screen display.

Note: If you display a 4:3 picture in this mode, it will be enlarged horizontally.

16/9 Picture Result

Sound

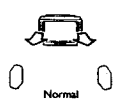
Press the green ○ key to display the SOUND menu.

Sound mode

This menu allows you to select the different Dolby Surround modes.

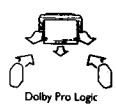
❶ Select SOUND MODE (the △▽ keys) and press the key.
The SOUND MODE menu appears.

❷ Use the ◁▷ keys to select the NORMAL, DOLBY PRO LOGIC, DOLBY 3 STEREO or HALL SURROUND sound modes.
For each setting, the active loudspeakers are displayed on screen.



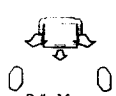
Normal

Normal
The left (L) and right (R) channels are reproduced on the left and right loudspeakers of the TV set.



Dolby Pro Logic

Dolby Pro Logic* (with Dolby Surround sound sources)
As well as the left (L) and right (R) channels, a centre channel (C) and a rear channel comprising 2 loudspeakers (S), reproduce the Dolby Pro Logic sound.
This mode is used when a film or programme has been recorded or encoded in Dolby Surround sound. These films or programmes are always indicated by the symbol ▯▯ DOLBY SURROUND.



Dolby 3 Stereo

Dolby 3 Stereo (with Stereo sources)
Dolby 3 Stereo sound is produced only on the left (L), right (R) and centre (C) channels.

Hall Surround

Hall Surround (with mono or Stereo sources)
The left (L) and right (R) channels are reproduced on the left and right loudspeakers of the TV set and on the rear channel (S), creating a "Hall Surround" ambient effect.
This mode is recommended for broadcasts that are not encoded in Dolby Surround if you wish to use a rear channel.

To exit from the menu: Press the blue ○ key.

Dolby Pro Logic and Dolby 3 Stereo modes are not recommended for mono transmissions (only the central channel is used).

Sound level

This menu is used to balance the volume between the loudspeakers.

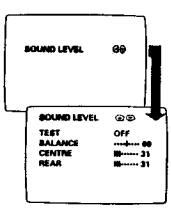
❶ Select SOUND LEVEL (△▽ keys) and press the key.
The SOUND LEVEL menu appears.

❷ Select TEST (△▽ keys) and press the key. A continuous sound is emitted in turn from each channel: left, right, centre and rear channel.

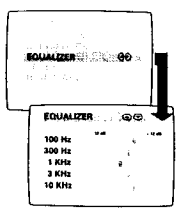
❸ Use the ◁▷ keys to adjust the level of each channel independently: BALANCE, CENTRE and REAR. The sequence stops while the level is being changed and then automatically starts up again.

To stop the test: Press the blue ○ key.

Levels may also be adjusted without using the test signal.



* Manufactured under license from Dolby Laboratories Licensing Corporation. "Dolby" "Pro Logic" and the double-D symbol ▯▯ are trademarks of Dolby Laboratories Licensing Corporation.



Equalizer

❶ Select EQUALIZER (△▽ keys) and press the key.
The EQUALIZER menu appears.

❷ Use the △▽ keys to select each frequency (from bass: 100 Hz to treble: 10 kHz)

❸ Use the ◁▷ keys to adjust the level.

To exit from the menu: Press the blue ○ key.

Spatial

This setting increased the stereo effect giving the impression that the loudspeakers are spaced further apart.

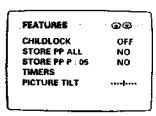
Headphones

This setting allows the volume of the headphones to be adjusted independently from the TV set.

To exit from the menu: Press the blue ○ key.

Features

Child Lock



The child lock function is an electronic lock which disables the keys on the TV set.

❶ Display the FEATURES menu (yellow ○ key).

❷ Select CHILD LOCK (△▽ keys).

❸ Use ◁▷ keys to switch to ON.

❹ Switch off the TV set and remove the remote control. The television can no longer be used.
The TV set can only be switched on using the remote control.
To cancel: Return CHILD LOCK to OFF in the features menu.

Storing adjustments

This function allows you to store your own picture and sound adjustments. The adjustments are restored every time your set is switched on, or by pressing the green ⓓ key on your remote control.

General storing

❶ First carry out your PICTURE and SOUND adjustments and adjust the volume (◁ + key) and then:

❷ Display the FEATURES menu (yellow ○ key).

❸ Select STORE PP ALL (△▽ keys) and press .
The message OK appears. All the PICTURE and SOUND menu adjustments as well as the volume are stored.

Storing adjustments for each programme

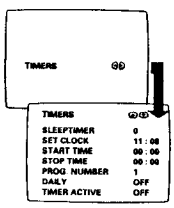
This function allows you to correct any differences in levels which may exist between TV channels and/or EXT sockets. It allows you to store BRIGHTNESS, COLOUR, SHARPNESS, NOISE REDUCT, SOUND MODE and volume adjustments (key).

1. Carry out desired corrections to settings for the programme (or EXT connection), and then:
2. Display the FEATURES menu (yellow ○ key).
3. Select STORE PP P: _ _ (keys) and press .
   The message OK appears. The adjustments are stored.
   Repeat for each programme that needs correcting.

Programming

Sleeptimer

From the FEATURES menu (yellow ○ key).



1. Select PROGRAMMING ( ) and press .
   The PROGRAMMING menu appears.
2. Select SLEEPTIMER and use to enter the length of time after which the TV will switch to standby mode (up to 180 mins).
   Press the key to display the length of time remaining.

To cancel: Switch SLEEPTIMER back to 0.

Programmed Switch on

The following adjustments allow you to program the TV to automatically switch on with the programme of your choice.
Select the adjustments using keys:

1. SET CLOCK: Use keys 0 to 9 or the keys.
   N.B.: Every time the TV is switched on the clock is automatically updated on the basis of the teletext information in programme No. 1.
   If the TV set does not feature teletext, this update will not occur.
2. START TIME: Use keys 0 to 9 or keys.
3. STOP TIME: Use keys 0 to 9 or keys.
4. PRG NUMBER: Use keys 0 to 9 or keys.
5. DAILY: Set this option to ON (key) if you want the programming to apply every day.
6. TIMER ACTIVE Set this option to ON to activate the timer.
7. Press the blue ○ key to exit from menu.
   If you now switch the TV set onto standby (key), it will automatically switch on at the time programmed.

To cancel: Switch TIMER ACTIVE back to OFF.

N.B.: For programming to function correctly do not use the on/off key on the front of the TV set to switch off the TV.
The programmed switch on-off can be used together with the child lock function in order to limit the use of the TV set to a certain length of time.

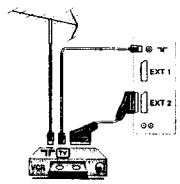
Picture tilt (only on certain models)

Select PICTURE TILT using the keys and use the key to adjust the tilt of the picture.
This compensates for regional variations in the earth's magnetic field.

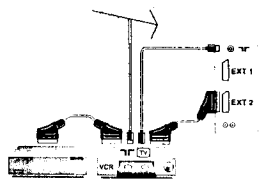
Connecting peripheral equipment

The EXT1 socket has audio and video inputs/outputs and RGB inputs.
The EXT2 socket has audio and video inputs/outputs and S-VHS inputs.
For further information, see glossary (p. 22).

Video recorder



...with Decoder

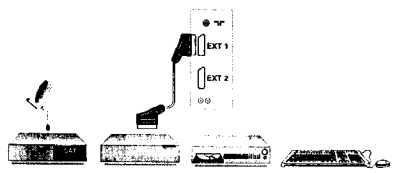


- If your video recorder has a euroconnector socket, carry out the above connections. Euroconnector sockets ensure better picture quality.
- If your video recorder does not have a euroconnector socket (or if this is already being used by another device), then the only connection possible is via the aerial cable. Your video recorder is then considered as a TV programme by your TV set. You will therefore need to tune in your video recorder's test signal and assign it programme number 0 (see manual store chapter, p. 5).

To reproduce the video recorder picture, press the 0 key.
Refer to your video recorder's operating instructions concerning the test signal (the video recorder must be equipped with an HF modulator).

Connecting other equipment

(satellite receiver, decoder, CDV/CDI, games...)
Connect to socket EXT1 (or to EXT2 if it produces a S-VHS signals).



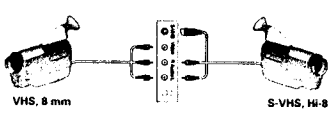
Directions for use

To select connected equipment

Use key to select E1 (EXT1), E2 (EXT2) or, for S-VHS or Hi-8 equipment, E2 Y/C.
Most equipment (decoder, video recorder) carries out the switchover itself.

Front connections

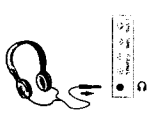
Carry out one of the following connections and then:
Use the key to select E2 (for VHS or 8mm cameras) or E2 Y/C (S-VHS or Hi-8 cameras).
N.B.: If a peripheral is connected to EXT2, it is advisable to switch it off while using a front S-VHS connection.



For Service Manuals Contact
MAURITRON TECHNICAL SERVICES
8 Cherry Tree Rd, Chinnor
Oxon OX9 4QY
Tel:- 01844-351694 Fax:- 01844-352554
Email:- enquiries@mauritron.co.uk

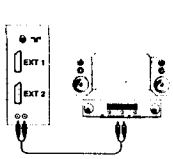
Headphones

To adjust the headphones volume, use the HEADPHONES adjustment in the SOUND menu (p. 14). To adjust the volume on the TV set, use the or keys.
You can also access the HEADPHONES adjustment directly using programmable keys and on the remote control (see p. 8).



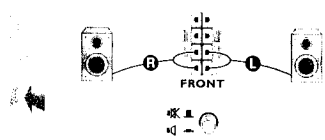
Amplifier

Use an audio connection cable and connect the sockets "L" and "R" on the set to the "AUDIO IN" "L" and "R" input on your hi-fi amplifier.



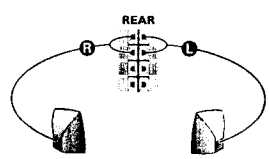
External loudspeakers

For improved sound, you can connect 2 external L and R loudspeakers in the place of the left and right loudspeakers on the TV set.
Connect as shown below and then switch off the internal loudspeakers on the TV set.
The impedance of the loudspeakers must be between 8 and 16 Ohms.



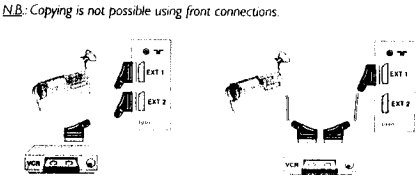
Surround loudspeakers

Connect the 2 Surround loudspeakers as illustrated below.
The loudspeakers should be located at the rear or on either side of the listening zone (always connect 2 loudspeakers).



To make a copy of recordings:

Carry out one of the following connections, then:
Press to select E1.
On the video recorder, select the euroconnector socket as the recording source
N.B.: Copying is not possible using front connections.



11. List of abbreviations /

Liste der Abkürzungen / Liste des abreviations

(not covered in CM MD1.2E)

GB DBE

AUDIO-L	Left channel audio signal coming from Audio Module via LSP.
AUDIO-R	Right channel audio signal coming from Audio Module via LSP.
DBE-COMMAND	Switching signal to enable or disable Dynamic Bass Enhancement (DBE). When external front speakers are selected (on the clickfit panel), DBE is bypassed.
L-DBE	Left channel audio signal with additional amplification of 80Hz signals. Going from DBE module to LSP audio amplifier.
R-DBE	Right channel audio signal with additional amplification of 80Hz signals. Going from DBE module to LSP audio amplifier.

16:9 MODULE

130VLOT	130V supply voltage from LOT to DC-shift circuitry.
150VLOT	150V supply voltage from LOT to DC-shift circuitry.
BLANKING 16:9	Fast blanking signal to video controller IC7119-4C, corrected for both additional horizontal and vertical blanking in 14:9 and 16:9 modes.
FRAMEDEFL-R	Correction signal from the 16:9 module back to the frame output stage.
LINEDEFL-LIN	Original line deflection signal from line output stage to the 16:9 module.
VOCONN	140V supply voltage from LOT to DC shift circuitry.

F DBE

AUDIO-L	Signal audio canal gauche délivré par le Module Audio via la LSP.
AUDIO-R	Signal audio canal droit délivré par le Module Audio via la LSP.
DBE-COMMAND	Signal de commutation pour activer ou désactiver l'amélioration des basses dynamiques (Dynamic Bass Enhancement ou DBE). Si on utilise des haut-parleurs externes (sur les bornes de raccordement externes), le DBE sera inactif.
L-DBE	Signal audio canal gauche avec amplification supplémentaire des signaux 80Hz. Transmis par le module DBE à l'amplificateur audio de la LSP.
R-DBE	Signal audio canal droit avec amplification supplémentaire des signaux 80Hz. Transmis par le module DBE à l'amplificateur audio de la LSP.

MODULE 16:9

130VLOT	Tension d'alimentation 130V délivrée par le LOT (transformateur de sortie de ligne) au circuit de correction à courant continu.
150VLOT	Tension d'alimentation 150V délivrée par le LOT (transformateur de sortie de ligne) au circuit de correction à courant continu.
BLANKING 16:9	Signal de suppression rapide délivré au contrôleur vidéo IC7119-4C, additionné des deux suppressions supplémentaires, horizontale et verticale, en modes 14:9 et 16:9.
FRAMEDEFL-R	Signal de correction envoyé par le module 16:9 à l'étage de sortie de trames.
LINEDEFL-LIN	Signal original de déviation horizontale délivré l'étage de sortie de lignes au module 16:9.
VOCONN	Tension d'alimentation 140V délivrée par le LOT (transformateur de sortie de ligne) au circuit de correction à courant continu.

NL DBE

AUDIO-L	Audiosignaal linker kanaal, afkomstig van Audio Module via LSP.
AUDIO-R	Audiosignaal rechter kanaal, afkomstig van Audio Module via LSP.
DBE-COMMAND	Schakelsignaal waarmee versterking laagweergave (DBE) kan worden in- of uitgeschakeld. Wanneer externe luidsprekers aan de voorzijde worden geselecteerd (op het clickfit paneel), wordt DBE overbrugd.
L-DBE	Audiosignaal linker kanaal met extra versterking van 80Hz signalen. Van DBE module naar LSP audio versterker.
R-DBE	Audiosignaal rechter kanaal met extra versterking van 80Hz signalen. Van DBE module naar LSP audio versterker.

16:9 MODULE

130VLOT	130V voedingsspanning van de LOT naar het DC-shift-systeem.
150VLOT	150V voedingsspanning van de LOT naar het DC-shift-systeem.
BLANKING 16:9	Signaal snelle onderdrukking naar video controller IC7119-4C, met correctie extra lijn- en rasteronderdrukking in 14:9 en 16:9 mode.
FRAMEDEFL-R	Correctiesignaal van de 16:9 module terug naar de rastereindtrap.
LINEDEFL-LIN	Oorspronkelijk lijnafbuigsignaal van de lijneindtrap naar de 16:9 module.
VOCONN	140V voedingsspanning van de LOT naar het DC-shift-systeem.

I DBE

AUDIO-L	Segnale audio del canale sinistro proveniente dal modulo audio tramite l'LSP.
AUDIO-R	Segnale audio del canale destro proveniente dal modulo audio tramite l'LSP.
DBE-COMMAND	Segnale di commutazione per attivare o disattivare il Dynamic Bass Enhancement (DBE). Quando vengono selezionati gli altoparlanti esterni anteriori (sul pannello click-fit), DBE viene escluso.
L-DBE	Segnale audio del canale sinistro con ulteriore amplificazione dei segnali da 80Hz. Va dal modulo DBE all'amplificatore audio del LSP.
R-DBE	Segnale audio del canale destro con ulteriore amplificazione dei segnali da 80Hz. Va dal modulo DBE all´amplificatore audio del LSP.

MODULO 16:9

130VLOT	130V provenienti dall' LOT per il circuito di DC-shift.
150VLOT	150V provenienti dall' LOT per il circuito di DC-shift.
BLANKING 16:9	Segnale di fast blanking al controllore video IC7119-4C, corretto per il blanking addizionale sia orizzontale che verticale per i formati 14:9 e 16:9.
FRAMEDEFL-R	Segnale di correzione dal modulo 16:9 verso lo stadio finale di quadro.
LINEDEFL-LIN	Segnale di riga dallo stadio finale (di riga), verso il modulo 16:9.
VOCONN	140V provenienti dall' LOT per il circuito di DC-shift.

D DBE

AUDIO-L	Audiosignal für den linken Kanal, kommt über die GSP vom Audio-Modul.
AUDIO-R	Audiosignal für den rechten Kanal, kommt über die GSP vom Audio-Modul.
DBE-COMMAND	Schaltsignal zum Ein- bzw. Ausschalten der dynamischen Tiefen-Verbesserung (Dynamic Bass Enhancement - DBE). Bei der Wahl von externen Frontlautsprechern (auf der Clickfit-Platine) wird DBE überbrückt.
L-DBE	Audiosignal für den linken Kanal mit zusätzlicher Verstärkung der 80-Hz-Signale. Läuft vom DBE-Modul zum Audioverstärker auf der GSP.
R-DBE	Audiosignal für den rechten Kanal mit zusätzlicher Verstärkung der 80-Hz-Signale. Läuft vom DBE-Modul zum Audioverstärker auf der GSP.

16:9-MODUL

130VLOT	130-V-Speisespannung vom LOT zur Gleichstromverschiebungsschaltung.
150VLOT	150-V-Speisespannung vom LOT zur Gleichstromverschiebungsschaltung.
BLANKING 16:9	Austastsignal zum Bildregler IC7119-4C, bereits korrigiert auf zusätzliche Horizontal- und Vertikalaustastung in der 14:9- und 16:9-Betriebsart.
FRAMEDEFL-R	Korrektursignal vom 16:9-Modul zurück zur Vertikal-Ablenkendstufe.
LINEDEFL-LIN	Original Zeilenablenkungssignal von der Zeilen-Ablenkendstufe zum 16:9-Modul.
VOCONN	140-V-Speisespannung vom LOT zur Gleichstromverschiebungsschaltung.

E DBE

AUDIO-L	Señal de audio del canal izquierdo procedente del Módulo Audio a través del LSP.
AUDIO-R	Señal de audio del canal derecho procedente del Módulo Audio a través del LSP.
DBE-COMMAND	Señal de conmutación para habilitar o deshabilitar la Mejora Dinámica de los Bajos (DBE). Habiendo sido seleccionados altavoces frontales externos (en el panel click-fit), DBE está puesta en deriva.
L-DBE	Señal audio del canal izquierdo con amplificación adicional de señales de 80Hz, suministrada por el módulo DBE al amplificador audio del LSP.
R-DBE	Señal audio del canal derecho con amplificación adicional de señales de 80Hz, suministrada por el módulo DBE al amplificador audio del panel LSP.

MODULO 16:9

130VLOT	Tensión de alimentación 130V suministrada por el transformador de salida de línea (LOT) al circuito de desplazamiento CC.
150VLOT	Tensión de alimentación 150V suministrada por el transformador de salida de línea al circuito de desplazamiento CC.
BLANKING 16:9	Señal de supresión rápida suministrada al controlador de vídeo IC7119-4C, corregida para la supresión adicional horizontal y vertical en los modos 14:9 y 16:9.
FRAMEDEFL-R	Señal de corrección procedente del módulo 16:9 de retorno a la etapa de salida de línea.
LINEDEFL-LIN	Señal de deflexión original de línea procedente de la etapa de salida de línea y suministrada al módulo 16:9.
VOCONN	Tensión de alimentación 140V suministrada por la etapa de salida de línea al circuito de desplazamiento CC.
