2. Safety Instructions, Warnings, Notes, and Service Hints

2.1 Safety Instructions

2.1.1 General Safety

Safety regulations require that during a repair:

- Connect the unit to the mains via an isolation transformer.
- Replace safety components, indicated by the symbol ▲, only by components identical to the original ones. Any other component substitution (other than original type) may increase risk of fire or electrical shock hazard.

Safety regulations require that after a repair, you must return the unit in its original condition. Pay, in particular, attention to the following points:

- Route the wires/cables correctly, and fix them with the mounted cable clamps.
- Check the insulation of the mains lead for external damage.
- Check the electrical DC resistance between the mains plug and the secondary side:
 1. Unplug the mains cord, and connect a wire between the two pins of the mains plug.
 2. Set the mains switch to the 'on' position (keep the mains cord unplugged!).
 3. Measure the resistance value between the mains plug and the front panel, controls, and chassis bottom.
 4. Repair or correct unit when the resistance measurement is less than 1 MΩ.
 5. Verify this, before you return the unit to the customer/user (ref. UL-standard no. 1492).
 6. Switch the unit 'off', and remove the wire between the two pins of the mains plug.

2.1.2 Laser Safety

This unit employs a laser. Only qualified service personnel may remove the cover, or attempt to service this device (due to possible eye injury).

Laser Device Unit

Type	: Semiconductor laser GaAlAs
Wavelength	: 650 nm (DVD) : 780 nm (VCD/CD)
Output Power	: 20 mW (DVD+RW writing) : 0.8 mW (DVD reading) : 0.3 mW (VCD/CD reading)
Beam divergence	: 60 degree

Figure 2-1

Note: Use of controls or adjustments or performance of procedure other than those specified herein, may result in hazardous radiation exposure. Avoid direct exposure to beam.

2.2 Warnings

2.2.1 General

- All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD, ⚡). Careless handling during repair can reduce life drastically. Make sure that, during repair, you are at the same potential as the mass of the set by a wristband with resistance. Keep components and tools at this same potential.
Available ESD protection equipment:
 - Complete kit ESD3 (small tablemat, wristband, connection box, extension cable and earth cable) 4822 310 10671.
 - Wristband tester 4822 344 13999.
- Be careful during measurements in the live voltage section. The primary side of the power supply (pos. 1005), including the heatsink, carries live mains voltage when you connect the player to the mains (even when the player is 'off!'). It is possible to touch copper tracks and/or components in this unshielded primary area, when you service the player. Service personnel must take precautions to prevent touching this area or components in this area. A 'lightning stroke' and a stripe-marked printing on the printed wiring board, indicate the primary side of the power supply.
- Never replace modules, or components, while the unit is 'on'.

2.2.2 Laser

- The use of optical instruments with this product, will increase eye hazard.
- Only qualified service personnel may remove the cover or attempt to service this device, due to possible eye injury.
- Repair handling should take place as much as possible with a disc loaded inside the player.
- Text below is placed inside the unit, on the laser cover shield:

Figure 2-2

Figure 2-4

2.3 Service Hints

2.3.1 Switched Mode Power Supply

The power supply unit has to be replaced in case of failure. The schematic provided in the manual is only for information and no service parts will be available.

2.3.2 DVD Module

This module can be repaired as follows:

1. The VAL6013/01 is a combination of loading mechanism and DVD-mechanism. Both are not repairable units and in case of failure, it has to be replaced with a new loader VAL6013/01.

Note: When replacing with a new VAL6013/01, two solder joints have to be removed after connecting the OPU flex foil to the mono board.

The solder joints, which shortcircuits the laser diodes to ground, are for protection against ESD. Refer to figures 2-5 and 2-6 for location of solder joints.

2. The mono board has to be repaired down to component level. Repair handling of the monoboard requires a workshop with sophisticated desoldering tools.

VAL6013/01 Solder Joints

Figure 2-5

VAL6013/01 Solder Joints

Figure 2-6

2.3.3 ComPair

For assistance with the repair process of the monoboard an electronic fault finding guidance has been developed. This program is called ComPair.

This ComPair program is available on CDROM.

The version of the CDROM for repair of the monoboard is V1.3 or higher and can be ordered with codenumber 4822 727 21637. This is an update CDROM, so when the ComPair CDROM is used for the first time, one has to install the ComPair Engine CDROM V1.2 first.

The V1.2 CDROM can be ordered with code number 4822 727 21634 and has to be registered after installation. The procedure for registration is explained in the help file of the program and in the CDROM booklet.

The cable to connect the monoboard with a PC can be ordered with codenumber: 3122 785 90017.

All the hardware and software requirements of the systems, necessary for working with ComPair, are described on the CDROM.

2.3.4 Service Positions

Refer to dismantling instructions for dismantling of the board. Figures 2-7 to 2-8 shows the service position that are recommended during repair of the boards.

DVD723/0X1 model

Figure 2-7

DVD743/0X1 model

Figure 2-8

3. Directions for Use

General Information

The region code for this set is 2.

Since it is usual for DVD movies to be released at different times in different regions of the world, all players have region codes and discs can have an optional region code. If you load a disc of a different region code to your player, you will see the region code notice on the screen. The disc will not playback and should be unloaded.

Manufactured under license from Dolby Laboratories, "Dolby", "Pro Logic," and the double-D symbol are trademarks of Dolby Laboratories.

This product incorporates copyright protection technology that is protected by method claims of certain U.S. patents and other intellectual property rights owned by Macrovision Corporation and other rights owners. Use of this copyright protection technology must be authorised by Macrovision Corporation, and is intended for home and other limited viewing uses only unless otherwise authorised by Macrovision Corporation. Reverse engineering or disassembly is prohibited.

TruSurround and the  symbol are trademarks of SRS Labs, Inc. TruSurround technology is incorporated under license from SRS Labs, Inc.

 The DVD VIDEO player is in conformity with the EMC directive and low-voltage directive.

For Customer Use:

Read carefully the information located at the bottom of your DVD VIDEO player and enter below the Serial No. Retain this information for future reference.

Model No. DVD VIDEO

Varoitus!

Laitteen käyttäminen muulla kuin tässä käyttöohjeessa mainituilla tavalla saattaa aiheuttaa käyttäjän turvallisuusloukan 1 yrittäville laseritaselle.

Huom.

Tuotteen avoimien POWER on kytketty osittopöytälaite, eikä se kytkä laitteita iri sähköverkossa. Sitä varten on yhdistetty verkko-osaa on kytketty sähköverkkoon aina silloin, kun protekti on pistotulostassa.

Important Note for Users in the UK

Mains plug

This apparatus is fitted with an approved 13 Amp plug. To change a fuse in this type of plug proceed as follows:

1. Remove fuse cover and fuse.
2. Fix new fuse which should be a BS1362, 5 Amp, A.S.T.A. or BSI approved type.
3. Re-fit the fuse cover.

If the fitted plug is not suitable for your socket outlets, it should be cut off and an appropriate plug fitted in its place. If the mains plug contains a fuse, this should have a value of 5 Amp. If a plug without a fuse is used, the fuse at the distribution board should not be greater than 5 Amp.

Note: The severed plug must be disposed of to avoid a possible shock hazard should it be inserted into a 13 Amp socket elsewhere.

How to connect a plug

The wires in the mains lead are coloured with the following code: blue = neutral (N), brown = live (L).

As these colours may not correspond with the colour markings identifying the terminals in your plug, proceed as follows:

- Connect the blue wire to the terminal marked N or coloured black.
- Connect the brown wire to the terminal marked L or coloured red.
- Do not connect either wire to the earth terminal in the plug, marked E (or e) or coloured green (or green and yellow).

Before replacing the plug cover, make certain that the cord grip is clamped over the sheath of the lead - not simply over the two wires.

Copyright in the U.K.

Recording and playback of material may require consent. See Copyright Act 1956 and The Performers' Protection Acts 1958 to 1972.

Laser safety

This unit employs a laser. Due to possible eye injury, only a qualified service person should remove the cover or attempt to service this device.

USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

NOTE: PICTURES SHOWN MAYBE DIFFERENT BETWEEN COUNTRIES.

LASER

Type	Semiconductor-laser GaAlAs
Wave length	650 nm (DVD)
	780 nm (VCD/CD)
Output Power	7 mW (DVD)
	10 mW (VCD/CD)
Beam divergence	60 degree

CAUTION (WARNING LOCATION: ON THE BACKPLATE OF SET)

NEVER MAKE OR CHANGE CONNECTIONS WITH THE POWER SWITCHED ON.

Introduction

Thank you for purchasing this Philips DVD player. This Owner's Manual explains the basic operation of this DVD player.

Environmental Information

All unnecessary packaging has been omitted. Packaging has been made easy to separate into three materials: cardboard (box), polystyrene foam (buffer) and polyethylene (bags, protective foam sheet).

Your DVD player consists of materials which can be recycled and reused if disassembled by a specialised company. Please observe the local regulations regarding the disposal of packaging materials, exhausted batteries and old equipment.

Supplied accessories

- Remote control
- Batteries (two AA size) for remote control
- Audio cable
- SCART cable (*not available for all versions*)
- CVBS cable
- Owner's Manual

Safety Information

- Before operating the DVD player, check that the operating voltage indicated on the typeplate (or the voltage indication beside the voltage selector) is identical with the voltage of your local power supply. If not, please consult your dealer.
- Place the DVD player on a flat, hard and stable surface.
- There must be sufficient room in front of the player for the disc tray to be opened.

Front Panel

- Helpful Hints!**
- Some DVD video discs require specific functions or allow only limited functions during playback.
 - "X" may appear on the TV screen which means that the function is not available on that specific DVD video disc.

Symbols Used in this Manual

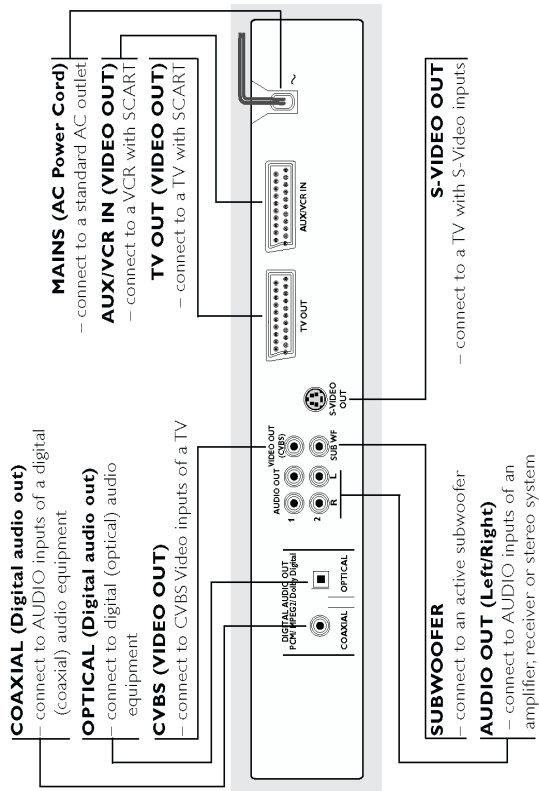

The below symbols appear in some headings and notes with the following meanings:

	- Description refers to playback of DVD-video discs
	- Description refers to playback of Video CDs
	- Description refers to playback of Audio CDs

Functional Overview

Rear Panel

English

Caution: Do not touch the inner pins of the jacks on the rear panel. Electrostatic discharge may cause permanent damage to the unit.

8

Remote Control

English

* Press and hold key for about two seconds

9

Preparation

English

Basic Connections

- Please refer to the instruction books of your TV, VCR, Stereo System or other devices as necessary to make the best connections.
- Make one of the following connections, depending on the capabilities of your existing equipment.

The following guidelines are options for the best picture and sound quality available on your DVD player:

- Picture**
 - 1 Use the CVBS Video Output for good picture quality.
 - 2 Use S-Video Output for the better picture quality.
 - 3 Use SCART Output for best picture quality.
- Sound**
 - 1 Digital audio connections provide the clearest sound. Connect the DVD player's DIGITAL AUDIO OUT (either COAXIAL or OPTICAL) to your amplifier or receiver.
 - 2 If digital connections are not possible, connect the DVD player's Left and Right (white and red) AUDIO OUT to your amplifier, receiver, stereo or TV.

- Warning!**
- Never make or change connections with the power switched on.
 - Connect the DVD player directly to your TV, instead of e.g. a VCR, to avoid distortion because DVD video discs are copy protected.
 - Do not connect the DVD player AUDIO OUT to PHONO IN of your amplifier or receiver.

Connecting to a TV

- 1 Connect the SCART (TV OUT) on the DVD player to the corresponding connector on the TV.

Note:

- Ensure that the "TV" indication on SCART cable is connected to the TV set and "DVD" indication on SCART cable is connected to the DVD player.

If your TV is not equipped with a SCART input, you can select the following connection:

If your TV has a CVBS Video input connector,

- 1 Connect the CVBS VIDEO OUT on the DVD player to the CVBS VIDEO IN on the TV.
- 2 Connect the Left and Right AUDIO OUT on the DVD player to the Left and Right AUDIO IN on the TV.

If your TV has a S-Video input connector,

- 1 Connect the S-VIDEO OUT on the DVD player to the S-VIDEO IN on the TV.
- 2 Connect the Left and Right AUDIO OUT on the DVD player to the Left and Right AUDIO IN on the TV.

Preparation

English

Connecting to Optional Equipment

- A digital component with a built-in MPEG 2 or Dolby Digital™ decoder allows you to enjoy the surround sound while producing the effect of being in a movie theater or a concert hall.
- The player outputs the surround sound signals from the DIGITAL OUT COAXIAL or OPTICAL connectors.

If your receiver has a MPEG 2 or Dolby Digital™ decoder,

- 1 Connect the COAXIAL or OPTICAL DIGITAL AUDIO OUT of the DVD player to the COAXIAL or OPTICAL DIGITAL AUDIO IN on your receiver.
- 2 You will need to set the DVD player's digital output to ALL (see 'Personal Preferences').

Notes:

- If your receiver has a PCM decoder only, make sure that the Digital Output is set to PCM-only in the 'Personal Preferences' setting.

Cinemalink (on SCART)

This DVD player is equipped with cinemalink feature (from Philips) which allows a more complete control of your home audio/video (AV) equipment.

Cinemalink interconnection plug & playback will enable the AV system to recognise the users intention and automatically switch the necessary controls or input source accordingly. This will reduce the necessity of having multiple control inputs for all AV equipments (eg. TV and Amplifier).

Connecting to an Audio System

- 1 You can also listen to the sound of audio CDs and DVD video discs by connecting to an optional stereo system.
- 2 Connect the Left and Right AUDIO OUT on the DVD player to the Left and Right AUDIO IN on the stereo system.

Preparation

If you connect to an active subwoofer,

- 1 Connect the SUBWOOFER AUDIO OUT on the DVD player to an optional active subwoofer.
- 2 The subwoofer reproduces the low bass sound effects (e.g. explosions, the rumble of spaceships, etc.).
- 3 Be sure to follow the instructions supplied with the subwoofer.

Notes:

- If the audio format of the digital output does not match the capabilities of your receiver, the receiver will produce a strong, distorted sound or no sound at all.
- To see the selected audio format of the current DVD in the Status Window, press SYSTEM MENU.
- MP3 Audio is not available on the Digital Output.

Inserting batteries into the Remote Control

- 1 Open the battery cover.
- 2 Insert batteries (AA size) with the correct polarity as indicated by the + and - symbols inside the battery compartment.
- 3 Close the cover.

CAUTION!

- Remove batteries if they are exhausted or not to be used for a long time.
- Do not use old and new or different types of batteries in combination.
- Batteries contain chemical substances, so they should be disposed off properly and kept away from children.

Using the Remote Control

- Direct the remote control at the remote sensor of the DVD player.
- Do not drop the remote control.
- Do not leave the remote control near extremely hot or humid place.
- Do not spill water or put anything wet on the remote control.

Preparation

chapter	safe	Child Safe
shuffle	return	Resume
shuffle	shuffle	Action Prohibited

NTSC/PAL Conversion

This player is equipped with an NTSC/PAL conversion feature that converts the video output of the disc to match your TV system. To activate the conversion refer to page 15.

Switching On

- 1 Connect the AC power cord to the power outlet.
- 2 Switch on the TV and DVD player.
- 3 Set the TV to the correct Video IN channel (e.g. EXT1, EXT2, AV1, AV2, AUDIO/VIDEO), etc. (Refer to your TV owner's manual for detail) → The player display lights up and the default screen appears on the TV.
- 4 If you are using an external equipment (e.g. audio system or receiver), turn them on and select the appropriate input source that was used to connect to the DVD player output. Refer to the equipment owner's manual for detail.

Menu Bars on TV Screen

- Operations can be carried out directly via the multiple menu bars on the TV screen.
- The following functions are available via the menu bars. Pressing SYSTEM MENU keys repeatedly will toggle through menu bar 1, menu bar 2, menu bar 3 and menu bar OFF.

Preparation

English

Personal Preferences

In the Personal Preferences settings menu, you can customize your player to suit your own particular requirements.

General operation:

- 1 Press SYSTEM MENU on the remote control.
 - 2 The **TV** will be highlighted in the menu bar.
 - 3 Press **▼** to activate the Personal Preferences menu.
 - 4 Use the **◀ ▶ ▲ ▼** keys to toggle through the functions and select your preferred option.
 - 5 Press **OK** to confirm a highlighted selection.
- The following items are available:

Picture

– TV Shape

Select the aspect ratio of the TV to be connected.

16:9 → when you connect a wide-screen TV to the DVD player.

4:3 LETTER BOX → when you connect a normal TV to the DVD player. Displays a wide picture with bands displayed on the upper and lower portions of the TV screen.

4:3 PAN SCAN → when you connect a normal TV to the DVD player. Displays the wide picture on the whole TV screen with a portion automatically cut off.

Note:

- Pan Scan is subject to availability on the disc.

– Black level shift (NTSC output only)

Select **ON** for adapting the colour dynamics to obtain richer contrasts.

– Video shift

Use this setting to personalize the position of the picture on your TV by scrolling it to the left or right.

– Monitor type selection

Allows you to select the type of display device that is connected to the DVD Video player.

For each device, a set of predefined picture settings (eg. Rich-Natural-Soft+Animation) is available. Or choose 'Personal' that allows you to fine tune the brightness, saturation and contrast according to your preference.

Notes:

- You can select one of the following display devices: eg. TV, Plasma TV, Video Projector and Projection TV.

Preparation

English

– Smart Picture

You can select one of five predefined sets of colour settings and one set (Personal) which you can define yourself.

You can also press **SMART PICTURE** key (front panel) to access the smart picture in the menubar.

- When **Personal** is selected it allows you to fine-tune saturation, brightness and contrast. Use **▲** or **▼** keys to adjust the values of these parameters.

– TV System (NTSC/PAL Conversion)

Allows you to select between PAL, NTSC and AUTO mode depending on your TV.

The conversions supported are as follows:

Disc Type	Format	Output format		
		Digital mode	PAL	AUTO
DVD	NTSC	NTSC	PAL	NTSC
	PAL	Not supported	PAL	PAL
VCD	NTSC	NTSC	PAL	NTSC
	PAL	NTSC	PAL	PAL

- 1 In the Personal Preferences Menu, select **TV System**.
- 2 Press **▲** or **▼** to select PAL, NTSC or AUTO.

Notes:

- If you have a PAL only TV, ensure that your PAL/NTSC setting is PAL.
- AUTO can only be selected when using a TV that has both the NTSC and PAL systems.
- This setting is applicable for CVBS output on cinch and SCART only.
- Slight picture distortions may occur due to this conversion. This is normal. Thus, the AUTO format is most suitable for the best picture quality.

Sound

– Digital output

- Digital output selection enables you to specify the type of digital output suitable for your receiver.
- Select **ALL** (default setting), if you had connected your DIGITAL AUDIO OUT to a multichannel decoder receiver.
- Select **PCM** only if your receiver is not capable of decoding multichannel audio.
- Select **OFF** to deactivate the DIGITAL AUDIO OUT.

Preparation

– Analogue output

Select Stereo, Dolby Surround compatible or 3D Sound (Insurround) output to match your system's playback capability.

– Night Mode

When set to ON, the dynamics of your sound output are optimised. High volume outputs are softened, enabling you to watch your favourite action movie without disturbing others.

– Subwoofer cut-off

The frequency of the subwoofer output can be set to HIGH (200Hz) or LOW (100Hz) to match your system's playback sound quality.

– PCM Output

Allows to select PCM digital output between 48kHz and 96kHz. When 48kHz has been selected, 96kHz PCM data (if available on disc) stream will be converted to 48kHz. Some 96kHz DVD are copy protected. If your PCM output selection is 96kHz, the digital output will be muted to comply with the standards. In such cases, select 48kHz to enable digital output.

– Karaoke vocal

Put this setting to ON only when a multi-channel karaoke DVD is being played. The karaoke channels on the disc will then be mixed into a normal stereo sound.

Language

Selecting disc languages:

Menu/Audio/Subtitle language

- This is to select the audio language, subtitle language and the language used in TV screen menus or DVD menus which will always be used for every disc to be played back.
- If the language selected is not available on the disc, the default language designated by each disc will be selected.

Preparation

Features

– Access Control

Access Control contains the following features: Child Lock - When Child Lock is set to ON, a 4-digit code needs to be entered in order to playback discs.

Parental control - Allows the conditional presentation of DVDs containing Parental Control information (see 'Access Control' section).

– Status Window

Displays the current status of the player and appears with the menu bar. When disc playback is stopped, it is displayed with the 'Temporary Feedback Field' in the default screen. See 'On-Screen Display' information. Factory setting is ON. Select OFF to suppress display of the Status Window.

– Help text

When set to ON, help text describes the icons selected. Select OFF if you no longer require the help text.

– Low Power Standby

If this is set to ON, the player will go in low-power standby when the standby button is pressed (front panel or remote control).

– Beeper

The beeper can be set to ON or OFF.

– PBC (Playback Control - for VCD)

The Playback Control can be set to ON or OFF (see section "Special VCD & SVCD Features" for details).

– Smart Power OFF

Puts the set to standby after a predefined time. This can be set to ENABLE or DISABLE.

– Bit Rate Indicator

Press the **DISPLAY** key to activate the bit rate indicator. When activated, the bit rate for video and audio, as well as the total bit rate is displayed. This is only applicable during playback of DVD and SVCD discs.

Operation

English

Basic Playback

- 1 Press **STANDBY ON** on the front panel.
- 2 Press **OPEN/CLOSE** \blacktriangle on the front panel to open disc loading tray.
- 3 Place the chosen disc in the tray, with the label facing up.
- 4 Press **OPEN/CLOSE** \blacktriangle again to close the tray. \rightarrow **RETURN** appears in the status window and on the player display, and playback starts automatically.

Notes:

- DVDs may have a region code. Your player will not play discs that have a region code different from the region code of your player.
- If Child Lock is set to ON and the disc inserted is not authorised, the 4-digit code must be entered and/or the disc must be authorised (see Access Control).

Playing a DVD-Video

- DVD video discs may have one or more **TITLES**, and each **TITLE** may have one or more **CHAPTERS**.
- Playback stops at the end of each **TITLE**.

Playing a title

- 1 Insert a disc and close the tray, playback starts automatically.
 - \rightarrow The TV screen's and DVD player's display shows the type of disc loaded, disc's information and playing time.
- 2 When the Disc Menu appear on the TV screen, use \blacktriangleright \blacktriangleleft keys or numerical keys on the remote control to select an option and continue playback.
- 3 If the titles are numbered, press the numerical keys or use the \blacktriangleright \blacktriangleleft keys to select desired title in the menu bar.
- 4 To stop playback, press **STOP**.

Smart Resume

- In stop mode and when a disc has not been ejected,
 - \rightarrow Pressing **PLAY** will automatically resume playback from the point where the playback was last stopped.
- **To deactivate auto resume,**
 - \rightarrow Press **STOP** to stop playback.
 - \rightarrow The help line text appears "Press Stop again to start from beginning" for 5 seconds.
- Press **STOP** again or unload the discs, the auto resume is cancelled.
- **To activate auto resume,**
 - Reload the disc and press **PLAY**
 - \rightarrow Playback starts from the beginning of the title.
- When resume icon \blacktriangleright appears on the screen,
 - press **PLAY** again.
 - \rightarrow Playback will resume from the point where the playback was last stopped.

Note:

- Resume feature is also applicable to VCDs and SVCDs.

Operation

English

Playing a disc

- 1 Insert a disc and close the tray, playback starts automatically.
 - \rightarrow The TV screen will display the number of tracks for selection and current playing status. Playback will stop at the end of the disc.
- 2 To stop playback, press **STOP**.

Special DVD Features

DVDs may contain menus to navigate the disc and access special features. Press the appropriate numerical key or use the \blacktriangleright \blacktriangleleft keys to highlight your selection in the DVD menu and press **OK** to confirm.

Title/Disc menu

- 1 Press **DISC MENU**
 - \rightarrow If the current title has a menu, the menu will appear on the screen. Otherwise, the disc menu will be displayed.
- 2 If disc menu is available on the disc, audio language, subtitle options, chapters for the title and other options will appear for selection.
- 3 To remove the title/disc menu, press **DISC MENU** again.

Camera Angle

- Some discs contain scenes which have been shot simultaneously from various angles. This DVD player allows you to select the desired camera angle.
- When the DVD player encounters a scene shot in multiple angles, it will give an indication on the "Temporary Feedback Field".
 - \rightarrow The angle icon remains displayed until multiple angles are no longer available.
 - Use the \blacktriangleright \blacktriangleleft to select the required angle.
 - \rightarrow Playback changes to the selected angle.
 - You can also select \blacktriangleright (**ANGLE**) in the menu bar or press the **ANGLE** button on the remote control directly.
- ### Changing the audio language
- 1 Select \blacktriangleright (**AUDIO**) in the menu bar or press the **AUDIO** button on the remote control directly.
 - 2 Press **AUDIO** or \blacktriangleright repeatedly to select the different languages.

Playing a Video CD

- Video CDs may have one or more **TRACKS**, and **TRACKS** may have one or more **INDEXES**.
- To make easy and convenient access, you can move between **TRACKS** and **INDEXES**.
- Some Video CDs have Play Back Control (PBC), which is a predefined playback sequence stored on the disc (see Playback Control section).

Playing a disc

- 1 Insert the disc and close the tray, playback starts automatically.
 - \rightarrow The number of tracks and the total playing time of the disc will appear on the TV screen and DVD player's display.
- 2 Press **PLAY**.
 - \rightarrow The current track number and its elapsed playing time will be displayed.
 - Playback will stop at the end of the disc.
- 3 To stop playback, press **STOP**.
- 4 Disc Resume feature is also applicable for VCDs and SVCDs (see "Smart Resume" section).

Playing an Audio CD

- Audio CDs contain only **TRACKS**.
- They can be played on your DVD player with the audio output connected to a stereo system or to your TV.
- If CD-text is available on the disc, it will be display on both the TV screen and player's front display.
- Select tracks using the menu bar on the TV screen or by pressing the numerical keys directly.
- Your DVD player also allows you to compile Favourite Track Selection (FIS) programmes for your discs by selecting or excluding tracks of your choice (see FIS Programme - Audio CDs).

Operation

Subtitles

- 1 Select **(SUBTITLE)** in the menu bar or press the **SUBTITLE** button on the remote control directly.
- 2 Press **SUBTITLE** or **▲▼** repeatedly to select the different subtitles.

Special VCD & SVCD Features

Playback Control (PBC)

- 1 Load a Video CD with PBC and press **PLAY**.
- 2 Go through the menu with the keys indicated on the TV screen until your chosen passage starts to playback. If a **PBC** menu consists of a list of tracks, you can select a track directly.
- 3 Enter your choice with the numerical keys (0-9).
- 4 Press **RETURN** to go back to the previous menu, if applicable on the menu.
- 5 You may also select **PBC OFF** under Personal Preferences.
 - When set to OFF, PBC menus are not activated for further playback.

Special CD & MP3 Features

CD text and MP3 text

- 1 Some CD or MP3-CD discs may contain text information (eg. track name, album name, artist name etc.) which will appear on the DVD player and TV screen during playback.
- 2 By default, CD text display is set to ON.
- 3 To switch off the CD text display, press **CD TEXT (DISPLAY)** on the remote control during playback.
- 4 Press **CD TEXT (DISPLAY)** on the remote control again to switch on the text display mode.

General Features

- Note:
- Unless stated, all operations described are based on remote control use. Some operations can be carried out using the menu bar on the TV screen.

Moving to another title/chapter

DVD VCD

When a disc has more than one title/track or chapter, you can move to another title/chapter as follows:

- 1 Press **SYSTEM MENU**, then select **T** or **C** in the menu bar.
- 2 Press **▲▼** or numerical keys to select a title/chapter.
 - **CD**
- 3 Press **▶▶** or **◀◀** briefly during playback to go to the next track or to return to the beginning of the current track respectively.
- 4 Press **◀◀◀** or **▶▶▶** twice briefly to step back to the previous track.
- 5 To go directly to any track, enter the track number using the numerical keys (0-9).

Note:

- Long press of the **▶▶▶** or **◀◀◀** keys will switch the DVD player on **BACKWARD** or **FORWARD** search (see **SEARCH** section).

Search

DVD VCD

- 1 Select **(FAST MOTION)** in the menu bar and press **▼**.
- 2 Use the **◀▶** keys to select the required speed: -32, -8 or -4 (backward), or +4, +8, +32 (forward).
- 3 Select 1 to play the disc at normal speed again.
- 4 To exit **FAST MOTION** mode, press **PLAY** or **▲**.

CD

- To search forward or backward through different speeds, you can also hold down **▶▶▶** or **◀◀◀** for more than two seconds.

20

Operation

Repeat

DVD

Repeat chapter/title/disc

- To repeat the current chapter, press **REPEAT**.
- **REPEAT CHP** appears on the front display.
- To repeat the current title, press **REPEAT** a second time.
- **REPEAT TTL** appears on the front display.
- To repeat the entire disc, press **REPEAT** a third time.
- **REPEAT DISC** appears on the front display.
- To exit Repeat mode, press **REPEAT** a fourth time.

VCD CD

Repeat track/disc

- To repeat the current track, press **REPEAT**.
- **REPEAT TRK** appears on the front display.
- To repeat the entire disc, press **REPEAT** a second time.
- **REPEAT DISC** appears on the front display.
- To exit Repeat mode, press **REPEAT** a third time.

Repeat A-B DVD VCD CD

- **DVD-Video Discs: repeat a sequence in a title**
 - Video and Audio CDs: repeat a sequence in a track
- 1 Press **REPEAT A-B** at your chosen starting point.
- 2 Press **REPEAT A-B** again at your chosen end point.
 - **REPEAT A-B** appears briefly on the front display, and the repeat sequence begins.
- 3 To exit the sequence, press **REPEAT A-B**.

Slow Motion DVD VCD

- 1 Select **(SLOW MOTION)** in the menu bar and press **▼**.
 - Playback will pause.
- 2 Use the cursor keys **◀▶** to select the required speed: -1, -1/2, -1/4 or -1/8 (backward), or +1/8, +1/4, +1/2 or +1 (forward).
- 3 Select 1 to play the disc at normal speed again.
- 4 If **III** is pressed, the speed will be set to zero (**PAUSE**).
- 5 To exit slow motion mode, press **PLAY**.

Still Picture and Frame-by-frame playback DVD VCD

- 1 Select **(STEP)** in the menu bar and press **▼**.
 - Playback will pause.
- 2 Use the cursor keys **◀▶** to select the previous or next picture frame.
- 3 To exit step by step playback, press **PLAY** or **▲**.

Note:

- You can also activate **frame-by-frame** playback by pressing the **PAUSE** key repeatedly on the remote control.

Scan DVD VCD CD

Scanning plays the first 10 seconds of each chapter/track on the disc.

Press SCAN

- 1 To continue playback at your chosen chapter/track, press **SCAN** again or press **PLAY**.

Operation

English

Shuffle

This shuffles the playing order of chapters within a title, if the title has more than one chapter:

- 1 Press **SHUFFLE** during playback.
- **SHUFFLE** appears on the screen for about two seconds.
- 2 To return to normal playback, press **SHUFFLE** again.

This shuffles the playing order of tracks within a disc, if the disc has more than one track:

- 1 Press **SHUFFLE** during playback.
- **SHUFFLE** appears on the screen for about two seconds.
- 2 To return to normal playback, press **SHUFFLE** again.

Time search

The Time Search function allows you to start playing at any chosen time on the disc.

- 1 Select **(TIME SEARCH)** in the menu bar and press **Y**.
- Playback will pause.
- The elapsed playing time is displayed in a time edit box.
- 2 Enter hours, minutes and seconds from left to right in the time edit box using remote control numerical key pad.
- Each time an item has been entered, the next item will be highlighted.
- 3 Press **OK** to confirm the selected time.
- The time edit box will disappear and playback starts from the selected time position on the disc.

- 4 Press **SYSTEM MENU** to remove the menu bar.

Zoom

The Zoom function allows you to enlarge the video image and to pan through the enlarged image.

- 1 Select **(ZOOM)**.
- 2 Press **▲/▼** to activate the **ZOOM** function and select the required zoom factor: 1.33 or 2 or 4.
- Playback will continue.
- The selected zoom factor and 'Press **OK** to pan' appears below the menu bar.
- The zoomed picture will appear on the TV screen.
- 3 Press **OK** to confirm the selection.
- The panning icon appears on the screen.
- 4 Use the **◀▶▶▶▶** keys to pan across the screen. When **OK** is pressed only the panned picture will be shown on the screen.
- 5 To exit **ZOOM** mode, select zoom factor to "Off" (zoom factor 1) in the menu bar.

FTS Video/Audio Programme

- Favourite Track Selection (FTS) list contains up to 20 items (titles, chapters).
- The most recent programme list will be placed on top of the existing list.

Storing a Programme

- 1 While playback is stopped, select **VIDEO FTS** in the menu bar.
- 2 Press **▼** to open the menu bar.
- The **VIDEO FTS** menu appears.
- 3 Press **▶** or **◀** or **FTS** (on the remote control) to select **ON**.

Operation

English

Storing titles/tracks

- 1 Press **▼** to select **TITLES/TRACKS**.
- 2 Use **▶** and **◀** to select the require title/tracks.
- 3 Press **OK** to store the entire selected title/tracks.
- The title number will be added to the list of selections.

Storing chapters/indexes

- 1 Press **▼** on the selected chapter/indexes number: → The chapter/indexes number will be highlighted.
- 2 Use **▶** and **◀** to select the required chapter number.
- 3 Press **OK** to confirm the selection.
- The selected chapter/indexes confirmation will be added to the list of selections.
- 4 Press **SYSTEM MENU** to exit the **VIDEO FTS** menu.

Erasing a selection in a Programme

- 1 While playback is stopped, select **VIDEO FTS** in the menu bar.
- 2 Use **▼** to select **PROGRAM**.
- 3 Use **▶** and **◀** to select the required number.
- 4 Press **OK** to erase the selection.
- 5 Press **SYSTEM MENU** to exit.

Erasing all selections

- 1 While playback is stopped, select **VIDEO FTS** in the menu bar.
- 2 Use **▼** to select **CLEAR ALL** and press **OK**.
- All selections will be erased.
- 3 Press **SYSTEM MENU** to exit.

Storing a Programme

- 1 Load a disc and stop playback.
- 2 Press **▼** to go to the list of available tracks.
- 3 Use **▶** and **◀** to select the required tracks or directly using remote control numeric key.
- 4 Press **OK** to store the selected tracks.
- The track number will be added to the list of selections.

Switching a Programme ON/OFF

- 1 Use **▲▼** to move and select desired tracks.
- 2 Press **▶** or **◀** to select either **ON** or **OFF**.

Erasing a track in a Programme

- 1 Use **▼** to go to the programmed tracks.
- 2 Use **▶** and **◀** to select the required number.
- 3 Press **OK** to erase the selection.
- 4 Press **SYSTEM MENU** to exit.

Erasing all selections

- Use **▼** to select **CLEAR ALL** and press **OK**.
- All selections will be erased.

English

Access Control

- Each time a 'child safe' disc is played, it will be placed on top of the list. When the list is full, the last disc in the list will be replaced when a new disc is added.
- Double-sided DVDs and multi-volume VCDs may have a different ID for each side. In order to make the disc 'child safe', each side has to be authorised.

Child Lock DVD VCD

- When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
- Enter a 4-digit code of your own choice twice.
- Move to **'CHILD LOCK'** using the **▲▼** keys.
- Move to **1** using the **▶** keys.
- Select **1** using the **▲▼** keys.
- Press **OK** or **◀** to confirm, then press **◀** again to exit the Personal Preferences menu.
- Now unauthorised discs will not be played unless the 4-digit code is entered.
- Select **1** to deactivate the **CHILD LOCK**.

- Notes:**
- Confirmation of the 4-digit code is necessary when:
 - The code is entered for the very first time (see above).
 - The code is changed or cancelled (see 'Changing the 4-digit code').

Deauthorising discs

- Insert the disc.
- Press **▶** while **☺** is visible.
- The **☺** will appear and the disc is now deauthorised.

Parental Control DVD

Movies on DVDs may contain scenes not suitable for children. Therefore, discs may contain 'Parental Control' information which applies to the complete disc or to certain scenes on the disc. These scenes are rated from 1 to 8, and alternative, more suitable scenes are available on the disc. Ratings are country dependent. The 'Parental Control' feature allows you to prevent discs from being played by your children or to have certain discs played with alternative scenes.

Authorising discs

- Insert the disc.
- You will be asked to enter your secret code for 'Play Once' or 'Play Always'.
- If 'Play Once' disc can be played when in the player and the player is ON.
- If 'Play Always' disc will become authorised and can always be played, even if the Child Lock is set to ON.

Notes:

- The player memory can maintain 120 authorised ('Child safe') disc titles. A disc will be placed in the list when 'Play Always' is selected.

Operation

MP3 Disc Features

Support following MP3-CD formats (ISO9660 format):

- Max. 30 characters
- Max. nested directory is 8 levels
- The max. ALB number is 32
- Supported VBR bit-rate
- Supported sampling frequencies for MP3 disc are: 32 kHz, 44.1 kHz, 48 kHz
- Supported Bit-rates of MP3 disc are: 32, 64, 96, 128, 192, 256 (kbps)

Following formats can't be supported

- The files like *.WMA, *.AAC, *.DLE, *.M3U, *.PLS
- Chinese filenames
- The non-session closed discs
- The discs recorded under UDF format

Downloading MP3 files from the Internet or copying songs from your own legal discs is a delicate process.

Sound Format	Bit Rate	Approximate File Size	Approximate Total File Size	Comment
MP3	32 kbps	40 s	1.3 MB	Sound quality significantly degraded
MP3	64 kbps	20 s	0.6 MB	Not recommended
MP3	96 kbps	15 s	0.5 MB	Balanced sound quality
MP3	128 kbps	10 s	0.4 MB	Compression ratio
MP3	192 kbps	7 s	0.3 MB	Compression ratio low
MP3	256 kbps	5 s	0.2 MB	Compression ratio low
MP3	320 kbps	4 s	0.1 MB	Compression ratio low

You may experience an occasional "skip" while listening to your MP3 files. This is normal.

Additional note for MP3 disc Playback:

- In compliance with the SDMI, digital-out is muted while playing MP3 discs.
- Due to the recording nature of Digital Audio MP3 (DAM), only Digital Audio music will play.
- The disc reading time may exceed 10 seconds due to the large number of songs compiled onto one disc.
- For multi-session discs, only the first session will be available.

English

Album/Title

This feature allows you to view and select the next or previous MP3 disc Album/Title.

- Press **▲▼** to scroll through the previous or next Album.
- Press **◀▶** to scroll through the previous or next Track.
- You can also select the desired album/track number directly using the numeric keys on the remote control.

Note:

- In **STOP mode: numbers are used for ALBUM selection.**
- In **PLAY mode: numbers are used for TRACK selection.**

- Only the following functions are possible for MP3 discs:
 - STOP / PLAY / PAUSE
 - SKIP NEXT / PREVIOUS
 - REPEAT (TRACK / ALBUM / DISC)

MP3 Discs - Album/Track/Disc

- To repeat a track, press REPEAT.
- REPEAT TRK appears on the player display.
- To repeat an album, press REPEAT a second time.
- REPEAT ALBM appears on the player display.
- To repeat the entire disc, press REPEAT a third time.
- REPEAT DISC appears on the player display.
- To exit REPEAT mode, press REPEAT a fourth time.
- REPEAT OFF appears on the player display.

Access Control

English

Activating/Deactivating Parental Control

- 1 When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
- 2 Enter your 4-digit code. If necessary, enter the code a second time.
- 3 Move to **Parental Control** using the **▲▼** keys.
- 4 Move to value adjustment (1-8) using the **►** key.
- 5 Then use the **▲▼** keys or the numerical keys on the remote control to select a rating from 1 to 8 for the disc inserted.

Rating 0 (displayed as “-”):
Parental Control is not activated. The Disc will be played in full.

Ratings 1 to 8:

The disc contains scenes not suitable for children. If you set a rating for the player, all scenes with the same rating or lower will be played. Higher rated scenes will not be played unless an alternative which has the same rating or lower is available on the disc. If no suitable alternative is found, playback will stop and the 4-digit code has to be entered.

- 6 Press **OK** or **◀** to confirm, then press **◀** again to exit the Personal Preferences menu.

Country

- 1 When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
- 2 Enter the 4-digit code.
- 3 Move to **CHANGE COUNTRY** using the **▼** key.
- 4 Press the **►** key.
- 5 Select a country using **▲▼**.
- 6 Press **OK** or **◀** to confirm, then press **◀** again to exit the menu.

Maintenance

Cleaning the Cabinet

- Use a soft cloth slightly moistened with a mild detergent solution. Do not use a solution containing alcohol, spirits, ammonia or abrasives.

Cleaning Discs

- When a disc becomes dirty, clean it with a cleaning cloth. Wipe the disc from the centre out. Do not wipe in a circular motion.
- Do not use solvents such as benzine, thinner, commercially available cleaners, or antistatic spray intended for analogue records.

Cleaning the disc lens

- After prolonged use, dirt or dust may accumulate at the disc lens. To ensure good playback quality, clean the disc lens with Philips CD Lens Cleaner or any commercially available cleaner. Follow the instructions supplied with the cleaner.

Troubleshooting

WARNING

Under no circumstances should you try to repair the system yourself, as this will invalidate the warranty. Do not open the system as there is a risk of electric shock. If a fault occurs, first check the points listed below before taking the system for repair.

Problem	Solution
No power	<ul style="list-style-type: none"> Check if the AC power cord is properly connected.
No picture	<ul style="list-style-type: none"> Check if the TV is switched on. Check the video connection.
Distorted picture	<ul style="list-style-type: none"> Sometimes a small amount of picture distortion may appear. This is not a malfunction.
Completely distorted picture or black/white picture with DVD or Video CD	<ul style="list-style-type: none"> Make sure the NTSC/PAL setting at the DVD player matches the video signal of your television. (See NTSC/PAL Conversion/Settings)
No sound or distorted sound	<ul style="list-style-type: none"> Adjust the volume. Check that the speakers are connected correctly.
No audio at digital output	<ul style="list-style-type: none"> Check the digital connections. Check the settings menu to make sure the digital output is set to ALL or PCM. Check if the audio format of the selected audio language matches your receiver capabilities.
No sound and picture	<ul style="list-style-type: none"> Check that the SCART cable is connected to the correct device. (See Connecting to a TV)
Picture freezes momentarily during playback	<ul style="list-style-type: none"> Check the disc for fingerprints/scratches and clean with a soft cloth wiping from centre to edge.
Disc can't be played	<ul style="list-style-type: none"> Ensure the disc label is facing up. Check if the disc is defective by trying another disc.
No return to start-up screen when disc is removed	<ul style="list-style-type: none"> Reset the unit by switching the player off, then on again.
The player does not respond to the remote control	<ul style="list-style-type: none"> Aim the remote control directly at the sensor on the front of the player. Reduce the distance to the player. Replace the batteries in the remote control. Re-insert the batteries with their polarities (+/- signs) as indicated.
Buttons do not work or player stops responding	<ul style="list-style-type: none"> To completely reset the player, unplug the AC cord from the AC outlet for 5-10 seconds.
Player does not respond to some operating commands during playback.	<ul style="list-style-type: none"> Operations may not be permitted by the disc. Refer to the instructions of the disc.
DVD Video player cannot read CDs/DVDs	<ul style="list-style-type: none"> Use a commonly available cleaning CD/DVD to clean the lens before sending the DVD player for repair.

If you are unable to remedy a problem by following these hints, consult your dealer or service centre.

5. Diagnostic Software, Trouble Shooting and Test Instructions

5.1 Dealerscript

5.1.2 Contents of Dealer Script

5.1.1 Purpose of Dealer Script

The dealer script can give a diagnosis on a standalone DVD player, no other equipment is needed to perform a number of hardware tests to check if the DVD player is faulty. The diagnosis is simply a "error" or "pass" message. No indication is given of faulty hardware modules. Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

The dealer script executes all diagnostic nuclei that do not need any user interaction and are meaningful on a standalone DVD player.

The nuclei called in the dealer script are the following (the number after each nucleus name corresponds with the number being on the local display when the nucleus is executed during the dealer script):

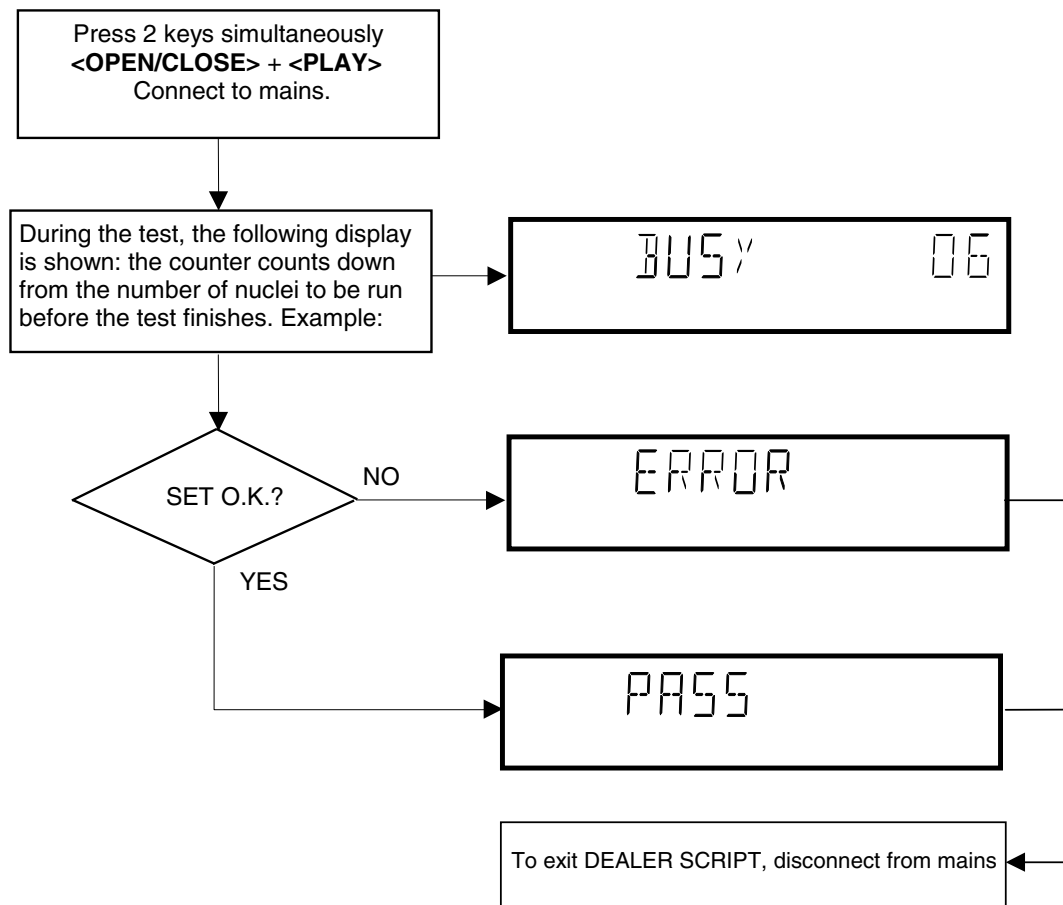

Nucleus

Display Countdown	Nucleus Number	Nucleus Name	Description
6	6	PapChksFl	Calculate and verify checksum of FLASH memory
5	12	PapI2cDisp	Checks the I2C interface with the slave processor on the display board
4	13	PapS2bEcho	Checks the I2C interface to the basic engine
3	11	PapI2cNvram	Checks the I2C interface with the NVRAM
2	15	PapNvramWrR	Pattern test of all locations in the NVRAM
1	16	CompSdramWrR	Pattern test of all locations in the SDRAM(s)

Figure 5-2

5.2 Player Script

Press the OPEN/CLOSE key to proceed to the next test.

5.2.1 Purpose of Player Script

The Player script will give the opportunity to perform a test that will determine which of the DVD player's modules are faulty, to read the error log and error bits and to perform an endurance loop test. To successfully perform the tests, the DVD player must be connected to a TV set to check the output of a number of nuclei. For DVDv2b a multi-channel amplifier, a set of 6 speakers and an external video source are necessary to test. To be able to check results of certain nuclei, the player script expects some interaction of the user (i.e. to approve a test picture or a test sound). Some nuclei (e.g. nuclei that test functionality of the Basic Engine module) require that the DVD player itself is opened, to enable the user to observe moving parts and approve their movement visually. Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

5.2.2 Contents of Player Script

The player script contains all nuclei that are useful on a DVD player that is connected to a TV set and help to determine which module of the DVD player is faulty, as well as to read out the contents of the error logs.

5.2.3 Structure of Player Script

The player script consists of a set of nuclei testing the three hardware modules in the DVD player: the Display PWB, the Digital PWB, and the Basic Engine.

Nuclei run by the player test need some user interaction. In the next paragraph this interaction is described. The player test is done in two phases:

1. **Interactive tests:** this part of the player test depends strongly on user interaction and input to determine nucleus results and to progress through the full test. Reading the error log and error bits information can be useful to determine any errors that occurred recently during normal operation of the DVD player.
2. **The loop test:** this part of the player test will loop through the list of nuclei indefinitely, till the player is reset. The list of nuclei is as follows:
 - PapChksFlash
 - PapI2cNvram
 - CompSdramWrR
 - PapS2bEcho
 - PapI2cDisp

At the beginning of the tests, the DSW version number will be indicated on the local display of the DVD.

The display will look like the following:

Figure 5-3

Pressing the PLAY key will proceed to the slave S/W version display, which is shown on the local display of the DVD player. The display will look like the following:

Figure 5-4

5.2.4 Survey

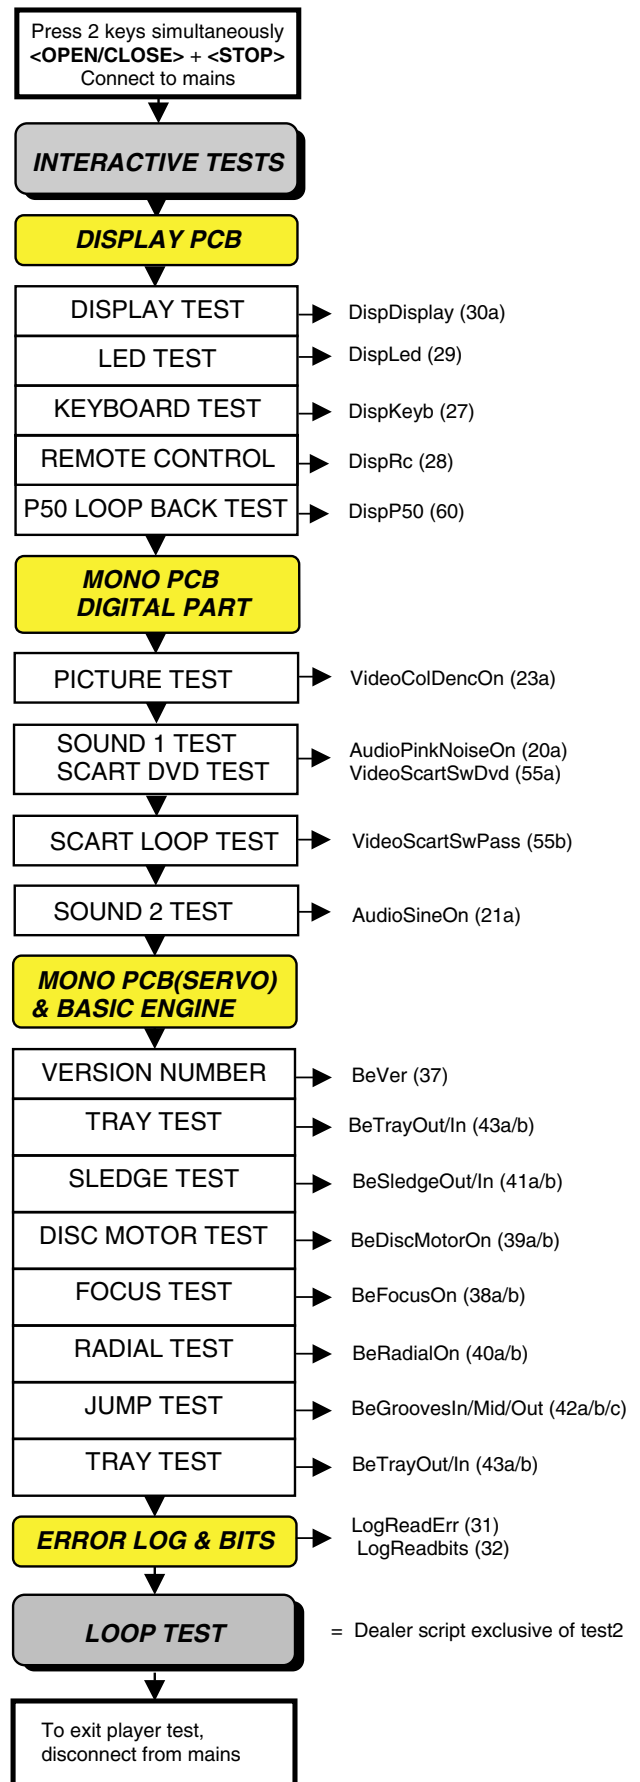

Figure 5-5

5.3 Display PCB

5.3.1 Display Test

The display test is performed by nucleus DispDisplay. By putting a series of test patterns on the local display, the local display is tested. To step through all different patterns, the user must either press OPEN/CLOSE (pattern is ok) or STOP (pattern was incorrect) to proceed to the next pattern. The display of patterns is continued in a cyclic manner, shown in Fig. 5-6, until the user presses PLAY. If the user presses PLAY before all display patterns are tested, the DispDisplay nucleus will return FALSE (display test unsuccessful).

Figure 5-6

5.3.2 LED Test

The LED(s) on the DVD player is (are) tested by nucleus DispLed. The user must check if the LED(s) is (are) lighted; if it is, press OPEN/CLOSE, if it is not, press STOP. By pressing PLAY the script will proceed to the next test. If the user presses PLAY before OPEN/CLOSE or STOP, the DispLed nucleus will return TRUE (LED test successful).

5.3.3 Keyboard Test

The keyboard of the DVD player is tested by nucleus DispKeyb. The user is expected to press all keys on the local keyboard once. The code of the key pressed is shown on the local display (1 hexadecimal digit) immediately followed by a (hexadecimal) number indicating how many times that key has been pressed. Example of the local display during this test:

Figure 5-7

The key-codes displayed on the local display will scroll from right to left when the display gets full, the text "K" will remain on display.

KEY ID	KEY
0	PLAY/PAUSE
1	STOP
2	OPEN/CLOSE
3	STANDBY
4	NEXT
5	PREVIOUS
7	SMART PICTURE
8	NAVIGATION -UP
9	NAVIGATION -DOWN
A	NAVIGATION - LEFT
B	NAVIGATION - RIGHT
C	DISC MENU
D	OK
E	SOUND

CL 26532039_027.eps
203020

Figure 5-8

If any keys are detected more than once (due to hardware error), the key-code is displayed twice (or more), with the second digit increased by 1. If the user does not press all keys minimally once (in any order), the DispKeys nucleus will return FALSE and cause an error in the overall result of the player script. The user can leave the keyboard test by pressing the PLAY key on the local display of the DVD player for at least one full second. The result of the keyboard test is shown on local display as follows:

CL 16532162_033.eps
080102

Figure 5-9

Or

CL 16532162_034.eps
080102

Figure 5-10

Pressing PLAY on the local keyboard again will proceed to the next text.

5.3.4 Remote Control Test

The remote control of the DVD player is tested by nucleus DispRc. The user must press any key on the remote control just once. The codes of the key pressed will be shown on the local display in hexadecimal format. Example:

CL 16532162_035.eps
140102

Figure 5-11

In this example 23 is the hexadecimal code of the pressed RC key. The user can leave the remote-control test by pressing PLAY on the local keyboard of the DVD player. The remote control test is successful if a code was received before the user pressed the PLAY key. Pressing the PLAY key, before pressing a key on the remote control, gives an error in the remote control test (note that the remote control test will also fail if a key on the remote control was pressed but no code was received). The remote control test does not check upon the contents of the received code, that is it will not be checked if the received code matches the key pressed. If desired, the user can manually check this code by using a code-table for the remote control key-codes.

RC Key id	Hexadecimal code
STANDBY	0C
1	1
2	2

CL 16532162_037.eps
080102

Figure 5-12

After pressing PLAY, the result of the remote control test is displayed on the local display of the DVD player as follows:

CL 96532065_013.eps
120799

Figure 5-13

Or

CL 96532065_014.eps
120799

Figure 5-14

Pressing PLAY on the local keyboard again will proceed to the next test.

5.3.5 P50 Loop-Back Test

For the P50 loop-back test, the user must first press a key to decide if the test is to be performed. The display will show the following message:

CL 16532007_004.eps
090102

Figure 5-15

If the user presses STOP, the P50 test will be skipped. If the user presses OPEN/CLOSE, the P50 test is performed and the result is displayed as follows:

Test successful:

CL 16532007_005.eps
090102

Figure 5-16

Test fails:

CL 16532007_006.eps
090102

Figure 5-17

Press the PLAY key to continue to the next text

5.4 Mono PCB Digital Part

5.4.1 Picture Test

The picture test is performed by putting a predefined picture (colour bar) on the display (nucleus VideoColDencOn), and asking the user for confirmation.

The display will show the following message:

Figure 5-18

By pressing OPEN/CLOSE the user confirms the test, pressing STOP will indicate the picture was invisible or incorrect. Pressing PLAY will proceed to the next test. If the user presses PLAY without pressing OPEN/CLOSE or STOP first, the result of this test will be TRUE (picture ok).

Note: The colour bar must be simultaneously available on the CVBS, YC, and RGB (or YUV) outputs available. On the SCART only the CVBS and RGB signals will be available.

5.4.2 Sound 1 & SCART DVD Test

The first soundtest is performed by starting a pink noise sound that needs confirmation from the user (nucleus AudioPinkNoiseOn).

The display will show the following message:

Figure 5-19

On the TV screen a colour bar (generated by nucleus VideoColDencOn) is visible and the internally generated pinknoise is audible.

By pressing the PLAY key, the user confirms the test. Pressing the STOP key will indicate the sound was inaudible or incorrect.

Note: Only for double scart models, SCART loop-through will be simultaneously active during this test. SCART loop-through will be measured with the aid of an external video source.

By pressing the PLAY key, there will be switched over to the external source. This must become now visible on the TV screen (using the SCART).

The local display will show the following message:

Figure 5-20

The internally generated colour bar is still available on the CVBS and Y/C outputs. And the pinknoise-signal is still available on the cinch audio outputs. By pressing the OPEN/CLOSE button, the internal generated colour bar becomes visual again.

The test can be left by pressing the PLAY key for more than one second.

5.4.3 Sound 2 Test

The second soundtest is performed by producing a sine sound (nucleus AudioSineOn). The signal can be stopped by pressing the STOP key.

The display will show the following message:

Figure 5-21

After the audio signal has been stopped, by pressing OPEN/CLOSE, the user confirms the test. Pressing STOP will indicate that something went wrong. Pressing PLAY will proceed to the next. If the user presses PLAY without pressing OPEN/CLOSE or STOP first, the result of this test will be TRUE (sound ok).

5.5 Basic Engine

5.5.1 Version Number

In the basic engine tests, the version number of the Basic Engine will be shown first, as the following example:

Figure 5-22

By pressing the PLAY key, the Basic Engine tests are started.

5.5.2 Tray Test

First, the tray is tested. The purpose of this test is also to give the user the opportunity to put a disc in the tray of the DVD player. Some tests on the Basic Engine require that a disc (e.g. DVD MPTD test disc) is present in the player. At the end of the Basic Engine tests this tray test will be repeated solely to enable the user to remove the disc in the tray. The local display will look as follows:

Figure 5-23

By pressing OPEN/CLOSE the user can toggle the position of the tray. Note that this test will not contribute to the test result of the Basic Engine. Pressing PLAY will proceed to the next test. At this point, the tray will be closed automatically by the software if it was open.

5.5.3 Sledge Test (Visual Test)

The second Basic Engine test tests the sledge. The user can move the sledge as many times as desired by using OPEN/CLOSE (nucleus BeSledgeOut) and STOP (nucleus BeSledgeIn). Pressing PLAY on the local keyboard proceeds to the next test. Note that this test will not contribute to the test result of the Basic Engine.

The local display will look as follows during the sledge test:

Figure 5-24

5.5.4 Disc Motor Test (Visual Test)

The third Basic Engine test tests the disc motor (nucleus BeDiscMotorOn).

The local display looks as follows:

Figure 5-25

By pressing OPEN/CLOSE the user confirms that the disc motor is running. Pressing STOP indicates the disc motor does not work. Pressing PLAY proceeds to the next test, after a reset of the disc motor (nucleus BeDiscMotorOff). If the user presses PLAY before pressing OPEN/CLOSE or STOP, the result of this test will be TRUE (disc motor is running).

5.5.5 Focus Test (Visual Test)

The fourth Basic Engine test tests the focussing. First focussing is turned on by calling nucleus BeFocusOn. The display will look as follows:

Figure 5-26

By pressing OPEN/CLOSE the user confirms that the focussing was successful. Pressing STOP indicates a focussing failure. Pressing PLAY proceeds to the next test after a reset of the focussing (nucleus BeFocusOff). If PLAY is pressed before OPEN/CLOSE or STOP, the result of this test will be TRUE (focus successful).

5.5.6 Radial Test (Visual & Listening Test)

The fifth Basic Engine test tests the radial functionality (nucleus BeRadialOn).

The local display looks as follows:

Figure 5-27

By pressing OPEN/CLOSE the user confirms that the radial function works. Pressing STOP indicates the function does not work. Pressing PLAY proceeds to the next test, after a reset of the radial (nucleus BeRadialOff). If the user presses PLAY before pressing OPEN/CLOSE or STOP, the result of this test will be TRUE (radial successful).

5.5.7 Jump Test (Listening Test)

The sixth and last Basic Engine test tests the jumping by calling nuclei BeGroovesIn, BeGroovesMid and BeGroovesOut. During this test, the local display looks as follows:

Figure 5-28

The user can switch between the three different types of groove settings by pressing OPEN/CLOSE (forward to next nucleus in the list In-Mid-Out), or STOP (backward in the list In-Mid-Out). This is done in a cyclic manner; note that this test will not contribute to the test result of the Basic Engine. Pressing PLAY proceeds to the next test, after the disc motor has been shut off with a call to nucleus BeDiscMotorOff.

Figure 5-31

Only the identification number (decimal) representing set errorbits will be shown. By pressing OPEN/CLOSE or STOP, the user can move forward or backward (respectively) through the logged errorcodes. If the display only shows "EB-0", no error bits were set. By pressing PLAY the user can continue to the next test.

5.5.8 Tray Test

As a last action for the Basic Engine tests, the tray test is repeated. The local display will look as follows:

Figure 5-29

This test is meant to give the user the opportunity to remove the disc in the tray. The tray position can be toggled using the OPEN/CLOSE key. The tray will be closed (by the software, if it is open) before proceeding to the next test when the user presses the PLAY key.

5.5.9 Error Log (See Table on Page 25)

Reading the error log and error bits information can be useful to determine any errors that occurred recently during normal operation of the DVD player. Reading the error log is done by nucleus LogReadErr.

The display during the errorlog readout looks as follows :

Figure 5-30

Note: Previous versions of the diagnostic software showed a 8-digit error code.

Due to limitations in the number of digits that can be displayed by some front panel displays, the most significant digits will not be shown. This can be done since all the error codes used by this player has set these 2 digits to "00"

By pressing OPEN/CLOSE or STOP the user can move forward or backward (respectively) through the logged error codes. If "0000" is displayed at all positions, the error log is empty. Display of the logged errors is done in a cyclic manner. By pressing PLAY on the local keyboard, the user can proceed to the next test.

5.5.10 Error Bits

Reading the error bits is done by nucleus LogReadBits. The display during the errorbits readout looks as follows:

5.6 Loop Test (See Table Below)

At the start of the loop test, the local display of the DVD player will show the interactive player test result readout in the following display:

Figure 5-32

The left side of the display contains a 3-digit code, which can have a value between 000 and 111. These values indicate the faulty modules and are to be interpreted as follows:

Displayed Value	Indication for each module		
	Basic Engine	Mono PCB	Display PCB
000	ok	ok	ok
001	ok	ok	faulty
010	ok	faulty	ok
011	ok	faulty	faulty
100	faulty	ok	ok
101	faulty	ok	faulty
110	faulty	faulty	ok
111	faulty	faulty	faulty

CL 96532065_031.eps
120799

Figure 5-33

The loop test will perform the same nuclei as the dealer test, but it will loop through the list of nuclei indefinitely. The display of the DVD player will display not only the three digits indicating correct/faulty modules and the last found error code (as mentioned, faults are detected as far as they can be within the scope of the diagnostic software), but also a loop counter indicating how many times the loop has been gone through. If an error was detected, the display will remain as in figure 5-34 until the user presses the PLAY key and then it will continue to the next loop.

Example:

Figure 5-34

The 2-digit number (23) on the right of figure 5-32 indicates the number of times the loop test has been performed.

After one loop cycle: Display the 3-digit module bits together with the last error code which occurred in the loop test. The 4 digits at the right side of the display (fig. 5-34) show the last error that was found during the loop test. The leftmost two digits (54) of this code indicates which nucleus resulted in a fault. The rightmost two digits (03) refer to the faultcode within that nucleus. For further explanation of this error code, refer to chapter 5.8 (Nuclei Error Codes).

5.6.1 Errorlog

Explanation:

The application errors will be logged in the NVRAM. The maximum number of error bytes that will be visible is 16. The first word (4 digits) of the byte is the component identification, the last word is the error code.

The diagnostics software will present a combination of this component identification plus an error code on the local display (and on the attached terminal). The last reported error is shown as < 00000000, the oldest visible error as 00000000 > and the errors in between as < 00000000 >.

The devices that may report errors are the serial controller (UART), the basic engine (BE), the slave processor (SLPH), the SACD Stream Manager (SSM) and the SACD Media Access (SMA). The identification of these components is as follows:

Component name	Component identification
Serial controller (UART)	000A
Engine (BE)	0016
Slave Processor (SLPH)	001A
SACD Stream Manager (SSM)	001C
SACD Media Access (SMA)	002E
Diagnostic software (DS)	Dxxx

The tables in the next chapters list the error code and corresponding problem. The column 'Explanation' holds a more elaborate description and the most likely reason for the error.

Some Examples:

002E0000 (SMA reported a timeout error)
 0016010A (Engine could not fully close or open the tray)
 D0010001 (Flash checksum failed).

For further explanation of DS errors, see description of nuclei error codes in paragraph 5.8.

UART Error Codes

Error Number	Error name	Explanation
0000	BUF_OVE RFLOW	To many characters were offered in too little time. Reason: system was too busy doing other jobs.
0001	COMMUNI CATION	Usually a protocol error. Reason: bad connection between engine and processor.
0002	TIME OUT	

BE Errors

Error Number	Error name	Explanation
0101	S2B_ILL_CO MMAND	Parameter(s) not valid for this command. Reason: some communication problem between UART and engine.
0102	S2B_ILL_PAR AM	Command not allowed in this state or unknown. Reason: see S2B_ILL_COMMAND error

Error Number	Error name	Explanation
0103	S2B_SLEDGE	Sledge could not be moved to home position.
0104	S2B_FOCUS	Focus failure
0105	S2B_MOTOR	Motor could not reach speed within timeout
0106	S2B_RADIAL	Servo didn't get on track after several retries.
0107	S2B_PLL_LO CK	PLL could not lock in Accessing or Tracking state
0108	SBC_HEADE R_TO	Header timeout
0109	S2B_SBC_NO T_FOUND	Requested subcode item could not be found.
010A	S2B_TRAY	Tray could not be opened or closed completely.
010B	S2B_TOC_RE AD	TOC could not be read within timeout period.
010C	S2B_JUMP	Requested seek could not be performed.
010D	S2B_NON_EX IST_SES	Attempt to access a non-existing session.
010E	S2B_NON_EX IST_BCA	Caller tries to acces a non-existing BCA area
010F	Speed setting	A wrong or inappropriate speed value has been set
0116	NO_DISC	No disc selected
011A	TRAY_INIT	After reset, initialized tray
011B	NO TOC INFO	No TOC information in lead-in area or erase TOC found
01F0	S2B_OVERR UN	Too many bytes received over S2B Reason: see S2B_ILL_COMMAND error
01F1	S2B_COMM_ TO	Not enough bytes are received over S2B Reason: see S2B_ILL_COMMAND error
01F2	S2B_PARITY	Byte received with parity error. Reason: see S2B_ILL_COMMAND error
01F3	S2B_ILL_PHA SE	CMD IDC is not valid, transmission out of sync. Reason: see S2B_ILL_COMMAND error
01F4	S2B_ILL_NR_ OF_BYTES	Byte count has an illegal value. Reason: see S2B_ILL_COMMAND error

SLPH Error Codes

Error Number	Error name	Explanation
0000	COMMUNICA TION	Error in I2C communication. Reason: bad connection between slave processor and main processor.

SSM Error Codes

Error Code	Error name	Explanation
0006	SP_SYNCER ROR	System cannot get synchronised with sectors coming from disc. Reason: Usually a damaged disc or the player was dropped/pushed during operation. If not, the engine is malfunctioning.
0007	SP_EDCERR OR	Data coming from disc is damaged. Reason: see SP_SYNCERROR

Error Code	Error name	Explanation
0008	SP_CONTINUITYERROR	Sequence of sectors coming from disc is incorrect. Reason: see SP_SYNCERROR
0009	DMX_CONTINUITYERROR	Sequence of sectors is incorrect. Reason: problem with buffer RAM
000A	LLD_ERROR	An illegal audio format was offered to the decoder. Reason: unknown audio type on disc or problem with buffer RAM
000B	BCU_ERROR	Internal problem in Furore chip

SMA Error Codes

Error Number	Error name	Explanation
0000	SMA_TIMEOUTERROR	Data coming from disc not in time. Reason: damaged disc or engine problem.

5.6.2 Reprogramming of New Mono Boards.**Caution**

This information is confidential and may not be distributed. Only a qualified service person should reprogram the mono board.

After reset of NV-memory or repair of the mono board, all the customer settings and also the region code will be lost.

Reprogramming of the mono board will put the player back in the state in which it has left the factory, i.e. with the default settings and the allowed region code.

Reprogramming is limited to 25 times

When the counter reaches 25, reprogramming is not possible anymore

Reprogramming will be done by way of the remote control.

Put the player in stop mode, no disc loaded.

Press the following keys on the remote control:

<PLAY> followed by numerical keys <1> <5> <9>

The display shows: “-----”

Press now successively the following keys :

for DVD723 /001 /021 /051 : <2><2><2> <0><0><2><0><0>
for DVD743 /001 /021 /051 : <2><2><2> <0><0><3><0><0>

Press <PLAY> again.

The TV screen will become BLUE during a short time to confirm that the mono board has been reprogrammed.

Figure 5-35

5.6.3 Trade Mode

When the player is in Trade Mode, the player cannot be controlled by means of the front key buttons, but only by means of the remote control.

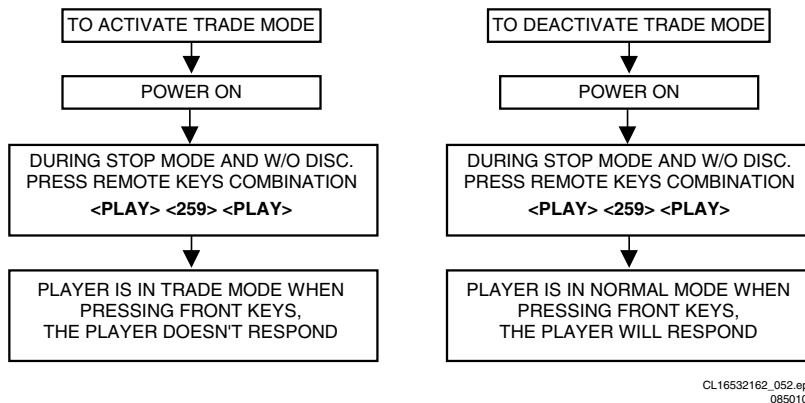

Figure 5-36

Note: To activate and deactivate the Trade Mode with the disc in the player, the procedure is similar to above, except that the remote control keys combination is pressed at the instant when the local display is flashing “READING”

5.7 Menu and Command Mode Interface

5.7.1 Layout of Results Diagnostic Nuclei

Results returned from a Diagnostic Nucleus will be displayed in the following layout:

< number >< string > [ok | ER]

< number >: is a 4-digit decimal number padded with leading zeros if its value is less than 4 digits. The first 2 digits identify the generating nucleus (or group of nuclei) while the latter 2 digits indicate the error number.

< string >: is a text string containing information about the result of the Diagnostic Nucleus.

< number > and < string > are defined in [SSD_DN] in the output sections of each Nucleus.

Examples:

1. 0001Unknown command ER @
2. 3100OK @
3. 0901Data line X is not connected to the DRAM ER@

5.7.2 Command Mode Interface

Set-up Physical Interface Components

Hardware required:

- Service PC
- one free COM port on the Service PC
- special cable to connect DVD player to Service PC

The service PC must have a terminal emulation program (e.g. OS2 WarpTerminal or Procomm) installed and must have a free COM port (e.g. COM1). Activate the terminal emulation program and check that the port settings for the free COM port are: 19200 bps, 8 data bits, no parity, 1 stop bit and no flow control. The free COM port must be connected via a special cable to the RS232 port of the DVD player. This special cable will also connect the test pin, which is available on the connector, to ground (i.e. activate test pin).

Code number of PC interface cable: 3122 785 90017

Activation

Switch the player on and the following text will appear on the screen of the terminal (program):

```

DVDv4 Diagnostic Software version 4.03
SDRAM Interconnection test passed
Basic SDRAM test passed
Front Panel Processor: SLAVE 4

(M)enu, (C)ommand (F)lash lguana or(S) 2B-interface?[M]:@ c
DD:>
  
```

CL 16532162_053.eps
080102

Figure 5-37

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the three possible interface forms. If pressing C has made a choice for Command Interface, the prompt (“DD>”) will appear. The diagnostic software is now ready to receive commands. The commands that can be given are the numbers of the nuclei.

Command Overview of Nuclei

The following table gives an overview of all available nuclei. The first column contains an identification number, the second contains the name of a nucleus and the last column indicate the description of the nucleus.

Note: User confirmation is necessary during front panel tests

Basic Diagnostic Nuclei

Ref. #	Reference Name	Remark
1	BasicSpAcc	Serial port Access test/ initialization
2a	BasicInterconDram	Data and address bus Interconnection (only for development)
2b	BasicInterconSdram	Data and address bus interconnection
3	BasicDramWrR	DRAM Write Read (only for development)
4	BasicSdramWrR	SDRAM Write Read

Processor and Peripherals

Ref. #	Reference Name	Remark

34	MiscReadConfig	Read Configuration area from NVRAM
35	MiscNvramReset	NVRAM Reset
36	MiscNvramMod	Modify NVRAM contents
46	MiscApplVer	Read version of application software
47a	MiscTrayOpenNr	Read the number of times the tray opened
47b	MiscPowerOnTime	Read the total time the player's power has been on
47c	MiscPlayTimeCddaVcd	Read the Playtime of CDDA and VCD discs
47d	MiscPlayTimeDvd	Read the Playtime of DVD discs

Basic Engine

Ref. #	Reference Name	Remark
37	BeVer	Version number
38a	BeFocusOn	Focus On
38b	BeFocusOff	Focus Off
39a	BeDiscmotorOn	Discmotor On
39b	BeDiscmotorOff	Discmotor Off
40a	BeRadialOn	Radial control On
40b	BeRadialOff	Radial control Off
41a	BeSledgeIn	Sledge Inwards
41b	BeSledgeOut	Sledge Outwards
42a	BeGroovesIn	jump Grooves to Inside
42b	BeGroovesMid	jump Grooves to Middle
42c	BeGroovesOut	jump Grooves to Outside
43a	BeTrayIn	Tray In
43b	BeTrayOut	Tray Out
44	BeReset	Reset Basic Engine
58a	LaserCdOn	CD Laser on
58b	LaserCdOff	CD Laser off
58c	LaserDvdOn	DVD Laser on
58d	LaserDvdOff	DVD Laser off
59	AudioDtsCheckComm	Check I2C communication with Motorola DSP chip

Karaoke (Not Available)

Ref. #	Reference Name	Remark
48a	KaraokeModeOff	Switch Karaoke mode off
48b	KaraokeModeOn	Switch Karaoke mode on
49	KaraokeMicInput	Check path from the microphone input to audio output
50a	KaraokeKeyOn	Set Karaoke Key to the maximum level (1200 cent)
50b	KaraokeKeyOff	Set Karaoke Key to flat octave (0 cent)
51a	KaraokeEchoOn	Set Echo Control function on
51b	KaraokeEchoOff	Set Echo Control function off

5.7.3 Menu Mode Interface**Activation**

Switch the player on and the following text will appear on the screen of the terminal (program):

```

DVDv4 Diagnostic Software version 4.03

SDRAM Interconnection test passed
Basic SDRAM test passed
Front Panel Processor: SLAVE 4

(M)enu, (C)ommand (F)lash lguana or(S) 2B-interface?[M]:@ M
                                     ↓
Press enter to go to main menu
CC:>
MAIN MENU

1  Audio          ---
2  Video          ---
3  Front Panel   ---
4  Basic Engine   ---
5  Processor Peripheral ---
6  Error Log     ---
7  Miscellaneous ---

Select>

```

CL 16532162_054.dps 080102

Figure 5-38

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose

between the four possible interface forms. If pressing M has made a choice for Menu Interface, the Main Menu will appear.

Layout of Menu and Submenu

The following menu layout will appear after starting up the DVD player in menu mode. The symbol “- - -” indicates that the current menu choice will invoke the display of a submenu. The number between [] indicates the nucleus number. These numbers will not be shown on the screen.

Menus**MAIN MENU**

- 1 Audio...
- 2 Video...
- 3 Front Panel...
- 4 Basic Engine...
- 5 Processor Peripherals...
- 6 Error Log...
- 7 Miscellaneous...

First Level Submenus**MAIN > AUDIO MENU**

- 1 Mute...
- 2 Pink Noise...
- 3 Sine Wave...
- 4 Digital Ports...

MAIN > VIDEO MENU

- 1 Colourbar...
- 2 Scart...
- 3 Digital Port...

MAIN > FRONT PANEL MENU

- 1 Slave Processor...
- 2 VFT Display [30a]
- 3 LCD Display [30b]
- 4 LCD BkLight [30c]
- 5 Keyboard [27]
- 6 LEDs [29]
- 7 Remote Control [28]
- 8 P50 Check [60]

MAIN > BASIC ENGINE MENU

- 1 Reset [44]
- 2 Version [37]
- 3 S2B...
- 4 Loader Mechanism...
- 5 Special Diagnostics...

MAIN > PROCESSOR PERIPHERALS MENU

- 1 Clock...
- 2 Flash...
- 3 NVRAM...
- 4 SDRAM Write/Read [16]

MAIN > ERROR LOG MENU

- 1 Read Last Errors [31]
- 2 Read Error Bits [32]
- 3 Reset Error Log [33]

MAIN > MISCELLANEOUS MENU

- 1 Statistics Info...
- 2 Read DVD Application version [46]

Second Level Submenus**MAIN > AUDIO > MUTE MENU**

- 1 Mute On [19a]
- 2 Mute Off [19b]

MAIN > AUDIO > PINK NOISE MENU

- 1 Pink Noise On [20a]
- 2 Pink Noise Off [20b]

MAIN > AUDIO > SINE WAVE MENU

- 1 Audio Sine On [21a]
- 2 Audio Burst On [21b]

MAIN > AUDIO > DIGITAL PORTS MENU

- 1 LFE_SEL High [56a]
- 2 LFE_SEL Low [56b]

MAIN > VIDEO > COLOURBAR MENU

- 1 Colourbar DENC On (PAL) [23a]
- 2 Colourbar DENC On (NTSC) [23c]
- 3 Colourbar DENC/MPEG Off [23b]
- 4 ProgressiveScan MPEG On [24a]
- 5 Enhanced YUV MPEG On [24b]
- 6 Set Video Out To RGB [61a]
- 7 Set Video Out To YUV [61b]

MAIN > VIDEO > SCART MENU

- 1 I2C Scart IC Check [54]
- 2 Scart To DVD [55a]
- 3 Scart Pass Through [55b]
- 4 Scart Pin 8 Low (0 to 2)V [25a]
- 5 Scart Pin 8 Mid (4.5 to 7)V [25b]
- 6 Scart Pin 8 Hi(9.5 to 12)V [25c]

MAIN > VIDEO > DIGITAL PORT MENU

- 1 Video Port Out 0xAA [17a]
- 2 Video Port Out 0x55 [17b]

MAIN > FRONT PANEL > SLAVE PROCESSOR MENU

- 1 Bus Comms Check [12]
- 2 S/W Version [26]

MAIN > BASIC ENGINE > S2B MENU

- 1 S2B Echo [13]
- 2 S2B Pass-Through [14]

MAIN > BASIC ENGINE > MECHANISM MENU

- 1 Disc Motor...
- 2 Laser...
- 3 Tray...
- 4 Focus...
- 5 Radial...
- 6 Sledge...
- 7 Grooves...

MAIN > BASIC ENGINE > SPECIAL DIAGNOSTICS MENU

- 1 Read FlashID [70]
- 2 ROM Checksum [71]

MAIN > PROCESSOR PERIPHERALS > PCM CLOCK MENU

- 1 PCM_CLK In CDDA Mode (11.3MHz) [8a]
- 2 PCM_CLK In DVD Mode (12.3MHz) [8b]
- 3 PCM_CLK In DVD96kHz Mode (24.6MHz) [8c]

MAIN > PROCESSOR PERIPHERALS > FLASH MENU

- 1 Verify FLASH Checksum [6]
- 2 Show FLASH Checksum [62]
- 3 Flash Write Access [10]

MAIN > PROCESSOR PERIPHERALS > NVRAM MENU

- 1 NVRAM Config [34]
- 2 NVRAM Reset [35]
- 3 NVRAM Modify [36]
- 4 NVRAM Read/Wr Test [15]

MAIN > MISCELLANEOUS > STATISTICS INFO MENU

- 1 Total Nr Of Times Tray Open [47a]

- 2 Total Time Power On [47b]
- 3 Total Play-Time CDDA & VCD [47c]
- 4 Total Play-Time DVD [47d]

Third Level Submenus*MAIN > BASIC ENGINE > MECHANISM > DISC MOTOR MENU*

- 1 Disc Motor On [39a]
- 2 Disc Motor Off [39b]

MAIN > BASIC ENGINE > MECHANISM > LASER MENU

- 1 CD Laser On [58a]
- 2 CD Laser Off [58b]
- 3 DVD Laser On [58c]
- 4 DVD Laser Off [58d]

MAIN > BASIC ENGINE > MECHANISM > TRAY MENU

- 1 Tray Open [43b]
- 2 Tray Close [43a]

MAIN > BASIC ENGINE > MECHANISM > FOCUS MENU

- 1 Focus On [38a] (load DVD first)
- 2 Focus Off [38b]

MAIN > BASIC ENGINE > MECHANISM > RADIAL MENU

- 1 Radial Control On [40a] (load DVD first)
- 2 Radial Control Off [40b]

MAIN > BASIC ENGINE > MECHANISM > SLEDGE MENU

- 1 Sledge Inwards [41a]
- 2 Sledge Outwards [41b]

MAIN > BASIC ENGINE > MECHANISM > GROOVES (Uses DVD) MENU

- 1 Jump ToInside Grooves [42a]
- 2 Jump ToMiddle Grooves [42b]
- 3 Jump To Outside Grooves [42c]

5.8 Nuclei Error Codes

In the following tables the error description of the error codes will be described.

5.8.1 Audio Nuclei

Error code	Error text
1880	Test successful
1800	Test successful
1900	Test successful
1920	Test successful
2000	Test successful
2020	Test successful
2100	Test successful
5600	Test successful
5620	Test successful

5.8.2 Basic Engine Nuclei

Error code	Error text
3900	Test successful
3901	"Parity error from Basic Engine to Serial"
3902	"Unexpected response from Basic Engine"
3903	"Communication time-out error"
3904	"Basic Engine returned error number 0xXX"
3921	"Parity error from Basic Engine to Serial"
3922	"Unexpected response from Basic Engine"
3923	"Communication time-out error"
3924	"Basic Engine returned error number 0xXX"
3800	Test successful
3801	"Parity error from Basic Engine to Serial"
3802	"Unexpected response from Basic Engine"
3803	"Communication time-out error"
3804	"Basic Engine returned error number 0xXX"
3805	"Focus loop could not be closed"
3820	Test successful
3821	"Parity error from Basic Engine to Serial"
3822	"Unexpected response from Basic Engine"
3823	"Communication time-out error"
3824	"Basic Engine returned error number 0xXX"
4200	Test successful
4201	"Parity error from Basic Engine to Serial"
4202	"Unexpected response from Basic Engine"
4203	"Communication time-out error"
4204	"Basic Engine returned error number 0xXX"
4205	"Sledge could not be moved to home position"
4206	"Focus loop could not be closed"
4207	"Motor not on speed within time-out"
4208	"Radial loop could not be closed"
4209	"PLL could not lock in accessing or tracking state"
4210	"Subcode or sector information could not be read"
4211	"Requested subcode item could not be found"
4212	"TOC could not be read in time"
4213	"Seek could not be performed"
4220	Test successful
4221	"Parity error from Basic Engine to Serial"
4222	"Unexpected response from Basic Engine"

5.9 Test Instruction Front Display and Audio/ Video Board

These test instruction is designed specifically for LEAD 2002 models which has the following outputs:

- Audio L/R
- Coaxial / Optical digital output
- CVBS
- Single and double SCART output
- SVHS
- Front Display

5.9.1 General

- All the waveforms measurement carried out in these test instruction will be base on the testpoint indicated in the A/V Board and Front Display schematic diagram in the Service manual.
- Impedance of the measuring-equipment should be $> 1M\Omega$
- Most of the tests can be done using either the Diagnostic software "Player script" which can be found in the chapter "Diagnostic Software description and troubleshooting" or the Menu interface using the Service PC with a terminal emulation program (e.g. Window Hyperterminal) where it is possible to control the execution of the Diagnostic Nuclei
- Setup for the measurement will be done in set level with all modules connected as shown in the Wiring Block diagram.

5.9.2 General Start-Up Measurement

Supply Check:

Before starting the measurement,ensure that all power supply are connected to the A/V and Front Display board via conn.1101 and 1114/1133.

Pin nr.	A/V Board	Front Display
Voltage	Conn. 1101	Conn. 1114/1133
1	+3V3STBY	+5VSTBY
2	+3V3STBY	+12VSTBY
3	GND	GND
4	+12VSTBY	-32V
5	GND	-
6	+5VSTBY	-
7	GND	-
8	-8V	-

Clock Check

Ensure the present of the clock to the DAC and the μP .

Clock Name	Testpoint	Frequency
PCM_CLK	I173	11.2896MHz \pm 0.02% tolerance
XOUT	S1	8MHz \pm 0.2% tolerance

Audio Mute Check

Measure the Audio mute voltage input at pin 22 of connector 1100

Status	Value
AudioMuteOn	HIGH (>3V)
AudioMuteOff	LOW (<3V)

To toggle between ON and OFF,use the following commands:

Ref.#	Command Name	Remarks
19a	AudioMuteOn	Audio Mute On
19b	AudioMuteOff	Audio Mute Off

5.9.3 Audio DAC And Amplifier

Ensure that the Audio mute signal is OFF
To check the DAC and buffer amplifier,send the following commands:

Ref.#	Command Name	Remarks	Audio output
21a	AudioSineOn	Audio Sine signal ON	Sine,1Khz on stereo
----	Press stop button	Audio Sine signal OFF	No waveform
20a	AudioPinkNoiseOn	Audio Pinknoise ON	Pink Noise on 6 channels
20b	AudioPinkNoiseOff	Audio Pinknoise OFF	No waveform

The audio signal (sine or pink noise) will also be present on the digital output (SPDIF).This can be checked by connecting digital signal to an amplifier with digital input.

Check the I2S and audio signal at the following testpoints:

Name	Testpoint
PCM_LRCLK	I172
PCM_SCLK	I175
PCM_CLK	I173
PCM_DATA0	I174
PCM_DATA1	NA
PCM_DATA2	NA
DIG_OUT	I235
AUDIO L/R OUT	I226 / I236
FRONT L/R OUT	NA
SURROUND L/R OUT	NA
CENTRE OUT	NA
SUB WOOFER L/R OUT	I165

All waveforms can be refered to the A/V board schematic diagram.

5.9.4 Video Output And Buffer Amplifier

Check DC output-level at all video cinch output : 1.0V DC \pm 10%

Generate a color bar using the following software commands:

Ref.#	Command Name	Remarks
23a	VideoColDencOn	Colour DENC ON
23b	VideoColDencOff	Colourbar DENC OFF

Check the video outputs at the following testpoints:

Name	Testpoint
BLUE	I123
GREEN	I124
RED	I125
CVBS out	I180 / I195 / I145
S-Video-C out	I122
S-Video-Y out	I121

Il waveforms can be refered to the A/V board schematic diagram.

5.9.5 Play and 16/9 Detection

Check 0/6/12 signal on pin 8 of the SCART connector 1130 and change the input with the following commands:

Ref.#	Command Name	Remarks
25a	VideoScartLo	Sends out 0V \pm 0.5V
25b	VideoScartMi	Sends out 6V \pm 10%
25c	VideoScartHi	Sends out 12V \pm 10%

Since in SD4 based single SCART players, pin 8 output is determined by SCART0 and standby control signal. Since standby control must be LOW when diagnostic is running, we can only set pin 8 to 6V or 12 V.

5.9.6 Kill Circuit

To check the functionality of the Kill circuitry, the audio outputs has to be present by the following command:

Ref.#	Command Name	Remarks	Audio output
21a	AudioSineOn	Audio Sinewave ON	1kHz tone

Check the audio outputs at the audio cinch of the A/V board: 1kHz tone

Activate the Kill circuit by using the following command:

Ref.#	Command Name	Remarks
19a	AudioMuteOn	Audio Mute On

Check the audio outputs at the audio L/R cinch and SCART of the A/V board: No waveform

Switch off the kill circuit by using the following command:

Ref.#	Command Name	Remarks
19b	AudioMuteOff	Audio Mute Off

Check the audio outputs at the audio L/R cinch and SCART of the A/V board: 1kHz tone

5.9.7 Digital Silence

Digital silence is a signal from the audio DAC, KILL_LR, when there is no input to the audio DAC, or when the player is in STOP/PAUSE mode, or during disc changing track.

To check the KILL_LR signal, use the following command and check the voltage level at pin 16 of 7200:

Ref.#	Command Name	Remarks	KILL_LR signal
21a	AudioSineOn	Audio Sinewave ON	LOW (<0.3V)
---	Press STOP button	Audio Sine signal OFF	HIGH (>4.5V)

5.9.8 Front Display

To check the segment display of the FTD, the following command can be used. And for full detail description of the test, refer to the chapter of "Diagnostic Software Player Script" which can be found in chapter "Diagnostic Software Description and Troubleshooting"

Ref.#	Command Name	Remarks
30a	DispDisplay	Turn ON local display

5.9.9 IR Receiver

Check at pin 22 of 7101 and observe if this line switches from LOW (<0.3V) to HIGH (>4.5V) when pressing a key on a philips RC5 or RC6 remote control

5.9.10 P50 Interface (Only for DVD743 model)

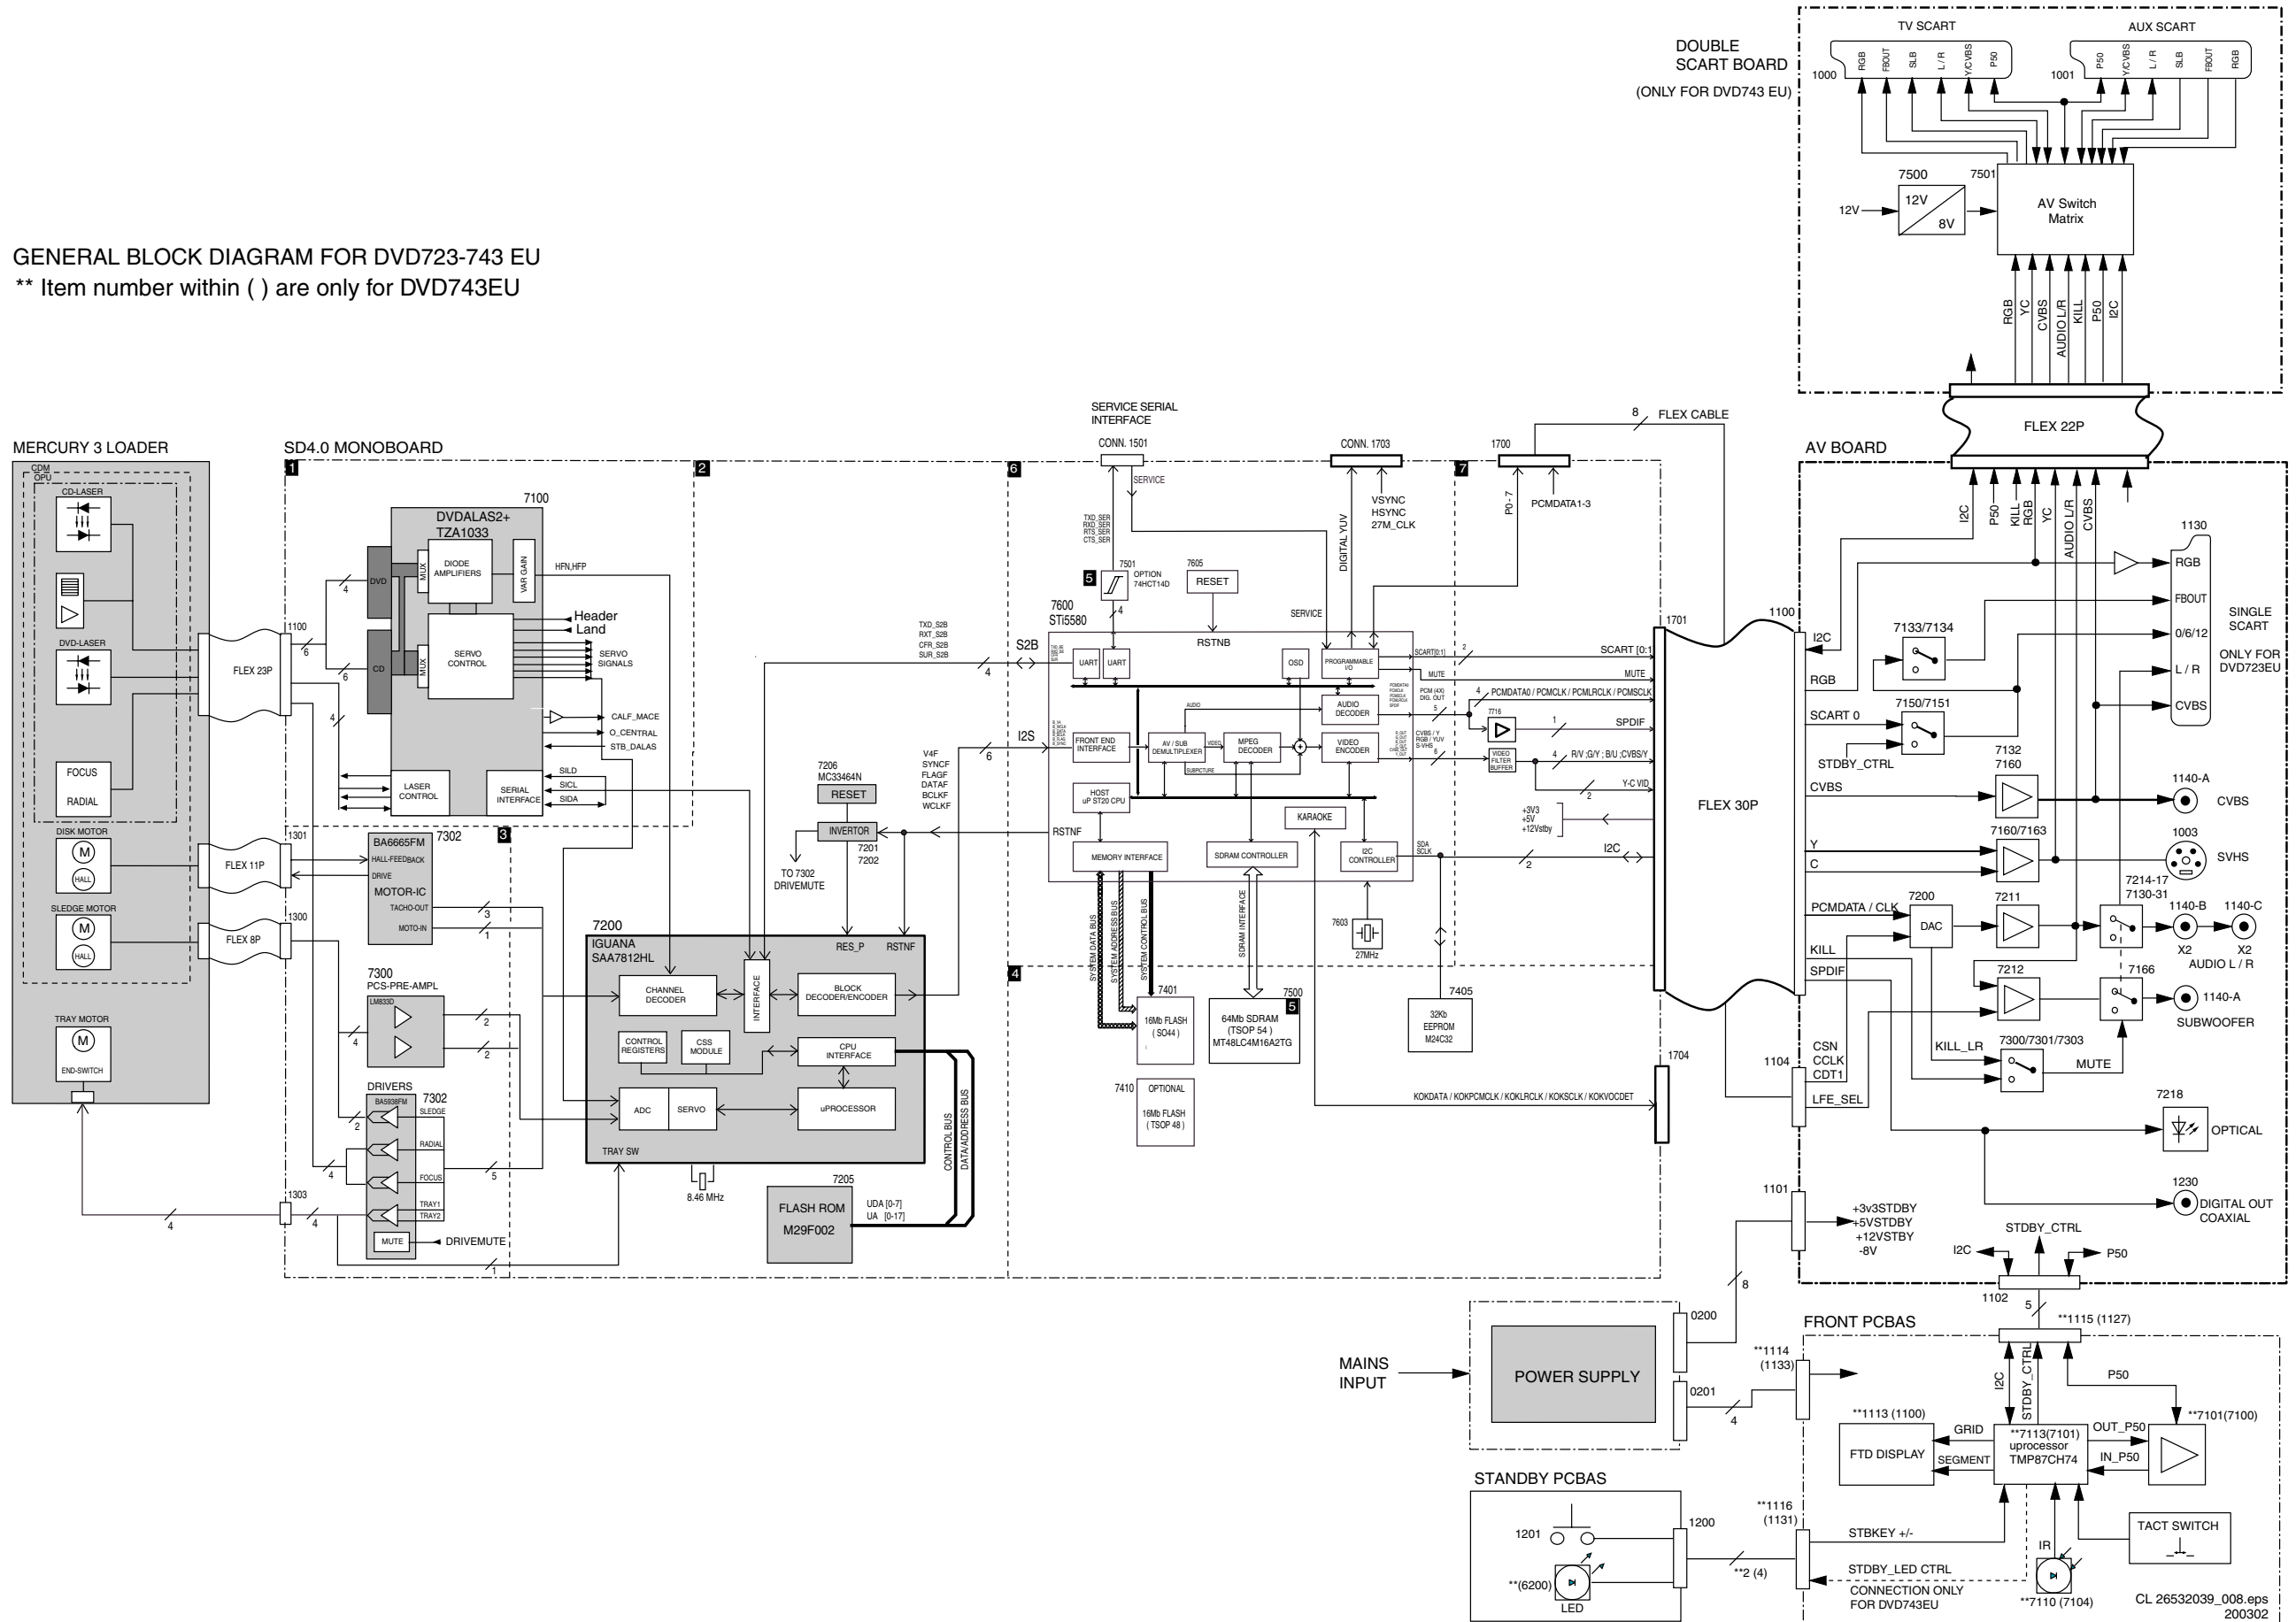

P50 (or Easylink) is a bi-directional serial interface for communication between video equipment. To check for the functionality of the P50 Interface, refer to the chapter of 'Diagnostic Software Player Script' for full detail description.

8. Alignments

Not applicable.

9. Circuit Descriptions, List of Abbreviations, and IC Data

Index of this chapter:

1. Introduction
2. Power Supply
3. Loader/Mono Board
4. Control and Display
5. Audio/Video (A/V) and SCART
6. Abbreviation list
7. IC Data

Notes:

- Figures can deviate slightly from the actual situation, due to different set executions.
- For a good understanding of the following circuit descriptions, please use the diagrams in chapter 6 and 7.

9.1 Introduction

The DVD7xx range (723, and 743) is a fourth generation DVD players. Some of their features are:

- MP3 playback.
- 3D Sound.
- Auto power off (after 15 min.).
- Build in MPEG2, MP3, and AC-3 decoder.
- CD-R(W) compatible.
- DVD+R(W) compatible.
- RGB video output on SCART.

Panel Overview

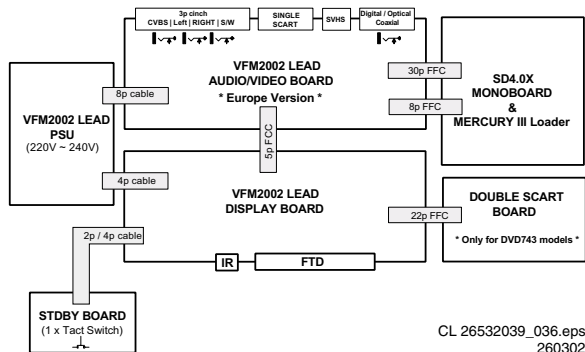

Figure 9-1

The DVD723/743 uses the new SD4.0 loader module. It also has a separate Audio/Video, Display board and a dedicated power supply (based on the VFM2002 type).

This SD4.0 mono board has the same service (ComPair) connector as in previous versions.

Flashing of the application-SW is not possible via the ComPair cable, only with a CD-R disc.

For sets with mask-ROM software, replace it with a programmed Flash (available via your Philips Service organisation).

9.2 Power Supply

9.2.1 Introduction

The supply is a Switching Mode Power Supply (SMPS), which uses the control IC TY720xx to produce pulses to drive the power 'switch' (MOSFET). The TY720xx (item 7130) is a high performance, current mode controller for DC-to-DC converter applications.

The operation frequency varies with the circuit load. When the output power demand decreases, the switching frequency raises, with a maximum frequency of 125 kHz (determined by C2107 at pin 5). At this point, the internal VCO takes over and starts to decrease the switching frequency.

This has some benefits compared to a 'fixed frequency' flyback converter. The efficiency is better, which results in a lower power consumption.

9.2.2 Output Voltages

PSU Connection

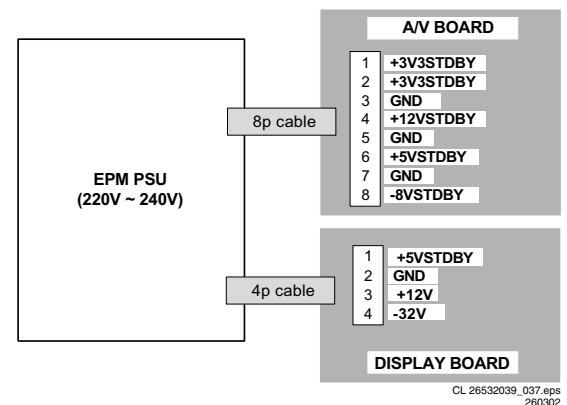

Figure 9-2

The following voltages are connected to the A/V board and Front Display board via connectors 1101 and 1114 (1133) respectively:

- +12VSTBY, 470 mA.
- +5VSTBY, 400 mA.
- +3V3STBY, 1200 mA.
- -8V, 30 mA.
- -32V, 16 mA.

The +12VSTBY, on pin 4 of connector 1101, is further divided into the following voltage:

- +5V_DAC (via voltage regulator 7423), supply to audio DAC, and OpAmp filter.

The +5VSTBY, on pin 6 of connector 1101, is further divided into the following voltages:

- +5V, supply to SD4.0 mono board.
- +5VM, supply for analogue circuitry.

The suffix 'STBY', indicates that the supply is not switched 'off' during Standby Mode. Power switching is done **on the A/V board** with the STBY_CTRL signal from the slave processor.

Power Switching

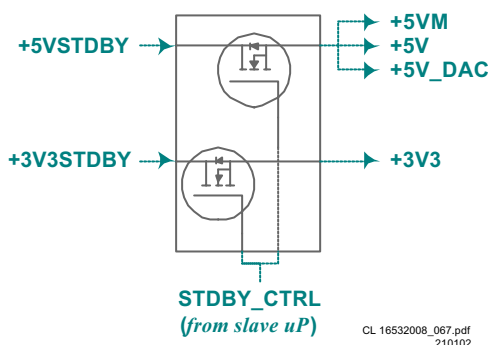

Figure 9-3

The derived voltages +3V3, +5V, and +5V_DAC are switched 'off' during Standby Mode with a MOSFET (see items 7308, 7309, and 7506 on diagram A3).

The -8V is regulated to -5.5V via transistor 7304 and zenerdiode 6308, and is switched 'off', with transistor 7305, during Standby Mode.

The -32V is not switched 'off' during Standby Mode.

9.2.3 Operation

Mains Input Circuit

The bridge rectifier (D6110-D6113), direct after the mains filter 5115, rectifies the mains voltage, after which C2116 smoothens it. The DC voltage across this capacitor is the DC input voltage (HV= approximately 300 V), to pin 9 of transformer T5190 and pin 1 of IC7130.

Start-up Circuitry

The rectified voltage from the bridge rectifier is connected to pin 1 via L5130. It will charge the VCC capacitor (C2131). When this voltage, (at pin 13 of 7130), reaches the start-up threshold of min 15 V, the control circuit starts to operate. After start-up, IC 7130 requires a sinking current, which the start-up circuitry cannot deliver. Therefore, a take-over circuitry (a coupled winding of transformer L5190) is present. The voltage here will take over the supply voltage at pin 13 of the IC. If the take-over circuit does not function, the IC will switch 'off' again at the minimal operating voltage of +8 V. The whole operation cycle will repeat itself with audible hiccup sound if take-over is not present.

Secondary Voltage Sensing

The secondary voltage regulating circuit comprises of opto-coupler 7190 (which isolates the error signal from the control IC on the primary side), and a reference component 7290 (TL431) with the following functions:

- A very stable and accurate reference diode.
- A high gain amplifier.

TL431

Figure 9-4

When the output voltage increases (due to a reduction in the load), the voltage across R3290+R3291 increases to above the internal reference voltage of 2.5 V. Item 7290 will conduct and the current through the opto-coupler will increase. This results in an increase of the voltage at pin 4 of 7130, which will reduce the 'on' time of FET 7125. In the event of an output voltage decrease (due to an increase in the load), the control circuit will operate in the opposite way.

Primary Current Sensing

The current through FET 7125 will result in a voltage drop across R3120/21/22 (RSENSE). This line goes to pin 11 of 7130, which is the current sense input. The higher the input voltage, the more the primary current is limited. In this way, the maximum output power of the power supply is limited.

Under-voltage Protection

If the supply voltage at pin 13 drops below 7.2 V (typical), e.g. due to a shorted secondary voltage or excessive load, the drive pulse at pin 12 is disabled and the controller will switch 'off'.

Over-voltage Protection

An internal over-voltage protection circuitry continuously monitors the VCC pin. If, after start-up, this voltage exceeds 40 V, the internal latch circuit is triggered, the output buffer is disabled, and the SMPS goes into over-voltage protection. Now a complete restart sequence is required.

Note: If the event of the over-voltage situation remains present, the SMPS will go in sequence of protection, start-up, protection and the cycle repeats. This effect is highly audible.

9.3 Loader/Mono Board

For an extensive circuit description of the SD4.0 Loader/Monoboard, see the **SD4.0 Service Manual 3122 785 12230**.

9.4 Control and Display

Note: There are two different Display panels used, due to different models (DVD723 and DVD743). Both panels will have the same description, except the item number will be different and it will be displayed as XX/YY, where XX refer to the DVD723 Display panel and YY refer to the DVD743 Display panel.

9.4.1 Control

The most important component on this board is the (slave) microprocessor (item 7113/7101). It runs on an 8MHz system clock generated with a ceramic resonator.

After the RESET pulse (active LOW), the STB_CTRL line (pin 21, item 7113/7101) will release the reset of the host uP (on the mono board) via the switched 3V3 supply (see circuit around item 7605 on mono board).

Other slave processor functions are:

- Generation of a scanning grid for the keys.
- Generation of the display grid and segment scanning.
- Generation of a square signal to generate the filament voltage for FTD display.
- Input for RC5/6 remote control protocol. The logic is HIGH > 4.5V and LOW < 0.3V.

Standby LED (only for DVD743 models)

Transistor 7105 drives the Standby LED. When the STBY_LED signal from the slave processor is 'high', the LED is 'off'.

Key Matrix

When a key on the local keyboard is pressed, the signal at the scanning pins of the microprocessor goes from +5V to 0V.

IR Receiver

The IR controller in the slave processor handles both RC5 and RC6 signals. The logic is +5V for 'high' and 0V for 'low'.

P50 Interface (only for DVD743 models)

P50 (or Easylink) is a bi-directional serial interface for communication between video equipment. For European sets, this communication goes via pin 10 of the double SCART.

FTD Display

The slave uP drives the 11-segment FTD. It provides a negative DC switching drive voltage. As the display consists of eleven segments, there are eleven grid signals (G1-G11) controlling each respective grid.

The slave processor has an internal square signal generator (42 kHz), to generate the AC filament voltage. TS7105/7103 and 7106 amplify the square signal before it is applied to the display ($V_{AC} = V_{FIL_1} - V_{FIL_2}$, $V_{RMS} \approx 2.4V$). The necessary power supply of -26V is derived (via zener diode 6101) from the -32V supply directly from the Switching Mode Power Supply (SMPS).

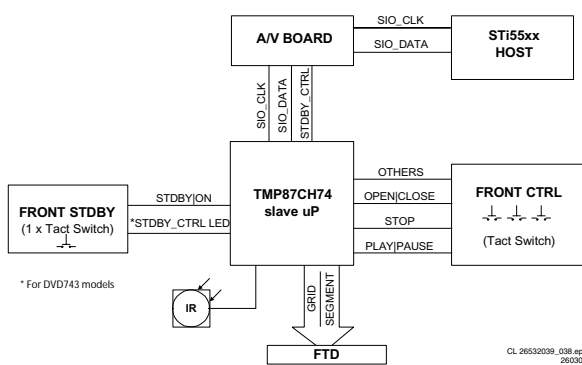

Slave Processor Interface

Figure 9-5

The block diagram above, illustrates the interfaces of the slave uP. The start-up sequence is as follows:

1. The required IC voltage is the +5VSTBY, which is present during Standby Mode.
2. When the RESET circuit (7108/7102) is triggered by the +5VSTBY, the slave uP initialises.
3. This will set the STDBY_CTRL signal to LOW, which will switch on the +3V3 and +5V.
4. Once these voltages are provided, the host uP (on the SD4.0 mono board) will reset.
5. Now, the host uP will initialise, and indicate the slave uP to activate the Standby Mode (STBY_CTRL) signal.
6. The player wakes up from the Standby Mode when any button is pressed on the front panel, or when the 'Power' button is pressed on the Remote Control.

Note: The slave uP will not reset successfully if the 8MHz clock oscillator has not stabilised (check on pin 8 of item 7113/7101).

9.5 Audio/Video (A/V) and SCART

The video output from the STi55xx is RGB, YC and CVBS. These signals enter the A/V Board via connector 1100. All these analogue video signals, from the SD4.0 Monoboard, first go through the transistor (item 7168, 7169, 7170, 7160, 7161, 7162, 7163, 7164, 7132) for impedance matching before going directly to the cinch, SVHS and SCART connector. However for double scart models, the RGB signals go directly to the SCART connector 1103.

The '0/6/12' switch signal on pin 8 of the single SCART connector, depends on the logic state of two other signals: SCART0 from the μ P and STBY_CTRL from the slave μ P.

This is done according to the following table:

Status Truth Table

SCART_0	STBY_CTRL	0/6/12	Function
0	0	12V	4:3 aspect ratio DVD
0	1	0V	TV display
1	0	6V	16:9 aspect ratio DVD
1	1	0V	TV display

Figure 9-6

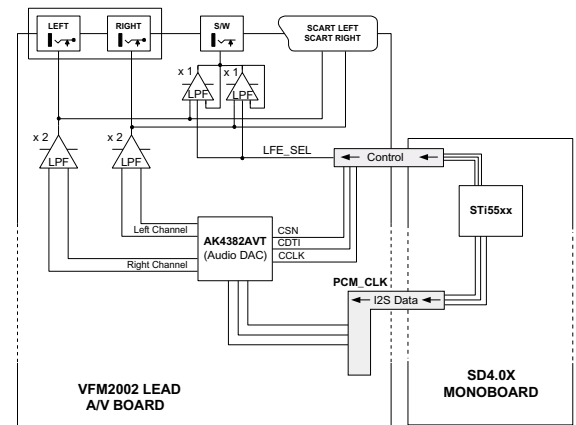

9.5.1 Audio Path**Audio DAC circuitry**

Figure 9-7

The STi55xx supplies I2S data and PCM_CLK master clock to the new audio DAC (item 7200, AK4382AVT).

The decoded analogue output of both left and right channel is balanced. These are filtered (3-pole LPF) and amplified with OpAmp LM833 (item 7211). The gain of this OpAmp is two times.

There is only 2X two stereo output from the A/V Board, a subwoofer, and Digital audio out on coaxial and optical connector.

The audio DAC accepts only +5V inputs with +3V3 tolerance. During STDBY mode, there will be no power to the audio DAC. The registers of the audio DAC are in their default values each time the power to the IC is cut-off. The slave uP is required to program the DAC each time after exiting from STDBY mode. This requires three signal lines.

- CSN - Chip Select Pin.
- CCLK - Control Clk Input Pin.
- CDTI - Control Data Input Pin in Serial Mode.

CCLK and CDTI are connected to P1 and P2 of host uP (via conn 1104) respectively for communication between the slave uP and STi55xx.

The host uP (STi55xx) will indicate the slave uP when to program the audio DAC after waking up from STDBY mode.

The audio MUTE signal depends on the logic state of two other signals:

- KILL: This signal comes from the host processor (STi55xx) and is meant to mute the outputs during switch on/off.
- KILL_LR: This is a signal from the audio DAC, when it receives no input for a certain time (8192 LRCK cycles). It can be tested in STOP, PAUSE and during track changes. The logic level for the MUTE signal is -3V < LOW < 0V and 0V < HIGH < +3V.

Mute Truth Table

KILL	KILL_LR	MUTE	Function
0	0	0	Output is not muted.
0	1	1	Output is muted.
1	0	1	Output is muted.
1	1	1	Output is muted.

9.6 Abbreviation list

ADC	Analogue to Digital Converter
AM	Amplitude Modulation
AV	External Audio Video
BE	Basic Engine
ComPair	Computer aided rePair
CD-DA	CD Digital Audio
CS	Chip Select
CVBS	Composite Video Blanking and Synchronisation
DAC	Digital to Analogue Converter
DFU	Direction For Use: description for the end user
DNR	Dynamic Noise Reduction
DRAM	Dynamic RAM
DSD	Direct Stream Digital
DSP	Digital Signal Processing
DTS	Digital Theatre Sound
DVD	Digital Versatile Disc
EMI	External Memory Interface (ST155xx)
EXT	External (source), entering the set via SCART or Cinch
FFC	Flat Foil Cable
FLASH	Flash memory
FM	Frequency Modulation
FTD	Fluorescent Tube Display
HP	Headphone
HPF	High Pass Filter
HW	Hardware
I2C	Integrated IC bus
I2S	Integrated IC Sound bus
IC	Integrated Circuit
IF	Intermediate Frequency
IR	Infra Red
IRQ	Interrupt Request
LED	Light Emitting Diode
LPCM	Linear Pulse Code Modulation
LPF	Low Pass Filter
LRCLK	Left/Right clock
LVTTTL	Low Voltage Transistor Transistor Logic (3.3V logic)
MPEG	Motion Pictures Experts Group
NC	Not Connected
NTSC	National Television Standard Committee. Colour system mainly used in North America and Japan. Colour carrier NTSC M/N = 3.579545 MHz, NTSC 4.43 = 4.433619 MHz (this is a VCR norm, it is not transmitted off-air)
NVM	Non Volatile Memory: IC containing TV related data e.g. alignments
OC	Open Circuit
OSD	On Screen Display
P50	Project 50 or Easy Link
PAL	Phase Alternating Line. Colour system mainly used in West Europe (colour carrier = 4.433619 MHz) and South America (colour carrier PAL M = 3.575612 MHz and PAL N = 3.582056 MHz)
PCB	Printed Circuit Board (see PWB)
PCM	Pulse Code Modulation
PCM_CLK	Audio system clock for DAC

PCM_OUTx	Audio serial output data
PSU	Power Supply Unit
PWB	Printed Wiring Board (see PCB)
RAM	Random Access Memory
RC	Remote Control handset
RC5/6	Remote Control system 5/6, signal from/to the remote control receiver
RGB	Red, Green and Blue colour space
ROM	Read Only Memory
SCART	Syndicat des Constructeurs d'Appareils Radiorecepteurs et Televisieurs
SCL	Serial Clock I2C
SCLK	Audio serial bit clock
SDA	Serial Data I2C
SDRAM	Synchronous DRAM
S/PDIF	Sony Philips Digital InterFace
SRAM	Static RAM
STBY	Standby
SVCD	Super Video CD
SVHS	Super Video Home System
SW	Software
THD	Total Harmonic Distortion
TTL	Transistor Transistor Logic (5V logic)
TXT	Teletext
uP	Microprocessor
VCD	Video CD
Y/C	Luminance (Y) and Chrominance (C) signal
YUV	Component video
0/6/12	SCART switch control signal on A/V board. 0 = loop through (AUX to TV), 6 = play 16:9 format, 12 = play 4:3 format

9.7 IC Data

In this paragraph, the internal block diagrams and pinning are given of ICs that are drawn as 'black box' in the electrical diagrams (with the exception of 'memory' and 'logic' ICs).
