## Product highlights

### i.LINK

Also known as IEEE 1394 and FireWire. i.LINK is the worldwide standard for connecting digital video devices, used on digital home video equipment such as DV and D8 camcorders, as well as PCs. Conveniently, it carries all audio and video signals via a single cable.

With i.LINK Digital Video input you can copy your home videos in their original digital picture quality.

### Two-way compatibility

DVD Recorders can play regular DVD-Video discs, but equally important is that DVD+R and DVD+RW discs recorded on them can be played on existing DVD-Video players.

### MP3-CD playback

MP3 stands for 'MPEG 1 Audio layer-3'. MP3 is a revolutionary compression technology by which large digital music files can be made up to 10 times smaller without radically degrading their audio quality. MP3 has become the standard audio compression format used on the world-wide web allowing quick and easy file transfer.
