Important notes for users in the U.K.

Mains plug

This apparatus is fitted with an approved 13 Amp plug. To change a fuse in this type of plug proceed as follows:

- 1 Remove fuse cover and fuse.
- **2** Fix new fuse which should be a BS1362 5 Amp, A.S.T.A. or BSI approved type.
- **3** Refit the fuse cover.

If the fitted plug is not suitable for your jack outlets, it should be cut off and an appropriate plug fitted in its place.

If the mains plug contains a fuse, this should have a value of 5 Amp. If a plug without a fuse is used, the fuse at the distribution board should not be greater than 5 Amp.

Note: The severed plug must be disposed to avoid a possible shock hazard should it be inserted into a 13 Amp jack elsewhere.

How to connect a plug

The wires in the mains lead are coloured with the following code: blue = neutral (N), brown = live (L).

- As these colours may not correspond with the colour markings identifying the terminals in your plug, proceed as follows:
 - Connect the blue wire to the terminal marked N or coloured black.
 - Connect the brown wire to the terminal marked L or coloured red.

- Do not connect either wire to the earth terminal in the plug, marked E (or $\frac{1}{2}$) or coloured green (or green and yellow).

Before replacing the plug cover, make certain that the cord grip is clamped over the sheath of the lead - not simply over the two wires.

Introduction

Supplied accessories

Remote Control and two AA batteries

Care and safety information

Power consumption

When the system is switched to
 Standby mode, it is still consuming power.
 To disconnect the system from the power supply completely, remove the AC power plug from the wall jack.

• Avoid high temperatures, moisture, water and dust

 Do not expose the player, batteries or discs to humidity, rain, sand or excessive heat (caused by heating equipment or direct sunlight.)

Avoid condensation problem The lens may cloud over when the

player is suddenly moved from cold to warm surroundings, making it impossible to play a disc. Leave the player in the warm environment until the moisture evaporates.

6

Do not block the vents

 Do not operate the DVD Player in an enclosed cabinet, allow about 10 cm (4 inches) of free space all around the player for adequate ventilation.

• Care of the cabinet

 Use a soft cloth slightly moistened with a mild detergent solution. Do not use a solution containing alcohol, spirits, ammonia or abrasives.

Finding a suitable location Place the player on a flat, hard, and

stable surface.

Disc handling

 To clean a CD, wipe it in a straight line from the center towards the edge using a soft, lint-free cloth. A cleaning agent may damage the disc!

 Write only on the printed side of a CDR(W) and only with a soft felttipped pen.

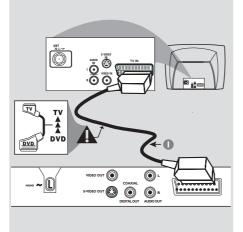

- Handle the disc by its edge, do not touch the surface.

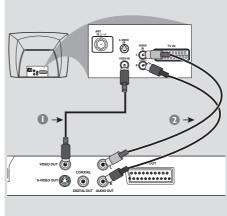

Connecting TV

IMPORTANT!

- You only need to make <u>one</u> video connection from the following options, depending on the capabilities of your TV system.

- Connect the DVD system directly to the TV.

- SCART connection will let you use the features of both the Audio and Video in the DVD Player.

Using SCART jack

 Use the SCART cable (black) to connect the DVD Player's SCART jack (TV OUT) to the corresponding Scart input jacks on the TV (cable not supplied).

Helpful Hint:

- Ensure that the "TV" indication on SCART cable is connected to the TV set and "DVD" indication on SCART cable is connected to the DVD Player.

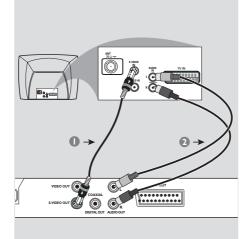

7

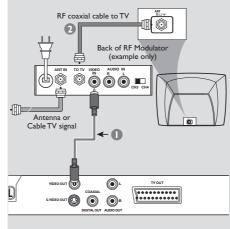

Using Composite Video jacks (CVBS)

- Use the composite video cable (yellow) to connect the DVD Player's CVBS (VIDEO OUT) jack to the video input jack (or labeled as A/V In,Video In, Composite or Baseband) on the TV (cable not supplied).
- To hear the sound of this DVD Player through your TV, use the audio cables (white/red) to connect AUDIO OUT (L/ R) jacks of the DVD Player to the corresponding AUDIO IN jacks on the TV (cable not supplied).

01-32 DVP520_051

Connections

IMPORTANT!

- S-Video connection provides better picture quality. This option must be available on your TV.

Using S-Video jack

- Use the S-video cable to connect the DVD system's S-VIDEO OUT jack to the S-Video input jack (or labeled as Y/C or S-VHS) on the TV (cable not supplied).
- To hear the sound of this DVD Player through your TV, use the audio cables (white/red) to connect AUDIO OUT (L/ R) jacks of the DVD Player to the corresponding AUDIO IN jacks on the TV (cable not supplied).

8

IMPORTANT!

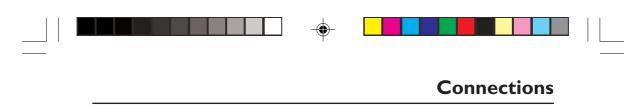

- If your TV only has a single Antenna In jack (or labeled as 75 ohm or RF In,) you will need an RF modulator in order to view the DVD playback on the TV. See your electronics retailer or contact Philips for details on RF modulator availability and operations.

Using an accessory RF modulator

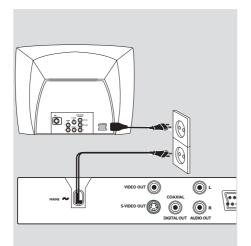

- Use the composite video cable (yellow) to connect the DVD Player's CVBS (VIDEO OUT) jack to the video input jack on the RF modulator.
- Use the RF coaxial cable (not supplied) to connect the RF modulator to your TV's RF jack.

8

01-32 DVP520_051

Connecting the power cord

After everything is connected properly, plug in the AC power cord to the power outlet.

Never make or change any connections with the power switched on.

When no disc is loaded, press STANDBY ON on the DVD Player front panel,

"NO DISE" may appear on the display panel.

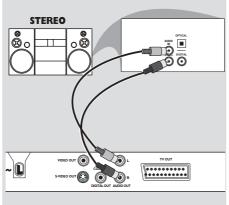

9

Connections

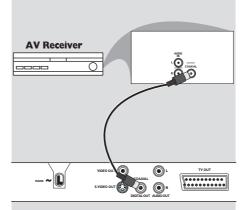

Optional: Connecting to an Audio System

Stereo system has Dolby Pro Logic or Right / Left Audio In jack

- Select one of the video connections (VIDEO IN, S-VIDEO IN or SCART jack (TV IN) depending on the options available on your TV.
- Use the audio cables (white/red) to connect AUDIO OUT (L/R) jacks of the DVD Player to the corresponding AUDIO IN jacks on the stereo system (cable not supplied).

Optional: Connecting Digital AV Receiver

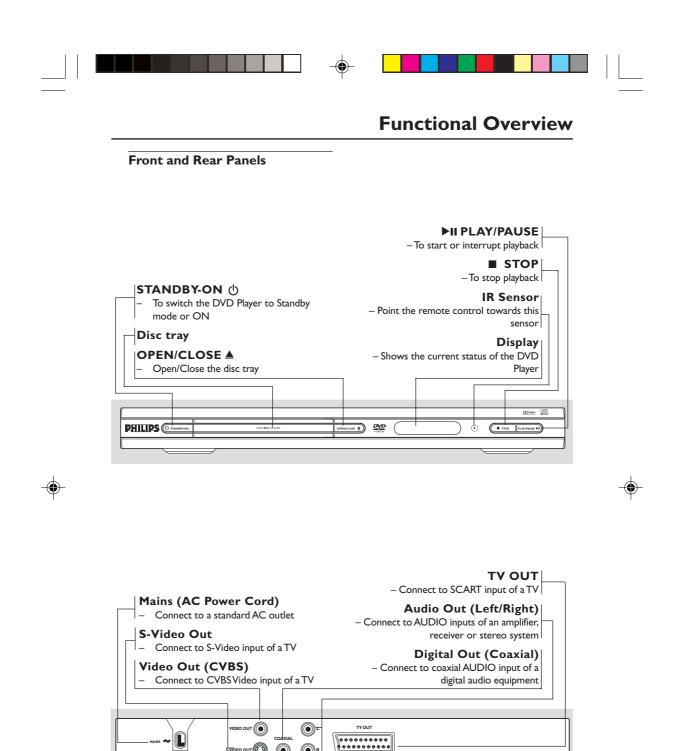

Receiver has a PCM, Dolby Digital, or MPEG2 decoder

- Select one of the video connections VIDEO IN, S-VIDEO IN or SCART jack (TV IN) depending on the options available on your TV.
- Connect the COAXIAL jack of the DVD Player to the corresponding Digital Audio In jack on your Receiver (cable not supplied).
- Set the DVD Player's Digital Output to PCM-ONLY or ALL depending on the capabilities of your Receiver (see page 23 "Digital Output").

Helpful Hint:

 If the audio format of the Digital Output does not match the capabilities of your receiver, the receiver will produce a strong, distorted sound or no sound at all.

Caution: Do not touch the inner pins of the jacks on the rear panel. Electrostatic discharge may cause permanent damage to the unit.

01-32 DVP520_051

- Open the battery compartment.
- Insert two batteries type R06 or AA, following the indications (+ -) inside the compartment.
- Close the cover.

Using the Remote Control to operate the Player

- Aim the Remote Control directly at the remote sensor (IR) on the front panel.
- Do not put any objects between the Remote Control and the DVD Player while operating the DVD Player.

C

CAUTION!

Remove batteries if they are exhausted or if the Remote Control is not being used for a long time.
Do not use old and new or different types of batteries in combination.

- Batteries contain chemical substances, so they should be disposed properly.

Getting Started

Step 2: Setting up the TV

IMPORTANT!

Make sure you have completed all the necessary connections. (See pages 7-8 "Connecting TV").

Turn on the TV and set to the correct video-in channel. You should see the blue Philips DVD background screen on the TV.

→ Usually these channels are between the lowest and highest channels and may be called FRONT, A/V IN, or VIDEO. See your TV manual for more details.

→ Or, you may go to channel 1 on your TV, then press the Channel down button repeatedly until you see the Video In channel.

→ Or, the TV Remote Control may have a button or switch that chooses different video modes.

 \rightarrow Or, set the TV to channel 3 or 4 if you are using an RF modulator.

If you are using external equipment, (eg. audio system or receiver), turn it on and select the appropriate input source for the DVD Player output. Refer to the equipment owner's manual for detail.

Troubleshooting

WARNING

Under no circumstances should you try to repair the system yourself, as this will invalidate the warranty. Do not open the system as there is a risk of electric shock.

۲

If a fault occurs, first check the points listed below before taking the system for repair. If you are unable to remedy a problem by following these hints, consult your dealer or Philips for help.

| Problem | Solution |
|---|--|
| No power | Check if the AC power cord is properly connected. Press the STANDBY ON on the front of the DVD system to turn on the power. |
| No picture | Refer to your TV's manual for correct Video In channel selection. Change the TV channel until you see the DVD screen. Check if the TV is switched on. |
| Distorted picture | Sometimes a small amount of picture distortion may appear depending on the disc being played back. This is not a malfunction. |
| Completely distorted picture or black/white picture with DVD | Connect DVD Player directly to the TV. Make sure the disc is compatible with the DVD Player. Ensure that the DVD Player's TV Type is set to match that of the Disc and your TV. |
| No sound or distorted sound | Adjust the volume. Ensure to select stereo output on your disc (except multichannel). Check that the speakers are connected correctly. Ensure that the DTS disc also supports Dolby Digital output. |
| No audio at digital output | Check the digital connections. Check if your receiver can decode MPEG-2 or DTS and if not, please make sure the digital output is set to PCM. Check if the audio format of the selected audio language matches your receiver capabilities. |
| No sound and picture | Check that the SCART cable is connected to the correct device (See Connecting TV). |
| Disc can't be played | The DVD+R/CD-R must be finalized. Ensure the disc label is facing up. Check if the disc is defective by trying another disc. If you have recorded a Picture CD or MP3 CD yourself, ensure that your disc contains at least 10 pictures or 5 MP3 tracks. Region code incorrect. |
| Picture freezes momentarily during playback | - Check the disc for fingerprints/scratches and clean with a soft cloth wiping from centre to edge. |

Glossary

Analog: Sound that has not been turned into numbers. Analog sound varies, while digital sound has specific numerical values. These jacks send audio through two channels, the left and right.

Aspect ratio: The ratio of vertical and horizontal sizes of a displayed image. The horizontal vs. vertical ratio of conventional TVs. is 4:3, and that of wide-screens is 16:9.

AUDIO OUT Jacks: Jacks on the back of the DVD System that send audio to another system (TV, Stereo, etc.).

Bit Rate: The amount of data used to hold a given length of music; measured in kilobits per seconds, or kbps. Or, the speed at which you record. Generally, the higher the bit rate, or the higher the recording speed, the better the sound quality. However, higher bit rates use more space on a Disc.

Chapter: Sections of a picture or a music piece on a DVD that are smaller than titles. A title is composed of several chapters. Each chapter is assigned a chapter number enabling you to locate the chapter you want. **Disc menu:** A screen display prepared for allowing selection of images, sounds, subtitles, multi-angles, etc recorded on a DVD.

Digital: Sound that has been converted into numerical values. Digital sound is available when you use the DIGITAL AUDIO OUT COAXIAL or OPTICAL jacks. These jacks send audio through multiple channels, instead of just two channels as analog does.

Dolby Digital: A surround sound system developed by Dolby Laboratories containing up to six channels of digital audio (front left and right, surround left and right, center and subwoofer).

DTS: Digital Theater Systems. This is a surround sound system, but it is different from Dolby Digital. The formats were developed by different companies. **JPEG:** A very common digital still picture format. A still-picture data compression system proposed by the Joint Photographic Expert Group, which features small decrease in image quality in spite of its high compression ratio.

MP3: A file format with a sound data compression system. "MP3" is the abbreviation of Motion Picture Experts Group 1 (or MPEG-1) Audio Layer 3. By using MP3 format. one CD-R or CD-RW can contain about 10 times as much data volume as a regular CD can. **Multichannel:** DVD is specified to have each sound track constitute one sound field. Multichannel refers to a structure of sound tracks having three or more channels.

Parental Control: A function of the DVD to limit playback of the disc by the age of the users according to the limitation level in each country. The limitation varies from disc to disc; when it is activated, playback will be prohibited if the software's level is higher than the user-set level.

<u>PCM (Pulse Code Modulation):</u> A system for converting analog sound signal to digital signal for later processing, with no data compression used in conversion.

Playback control (PBC): Refers to the signal recorded on video CDs or SVCDs for controlling reproduction. By using menu screens recorded on a Video CD or SVCD that supports PBC, you can enjoy interactive-type software as well as software having a search function.

Region code: A system for allowing discs to be played back only in the region designated beforehand. This unit will only play discs that have compatible region codes. You can find the region code of your unit by looking on the product label. Some discs are compatible with more than one region (or ALL regions).

S-Video: Produces a clear picture by sending separate signals for the luminance and the color. You can use S-Video only if your TV has S- video In jack. **Title:** The longest section of a picture or music feature on DVD, music, etc., in video software, or the entire album in audio software. Each title is assigned a title number enabling you to locate the title you want. **VIDEO OUT jack:** Jack on the back of the DVD System that sends video to a TV.
