

# COMPACT LIGHTWEIGHT SPIDER FOR RELIABLE COMMUNICATION

Over 25 years of experience with successful combat radio equipment such as the PRC/VRC 3600 and 4600 are the solid basis of Signaal's portable combat net radio SPIDER.

Its extremely low weight of 2.4 kgs and small volume, in combination with excellent communication features make SPIDER undeniably unique in the field.

SPIDER is fit for both voice and data communication and operates in the extended frequency range of 30 to 108 MHz. A simple keyboard, a single rotary switch and a clearly readable LCD with adjustable illumination render SPIDER easy to operate under all conditions. An optional crypto/data insert module is available, providing secure voice and data communication, selective call facilities and burst transmission of pre-coded numerical messages.
