

For Immediate Release

**POWERWARE CORPORATION INTRODUCES NEW POWER MANAGEMENT SOFTWARE
WITH INDUSTRY-FIRST FEATURES**

Raleigh, NC (June 3, 2003) – Powerware Corporation announces the release of its new power management software, LanSafe version 5. The new software incorporates innovative features to help customers better manage and measure return-on-investment of their UPS equipment.

LanSafe power management software continuously monitors UPS systems and automatically notifies users locally and remotely of any events. During an extended power failure in which battery runtime is depleted, LanSafe saves work-in-progress data, closes applications, and performs a graceful, user-defined shutdown sequence.

LanSafe v. 5 includes several new industry-first features to further raise the bar in power management:

- **Built-in Cost Savings Calculator:** determines the amount of money saved by the UPS equipment due to prevented downtime. For the first time, network managers have a tool to measure and justify their UPS investment.
- **Stealth Mode Operation:** enables power management functions to be run invisibly to the end-user. This feature is particularly important for applications such as point-of-sales, automatic teller machines where end-users should not be interrupted by pop-up power alarms.
- **Historical View:** gives an at-a glance view of a year of power events in a calendar format. Network managers can see how often a particular event occurs and obtain related details.

Furthermore, LanSafe v. 5 incorporates automatic regional settings detection with local language support capabilities. Date, time, temperature, and UPS receptacle graphics are automatically selected according to the operating system's regional settings.

New LanSafe v. 5 supports all Powerware UPS products. Windows and Linux support is available immediately. Other major operating system support will be available in 2003.

Powerware Corporation

Powerware Corporation is a leading global provider of Strategic Power Management solutions. Offering the broadest range of product and services available today, Powerware integrates a full line of AC and DC power systems, power management software, remote monitoring, turnkey integration services and site support, providing a seamless solution.

Powerware systems and services deliver the high nines of availability demanded by today's digital economy. Powerware products and services are utilized in local and wide area networking, data and voice over IP, co-location facilities, fixed-line and wireless communication networks, and industrial manufacturing. Powerware Corp. is headquartered in Raleigh, NC, and is part of Invensys plc.
