

High Density DPDT Switch Plug-in

- ◆ **Ideal for Switching Digital Communication Signals**
- ◆ **Ideal for Switching Differential Analog Communication Signals**
- ◆ **120 MHz Bandwidth**
- ◆ **Ideal for General-Purpose High-Performance Signal Routing**
- ◆ **High Density**
- ◆ **Standard Adapt-a-Switch® Plug-in Design for Ease of Replacement**

Racal Instruments 1260-112 is a high-density, double-pole, double-throw (DPDT) switch plug-in designed for use in the VXI Adapt-a-Switch® carrier (Racal Instruments 1260-100 or 1260-101) and Racal Instruments 1256 GPIB/Ethernet Switching System. It quickly and easily plugs into the front of an Adapt-a-Switch® Carrier or the 1256 Switching System.

This DPDT switch plug-in is designed to switch high-speed differential signals. Its architecture is ideal for switching bi-directional buses and for configuring flexible, interchangeable solutions to varying test requirements.

The 1260-112 provides 20 DPDT relays that can be actuated individually or in groups using the "Include" feature. This feature permits multi-line buses such as RS-232 to be routed with a single command. This simplifies use of the switching system, reducing overall test development time and cost.

The Option-01T interface (for VXI) controls the 1260-112 using either register-based or message-based commands. The 1256 (for GPIB/Ethernet) supports message-based operations. Refer to the Option-01T/1256 literature for more information about product specifications and features such as include, exclude, scan lists, user-defined path names and reset states.

The Adapt-a-Switch® series includes VXI *plug&play* support of Win/98/NT/2000/XP frameworks, including drivers for LabWindows/CVI and LabVIEW.
