WARRANTY STATEMENT

All Racal Instruments, Inc. products are designed and manufactured to exacting standards and in full conformance to Racal's ISO 9001:2000 processes.

This warranty does not apply to defects resulting from any modification(s) of any product or part without Racal Instruments express written consent, or misuse of any product or part. The warranty also does not apply to fuses, software, non-rechargeable batteries, damage from battery leakage, or problems arising from normal wear, such as mechanical relay life, or failure to follow instructions.

This warranty is in lieu of all other warranties, expressed or implied, including any implied warranty of merchantability or fitness for a particular use. The remedies provided herein are buyer's sole and exclusive remedies.

For the specific terms of your standard warranty, or optional extended warranty or service agreement, contact your Racal customer service advisor. Please have the following information available to facilitate service.

- 1. Product serial number
- 2. Product model number
- 3. Your company and contact information

You may contact your customer service advisor by:

E-Mail: Helpdesk@racalinstruments.com

Telephone: +1 800 722 3262 (USA)

+44(0) 8706 080134 (UK)

Fax: +1 949 859 7309 (USA)

+44(0) 1628 662017 (UK)

RETURN of PRODUCT

Authorization is required from Racal Instruments before you send us your product for service or calibration. Call your nearest Racal Instruments support facility. A list is located on the last page of this manual. If you are unsure where to call, contact Racal Instruments, Inc. Customer Support Department in Irvine, California, USA at 1-800-722-3262 or 1-949-859-8999 or via fax at 1-949-859-7139. We can be reached at: helpdesk@racalinstruments.com.

PROPRIETARY NOTICE

This document and the technical data herein disclosed, are proprietary to Racal Instruments, and shall not, without express written permission of Racal Instruments, be used, in whole or in part to solicit quotations from a competitive source or used for manufacture by anyone other than Racal Instruments. The information herein has been developed at private expense, and may only be used for operation and maintenance reference purposes or for purposes of engineering evaluation and incorporation into technical specifications and other documents which specify procurement of products from Racal Instruments.

DISCLAIMER

Buyer acknowledges and agrees that it is responsible for the operation of the goods purchased and should ensure that they are used properly and in accordance with this handbook and any other instructions provided by Seller. Racal Instruments products are not specifically designed, manufactured or intended to be used as parts, assemblies or components in planning, construction, maintenance or operation of a nuclear facility, or in life support or safety critical applications in which the failure of the Racal Instruments product could create a situation where personal injury or death could occur. Should Buyer purchase Racal Instruments product for such unintended application, Buyer shall indemnify and hold Racal Instruments, its officers, employees, subsidiaries, affiliates and distributors harmless against all claims arising out of a claim for personal injury or death associated with such unintended use.

FOR YOUR SAFETY

Before undertaking any troubleshooting, maintenance or exploratory procedure, read carefully the **WARNINGS** and **CAUTION** notices.

If this instrument is to be powered from the AC line (mains) through an autotransformer, ensure the common connector is connected to the neutral (earth pole) of the power supply.

Before operating the unit, ensure the conductor (green wire) is connected to the ground (earth) conductor of the power outlet. Do not use a two-conductor extension cord or a three-prong/two-prong adapter. This will defeat the protective feature of the third conductor in the power cord.

Maintenance and calibration procedures sometimes call for operation of the unit with power applied and protective covers removed. Read the procedures and heed warnings to avoid "live" circuit points.

Before operating this instrument:

- 1. Ensure the proper fuse is in place for the power source to operate.
- 2. Ensure all other devices connected to or in proximity to this instrument are properly grounded or connected to the protective third-wire earth ground.

If the instrument:

- fails to operate satisfactorily
- shows visible damage
- has been stored under unfavorable conditions
- has sustained stress

Do not operate until, performance is checked by qualified personnel.

Racal Instruments

CE Declaration of Conformity

We

Racal Instruments Inc. 4 Goodyear Street Irvine, CA 92618

declare under sole responsibility that the

1260-43, P/N 408006

conforms to the following Product Specifications:

EMC:

EN61326:1998 +A1: 1998 +A2: 2001

FCC CFR 47, PART 18 SUBPART B CLASS A

ICES-003 ISSUE 4: February 2004 CLASS A

Supplementary Information:

The above specifications are met when the product is installed in a Racal Instruments certified mainframe with faceplates installed over all unused slots, as applicable

The product herewith complies with the requirements of the Low Voltage Directive 73/23/EEC and the EMC Directive 89/336/EEC (modified by 93/68/EEC).

Irvine, CA, May 20, 2006

Chapter 1 SPECIFICATIONS

Introduction

The 1260-43 is an ultra high-density matrix switch card. Each module consists of three 8x24 matrices, which are interconnected via a 10 lane bus. On-board configuration relays allow software control of the matrix configuration.

Multiple modules can be linked together via a front panel 10 Lane bus to form larger matrices. This allows the user to construct very large Matrices.

With its combination of density, versatility, expandability, and excellent signal integrity, the 1260-43 is ideal for constructing large switching systems. It allows great flexibility in the connection of a large numbers of instruments to a large number of test points. The 1260-43 is an excellent choice for continuity, audio, video, telecom, datacom, and ATE systems testing.

An Option 01T is required to communicate with any set of switch cards. Provisions for an Option 01T is not provided for on the 1260-43. Another switch card must be in the system that has an Option 01T installed in order for the 1260-43 to work.

The following features are included in the 1260-43

- Data-Driven embedded descriptor, allowing immediate use with any Option-01T switch controller, regardless of firmware revision level.
- Three 8x24 Matrices in a Single VXI Slot
- 10 Lane Matrix expansion Bus
- Programmable Load Terminations
- Link Multiple modules via the front panel

Each switch can handle current up to 2 Amps. The 1260-43 plug-in fits into a standard VXI chassis.

Ordering Information

Listed below are part numbers for the 1260-43 switch module. The 1260-43 uses an IDC type of mating connector.

| ITEM | DESCRIPTION | PART# |
|---------------------------|---|------------|
| 1260-43 Switch Module | 1260-43, 3, 8 x 24, 1-wire, 2A, Multiplexer | 408006 |
| Interconnecting Bus Cable | Cable, 1260-43, 20 Position, 4" | 602715-001 |
| I/O Bus Cable | Cable, 1260-43, 20 Position, 3' | 602715-002 |
| I/O Bus Cable | Cable, 1260-43, 34 Position, 3' | 602715-003 |
| Additional Manual | | 980673-067 |

^{*}Operation at 15,000 feet requires de-rating of maximum overall power dissipation to 49W.

Chapter 2

INSTALLATION INSTRUCTIONS

Unpacking and Inspection

- 1. Before unpacking the switching module, check the exterior of the shipping carton for any signs of damage. All irregularities should be noted on the shipping bill and reported.
- 2. Remove the instrument from its carton, preserving the factory packaging as much as possible.
- 3. Inspect the switching module for any defects or damage. Immediately notify the carrier if any damage is apparent.
- 4. Have a qualified person check the instrument for safety before use.

Reshipment Instructions

- 1. Use the original packing material when returning the switching module to Racal Instruments for servicing. The original shipping carton and the instrument's plastic foam will provide the necessary support for safe reshipment.
- 2. If the original packing material is unavailable, wrap the switching module in an ESD Shielding bag and use plastic spray foam to surround and protect the instrument.
- 3. Reship in either the original or a new shipping carton.

Module Installation

Installation of the 1260-43 Switching Module into a VXI mainframe, including the setting of switches SW1-1 through SW1-4, is described in the Setup Section of the 1260A Option 01T Users Manual, Publication No. 980806-999.

Module Configuration

The 1260-43 is an ultra high-density matrix switch card. Each module consists of three 8x24, single wire matrices, which are interconnected via a 10 lane bus. On-board configuration relays allow software control of the matrix configuration.

The 1260-43 is comprised of three boards, the 405237, 405249 and the 405250. The 405249 is the main controller board, used in interfacing to the VXI bus and thus has all the control logic for communicating with the bus. In addition the control board decodes the address's that select the relay enable read/write ports. The 405237 is the relay board and contains 900 relays of which 450 relays are on top with another 450 relays on the bottom. The 405249 (control board) connects to the 405237 (relay board) via four 250 pin flex cables. The flex cables pass the relay coil enabling signals from the control board to the relay board. The 405250 is the interface board and contains 8 connectors used to connect to the outside world. The interface board connects to the relay board using two 80 pin flex cables.

The 405250 board shifts the 'Output Bus' one position to the left before connecting to J207. This is transparent to the user and is done in order for the 1260-43 to be compliant with the IFTE specification when daisy-chaining two or more 1260-43's together. This shift eliminates the need to place the shift in the daisy-chaining cable. Thus the daisy-chaining cable becomes point-topoint.

For a block diagram of the 1260-43, refer to both **Figure 2-1 and Figure 2-2**.

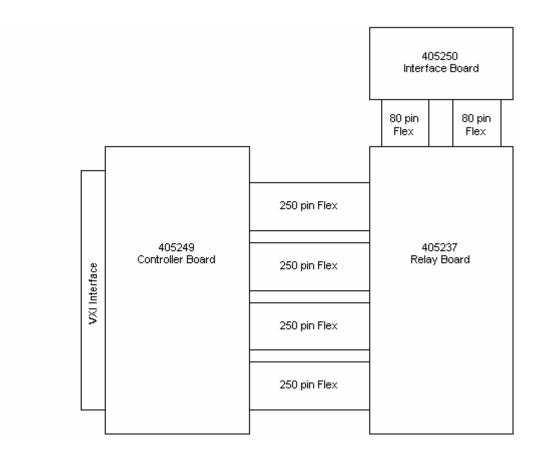

Figure 2-1, 1260-43, Physical Block Diagram

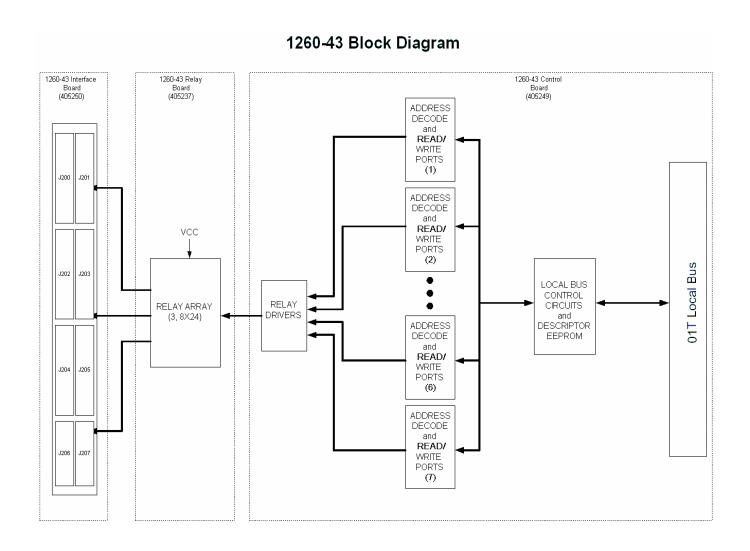

Figure 2-2, 1260-43, Logical Block Diagram

Front Panel Connectors

The 1260-43 has six 34-pin front-panel connectors, labeled J200-J205 and two 20-pin connectors, labeled J206 and J207. Each matrix consists of a pair of 34-pin connectors. The two 20-pin connectors are used for bussing the 10 lane bus in and out of the 1260-43. See **Figure 2-3** for front panel connector locations. **Table 2-1** shows the signal assignments to connector pins.

Mating Cables

The front panel connectors are a standard IDC type of connector. The mating connectors are unique due to the coax cabling. Special manufacturing processes are required in joining the coax cable to the mating connector. This prohibits manufactures from selling Individual connector parts. Only finished cable assemblies are sold. Mating cable/connector assemblies are available from Joy Signal, Molex and 3M.

Table 2-2 contains manufacture's part numbers for the cable/connector assemblies used by the 1260-43.

Table 2-2, Mating Cable Manufactures

| Manufacturer | 20 Pin Mating Cable | 34 Pin Mating Cable | | |
|--------------|---------------------------|---------------------------|--|--|
| Joy Signal | SSC-02-02-3-20-09-XXX.00 | ZZC-02-02-03-34-01-XXX.00 | | |
| Molex | ZZC-02-02-03-20-01-XXX.00 | SSC-02-02-3-34-09-XXX.00 | | |

Note: XXX equals the cable length in inches.

More About Maximum Current Ratings

The front panel connector and pins are rated for 2 A per pin, with all channels conducting full-rated current. The relays are rated at 2 A. This keeps the temperature rise within 10°C.

Definitions:

Max current carrying capacity

The maximum current that the relay can conduct if the relay is not switched while voltage is applied. The maximum current carrying capacity is affected by the size of the conducting section of the contact at its smallest area. The listed values are obtained from several tests in laboratories under room-temperature conditions (21°C). The contact is considered to be in free air. The maximum current carrying for the 1260-43 is 2.5 A.

Max operating current

The current the contacts can switch while conducting, without deteriorating. This depends on working conditions, such as dissipated heat, cooling provisions, ambient temperature, insulation material, etc. The maximum operating current for the 1260-43 is 2 A.

Recommended continuous current

The maximum current recommended for indefinitely-long time periods. The primary concern here is the heat generated in the relay. This specification can be applied for normal working conditions. The specification includes a safety margin. However, there are restrictions in the application of the given values. The most important restriction is the cross-sectional area of the connecting wire, insulation temperature range, and wire bundling. The recommended continuous current for the 1260-43 is 2 A.

Installation

To install the 1260-43 Switching Module into a VXI mainframe chassis, engage the printed circuit board into the grooves of the desired chassis slot. Slide the 1260-43 into the chassis until its connector mates with the connector on the chassis backplane. Push firmly to fully seat the connector. Tighten the two retaining screws at the top and bottom of the 1260-43 plug-in.

A 01T is required in the system in order for the 1260-43 to operate. An additional VXI Switch card containing a 01T needs to be installed in the system with the slot location to the left of the 1260-43.

This page was left intentionally blank.

Chapter 3

MODULE OPERATION

Operating Modes

The 1260-43 is operated in *register-based* mode.

In the *register-based* mode, the user writes directly to the control registers on the 1260-43 module. The 1260-01T command module does not monitor these operations, and does not keep track of the relay states on the 1260-43 module in this mode.

A conceptual view of the register-based mode is shown in **Figure 3-1** below.

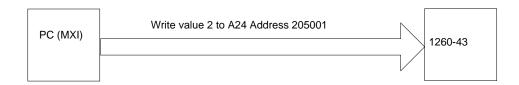

Figure 3-1, Register-Based Mode of Operation

The register-based mode provides faster control of relay channels. In this mode, relay operations are processed in less than 9 microseconds, not counting relay settling time or software overhead inherent in I/O libraries such as VISA. To determine the relay settling time, refer to Relay Settling Time in the Specifications section.

Operating The 1260-43 in Register-Based Mode In register-based mode, the 1260-43 is operated by directly writing to control registers and reading from status registers on the 1260-43 module. There are 180 control/status register pairs on the 1260-43 module. When a control register is written to, all channels controlled by that register are operated simultaneously. Default value for all control registers is hex '00' after reset.

The 1260-43 has a 10 Lane bus that is routed through the three matrices (refer to Appendix A.) With the exception of the matrix output relay groups, each group of relays operating on the bus is comprised of 10 relays. The matrix output relay groups only operate on 5 of the 10 signals of the bus and thus have only one control/status register associated with each group. For the rest of the relay groups an A and B control/status register pair is assigned to each group. Only bits 4-0 of the register are used. Bits 7-5 are not used and will display "111" when the status register is read. Register 'A' is assigned to bus signals 4-0 while register 'B' is assigned to bus signals 9-5.

The control registers are located in the VXI bus A24 Address Space. The A24 address for a control register depends on:

- The A24 Address Offset assigned to the 1260-01T module by the Resource Manager program. The Resource Manager program is provided by the VXI bus slot-0 controller vendor. The A24 Address Offset is placed into the "Offset Register" of the 1260-01T by the Resource Manager.
- 2. The <module address> of the 1260-43 module. This is a value in the range 1 through 12.
- 3. Each control / status register on the 1260-43 has a unique address.

The base A24 address for the 1260-43 module may be calculated by:

```
(A24 Offset of Option-01T) + (1024 x Module Address of 1260-43).
```

The A24 address offset is usually expressed in hexadecimal. A typical value of 204000₁₆ is used in the examples that follow.

A 1260-43 with a module address of 6 would have the base A24 address computed as follows:

```
Base A24 Address of 1260-43 = 204000_{16} + (400_{16} \times 6_{10}) = 205800_{16}
```

The control registers for 1260-Series VXI modules are always on odd-numbered A24 addresses. The first two control registers for the 1260-43 reside at the first two odd-numbered A24 addresses for the module:

```
(Base A24 Address of 1260-43) + 1 = Control Reg. 0
```

(Base A24 Address of 1260-43) + 3 = Control Reg. 1

So, for our example, the two control registers are located

at:

205801 Control Register 0

205803 Control Register 1

Table 3-1 shows the address offset assignments for each Control/Status register while **Table 3-2** shows the Control/Status Register Relay / Bus Assignments. Refer to **Appendix A** and **B** in determining relay groups and the relay reference designations.

Table 3-1, Control/ Status Register Address Offset Assignments

| Control/Status | Address | Function |
|----------------|---------|--|
| Reg. 00A | 001 | Input Bus to Matrix Bus 'A' (lower bus bits 4-0) |
| Reg. 00B | 003 | Input Bus to Matrix Bus 'A' (upper bus bits 9-5) |

Chapter 4 PRODUCT SUPPORT

Product Support

Racal Instruments has a complete Service and Parts Department. If you need technical assistance or should it be necessary to return your product for repair or calibration, call 1-800-722-3262. If parts are required to repair the product at your facility, call 1-949-859-8999 and ask for the Parts Department.

When sending your instrument in for repair, complete the form in the back of this manual.

For worldwide support and the office closes to your facility, refer to the Support Offices section on the following page.

Reshipment Instructions

Use the original packing material when returning the 1260-43 to Racal Instruments for calibration or servicing. The original shipping container and associated packaging material will provide the necessary protection for safe reshipment.

If the original packing material is unavailable, contact Racal Instruments Customer Service for information.

Appendix A LOGICAL RELAY LAYOUT

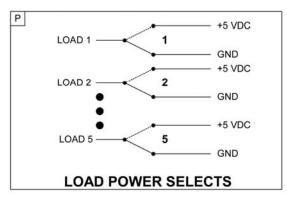

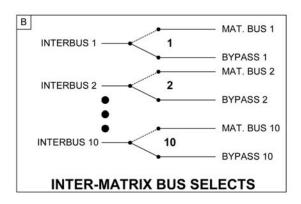

1260-43 Layout Legend

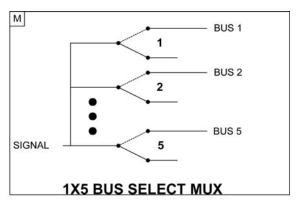

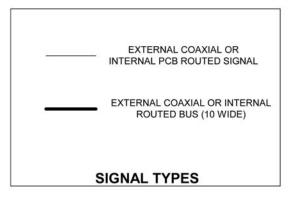

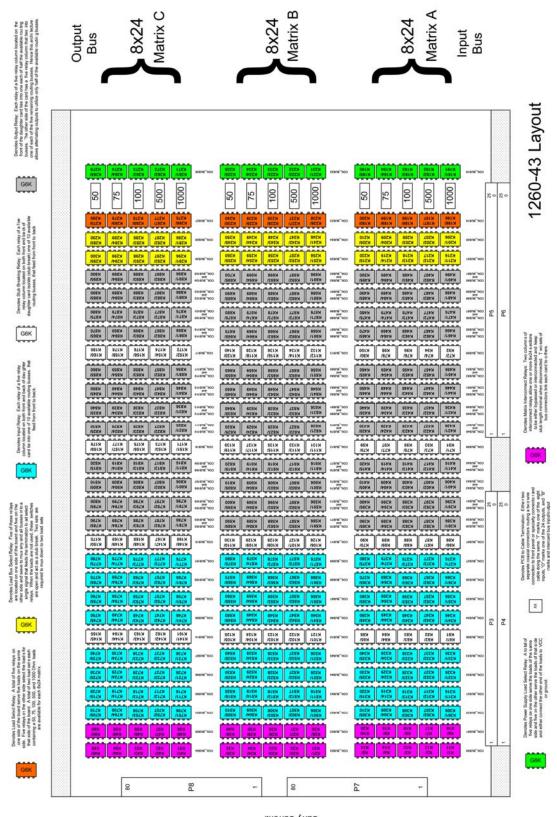

This page was left intentionally blank.

Appendix B 1260-43 RELAY LAYOUT

Note: This proposed design utilizes two boards joined together through interconnects. The bottom (mother) board contains all the VXI interconnects and driver devices. The top (daughter) card contains the switching components. Design is single wire 1A Hot, 2A Current.
