Series : 7-16

**1) STRIPPING OF THE SHEAT AND THE OUTER CONDUCTOR**

Cut the cable end in a hollow ( between two rings ) with a hacksaw .

Raise the handle and introduce the cable until it stops in the stripping tool.

Push down the handle by exerting a light pressure on it , keep turning the tool until it turns freely.

Hold the handle down , and turn the tool ( of approximately  $\frac{1}{4}$  of tour ) in the opposite direction , while pulling gently on the cable in order to release pieces of the cable cut.

Raise the handle, slide the cable out and remove loose pieces of cable.

In case of cut parts jammed in the tool : raise the handle , introduce again the stripped cable in the tool, screw slightly the cable into the copper previously cut and remove cable + loose parts.

Push down again the handle.

**2) STRIPPING OF THE DIELECTRIC**

Introduce the cable in the opposite side of the tool  
Turn the tool and exert a light pressure until stop.  
After cutting the dielectric cut will be extracted on the other side of the tool.

**3) POINTING OF THE CABLE**

Introduce the cable in the tool as shown.  
Turn the tool to point the inner conductor of the cable.

**2) CABLE MOUNTING**

Mount the clamp nut on the cable , until the clipsage of the elastic contact on the first annelure .  
To push the part defers the tow press in stop on the elastic contact.

**3) MOUNTING CABLE**

Mount the clamp nut with the cable in the body of the connector.  
Couple of tightening recommended: 800N.cm
