|---------------------------------------|--|--------------------------------|------------------------|------|----------|--------------------------------|
| Subject: Slow Printing from Macintosh | | | Prepared by: K. Misugi | | Misugi | |
| From: Technical | Services Dept., GTS Division | | | | | |
| Classification: | ☐ Troubleshooting☐ Mechanical | ☐ Part informa ☐ Electrical | | | Service | required ce manual revision |
| | ☐ Paper path ☐ Other () | ☐ Transm | it/rec | eive | ∐ Retrof | fit information |

SYMPTOM

Depending on network conditions, printing from a Macintosh is very slow.

This symptom occurs in the following machines:

Model K-P1 (Kir-P), Model A-C2 (Adonis-C2), Model J-P1 (Model J).

This occurs in the following conditions:

- Macintosh with PowerPC G3 or G4 processor
- Network: Apple Talk (Ether Talk)
- Network Speed: 100Mbps (100Base fixed)

CAUSE

When the data is transferred at 100Mbps, depending on network conditions, the controller ASIC is not able to receive all data packets and a retry procedure occurs. As a result, print jobs from a Macintosh take a long time to print out.

SOLUTION

Please also see the flow chart on the last page.

- Check what type of hub the customer is using.
 If the customer is using a dual speed (10M/100Mbps) hub, go to step 2.
 If the customer is using a 100Base fixed (100Mbps only) hub, go to step 3.
- 2) For the customer using a dual speed hub:

Set the network (ethernet) speed of the machine to 10Mbps.

The default setting of the machine is "Auto." This setting can be changed in the "Network Setup" in the user mode "Host Interface" ("Interface Settings" in the "System Settings" for the Model A-C2).

End of procedure for the customer using a dual speed hub.

Π PAGE: 2/3

Model: K-P1, A-C2, J-P1 Date: 03-Jul-01 No.: RB003008

3) For the customer using a 100Base fixed hub:

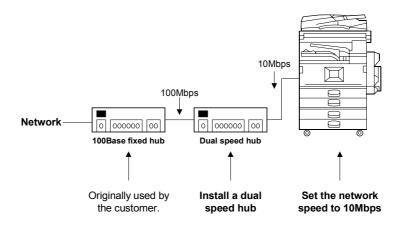

Temporary solutions:

Perform both of the following:

- a) Set the network (ethernet) speed of the machine to 10Mbps.

 The default setting of the machine is "Auto." This setting can be changed in the "Network Setup" in the user mode "Host Interface" ("Interface Settings" in the "System Settings" for the Model A-C2).
- b) Install a dual speed hub between the 100Base fixed hub and the machine.

End of procedure for the customer using a 100Base fixed hub.

Note:

There is almost no effect on actual print time when the machine's network speed setting is changed from 100Mbps to 10Mbps.

Permanent Countermeasure:

An interface board (GW-MAC) and a DIMM which contains firmware to drive the board will be supplied for attachment to the controller board. With these parts, the machine will work without installing a dual speed hub.

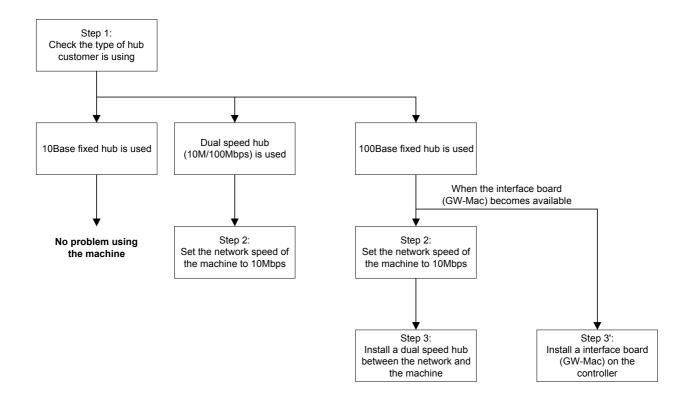

Detailed information on the interface board (GW-MAC) will be announced separately in mid July.

PAGE: 3/3

Model: K-P1, A-C2, J-P1 Date: 03-Jul-01 No.: RB003008

Flow Chart:

When machines are being connected to Macintosh with PowerPC G3/G4 processors with Apple Talk, check the type of hub being used and follow the steps explained below.

New Changes - NCS (NIB)

| | Descriptions | Version |
|------|---|---------|
| Firr | nware modified to correct the following: | |
| 1. | When using signature level 2 on a NetWare Server, the printer does not | |
| | connect to the NetWare Server. | |
| 2. | The printer cannot print more than one job sent from a CICS application | |
| | on an IBM Main Frame (e.g. OS/390) when the application uses lpd | |
| 2 | protocol unique to CICS. | |
| 3. | The lpd process on the printer is interrupted when lpq/lprm commands with arguments are executed more than 50 times after the printer has | |
| | been turned on. | |
| 4. | When trying to access the Web Status Monitor for a printer during | |
| | printing via the ipp port, the httpd process is occasionally interrupted. | |
| 5. | When there are several messages displayed, such as error messages | |
| | after a malfunction, Apple Talk protocol is occasionally interrupted | |
| | during printing. | |
| 6. | When the printer is not ready due to an open cover, the message | |
| _ | "Printer is not ready" is not indicated in the lpd or stat command. | 1.77 |
| 7. | When executing the prnlog command designate job ID 0, no information | |
| 8. | is indicated. Even when the parameter settings changed by telnet are not | |
| 0. | successfully written into the NVRAM, no error message is indicated as a | |
| | command line. | |
| 9. | The software allows any name to be entered as the computer name for | |
| | NetBEUI. | |
| 10. | When printing data with 0 byte by rcp, the NIB does not respond to the | |
| | waiting client PC. | |
| | No settings are valid with the install shell of RedHat Linux Ver.7.1. | |
| | ange in Specification: | |
| 1. | Two-byte code characters cannot be entered for a device name. | |
| 2. | The Job Spool function is available for printing with the combination of firmware Controller System Ver. 5.19.1 and Printer System Ver. 3.00. | |
| | By turning [Job Spool] ON with SP-5-828-065, a print job can spool into | |
| | the HDD during printing. | |

| Subject: Euro symbol not printed with PS driver | | | | Prepared by: T. II | toh |
| From: Technical Services sec. Service Planning Dept. | | | | | |
| Classification: | | ☐ Part info | rmat | ion 🔀 Action | required |
| | ☐ Mechanical | ☐ Electrica | l | ☐ Service | ce manual revision |
| | ☐ Paper path | Transmit | /rec | eive Retro | fit information |

PAGE: 1/8

SYMPTOM

When printing with the PS driver, the Euro currency symbol is not printed out with 112 of 136 fonts, which are stored in the font ROM in GW-based products.

The following are GW-based products:

Other (

Model-K3, Model-K P2, Russian-C2, Adonis- C2, Model-A P3, Model-J P1b, Model-J CF Model-U P1, Model-U C1, Martini-C1.

CAUSE

The Euro currency symbol was not included in the font ROM.

)

SOLUTION

Temporary Solution (1)

A workaround for each operating system has been previously released on the FAQ page, and is included on pp. 5-8 below.

Temporary Solution (2)

Although the font ROM will be modified as a permanent solution (details below), before this can be applied, the controller firmware has been modified on the following GW-based products:

| Product | Firmware Version | Product | Firmware Version |
|------------|----------------------------|-------------|----------------------------|
| Model-K3 | 1.01 (Controller) | Model-J P1b | 2.18 (Controller) |
| Model-K P2 | 1.06.1 (Controller) | Model-J CF | 1.11 (Printer Application) |
| Russian-C2 | 2.03 (Printer Application) | Model-U P1 | 2.20 (Printer Application) |
| Adonis-C2 | 3.09 (Printer Application) | Model-U C1 | 1.22 (Printer Application) |
| Model-A P3 | 1.08 (Controller) | Martini-C1 | 1.01 (Printer Application) |

Specifically, the Euro currency symbol has been added along with the "PS fonts download" feature, which allows the symbol to be downloaded to machine RAM. <u>Enable this feature</u> by changing the setting of Bit SW#3-0 to "1 (ON)" in SP mode (default: OFF).

PAGE: 2/8

Model: General RTB Date: 8-Nov-02 No.: RGene011

Remarks for Temporary Solution 2:

1. Switching PDL to PS takes approximate 7 to 10 seconds.

When PS fonts download is enabled, the Euro symbol is temporarily downloaded to the machine RAM at the first PS printing job, and whenever the PDL is switched from RPCS or PCL to PS. The total download time is approximately 7 to 10 seconds. This is because once the data is downloaded, it will remain in the RAM until the PDL is switched or the power turned off.

2. Printing high image area documents at 1200 dpi may cause a memory overflow error in machines equipped only with 32MB of memory (ex. Model-K P2).

This is because the PS fonts download feature uses approximately 800kB, which can bring the amount of available memory close to capacity with the above printing conditions.

Workaround:

- Printing at 600dpi may prevent an overflow, even with just the 32MB memory installed.
- Changing the memory usage setting from "Frame Priority" to "Font Priority" may prevent an overflow.

Permanent Solution

Modification of the font ROM on the ROM DIMM or the Controller Board, from October '02, production or later (details differ depending on the model). Specifically, the Euro currency symbol has been added to the 112 fonts mentioned above.

Note:

- 1. When the new ROM DIMM or Controller Board is installed, it is <u>not</u> necessary to disable the PS fonts download feature (temporary solution).
- 2. An MB will be issued separately announcing the P/N change for the ROMM DIMM and Controller Boards, and cut-in serial number.

ROM DIMM and Controller Board P/N:

| Model | Where the font ROM is soldered | Current P/N | Model | Where the font ROM is soldered | Current P/N |
|-------------|--------------------------------|----------------|------------|--------------------------------|----------------|
| Model-K P2 | Controller | G0735712 | Model-J CF | ROM DIMM | G5706687 |
| | | G0745712 | Model-U P1 | ROM DIMM | G0705851 |
| Adonis-C2 | ROM DIMM | B3615117 | Model-U C1 | ROM DIMM | B5295117 |
| | | B3625118 | 1 | | B4635117 |
| Model-A P3 | Controller | G0656022 | Martini-C1 | ROM DIMM | G3395117 |

Workaround Announced on the FAQ Page

Question:

Euro Fonts printing problem

Answer:

If Euro Fonts can't be printed by the PS driver, the following solutions may be effective.

Solution

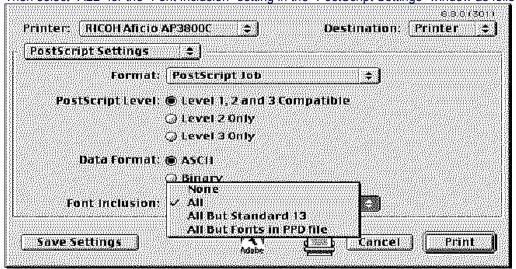

MacOS 9.x / 8.x

Use the AdobePS 8.8 printer driver.

Get the printer driver from the Adobe site on the web.

http://www.adobe.com/support/downloads/product.jsp?product=44&platform=Macintosh

Then select "ALL" for the "Font Inclusion" setting in the "PostScript Settings" window as follows.

Windows 95

Update Windows95 to "Euro Currency Support for Windows95".

You can get it from the following URL.

http://www.microsoft.com/windows95/downloads/contents/WURecommended/S_WUFeatured/W95EuroPatch/Default.asp

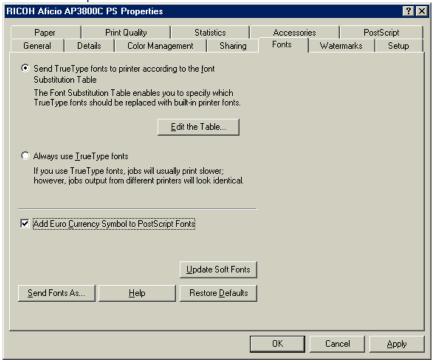

Then the "Add Euro Currency Symbol to PostScript Fonts" check box is available. Check "Add Euro Currency Symbol to PostScript Fonts". (Before update, the check box doesn't work.)

PAGE: 6/8

Model: General RTB Date: 8-Nov-02 No.: RGene011

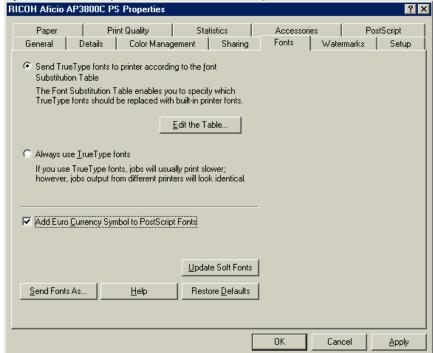

Windows95 after update

Windows 98 / ME / NT4.0 / XP

Check "Add Euro Currency Symbol to PostScript Fonts" .

Windows 98 / ME (Note: The AdobePS driver version 4.3.1 or later has "Add Euro Currency Symbol to PostScript Fonts" in the "Fonts" tab.)

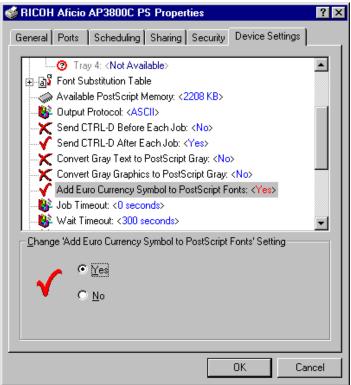

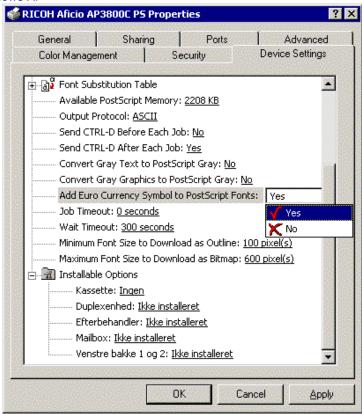

PAGE: 7/8

Model: General RTB Date: 8-Nov-02 No.: RGene011

Windows NT4.0

Windows XP

Model: General RTB Date: 8-Nov-02 No.: RGene011

Windows 2000

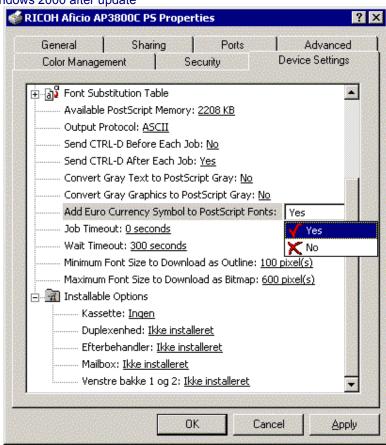

Update the printer driver to v5.5.2 or later.

You can get it from the printer driver v1.0.6 on the Adobe web site that includes the W2000 driver v 5.5.2.

PAGE: 8/8

http://www.adobe.com/support/downloads/product.jsp?product=44&platform=Windows Then the "Add Euro Currency Symbol to PostScript Fonts" check box is displayed. Check "Add Euro Currency Symbol to PostScript Fonts".

Windows 2000 after update

Firmware Downloading Procedure:

- 1. Insert the 4MB IC card containing the firmware into the controller IC card slot. Then, switch ON the main power.
- 2. Select the firmware that you would like to upgrade, then press "Download".
- 3. After the download has been completed, leave the card in the slot and switch the main power OFF/ON.

New Changes - Printer

| Descriptions | Version |
|--|---------|
| Firmware modified to correct the following: A print job received when the machine switches from On to Off Mode may not be printed out. After deleting a locked print document, it is possible to press the delete button without selecting any other locked print documents. The operation panel may flicker slightly after the operator performs settings in the Printer Features window very quickly (i.e. window is open for a very short time). | 3.02 |

No changes

NCS (NIB)

| Descriptions | Version |
|---|---------|
| Change in Specification: | |
| 1. 2-byte code characters cannot be entered for a device name. | |
| 2. The Job Spool function is available for printing with the | |
| combination of firmware Controller System Ver. 5.19.1 and Printer | |
| System Ver. 3.00. | |
| By turning [Job Spool] ON in SP-5-828-065, a print job can spool | |
| into the HDD during printing. | |
| The information in #2 above was mistakenly included in this RTB. | |
| Although the Spool function appears in SP5-828-065, 066 and 069, | |
| it is only supported on the Japanese model (please do not enable | |
| these modes). | |

Reissued: 28-Mar-02

| Model: Adonis-C2 | Date: 15-Mar-02 | No.: RB003034a |
|------------------|-----------------|----------------|
|------------------|-----------------|----------------|

| Descriptions | | |
|--------------|---|------|
| Fir | mware modified to correct the following: | |
| 1. | After a communication failure breaks the connection between the NIB and Network Twain driver, the driver is unable to re-establish connection (unless the A-C2 is powered Off/On). | |
| 2. | When 8000000(H) or more is registered in the Manager IPX Address 2 (Web Status Monitor), the setting is changed to an unspecified one. | |
| 3. | If several print jobs are sent one after another to the NIB via the IPP port of SmartNetMonitor for Client, the NIB terminates printing. (Also, a print job sent by the standard IPP port may be canceled). | |
| 4. | The USTATUS information may be lost, depending on when the USTATUS is sent during bi-directional communication over TCP/IP port 9100. | 1.66 |
| 5. | With bi-directional communication enabled for TCP port 9100, printing operation is inhibited after data is sent from an application utility that does not support bi-directional communication (e.g. Port Navi, MDP). | |
| 6. | The IP address 0.0.0.0 can be set by the ifconfig command. | |
| 7. | The wording of the message for saving data at logoff was corrected from "datas" to "data". | |
| Ch | ange in Specification: | |
| 1. | Information such as the IP address and printing protocol (Client PCs) was added to the syslog file for access restriction. | |
| 2. | The display width for the ID of the prnlog command with telnet, rsh, and ftp was expanded from 2 to 10 digits. | |
| Firs | st mass production | 1.61 |

Firmware Downloading Procedure:

- 1. Insert the 4MB IC card containing the firmware into the controller IC card slot. Then, switch ON the main power.
- 2. Select the firmware that you would like to upgrade, then press "Download".
- 3. After the download has been completed, leave the card in the slot and switch the main power OFF/ON.

Printer

| Descriptions | Version |
|---|---------|
| Firmware modified to correct the following: Line spacing command "lochEsc&l#D"loch causes incorrect output. (GFPR# RC02050002) Euro currency symbol is not printed when using the PS driver (refer to RTB #RGENE011 for workaround). Slow Printing from AutoCAD (GFPR# RC02070001) Bold may not work on some TrueType fonts. With some bold fonts, text characters appear too thick, removing the fine detail. When using bold fonts, short lines may appear around text characters. PJL Echo does not respond correctly. (GFPR# RE02070088) PS print files are printed as text (GFPR# RE02040013). CAD print files: Increased the number of available pen selections from 8 to 256 when BitSw #3-3 is ON (GFPR# RE02030003). Modified so that the "null" character is ignored when it is included in HP/GL2 data to increase speed (GFPR# RE02050016). The status flag for the bold selection command is refreshed when it is selected for HP/GL2 data (GFPR# RE02050016). | 3.09 |
| Firmware modified to correct the following: The "XL ERROR" occurs when specifying symbol sets SETvmath (6M), SETvint (13J) and SETvus (14J) which are not supported in PCLXL. Change in Specification: PCL6: Added symbol sets PC-858, Latin 9 and Roman 9 for display of the Euro currency symbol. | 3.08 |

NCS (NIB)

| NCS (NIB) | |
|---|---------|
| Descriptions | Version |
| The following items have been fixed: The controller freezes if disconnected while data containing the Readback command is being printed out with ftp/rsh. Display corrected for when the operator tries to execute Spool Printing Job List with SmartNetMonitor for Admin on the A-C2/R-C2: | 1.81 |
| the message. Change in Specification: 1. SNMP vulnerability SNMP security vulnerabilities reported by CERT on Feb.12, 2002 has been tested using the PROTOS c06-snmpv1 test suite and we have verified the fixesCERT: http://www.cert.org/advisories/CA-2002-03.html -PROTOS c06-snmpv1 test suite : http://www.ee.oulu.fi/research/ouspg/protos/testing/c06/snmpv1/ 2. Some reserved (unused) TCP ports that were open have been closed, e.g. FTP. | |
| Firmware modified to correct the following: No error message is displayed in Netscape Navigator even when an incorrect URL is input in the address bar. Up to 32 characters can be input in the NetBEUI configuration screen Comment box, even though specification is 31 characters maximum. The PS status cannot be displayed using the "stat" command (Ipq command for Ipr). If Trap is selected for the Access Type in the SNMP Configuration screen during the snmpd process, communication may be cut off. The NIB does not respond to the "Iprm –" command (root directory) from a FreeBSD host computer. If an undefined remote printer number is input in the Netware configuration page, communication between the NIB and Netware Server will be cut off. Change in Specification: | 1.79 |

Technical Bulletin

PAGE: 6/7 Date: 19-Nov-02 No.: RB003042

| | Date: 19-100-02 | 10000042 | |
|---|---|----------|--|
| | Descriptions | Version | |
| Firmware modified to correct the following: | | | |
| 1. | When using signature level 2 on the NetWare Server, the printer does not | | |
| | connect to the NetWare Server. | | |
| 2. | The printer cannot print more than one job sent from a CICS application | | |
| | on an IBM Main Frame (e.g. OS/390) when the application uses lpd | | |
| | protocol unique to CICS. | | |
| 3. | The lpd process on the printer is interrupted when lpq/lprm commands | | |
| | with arguments are executed more than 50 times after the printer has | | |
| | been turned on. | | |
| 4. | When trying to access the Web Status Monitor for a printer during printing | | |
| | via the ipp port, the httpd process is occasionally interrupted. | | |
| 5. | When there are several messages displayed, such as error messages | | |
| | after a malfunction, Apple Talk protocol is occasionally interrupted during | | |
| | printing. | 1 77 | |
| 6. | When the printer is not ready due to an open cover, the message "Printer | 1.77 | |
| | is not ready" is not indicated in lpd or stat command. | | |
| 7. | When executing the prnlog command designate job ID 0, no information | | |
| | is indicated. | | |
| 8. | Even when the parameter settings changed by telnet are not successfully | | |
| | written into the NVRAM, no error message is indicated as a command | | |
| | line. | | |
| 9. | The software allows any name to be entered as the computer name for | | |
| | NetBEUI. | | |
| 10. | When printing data with 0 byte by rcp, the NIB does not respond to the | | |
| | waiting client PC. | | |
| 11. | No settings are valid with the install shell of RedHat Linux Ver.7.1. | | |
| Ch | ange in Specification: | | |
| 1. | 2-byte code characters cannot be entered for a device name. | | |
| | mware modified to correct the following: | | |
| 1. | After a communication failure breaks the connection between the NIB and | | |
| | Network Twain driver, the driver is unable to re-establish connection | | |
| | (unless the A-C2 is powered Off/On). | | |
| 2. | When 80000000(H) or more is registered in the Manager IPX Address 2 | | |
| | (Web Status Monitor), the setting is changed to an unspecified one. | | |
| 3. | If several print jobs are sent one after another to the NIB via the IPP port | | |
| | of SmartNetMonitor for Client, the NIB terminates printing. (Also, a print | | |
| | job sent by the standard IPP port may be canceled). | 1.66 | |
| 4. | The USTATUS information may be lost, depending on when the | 1.00 | |
| | USTATUS is sent during bi-directional communication over TCP/IP port | | |
| | 9100. | | |
| 5. | With bi-directional communication enabled for TCP port 9100, printing | | |
| | operation is inhibited after data is sent from an application utility that does | | |
| | not support bi-directional communication (e.g. Port Navi, MDP). | | |
| 6. | The IP address 0.0.0.0 can be set by the ifconfig command. | | |
| 7. | The wording of the message for saving data at logoff was corrected from | | |
| | "datas" to "data". | | |
| | | • | |

|--|--|-----------------|---------|----------|
| Descriptions | | | Version | |
| Change in Specification: 1. Information such as the IP address and printing protocol (Client PCs) was added to the syslog file for access restriction. 2. The display width for the ID of the prnlog command with telnet, rsh, and ftp was expanded from 2 to 10 digits. | | | | |
| First mass production | | | 1.61 | |

NFA (Netfile)

| Descriptions | Version |
|--|---------|
| Minor program changes for Japanese model only. | 2.19 |
| Note: When using scanner firmware B3615901D, NFA firmware version 2.17 or later should be used. Firmware modified to correct the following: The MFP stalls when setting the I/O device from two ScanRouter V2 Professional servers at the same time. When setting the I/O device from ScanRouter V2 Professional, the fax delivery settings sometimes disappear. When a print request is issued from the Document server at the MFP or the DeskTopBinder V2 without the correct paper size in the tray, the MFP does not send the error to the operation panel or DeskTopBinder V2, and the MFP does not print the document. | 2.17 |
| When the machine sends 2 or more files to the Document Server within 1 second (as when sending backed up files just after the Server recovers), the first 2 documents receive the same filename and the first is therefore erased. The software has been modified so that file naming can be controlled at the ms level, preventing the file from being deleted. | 1.42.04 |
| First mass production | 1.42.02 |

NFA (Netfile)

| Descriptions | Version |
|--|---------|
| Minor program changes for Japanese model only. | 2.19 |
| Note: When using scanner firmware B3615901D, NFA firmware version 2.17 or later should be used. Firmware modified to correct the following: The MFP stalls when setting the I/O device from two ScanRouter V2 Professional servers at the same time. When setting the I/O device from ScanRouter V2 Professional, the fax delivery settings sometimes disappear. When a print request is issued from the Document server at the MFP or the DeskTopBinder V2 without the correct paper size in the tray, the MFP does not send the error to the operation panel or DeskTopBinder V2, and the MFP does not print the document. | 2.17 |
| When the machine sends 2 or more files to the Document Server within 1 second (as when sending backed up files just after the Server recovers), the first 2 documents receive the same filename and the first is therefore erased. The software has been modified so that file naming can be controlled at the ms level, preventing the file from being deleted. | 1.42.04 |
| First mass production | 1.42.02 |

Technical Bulletin

| Model: General RTB | | | | ate: 27-Dec-02 No.: | | No.: RGene012 |
|--|--------------|----------------|-----------|---------------------|---------------------------|---------------|
| Subject: GW Pro | | Prepared | by: T. It | oh | | |
| From: Technical Services Sec. Service Planning Dept. | | | | | | |
| Classification: | | ☐ Part info | orma | tion [| Action | required |
| | ☐ Mechanical | ☐ Electrical | | [| ☐ Service manual revision | |
| | ☐ Paper path | ☐ Transmit/rec | | eive [| ☐ Retrofit information | |
| | Other () | | | | | |

SYMPTOM

When the main switch is turned on, the error message "Hardware Ethernet Problem" may be displayed under the following condition on the GW-based products.

Conditions:

- Network speed on the hub has been set to 100Mbps fixed with full duplex, and
- Length of network cable is too long (60 m or more) or the cable quality is not good enough

CAUSE

When the main switch is turned on, the machine performs a loop-back test. If the cable length is too long or its quality is not good enough, the damping factor for the data transmission becomes worse, and the machine incorrectly detects an error during this test. This happens only when the network speed is set to 100Mbps fixed with full duplex. The PHY chip used on the controller board causes this.

SOLUTION

- Temporary Solution -
- Set the network speed on the hub to Auto-sensing,
- Use a shorter cable or a cable with a lower damping factor, or

- Disconnect the network cable and power on the printer; then, set the cable after the printer comes to the ready condition.
- Permanent Solution -

The controller firmware will be modified to avoid the incorrect detection of this error message. The schedule of firmware modification is as follows.

| Product Type | Product | Firmware Modification Cut-in Schedule |
|--------------|-------------|---------------------------------------|
| Fov | Kaiser 3 | at next modification |
| Fax | Kaisei 3 | at next modification |
| Printer | Model-K P1 | |
| | Model-K P2 | |
| | Model-J P1b | |

Firmware Downloading Procedure:

B3615902L

- 1. Insert the 4MB IC card containing the firmware into the controller IC card slot. Then, switch ON the main power.
- 2. Select the firmware that you would like to upgrade, then press "Download".

B3615901E

3. After the download has been completed, leave the card in the slot and switch the main power OFF/ON.

Printer

NFA (Netfile)

| Descriptions | Version |
|--|---------|
| Minor program changes for Japanese model only. | 2.19 |
| Note: When using scanner firmware B3615901D, NFA firmware version 2.17 or later should be used. Firmware modified to correct the following: The MFP stalls when setting the I/O device from two ScanRouter V2 Professional servers at the same time. When setting the I/O device from ScanRouter V2 Professional, the fax delivery settings sometimes disappear. When a print request is issued from the Document server at the MFP or the DeskTopBinder V2 without the correct paper size in the tray, the MFP does not send the error to the operation panel or DeskTopBinder V2, and the MFP does not print the document. | 2.17 |
| When the machine sends 2 or more files to the Document Server within 1 second (as when sending backed up files just after the Server recovers), the first 2 documents receive the same filename and the first is therefore erased. The software has been modified so that file naming can be controlled at the ms level, preventing the file from being deleted. | |
| First mass production | 1.42.02 |
