Modification History

1. Fax Application Firmware

P/N	System	Check	Contents of Modification	Cut-in Month
	Version	Sum		
G5705387A	1.00	13D4	Firmware installed from the first mass production run.	December, 2001

PAGE: 2/3

2. Fax FCU Firmware

For NA version

P/N	Version	Check Sum	Contents of Modification	Cut-in Month
G3075771B	2.00.04	8EAD	Firmware installed from the first mass production run.	December, 2001
G3075771C	3.00.02	6FFB	 The following have been fixed: The Al tone is sent 1db higher than the value set in the modem. The machine sometimes freezes if the operator attempts to cancel printing of a report containing image data. If communication is interrupted (ECM disabled) while the machine is receiving MMR compressed data, the machine prints out blank sheets or no sheets at all. Even when paper is reloaded following paper end during the printout of the power failure report, the machine does not continue printing and the job is cancelled. If the Printing Numbers have been set for reception mode or special senders and Transfer Request is enabled, the machine will print out the programmed number of sheets in addition to transferring the data to the proper destination. 	February, 2002
