

<b>Model:</b> PRIPORT PEARL/PEARL-MC	<b>Date:</b> 31-Mar-00	<b>No:</b> R-C229-6
<b>Subject:</b> New Pearl Series Model (PEARL-MC) Information	<b>Prepared by:</b> M. Ohtsubo, Priport Service Planning Section	
<b>Classification:</b>	<input type="checkbox"/> Troubleshooting <input type="checkbox"/> Part information <input type="checkbox"/> Action required <input type="checkbox"/> Mechanical <input type="checkbox"/> Electrical <input type="checkbox"/> Service manual revision <input type="checkbox"/> Paper path <input type="checkbox"/> Transmit/receive <input type="checkbox"/> Retrofit information <input checked="" type="checkbox"/> Other (New Version Machine Infomation)	
<b>Model Name:</b>		
PEARL/PEARL-MC: Ricoh JP5000, Gestetner 5450, RexRotary 1560, nashuatec CP450, SVN 3350DNP		

Pearl-MC was released in March 2000 as the successor to Pearl.

The model names for Pearl-MC are the same as those for Pearl because there are no specification differences between the two models.

However, a new model code " C233 " has been assigned to Pearl-MC because there are some new mechanisms and some parts are not interchangeable with #C229 Pearl.

This bulletin is to inform you of all the information unique to #C233 Pearl-MC for service.  
Add the information on the following pages to the C229 service manual, to cover all the information for #C233 Pearl-MC.

# 1. OVERALL INFORMATION

## 1.1 ESSENTIAL DIFFERENCES BETWEEN C233 AND C229 MODELS

No.	Item	Remarks
1	Thermal Head, Thermal Head Power Supply, MPU, I/O Board, PSU	Some related parts were different. Refer to the new electrical components section.
2	Energy Saver Mode	Energy saver mode lowers the energy consumption level below 10 W. When the machine enters Energy saver mode, only the LED for the clear modes key stays on. All other keys and the LCD remain at stand-by until the clear modes key is touched.
3	Operation Panel	<ul style="list-style-type: none"> <li>The sorter key was added.</li> <li>The clear modes key also works for Energy saver mode.</li> </ul>
4	Sharpen Image Mode	In User Tools 4-27, the sharpness of character images in Letter mode can be increased. Fine details become more apparent in letter mode. (As a side effect, the edges of paper pasted onto the original might appear on copy images.) "Thin Lettering" (images become sharper) or "Standard" can be selected. "Standard" is the default.
5	Drum Home Position Indicators	<p>New LEDs were added to indicate when the drum is home position.</p> <ul style="list-style-type: none"> <li>Green LED: Indicates the drum is in its home position.</li> <li>Red LED: Indicates that drum is not in its home position.</li> </ul>
6	JS Sorter Connection	<ul style="list-style-type: none"> <li>The new JS40 sorter can be connected.</li> <li>Some new SP modes were added for JS40 Sorter. Refer to the service tables section for details.</li> </ul>
7	Friction Pad (Paper Feed Section)	A newly designed friction pad was used. It has increased tolerance to feed poor quality (thin) paper. (The specifications for the paper type remain the same.)
8	New SP modes	Some SP modes were changed. Refer to the service tables section for details.
9	Torque Limiter	The torque limiter was added to prevent damage to the main motor (locking) when torque from the drum or pressure cylinder gets too high.
10	Feed Encoder Sensor Position	A new caution was made for the feed encoder sensor position. For details, refer to 'Feed Start Sensor and Feed Encoder' in the replacement and adjustment section.

No.	Item	Remarks
11	Paper Feed Length Adjustment	The adjustment method remains the same, however the SP mode number was changed. Refer to 'Paper Feed Length Adjustment' in the replacement and adjustment section.
12	Firmware Update Method	The firmware on the MPU can be upgraded using a flash memory card. It is not necessary to use the card interface board. Refer to 'Load Program (SP8-20)' in the service tables section.

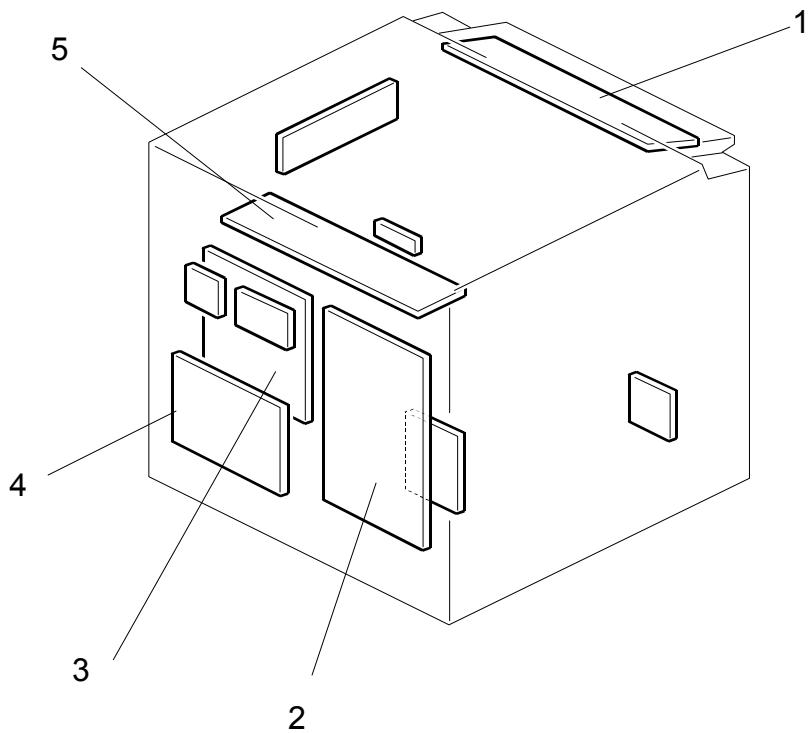

## 1.2 SPECIFICATIONS

The specifications are identical to the C229 model, except that the power consumption data for Energy Saver mode was added.

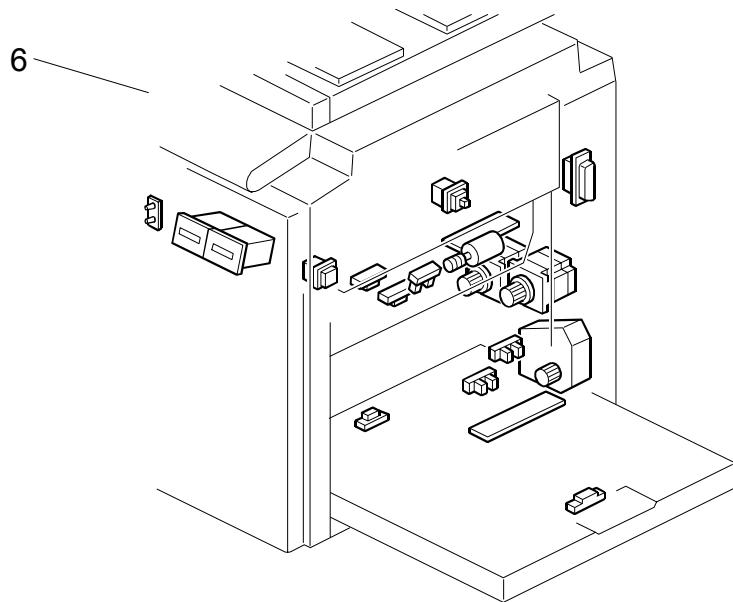

Power Consumption:	110/120 V version:	Maximum: 285 W (Same as C229 model) Energy saver mode: 10 W
	220 - 240 V version:	Maximum: 280 W (Same as C229 model) Energy saver mode: 10 W

## 1.3 NEW ELECTRICAL COMPONENTS

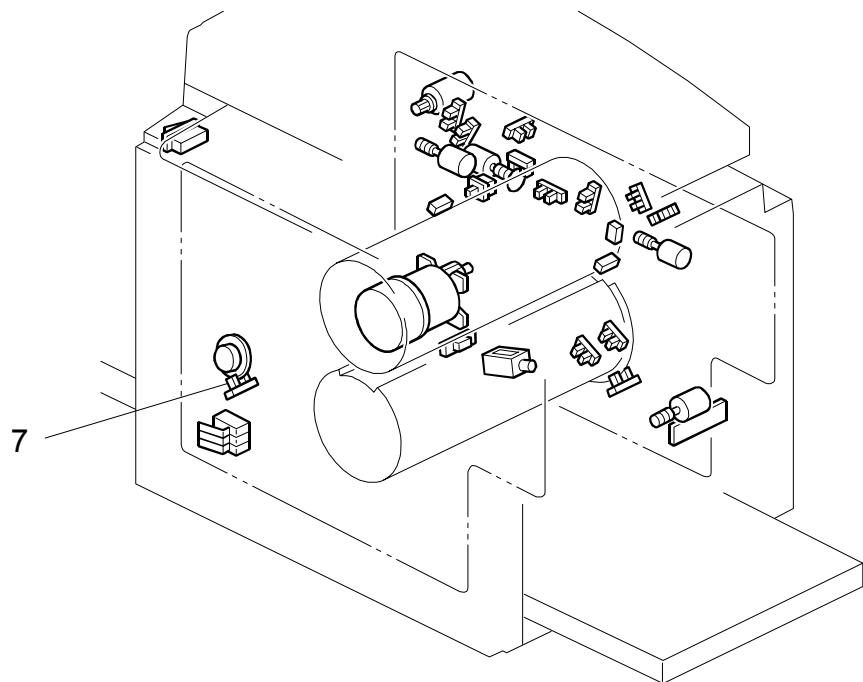

### 1.3.1 PRINTED CIRCUIT BOARD

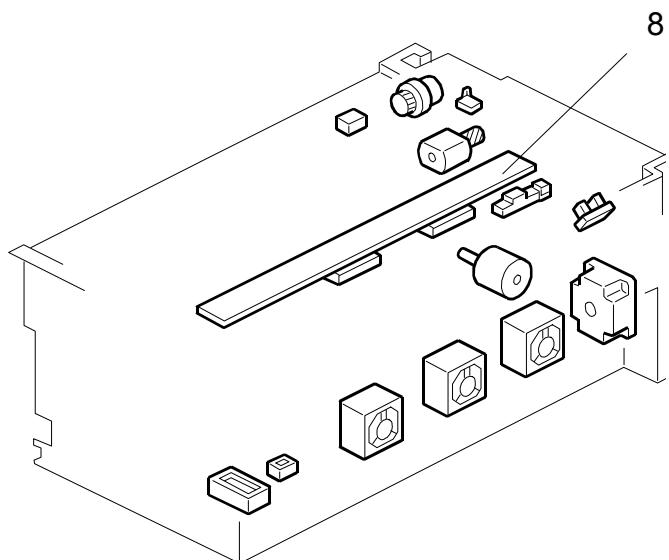

### 1.3.2 PAPER FEED SECTION

### 1.3.3 PRESSURE CYLINDER SECTION

### 1.3.4 MASTER MAKING UNIT

### 1.3.5 TABLES OF ELECTRICAL COMPONENTS

#### **Boards**

Index No.	Name	Function
1	Operation Panel Board	Controls the operation panel.
2	Power Supply Unit (PSU)	Provides dc power to the system.
3	Main Processing Unit (MPU)	Controls all machine functions both directly and through other boards.
4	I/O Board	Controls the mechanical components.
5	Thermal Head Power Supply Board	Provides dc power to the thermal head.

#### **Sensors**

Index No.	Name	Function
6	Drum Home Position Sensor	Informs when the drum is at home position to turn on the green LED.

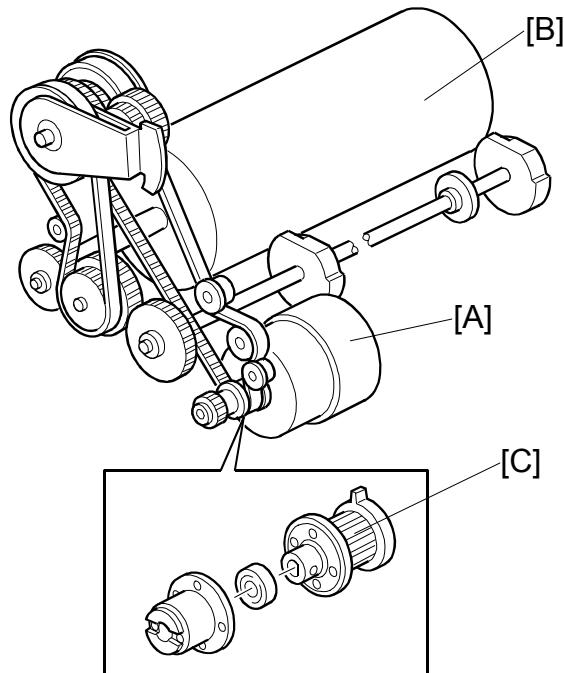

#### **Others**

Index No.	Name	Function
7	Thermal Head	Burns the image of the original onto the master.
8	Drum Home Position Indicator (LEDs)	LEDs that indicates the drum position.

## 2. DETAILED SECTION DESCRIPTIONS

### 2.1 MAIN MOTOR PROTECTION MECHANISM

The main motor [A] drives the pressure cylinder [B] and the drum. When the pressure cylinder or drum is locked, the torque limiter [C] stops drive from the main motor gear from being transmitted to these parts. This prevents the mechanism from being overloaded.

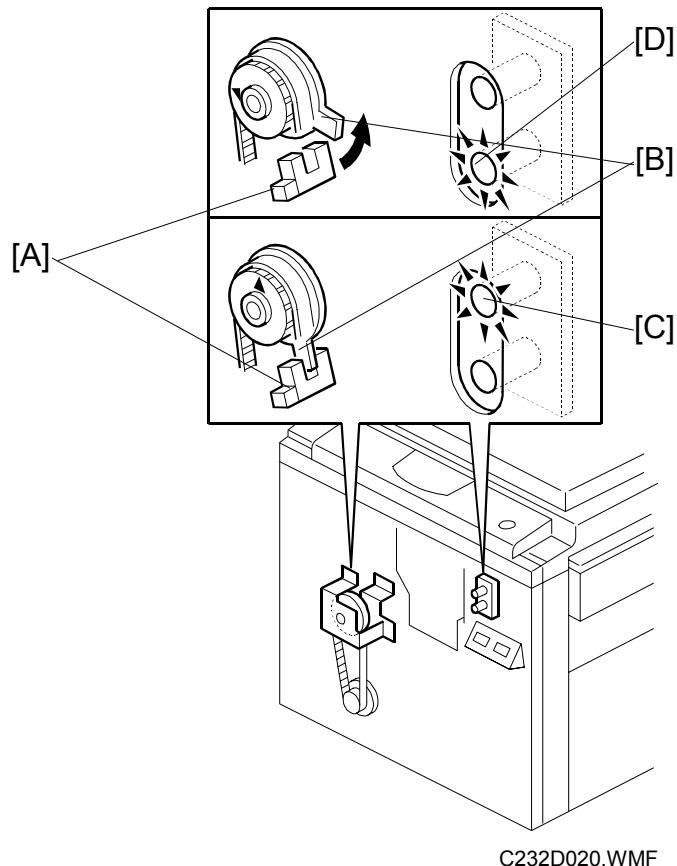

C233D010.WMF

When the mechanism is locked, the LCD indicates SC-05-00, SC05-01, or SC05-03. However, there are no damaged parts or changes in drum and pressure cylinder position.

To recover the machine, eliminate the cause of the problem then turn the main switch off/on.

- CAUTION:**
- 1) These service call codes can appear in different situations.
  - 2) Make sure jammed paper and masters are removed before switching off/on.

## 2.2 DRUM HOME POSITION DETECTION

C232D020.WMF

LEDs are added to inform the operator when the drum is at the exact home position and can be pulled out. The drum home position is monitored by the drum home position sensor [A], which is newly added for the actuator disk [B] on the pressure cylinder.

Green LED [C] turns on when the drum is at the home position.

Red LED [D] warns that the drum is not at the home position.

**NOTE:** If the red LED lights when the machine is in standby mode, the drum is not at the home position and the front door must be closed to reset the drum position.

### **3. INSTALLATION**

There are no differences from the C229 model in this section.

## 4. SERVICE TABLES

### 4.1 DIP SW, LED, VR, TP, AND FUSE TABLES

Fuse FU706 is added on the power supply board. There are no other differences from the C229 model in this section.

#### 4.1.1 FUSES

##### *Power Supply Unit*

Fuse	Rated Current	Protect
FU700	10A	Power Supply Unit
FU701	5A	Main Motor Drive Board
FU702	5A	Main Motor Drive Board
FU703	5A	I/O Board
FU704	5A	Thermal Head Power Supply Board, I/O Board
<b>FU706</b>	<b>2A</b>	<b>Power Supply Unit</b>

### 4.2 SERVICE CALL CODES

New SC codes for the optional JS40 Sorter (SC 40 series) were added. For these SC's, refer to the JS40 Service Manual. There are no other differences from the C229 model in this section.

### 4.3 SPECIAL TOOLS

The Flash Memory Card is added as a special tool. This is used instead of the C229 model's ROM Board. There are no other differences from the C229 model in this section.

Description	Part Number	Application
Main Drive Securing Tool Kit (Drum securing tool and two positioning shafts as a set)	C229 9000	For main drive positioning
Scanner Positioning Pin Kit (4 pins as a set)	A006 9104	For scanner wire installation
<b>Flash Memory Card</b>	<b>A230 9352</b>	<b>For updating firmware</b>

## 4.4 SERVICE PROGRAM MODE

Some SP modes were changed or newly added for the C233 model. The following table shows all of the items in the service program mode.

**NOTE:** The marks beside the SP mode numbers in the following tables represent the following meanings:

\*: A new item was added or the default setting was changed.

\*\*: New item, but not used for the C233 model.

### Main Menu Number List

1. Data Logging
2. Basic Settings
3. User Custom Settings
4. Input Test Mode
5. Output Test Mode
6. System Adjustment
7. Memory Data Clear
8. System Test

* 2-662	JS Sorter PaperVolmeLimit		No	Yes/No	-
* 2-663	JS Sorter Set Unit		Upper & lower	Upper & lower Upper Lower	-
* 2-664	Save Ink in Sorter Modes	Yes: The Ink Save mode is activated when a sorter mode is selected	OFF	ON/OFF	-

**Notes****1: 2-011 (Display language)**

0: Japanese, 1: English, 2: German, 3: French, 4: Italian, 5: Spanish, 6: Dutch

**2: 2-015 (Machine Destination)**

Always set this mode as 'Other.' If 'Japan' is selected, User Tools 1-5 that are not used for other versions are displayed.

**3: 2-016 (Swap Start Key)**

Enables swapping *the Start (master making) key function* and *the Print key function* depending on the end user's preference. ('No' is the default setting.)

**4: 2-020-1 (Default original mode)**

0: Letter, 1: Letter/Photo, 2: Photo, 3: Pencil

**5: 2-020-3 (Default paper type)**

0: Special, 1: Standard, 2: Thick, 3: User 1, 4: User 2

**6: 2-020-4 (Default master density)**

0: Pale, 1: Normal, 2: Fairly dark, 3: Dark

**7: 2-020-5 (Default print speed, cpm)**

1: 60, 2: 75, 3: 90, 4: 105, 5: 120

**8: 2-020-9 (Default Photo/Lightness)**

This is the default brightness in photo or letter/photo mode.

0: Dark, 1: Normal, 2: Light

**9: 2-020-10 (Default Photo/Screen)**

This is the default screen type for photo mode.

0: Standard, 1: Coarse 1, 2: Coarse 2, 3: Coarse 3, 4: Coarse 4 (coarsest)

**10: 2-020-11 (Default On Line paper size)**

This is the default paper size when the On Line key is pressed,

0: A3, 1: B4, 2: A4, 3: A4 lengthwise, 4: B5, 5: B5 lengthwise, 6: A5,

7: A5 lengthwise, 8: A6, 9: A6 lengthwise, 10 to 12: Not used, 13: Free, 14: Auto

Free – The master size is determined by the paper size sent from the PC.

Auto – The master size is determined by the paper size on the paper feed table. If the data from the PC is for a larger paper size, the excess data is lost.

Other settings: For example, if the setting is 0 (A3), the machine always makes an A3 master.

**11: 2-020-12 to -15 (Default make-up patterns 1 to 4)**

0 to 39: Preset patterns, from 1 to 40

40 to 43: User-created patterns A to D

**12: 2-020-16 (Default Ratio)**

U.S. version

0: 65%, 1: 74%, 2: 77%, 3: 93%, 4: 100%, 5: 121%, 6: 129%, 7: 155% 8: Auto

Other versions

0: 71%, 1: 82%, 2: 87%, 3: 93%, 4: 100%, 5: 115%, 6: 122%, 7: 141% 8: Auto

Selects a magnification ratio at power on or when the Modes Clear key is pressed. The same function has also been assigned to User Tool 3-11.

**13: SP2-20-17 (Default Eco Ink)**

By selecting ON in this mode, the Economy mode, which conserves ink during printing, can be set as the default at power on.

**14: 2-030 (Panel beeper)**

0: Disabled, 1: Enabled (except for when keys pressed), 2: Enabled fully

**15: 2-031 (Background correction)**

This can be used in letter/photo, photo, and tint modes to prevent the background of an original from appearing on copies. See Detailed Section Descriptions – Image Processing for more details.

**16: 2-032 (Thermal head energy control with temperature)**

If this is switched on, the energy supplied to the thermal head will depend on the temperature measured by the thermistor in the drum.

	Less than 18 °C	18 – 28 °C	More than 28 °C
Standard	SP 3-020-1 value (Default: -7%)	SP 3-020-1 – 5% (Default: -12%)	SP 3-020-1 – 10% (Default: -17%)
Economy	SP 3-020-2 value (Default: -25%)		

**17: 2-046-2 (ADF original size detection)**

Disabling ADF original size detection allows the ADF to scan originals within the following range.

Width: 105 to 297 mm

Length: 128 to 864 mm

**18: 2-050 (Sharpen Image Mode)**

When this SP mode is on, fine details become more apparent in letter mode. But the edges of paper pasted onto the original might appear on the print.

**19: 2-060 (Long paper mode)**

This disables trailing edge detection to allow long printer paper to be fed. This is not within specifications, so the machine's performance cannot be guaranteed using this mode.

**20: 2-070 (Auto Combine Original mode)**

This SP mode determines the use of the Combine key.

0: Normal – The Combine key accesses the Combine feature, in which two originals can be combined onto one copy

1: Automatic – The Combine key accesses the Auto Combine feature, in which the same original is printed twice or four times on the copy

This SP mode is only referred to when using the exposure glass. From the ADF, Auto Combine is always used if more than one original is placed.

The default is Normal.

**21: 2-080 (Double count-up for A3 masters)**

0: The counters go up by 1 only.

1: The master counter goes up by 2.

2: The master and print counters both go up by 2.

**22: 2-090 (APS A5 Size Detection)**

This determines how the machine behaves if the APS sensors cannot detect the original because it is too small

0: No original detected, 1: A5 assumed

Default: 0

**23: 2-120 (Exit Wing Position)**

This determines the position of the wings on the paper delivery table.

0: Auto (determined by the setting of SP6-100 for the currently-used paper type)

1: Always Up (regardless of SP6-100), 2: Always Down (regardless of SP6-100)

**24: 2-125 (Drum Idling)**

This mode has two options: "Fast" and "Slow". Fast is the default setting and is used with the new 16-kgf printing pressure setting. (See Pearl RTB No. 3 for more details about the new printing pressure setting.)

Fast mode skips the 30-rpm drum rotation speed at the beginning of printing. Consequently, the drum rotation speed increases as shown in the table below. Slow mode does not skip the 30-rpm drum rotation speed. Note that there are two cases depending on the temperature inside of the drum, detected by the thermistor. With the 'Slow' setting, paper wrapping jams become more likely unless the printing pressure is reduced to 14 kgf.

SP2-125 Setting	Drum Temperature	Trial Print	1st Print	2nd Print	3rd Print	4th Print	5th Print	6th Print	7th Print
Slow	Below 15 °C	16	16	30	60	75	90	105	120
	15 °C or above	16	30	60	75	90	105	120	120
Fast	Below 15 °C	16	16	60	75	90	105	120	120
	15 °C or above	16	60	75	90	105	120	120	120

\* These figures apply to the highest printing speed (120-rpm).

**25: 2-150 (Auto Image Rotation)**

If enabled, this feature rotates the scanned image if the original and printing paper are of the same size but different orientations.

0: Disabled, 1: Enabled

Default: Enabled

**26: 2-210 (Ink Near-end Detection)**

This SP mode enables and disables the display for ink and master roll near-end detection.

The machine determines how much of the master roll is remaining by subtracting the length of each master that is made.

In addition, it determines how much ink is left by counting the number of ink pump strokes that have been made.

The default is 0 (disabled). In this condition, the master and ink consumption is still monitored, but if a near-end condition occurs, it will not be displayed.

If this SP mode is changed to 1 (enabled), near-end will be displayed, but only for a few seconds when the machine has just been switched on.

**27: 2-250 (Separation lines for Combine Original mode)**

This can only be used with Memory Combine mode, using the optional memory board.

This determines the type of separation line printed on copies between the images of the different originals.

0: None (default), 1: Solid, 2: Broken line type A, 3: Broken line type B, 4: Crop marks

**28: 2-270 (Print Restart in Class)**

This determines how the machine behaves if the Job Separator feature is not used.

1: Auto Start – After printing for one class has been finished, there is a pause of a few seconds, then printing for the next class begins automatically. The short break allows the user to take the stack of prints off the delivery table.

2: Disabled (Default) – After printing for one class has been finished, the machine stops. The user must press Print to start printing for the next class.

**31: 2-291 (Restricted Access)**

When the key counter is installed, the technician enables the key counter with SP 2-002. However, the user can override this setting with SP 2-291 (which is also user tool 6-8).

OFF: Copies can be made even if the user has no key counter, regardless of SP 2-002.

ON: The user must have a key counter, if SP2-002 has been switched on.

The default is OFF, so to use the key counter, the user must switch 2-291 on using the equivalent user tool (6-8).

**32: 2-300 (Stamp type)**

This determines what the Stamping function (Stamp key) puts on the printouts.

**33: 2-301 (Default stamp size)**

This determines the size of the stamp.

0: Normal (about 32 x 64 mm), 1: x 2, 2: x 4, 3: x 8

**34: 2-302 (Default Stamp Density)**

0: Solid fill (default), 1: Fine pattern, 2: Coarse pattern

**35: 2-303 (Default Stamp Position)**

0: Upper left, 1: Upper middle, 2: Upper right, 3: Center left, 4: Center,

5: Center right, 6: Lower left, 7: Lower middle, 8: Lower right,

9: Everywhere (repeated)

User tool 5-4 (SP 3-120 to 128) can be used to adjust the co-ordinates of types 0 to 8.

**36: 2-304 to 2-306 (User Stamp Size, Density, and Position)**

These settings are the same as SP 2-301 to 2-303, except that they are for the user stamp. User stamps are stored using user tool 5-8.

User tool 5-7 (SP 3-130 to 138) can be used to adjust the co-ordinates of types 0 to 8.

**37: 2-308 (Date Stamp Position)**

0: Upper left (horizontal), 1: Lower right (horizontal), 2: Lower left (vertical),  
3: Upper right (vertical)

**38: 2-309 (Page Numbering Type)**

0: P1, P2, P3, . . 1: 1/5, 2/5, 3/5, . . 2: - 1 -, - 2 -, - 3 -, . . .

**39: 2-310 (Default Page Number Stamping Position)**

0: Upper right (horizontal), 1: Upper left (vertical), 2: Bottom middle (horizontal),  
3: Center right (vertical)

Settings 0 and 1 determine the default for the 'P1, P2' and '1/5, 2/5' types of page numbering.

Settings 2 and 3 determine the default for the '- 1 -, - 2 -' types of page numbering.

**40: 2-390 (Drum Size – A3 or DLT)**

This setting changes the master making area. It also affects the available range for the default image position shift (top/bottom, SP2-020-7).

A3: -15 mm to + 15 mm

DLT: -10 mm to + 10 mm

**41: 2-400, 401 (Paper types for User 1 and User 2)**

The user can customize two paper types (User 1 and User 2) in addition to the three usual paper types (Normal, Thick, Special).

These SP modes give the machine a rough idea of what type of paper the user is using as types User 1 and User 2.

0: This paper type is not being used at present

1: Standard, no feed (Standard paper type, non feed likely)

2: Standard, double feed (Standard paper type, double feed likely)

3: Thick, no feed (Thick paper type, non feed likely)

4: Thick, double feed (Thick paper type, double feed likely)

5: Thick, medium (Thick paper type, with intermediate chances of double and non-feed)

**42: 2-422 (*Ink Auxiliary Supply*)**

This mode determines when ink is detected and supplied. There are three possible settings.

- ‘0: After’: Ink detection and supply are done when a print job finishes.
- ‘1: Before’: They are done when the Print Start key is pressed (and before starting printing).
- ‘2: No’: Ink is not added except during normal printing.

Note that if the machine detects a low ink condition during printing, ink is supplied regardless of this setting.

To minimize the wait time for drum idling, ink supply prior to starting printing has been eliminated by setting this mode to ‘0: After’ as the default. With older firmware, when the Print Start key is pressed, the machine carries out the ink detection and (if low ink is detected) starts to supply ink before starting printing. (This ink detection is likely only when an operator cancels the Auto-cycle mode, which is selected by default. In the Auto-cycle mode, the machine enters the printing process without detecting the ink after making a master.)

### 3. User Custom Settings

SP No.	Display	Function	Default	Setting	User Tools
3-001	Minimum Print Quantity		0	0 to 9999%	2-1
3-002	Maximum Print Quantity		9999	0 to 9999%	2-2
3-010-1	Magnification (A3 to A4)	Allows the user to change the default reproduction ratios	71	50 to 200%	3-4
3-010-2	Magnification (B4 to A4)		82	50 to 200%	3-4
3-010-3	Magnification (A3 to B4)		87	50 to 200%	3-4
3-010-4	Magnification (Margins)		93	50 to 200%	3-4
3-010-5	Magnification (Standard)		100	50 to 200%	3-4
3-010-6	Magnification (B4 to A3)		115	50 to 200%	3-4
3-010-7	Magnification (A4 to B4)		122	50 to 200%	3-4
3-010-8	Magnification (A4 to A3)		141	50 to 200%	3-4
3-020-1	T Head Energy - Standard	Thermal head energy in standard and economy modes, as percentage of full power. Also see SP 2-032.	-7	0 to - 99%	-
3-020-2	T Head Energy - Economy		-25	0 to - 99%	-
3-030	Auto Reset Time	Determines how long it takes for the machine to return to the defaults.	0	0, 1 to 5	1-1
3-051	Number of Skip Feeds		2	2-9	4-11
3-060-1	MarginErase A3 MainScan	Determines the edge erase margins. For example, for A3 main scan, the width of the original is 297 mm, and the erase margin is set at 293. This means that only the central 293 mm will be scanned.	293	50-297	3-9

* 6-662-3	JS Sorter Feed Speed 3st		0	-50 to 100
* 6-662-4	JS Sorter Feed Speed 4st		0	-50 to 100
* 6-662-5	JS Sorter Feed Speed 5st		0	-50 to 100

**Notes****1: 6-001 (Main scan position)**

Inputting a positive number moves the image away from the operation side of the machine. Use the point ( . ) key to switch between + and -.

**2: 6-002 (Scan start position)**

Inputting a positive number moves the image away from the leading edge of the printer paper. Use the point ( . ) key to switch between + and -.

**3: 6-010 (Master writing speed)**

This changes the master feed motor speed.

Inputting a positive value stretches the image on the master. Inputting a negative value shrinks it.

Normally, do not use this SP mode to adjust the vertical magnification. Use it only if the vertical magnification is not satisfactory by adjusting Scanning Speed (SP6-011).

**4: 6-011 (Scanning speed)**

Inputting a positive value stretches the image on the master. Inputting a negative value shrinks it.

**5: 6-050 (Operation panel LCD contrast)**

0: Palest, 7: Darkest

**6: 6-070 (Master making density)**

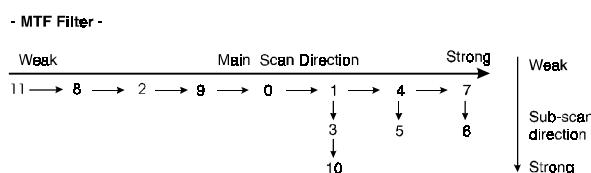

0: Pale, 1: Normal, 2: Dark

The default is 1: Normal. Changing this moves the user's image density settings up or down one notch.

**7: 6-082 (MTF filters)**

A stronger filter leads to a sharper image, but moiré can become more apparent.

Refer to the following diagram for the relationship between this SP mode and filter strength (the relationship is not linear). Do not use a value of 1; this is for designer's tests only.

**Note:** The value is the filter number

C229D505.WMF

**8: 6-90 to 99 (Paper feed and separation pressures for different paper types)**

These SP modes determine the paper feed and separation pressures that are automatically applied during paper feed. The user adjusts these pressures by selecting a paper type (normal, thick, special, user 1, user 2), and then by selecting how often non-feeds and double feeds are occurring.

The user customizes the user 1 and user 2 types by selecting from 5 choices. These choices can be seen in the description for SP 2-400 and 2-401. Each of these 5 choices has a set of feed and separation pressures (refer to Detailed Section Descriptions – Paper Feed).

- 6-090: Special paper, feed pressure
- 6-091: Normal paper, feed pressure
- 6-092: Thick paper, feed pressure
- 6-093: User 1 paper, feed pressure
- 6-094: User 2 paper, feed pressure
- 6-095: Special paper, separation pressure
- 6-096: Normal paper, separation pressure
- 6-097: Thick paper, separation pressure
- 6-098: User 1 paper, separation pressure
- 6-099: User 2 paper, separation pressure

The settings for user 1 and user 2 depends on the type of paper that the user has set these up for (see SP 2-400 and 2-401).

**9: 6-100 (Paper delivery table wing angle)**

The machine lifts or lowers the wings depending on the paper type selected by the user (standard, special, thick, user 1, user 2).

The settings for user 1 and user 2 depends on the type of paper that the user has set these up for (see SP 2-400 and 2-401).

**10: 6-101 (Paper clamping)**

Whether the machine clamps the paper or not depends on the paper type selected by the user (standard, special, thick, user 1, user 2).

The settings for user 1 and user 2 depends on the type of paper that the user has set these up for (see SP 2-400 and 2-401).

**11: 6-130 (Drum master clamper registration)**

This determines how far after the leading edge the master is clamped.

A larger value clamps the master further away from the leading edge, and moves the image closer to the leading edge of the paper.

Do not use this SP to adjust leading edge registration. Use SP6-2 for that.

**7. Memory Data Clear**

#### 4.4.2 CLEARING THE FACTORY SETTINGS (SP7-1)

**⚠CAUTION**

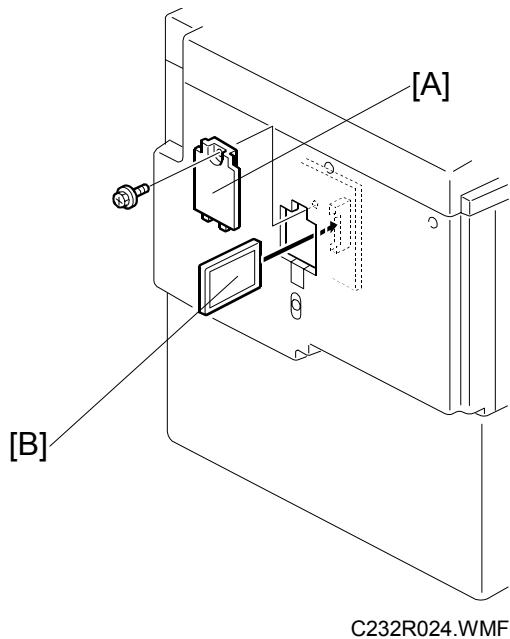

Performing "Clear factory settings" (SP7-1) resets a part of the settings stored in the RAM to their default settings. Normally, this SP mode should not be used. This procedure is required only after replacing the RAM on the MPU or when the machine malfunctions due to a damaged RAM.

The following data is not cleared even after performing "Clear factory settings" (SP7-1).

- SP2-10: Sizes in Metric or Inch
  - SP2-11: Select Language Type
  - SP2-380: Japanese Display Type (Do not use.)
  - SP2-390: A3/DLT Drum Selection
  - SP2-421: Type of Thermal Head (Do not use.)
  - SP3-70: Machine Serial Number
  - SP3-73: Clock
  - SP6- All : System Adjustment
1. Save the data SP mode in order to restore it later.  
**NOTE:** If possible, print out all system parameter lists using SP8-70, 71, 72, 73, and 74. The optional memory board is required to use the data printout function.
  2. Enter SP7-1.
  3. Press the Enter (#) key while holding the "0" key.  
**NOTE:** When the sequence is successful, "Cleared" is displayed.

#### 4.4.3 LOAD PROGRAM (SP8-20)

The firmware in the flash ROM on the MPU can be upgraded using a flash memory card, as follows.

1. Before downloading new software, check the current version with SP1-42.
2. Turn off the main switch and disconnect the power plug.
3. Remove the cover [A].
4. Plug the flash memory card [B] into the connector on the MPU.
5. Connect the power plug and turn on the main switch.
6. Access SP8-20-1 and press the **OK** key. Press the **Enter (#)** key to start downloading (the LCD displays '**Processing**').
7. After completing the download (the LCD displays '**Completed**'), leave the SP mode.
8. Turn off the main switch, then remove the flash memory card.
9. Turn on the main switch, then enter the SP mode again and check the updated ROM version with SP1-42.

#### 4.4.4 USER TOOLS

Some items in the SP mode can be accessed with the User Tools by users. The User Tools key on the operation panel accesses these.

The following table shows all the user tools.

**User Tools Table**

No.	Display	Equivalent SP No.
1-1	Auto Reset Time	3-030

## 5. PREVENTIVE MAINTENANCE

There are no differences from the C229 model in this section.

## 6. REPLACEMENT AND ADJUSTMENT

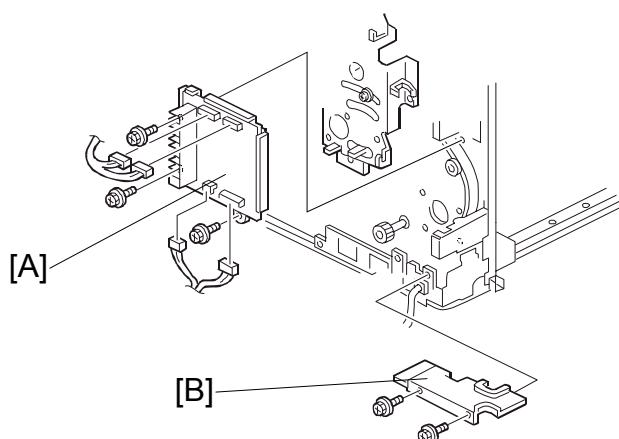

### 6.1 PRINTING SECTION

#### 6.1.1 TORQUE LIMITER

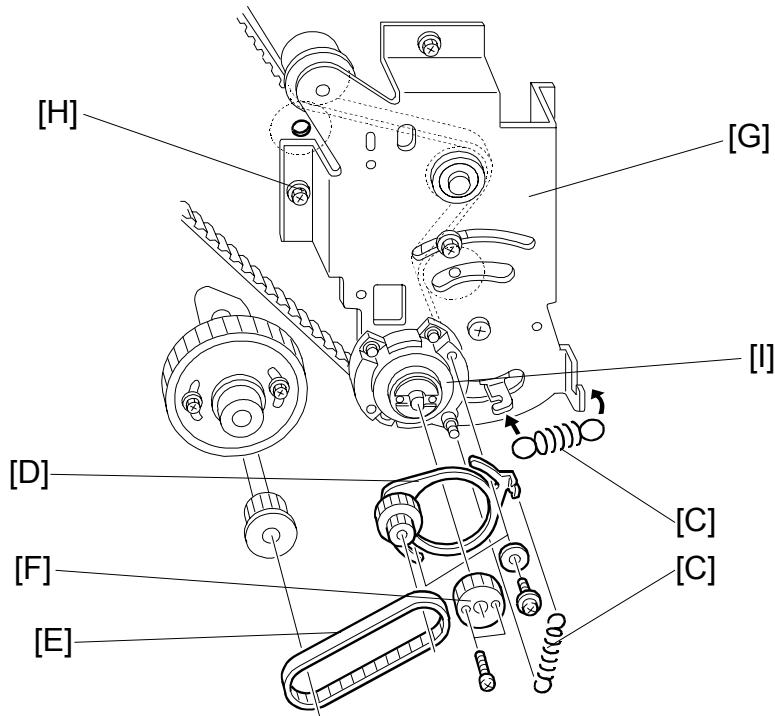

C232R505.WMF

1. Turn off the main switch and remove the drum.
2. Set the drum drive-securing tool.
3. Remove the rear cover and swing out the PSU (see the C229 service manual).

C232R503.WMF

4. Remove the main motor control board [A].
5. Remove the wire protection cover [B].

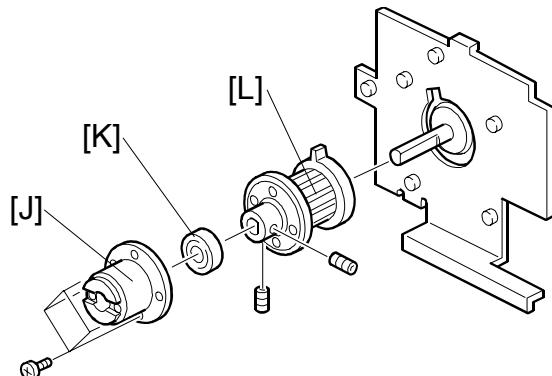

C232R506.WMF

6. Remove the 2 springs [C].
7. Remove the pulley bracket [D].
8. Remove the timing belt [E].
9. Remove the gear [F].
10. Remove the bracket [G].

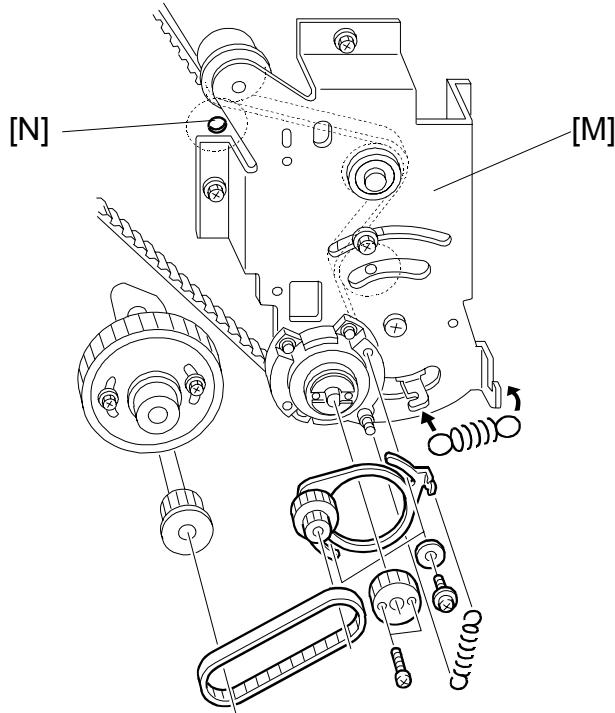

**CAUTION:** Screw [H] is located under the main wire harness. Take care not to damage the wire harness when removing it.

11. Remove the bearing [I] on the bracket.

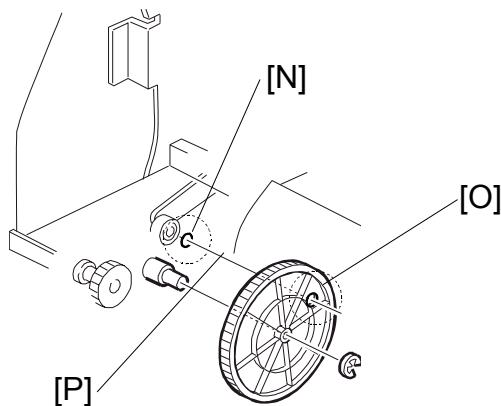

C232R507.WMF

12. Remove the bracket [J] (4 screws).
13. Remove the bearing [K].
14. Remove the torque limiter [L] (2 Allen screws).

C232R506.WMF

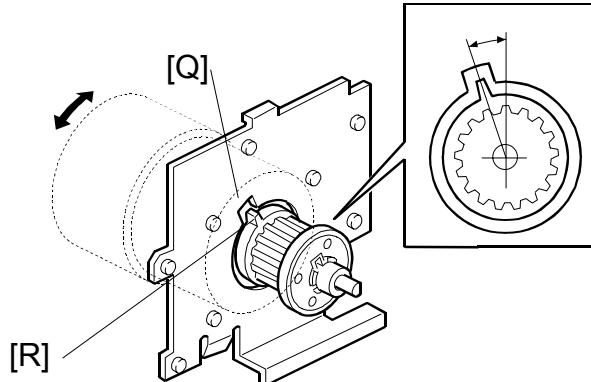

C232R508.WMF

15. Install the bracket [M]

**CAUTION:** Make sure that the positioning holes in the rear frame [N] and the drive gear [O] are in line [P] as shown. If the holes are in line, the paper exit pawl drive timing is OK. If they are not, make sure that the holes are in line again.

16. Install the bearing (removed in step 11) on the bracket.

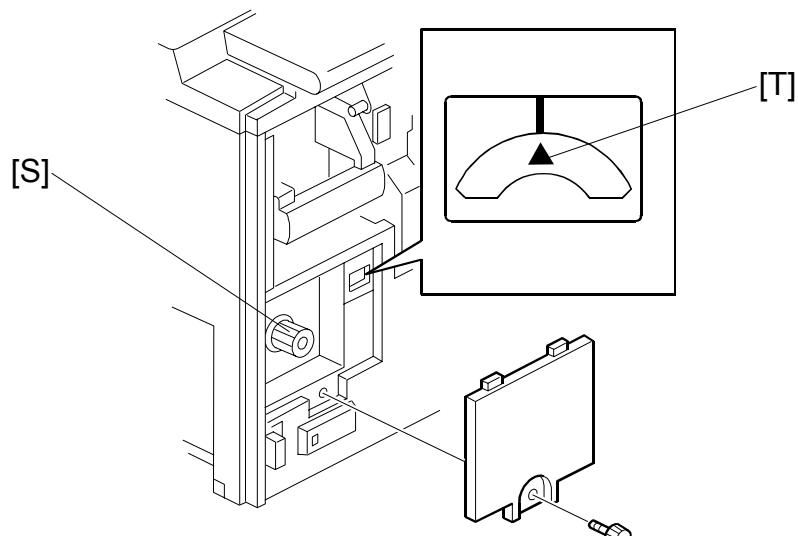

C232R509.WMF

17. Align the cutout in the bracket [Q] with the pawl on the torque limiter [R] as shown.

18. Install the spring.

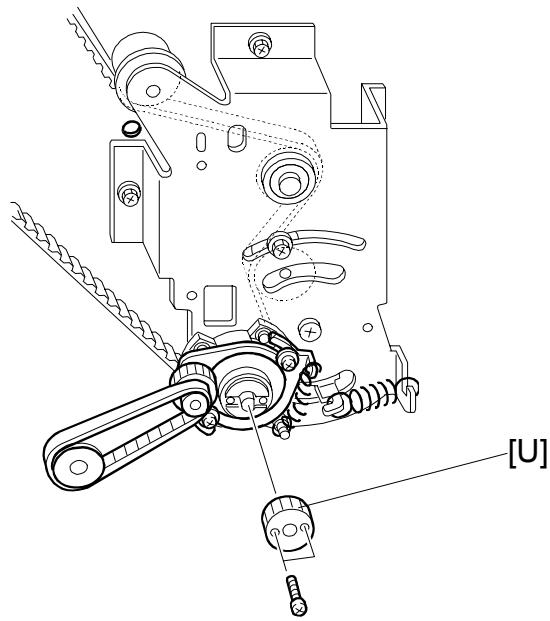

**CAUTION:** If the cutout and pawl are in line, the main motor drive timing is OK. If they are not, remove the spring, then make sure that the cutout and pawl are in line again.

C232R510.WMF

19. Install the timing belt and pulley bracket.

**CAUTION:** When you install the pulley bracket, adjust with the knob [S] until the line and arrow on the indicator disk are in line [T].

C232R504.WMF

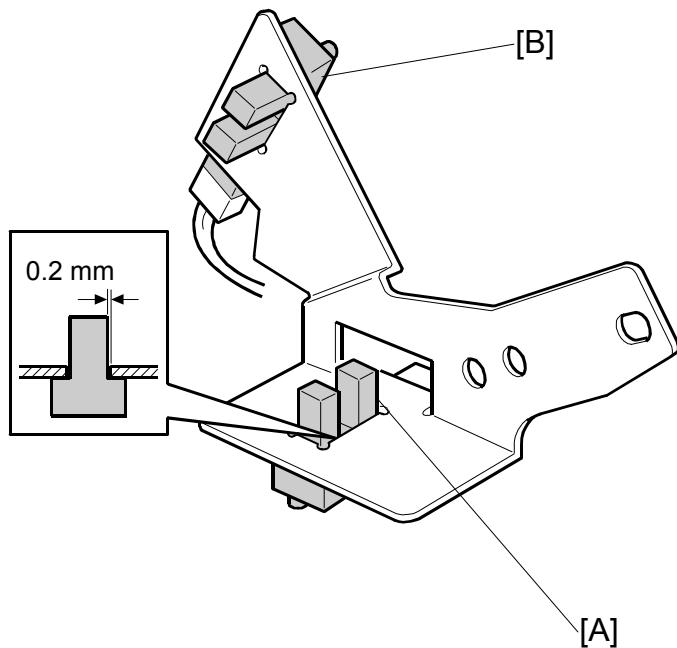

20. Install the gear [U].
21. Install the wire protection cover.
22. Install the main motor control board.
23. Install the rear cover.
24. Remove the drum drive securing tool.

### 6.1.2 FEED START SENSORS AND FEED ENCODER

The feed start sensor and feed encoder must be set in the correct positions to avoid paper feed trouble once they are removed. For general instructions and cautions for these sensors, refer to 6.10.2 'Feed Start Sensor and Feed Encoder' in the C229 Service Manual.

In addition, the following caution must be taken as a specific procedure for the C233 model. This is necessary because the configuration of the sensors' bracket was changed.

**CAUTION:** Make sure that the distance between the feed encoder sensor [A] and the sensor bracket is less than 0.2 mm.

B: Paper table feed start sensor

## 6.2 PAPER FEED SECTION (MAIN BODY)

### 6.2.1 PAPER FEED LENGTH ADJUSTMENT

**CAUTION:** The last digits of the SP numbers for this adjustment (SP 6-116) are different from the C229 model. Please refer to the chart below and note the changes in the numbers. Also, note that the default values are different for some items.

C229 Model			C233 Model		
SP No.	Display	Default	SP No.	Display	Default
6-116-1	Paper Clamp Timing Pulse	143	6-116-1	Paper Clamp Timing Pulse	145
6-116-2	Regist Timing Pulse	113	6-116-4	Regist Timing Pulse (Do not adjust this item.)	113
6-116-3	Feed Stop Timing Pulse	25	6-116-5	Feed Stop Timing Pulse	21
6-116-4	Regist Speed Ctl Pulse	20	6-116-6	Print Position 2 Setting (Do not adjust this item.)	103
6-116-5	Paper Clamp – Thick Paper	150	6-116-2	Paper Clamp - Thick Paper	148
6-116-6	Regist – Thick Paper	213	6-116-7	Print Position 1 Setting (Do not adjust this item.)	140
6-116-7	Paper Clamp Pls – A4 Cam	143	6-116-3	Paper Clamp Pls - A4 Cam (Do not adjust this item.)	145

### **Paper Feed Motor Stop Timing Adjustment**

The SP mode number and its default value used in this adjustment are different from those in the C229 model. There are no other differences from the C229 model. (The adjustment procedure remains the same, except for the SP number and default value.)

#### ***Adjustment procedure***

To ensure that the paper reaches the registration roller (main body) properly. Changing the paper feed motor stop timing with SP 6-116-5 changes the paper feed length for the paper feed roller.

**CAUTION:** Do not change SP6-110 and 6-111 (these change the paper feed start timing )

1. Turn on the main switch, then access the SP mode.
2. Enter SP6-116-5.
3. Increase or decrease the value on the display.

**NOTE:** 1) Before changing the value, check the current setting, in case you need to recover the previous setting. (Default for SP6-116-5: "21")  
2) Changing the value by +1 increases the paper feed motor's on-time and feeds the paper an extra 0.3 mm.

4. Leave the SP mode, then check the paper feed performance. If the problem still occurs, repeat the above steps.

### **Paper Clamping Timing Adjustment**

The SP mode numbers and their default values used in this adjustment are different from those in the C229 model. There are no other differences from the C229 model. (The adjustment procedure remains the same, except for the SP numbers and default values.)

#### ***Adjustment procedure***

To ensure that the paper reaches the paper clamper on the pressure cylinder properly. Changing the paper clamping timing with SP6-116-1 (or 6-116-2) changes the paper feed length for the paper registration roller (main body).

**CAUTION:** Do not change SP6-112 to 6-115 (these change the registration motor start timing). In addition, do not change SP6-116-3, -4, -6 or -7.

1. Turn on the main switch, then access the SP mode.

2. Enter SP6-116-1 (or 6-116-2).

**NOTE:** The paper clamping timing depends on the paper type selected at the operation panel. SP6-116-1 is the adjustment for normal paper only. For thick paper, use SP6-116-2. (Note that in thick paper mode, paper clamping is not done.)

3. Increase or decrease the value on the display.

**NOTE:** 1) Before changing the value, check the current setting, in case you need to recover the previous setting. (The default for SP6-116-1 is "145", and for SP6-116-2 it is "148".)  
2) Changing the value by +1 decreases the registration motor's on-time and feeds the paper 0.3 mm less.

4. Leave the SP mode, then check the paper feed performance. If the problem still occurs, repeat the above steps.
