### Introduction

The UC 5 is a high speed interface for Digital Duplicators. With a UC 5 you can print directly from your PC to your Digital Duplicator. This will significantly im-prove the quality of your printed material as well as speed up your printing jobs.

We are confident that you will find it a pleasure to use and an asset to your organi-sation.

Windows 3.11, Windows 95/98 or Windows NT based PC. Note: PS requires Win 95/98/NT

### **Safety Information**

Apparaten skall anslutas till jordat uttag när den ansluts till ett nätverk.

The Appliance has to be connected to an earth socket-outlet when the appliance is connected to a Network

This product is also designed for IT power distribution system with phase-to-phase voltage 230V.

220-240 V, 50/60 Hz

Raccordez toujours le cordon d'alimentation à une source de courant correspondant aux normes en vigueur sur le territoire métropolitain.

Branchez le cordon d'alimentation directement à la prise secteur et assurez-vous que cette dernière est reliée à une prise de terre. Veillez à ne jamais utiliser de rallonge.

For installation instructions please refer to the installation manual.

## **Basic Specifications**

Printer Language:	. Windows GDI.
Supported Resolutions:	. 300, 400 and 600 dpi.
Graphics Screening:	Coarse, Fine, Line Art, Error Diffusion. Density control supported.
Supported Drivers:	. Win 3.11, Win 95/98/ME., Win 2000, Win NT
Ports:	. ECP/EPP parallel port.
On Board Memory:	. 16 MB
Supported Digital Duplicator	
Brands:	Ricoh, Gestetner, Rex Rotary, Nashuatec, Savin and Standard. NB check that your model has interface support.
Certification:	.CE, UL, FCC.

## **Package Contents**

Check that you have received the following Items in your UC5 package.

### **Components For UC5.**

Cable for connecting to Digital Duplicator

Centronics Parallel Cable

This User Guide

ZipRIP - UC5

Power Cable

Installation CD

### **External Features**

All indicators and plugs referred to in this manual are described in the diagrams below.

"Activity" Indicator (Red)

"Power On" Indicator.

## **Testing your UC5**

Once you have set up the UC5 you can produce a test page before continuing to install the printer drivers on your computer.

To produce a test page, put your Digital Duplicator "on-line" and press the green button at the back of the UC 5.

After a short delay a test page should be printed. The test page should look like the illustration below.

**Note** that the test page will print as an A4 sheet on a 300dpi Digital Duplicator. If the Digital Duplicator has a higher resolution then the output will appear smaller. - This is normal.

If a test page is not created correctly, then refer to the section "Troubleshooting your UC5".

UC5 OM 1-9 April 2002

## **Activity Indicator**

The red activity indicator shows the status of the UC 5. The table below explains the different status indications.

Red Indicator Display	Meaning
On just after the UC5 is turned on.	UC5 initialising - the red light will stay on for 6 seconds.
Flashing rapidly.	The UC5 is receiving a print job.
Continuously on.	The UC5 has received a print job and is now waiting.
Continuously off.	The UC5 is idle.
Flashing slowly and evenly.	There is an error on the digital duplicator, such as paper jam.

## **GDI** Printer Driver Installation

## NOTE: Before beginning the driver installation ensure you are in possession of your Windows Operating System CD.

Once the UC5 has been installed, you will need to install a GDI printer driver. Please follow the instructions relating to the operating system installed on the PC connected to the UC 5.

Note: To allow fastest printing to the UC 5, we recommend that the parallel port is set to "ECP Mode". On most new PC's this is the default setting. However, on older PC's you may have to set this in the BIOS configuration utility. If you are unsure of how to do this, please check with your PC supplier, or IT support staff.As a guide, most PC's enter the BIOS when either "delete" or "F1" keys are pressed at boot up. Once the BIOS programme is running the "Parallel Port Mode" setting can generally be found in the "Chipset

Features" or "Integrated Peripherals" section. The following pages will give detailed and illustrated instructions on how to install the GDI Printer driver for the following operating systems:-

Windows 3.11 Windows 95/98 Windows NT Windows 2000

## **Installing GDI drivers for Windows 3.11**

To install the printer driver you will need the UC5 CD ROM as well as the Windows 3.11 installation disks.

To set up the UC 5 driver open the Windows "Control Panel" located in the "Main Program Group".

Double-click on the "Printers" icon. This will show the printers setup dialogue box. All installed printers will be listed in this box.

- Printers	
Default Printer No Default Printer	Close
Installed Printers:	<u>С</u> оппеск <u>S</u> etup <u>В</u> еточе <b>Add &gt;&gt;</b>
Sgl As Default Printer	<u>H</u> elp

Click on the "Add >>" button. Highlight the option "Install Unlisted or Updated Printer". Click on the "Install" button.

You will need to specify the location of the setup files for the UC 5 printer. These are located in the "win3.11" directory on the supplied UC 5 drivers CD ROM. Insert the Drivers CD and enter the letter of YOUR CD ROM. For example "X:\win311", if "X" is your CD drive letter, as shown in the illustration below. Click "OK" once you have entered the directory path.

-	Printers

The UC 5 drivers will now be installed. Some of the files used by the driver are stored on the Windows 3.11 installation disks, as a result you may be prompted to insert some of these disks during the installation process.

Once the driver has been installed the UC 5 will be listed in the Printers dialogue box. By default Windows installs the driver on LPT1:. The port can be changed by clicking on the "Connect" button and specifying an alternative.

Before continuing to use the UC 5 follow the final instructions on setting up the default options for the UC 5 settings.

Click on "Setup" to set the default options for the UC 5 driver. (These settings can be overridden by settings made in the "Print - Setup.." dialogue boxes within application programs.)

Choose settings which will be most commonly used with your Digital Duplicator. Click the "OK" button when done.

## Installing GDI drivers for Windows 95/98/ME

To install the driver you will need the UC5 CD ROM and your Windows operating system CD.

The first step is to add a printer driver. Choose the "Printers" menu from the "Setting" menu in the Windows "Start" menu.

The Printers folder will be shown, as illustrated below. If you have any printer(s) already installed, these will be listed here. With the mouse, dou-ble click on the "Add Printer" icon.

UC5 OM 1-9 April 2002

The "Add Printer Wizard" will be displayed. This will show a series of dialogue boxes with questions about the printer driver you are installing. Dialogues which require specific input for the UC 5 are covered in the following pages.

Choose "Local Printer" and click on "Next".

You should now click on "Have Disk". A dialogue box labelled "Install from Disk" will appear. Enter the location of the directory containing the UC 5 printer driver. This will be on the supplied UC5 GDI CD ROM in a directory called "win95".

Select "Browse" and locate the drive that contains the UC 5 CD ROM. For example, if the drive used for the supplied CD ROM is "X" then enter "X:\win95".

Install Fr	om Disk	×
J	Insert the manufacturer's installation disk into the drive selected, and then click OK.	OK Cancel
	Copy manufacturer's files from: E:\Win9x_ME\English	<u>B</u> rowse

The following dialogue box will appear. Select the driver name that matches the Digital Duplicator you are installing the UC 5 on and click "Next". (Refer to the driver list on page 6).

Add Prin	ter Wizard
Ì	Click the manufacturer and model of your printer. If your printer came with an installation disk, click Have Disk. If your printer is not listed, consult your printer documentation for a compatible printer.
Printers:	
	Pro B Pro C Pro D
	< <u>B</u> ack Next > Cancel

The files needed for the UC 5 printer driver will now be installed. Depending on how your system is configured, you may need to insert your Windows Operating System CD as this holds some of the files needed by the printer driver.

You now need to select the "Port" that the UC 5 will be connected to. This is normally LPT1:. If you have more than one parallel port on your PC, be sure to select the appropriate port in this dialogue. Click "Next" once the port is selected.

Add Printer Wizard	
Add Printer Wizard	Click the port you want to use with this printer, and then click Next. Available ports: COM1: Communications Port CDM2: Communications Port FILE: Creates a file on disk LPT1: ECP Printer Port
	Configure Port

Enter the name that you wish the UC 5 to be seen as on the computer. Click "Next" once the name has been entered.

You can now set windows to print out a test page, once the driver is installed, to ensure that the UC 5 is functioning correctly.

Add Printer Wizard	
	After your printer is installed, Windows can print a test page so you can confirm that the printer is set up properly. Would you like to print a test page? <u>Yes (recommended)</u> <u>No</u>
	< <u>B</u> ack Finish Cancel

The UC 5 printer driver will now be installed. As this is done, you may be prompted to insert the Windows Operating System CD. If you selected "print test page" earlier on, the UC 5 should print a Windows 95 test page.

## Installing GDI drivers for Windows NT.

To install the printer driver you will need the UC5 CD ROM as well as the Windows NT operating system CD.

The first step is to add a printer driver. Choose the "Printers" menu from the "Settings" menu in the Windows "Start" menu.

The Printers folder will be shown, as illustrated below. If you have any printer(s) already installed, these will be listed here. With the mouse, double-click on the "Add Printer" icon.

The "Add Printer Wizard" will be displayed. This will show a series of dialogue boxes with questions about the printer driver you are installing. Dialogues which require specific input for the UC 5 are covered in the following pages.

If you are installing the printer driver on the computer connected directly to the UC 5, then choose "My Computer" and click "Next". Alternatively, if you are installing the driver onto a machine that will be connected to the UC5 attached to another computer over a network, then choose "Network printer server".

If "My computer" was selected then a list of available ports will be displayed

Select the port you have connected the UC 5 to and click "Next". LPT1: is the most likely port to be used.

If "Network print server" was selected then a dialogue box will appear asking for you to specify the network path of the shared printer. Enter the network path and continue the installation.

Add Printer Wizard			xt(s) you want to use. ailable checked port.

In the final dialogue box you can specify that Windows NT prints a test page to the UC 5 once the drivers are installed. Click "Next" to continue. The drivers will now be installed, depending on your NT installation you may be prompted for the Windows NT installation CD. The driver should now be correctly installed.

## **Installing GDI drivers for Windows 2000**

To install the printer driver you will need the UC5 CD ROM as well as the Windows 2000 operating system CD.

The first step is to add a printer driver. Choose the "Printers" menu from the "Settings" menu in the Windows "Start" menu.

The Printers folder will be shown, as illustrated below. If you have any printer(s) already installed, these will be listed here. With the mouse, double-click on the "Add Printer" icon.

UC5 OM 1-9 April 2002

The "Add Printer Wizard" will be displayed. This will show a series of dialogue boxes with questions about the printer driver you are installing. Dialogues which require specific input for the UC 5 are covered in the following pages.

	If you want to search for Microsoft digitally signed software, visit the Windows Update Web site at http://windowsupdate.microsoft.com to see if one is available.
	Do you want to continue the installation?
	Yes No More Info

The newly installed printer will now be shown in the Printers dialog box.

## **Basic Operation Instruction of the UC5.**

After you have completed all the installation procedures and loading of the relevent driver for the Digital Duplicator you are printing to, the UC5 is ready for use.

#### Powering the UC5 on.

The power button is located on the back panel of the UC5. Insert the power cord and switch the mains on. Switch the UC5 on at the back panel of the unit. The green light on the front will indicate that the unit has power. This light remains on until such a time as the switch is turned off at the back panel. On power up the red light will flash once very quickly and then flash on and off depending on the version of firmaware installed. For example: 4 flashes for version 4 and 3 flashes for version 3. The red light will then stay on for 6 seconds and then switch off. The UC5 is now ready to receive a print job.

#### Powering the UC5 off.

To turn the UC5 off, switch off the power button located on the back panel and disconnect the power cord from the mains.

#### Printing to the UC5.

To print to the UC5, select the print option from the file menu of your application. In the print dialogue window select the ZipRip driver you have installed (NB if you are unsure as to which machine model you have refer to the Generic Driver List on page 6 of this manual)and the quantity you wish to print. In the properties section in the print dialogue box you can choose what size paper you are printing on and select a paper tray if your machine support this feature. Once you have made your selections press "Print" or "OK" depending on your application. The file is proc-essed by your computer and transfered to the UC5. The red light on the UC5 will begin to flash rapidly indicating it is receiving and processing your file. Once the file is transfered your Digital

Duplicator will cut a master and print the quantity you have specified. **Reset Button.** 

This button is located on the back panel of the UC5. It is the red button. If you wish to reset the UC5 without powering it off then press this button.

#### Test Button.

This button is located on the back panel of the UC5. It is the green button. If you wish to check that the UC5 is operating correctly press the button and the Digital Duplicator will cut a master and print test pages. Please refer to page 9 of this manual for the full test page description.

### **Frequently Asked Questions**

- Q: How far can I have the UC5 from the computer?
- *A:* The official specification for parallel cable recommends a length not greater than 3 feet (1 metre).
- Q: How far can I have the UC5 from the Digital Duplicator?
- A: The official specification allows for 6 feet (appro.. 2 metres) cable. This cable is supplied with the UC5. The potential for line communication problems are greater the farther the UC5 is away from the computer.
- Q: How many computers can you run from the UC5?
- A: One IBM or compatible connected to the parallel port.
- Q: Will the UC5 work with a laptop or notebook computer?
- A: Yes, all computers connect to the UC5 as if it were a standard computer printer. The GDI driver will need to be installed in each computer.
- Q: Is any special wiring required for the UC5?
- *A:* No, it will work on 110 or 220 volt systems by using the appropriate power cord.
- Q: How much RAM memory does the UC5 have?
- A: It comes standard with a maximum 16 megabytes RAM.
- Q: What if my file size is over 1 megabyte? Will the UC5 be able to print the file?
- *A:* Yes, the UC5 is not limited by your file size. If your PC can process the file, the UC5 can print it to the Digital Duplicator.
- Q: Can you add additional memory?
- *A:* No, the UC5 comes with maximum memory installed as standard.
- Q: Must you configure all software when you install the UC5?
- A: No. Once the driver is installed in any operating system on the computer, all software application programs can use it.

- Q: Will the UC5 work with Windows 3.11 Windows 95? Windows 98? Windows ME? Windows NT? Windows 2000?
- A: Yes. Printer drivers must be installed for each operating system.

#### Q: Will the UC5 work with all application software programs?

A: The customised printer drivers provided allow all Windows 3.11, Windows 95, Windows 98, Windows ME, Windows NT, and Windows 2000 programs to send documents to the UC5

#### Q: Will the UC5 work on a Network?

A: Yes, the GDI driver has to be installed onto each client computer or there is a optional network upgrade available.

#### **Q:** What fonts are built into the UC5?

- A: None. All operating systems use True Type fonts.
- Q: Will the UC5 allow the Digital Duplicator to create an A3 / 11" x 17" image?
- *A:* Yes, as long as the Digital Duplicator model has the image output capability.
- Q: Can you combine two A4 / US Letter pages side by side into a single A3 / 11" x 17" image?
- *A:* No. The laying out of two pages A4 / US Letter has to be done in the software where you are sending the image from.

#### Q: Can you reverse scan with the UC5 and the Digital Duplicator?

A: No.

#### **Q:** Can you set the number of copies to print from the computer?

*A:* Yes, all the newer Digital Duplicator models allow you to set the copy count from your computer.

#### Q: What does the green button do?

A: The Green test button on the back panel of the UC5 is pushed in, the Digital Duplicator will output a page which confirms the hardware and communication between the UC5 and the Digital Duplicator is correct.

UC5 OM 1-9 April 2002

- Q: What does the red button do?
- A: When the Red button is pushed in the UC5 resets.
- Q: If I have a software or hardware question, who do I call?
- A: Your local sales/service organisation should be contacted first or connect to the web site www.ziprip.com.

## Q: I download a file to the UC5 and the master is not cutting on my JP5800 / JP5000?

- A: If your JP5800 / JP5000 has the "Power Saving" function enabled then you could find that when the JP5800 / JP5000 is in powered down state, sending a file via the UC5 will not wake it up. You should either wake the machine up through the keyboard before sending an image or disable the "energy saving" feature as follows:
  - $\rightarrow$  Go to USER TOOL settings
  - → Choose "System Settings"
  - → Scroll to "Power Saving"
  - $\rightarrow$  Set to "off"
  - $\rightarrow$  Exit User Codes

## Q: When I download a file to the UC5 connected to my JP8000 the UC5 freezes?

- A: If your JP8000 has the "Power Saving" function enabled then you could find that when the JP8000 is in powered down state, sending a file via the UC5 will wake it up but the UC5 will freeze with the RED light showing. Switch the UC5 off and on again to clear the error. You should either wake the machine up through the keyboard before send-ing an image or disable the "energy saving" feature as follows:
  - $\rightarrow$  Go to USER TOOL settings
  - → Choose "System Settings"
  - → Scroll to "Power Saving"
  - $\rightarrow$  Set to "off"

- → Exit User Codes
- **Q:** I have entered a custom page size but the print job comes out too small?
- A: It is possible that you have input the page size incorrectly. The Unit of measurement used for page size is 0.01 inches or 0.1 mm. This means that you need to multiply by a factor of 100 to get the correct size in inches or a factor of 10 to get the correct size in mm.

#### Q: The image I am getting is larger than it should be and has fine horizontal lines running through it?

A: It is possible that you have entered a page size greater than the maximum image area of the Digital Duplicator connected to the UC5. Check the maximum page size of your Digital Duplicator and the page size entered in the UC5. Also check that you have used the correct multipli-cation factor for your page measurements. (see FAQ above).

## Q: When I define a custom page size the image I get is printed transverse (across) the drum.

A: The "width" value in the page setup refers to the size of the leading edge of the page. The leading edge is the edge that feeds into the Digital Duplicator. The "length" value refers to the size of the side of the page. By entering a "width" value greater than the "length" value the image will be positioned transverse on the drum. This means that

the operator will need to use the longest edge of the sheet as the leading edge.

#### Q: Missing Tabs in the Printer Properties dialogue box.

- A: There are two possible causes for this problem:-
  - 1. corrupt UC5 driver installation
  - 2. *corrupt Windows Operating System file(s)*

First try resolving the problem by reinstalling the UC5 drivers. If this does not solve the problem then you will need to reinstall the Windows Operating System.

#### WHY?

- A: Certain printer installations can overwrite or modify some of the Windows Operating System files used by the UC5 drivers. As a result some of the dialogue boxes go missing. By restoring the Operating System files back to the original version the Dialogue Boxes reappear and work as normal.
- Q: The image is in the wrong position on your JP5800.
- A: The UC5 is currently set to offset an A4 image to the centre of an A3 page. This works for the JP5000 but on the JP5800 the UC5 shifts the image and so does the Digital duplicator resulting in the image being put right off the A4 page. To solve this problem when cutting an A4 master insert an A3 sheet of paper into the paper feed tray and the image will be placed in the middle of the A3 which is the correct position when you insert the A4 paper.

#### Q: I keep getting a time out error printing from Windows 95.

A: Increase the time out settings within the printer driver. These are found under the details tabs in the properties window. Set "not selected" to 300 seconds. Set "transmission retry" to 9999 seconds.

## **Troubleshooting UC5**

Normally, your UC5 will function correctly with no user intervention. If there is a problem use this section as a guide to solve it.

Problem:	The following message is printed when I try to print a docu-ment: There was an error writing to LPT1: for the printer The printer is not ready. Make sure it is turned on and on-line.
Try the following:	a) Check all physical cable connection and power.
	b) Reset the UC5.
	c) Check you are not trying to print to the UC5 across a network. If this is the case see your windows documentation on network printing.
	d) Check the parallel port is set to "ECP" mode.
Problem:	Print jobs download to the UC5, but the Digital Duplicator does not create a master.
Try the following:	a) Press the Digital Duplicator "on-line" key. Some Duplicators do not support Auto on-line functions. Check that your Duplicators Auto on-line function has been enabled. Check also that the last print run on the Digital Duplicator has been completed.
	b) Turn the Digital Duplicator off then on.
Problem:	Activity light on the UC5 is permanently on, but no master is created.
Try the following:	Press the reset button on the UC5.

Problem:	UC 5 connected via optional network interface does not
	respond.
Try the following:	a) Reset the network interface.
	b) Check connections to the network interface.
	c) Make sure that the configuration for the network in
	terface port is referencing the correct network interface.

If none of the above resolves your problem you can send a description of the error to the ZipRip web site. Please include all details such as PC specification, Operating System, Application and version being used as well as a detailed account of the error and any preceding events that might have led to it. **www.ziprip.com**
