

Leonardo Synergy Solution

Develop test specifications from anywhere on your network in an integrated development environment for the ROHDE & SCHWARZ PTW60 protocol tester.

The Leonardo Editor Pro

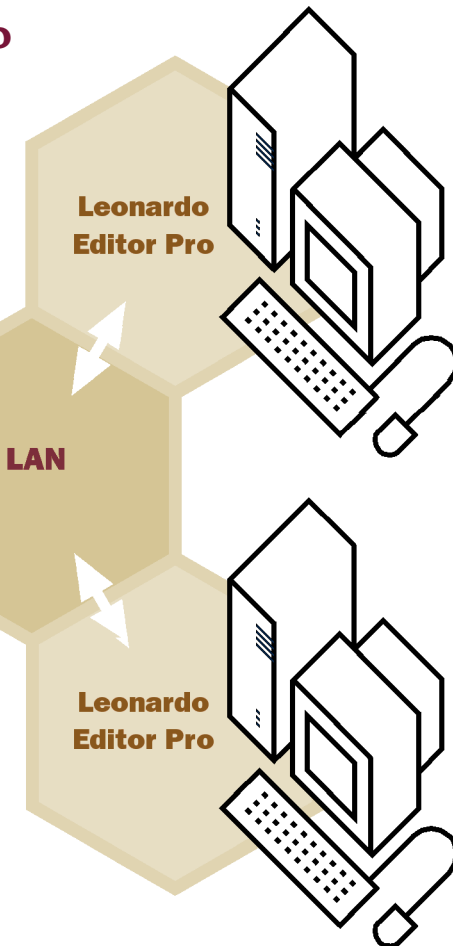

is connected via a graphical plugin over your network to the PTW60.

The Synergy Solution™ delivers enhanced productivity & user-friendliness through a seamless work environment.

PTW60

Future-proof thanks to high flexibility. In addition the plug-in interface enables you to add any functionality you desire, thereby securing your investment in equipment and keeping it at the leading edge of technology.

The PTW60 plugin provides a practice-oriented, integrated solution to develop, edit and debug TTCN test suites on the PTW60 protocol tester.

The innovative Leonardo Synergy Solution™ gives optimal performance and ease of use. Through the graphical interface of the Synergy plugin, it is possible to control the operation of the TTCN compiler/syntax & semantic checker on the PTW60. Highly flexible, it also allows the management and version control of abstract test suites on the PTW60.

Key features:

- remote control of TTCN compiler on PTW60
- feedback of error messages for debugging
- remotely manage build directory structure on PTW60
- manage different users and test suite versions
- plugin Online Help

For further information on the PTW60, please contact:

communications

Remote control of TTCN tools on the PTW60 tester.

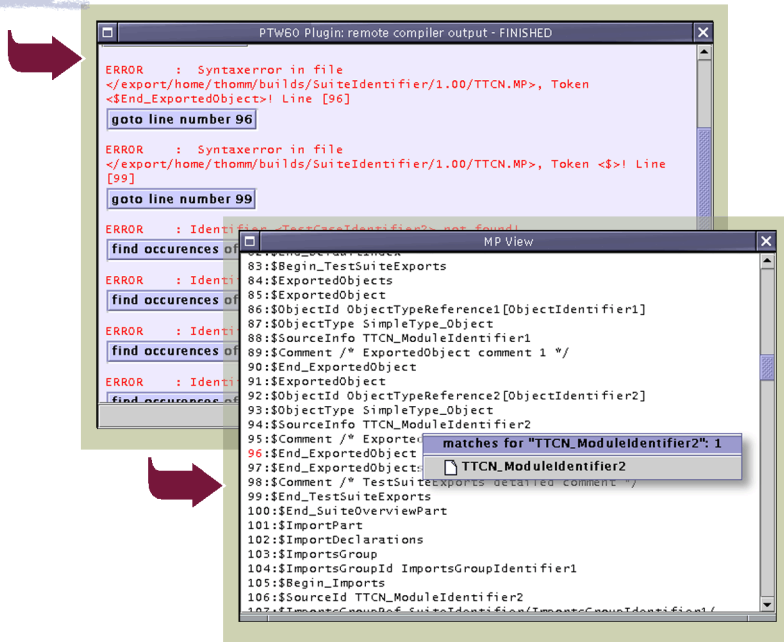

Plugin Menu

Control the test suite development on the PTW60 remotely over your network.

Debugging Mode

Debugging made easy, simply feed the error messages of the compiler or the syntax & semantic checker back to the editor's debugging facilities.

Bluetooth™, a global standard that eliminates the need for wires, cables and connectors for and between portable, as well as stationary, electronic devices.

Leonardo Plugins are Java programs

that extend the capabilities of the Leonardo Editor in a specific way – giving you, for example, the ability to control other test tools or view the debugging information intelligently from within the TTCN editor.

Build Manager

The Build manager provides a tree view of the build directory structure on the PTW60. Within the Leonardo editor you can view these directories, delete unwanted versions or builds, view Meta-information and load test suite files from the local machine or the PTW60.

Version Control

Make use of the version control mechanism to work with different versions of your test suites.
