The software contained in this product makes use of several valuable open source software packages. For information, see the "Open Source Acknowledgment" on the user documentation CD-ROM (included in delivery).  
Rohde & Schwarz would like to thank the open source community for their valuable contribution to embedded computing.

Throughout this manual, the Spectrum Analyzer R&S® FSL is abbreviated as R&S FSL.

R&S® is a registered trademark of Rohde & Schwarz GmbH & Co. KG  
Trade names are trademarks of the owners

# Basic Safety Instructions

## Always read through and comply with the following safety instructions!

All plants and locations of the Rohde & Schwarz group of companies make every effort to keep the safety standards of our products up to date and to offer our customers the highest possible degree of safety. Our products and the auxiliary equipment they require are designed, built and tested in accordance with the safety standards that apply in each case. Compliance with these standards is continuously monitored by our quality assurance system. The product described here has been designed, built and tested in accordance with the EC Certificate of Conformity and has left the manufacturer's plant in a condition fully complying with safety standards. To maintain this condition and to ensure safe operation, you must observe all instructions and warnings provided in this manual. If you have any questions regarding these safety instructions, the Rohde & Schwarz group of companies will be happy to answer them.

Furthermore, it is your responsibility to use the product in an appropriate manner. This product is designed for use solely in industrial and laboratory environments or, if expressly permitted, also in the field and must not be used in any way that may cause personal injury or property damage. You are responsible if the product is used for any purpose other than its designated purpose or in disregard of the manufacturer's instructions. The manufacturer shall assume no responsibility for such use of the product.

The product is used for its designated purpose if it is used in accordance with its product documentation and within its performance limits (see data sheet, documentation, the following safety instructions). Using the product requires technical skills and, in some cases, a basic knowledge of English. It is therefore essential that only skilled and specialized staff or thoroughly trained personnel with the required skills be allowed to use the product. If personal safety gear is required for using Rohde & Schwarz products, this will be indicated at the appropriate place in the product documentation. Keep the basic safety instructions and the product documentation in a safe place and pass them on to the subsequent users.

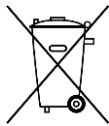

Observing the safety instructions will help prevent personal injury or damage of any kind caused by dangerous situations. Therefore, carefully read through and adhere to the following safety instructions before and when using the product. It is also absolutely essential to observe the additional safety instructions on personal safety, for example, that appear in relevant parts of the product documentation. In these safety instructions, the word "product" refers to all merchandise sold and distributed by the Rohde & Schwarz group of companies, including instruments, systems and all accessories. For product-specific information, see the data sheet and the product documentation.

## Safety labels on products

The following safety labels are used on products to warn against risks and dangers.

Symbol	Meaning	Symbol	Meaning
	Notice, general danger location Observe product documentation		ON/OFF Power
	Caution when handling heavy equipment		Standby indication
	Danger of electric shock		Direct current (DC)

## Basic Safety Instructions

Symbol	Meaning	Symbol	Meaning
	Caution ! Hot surface		Alternating current (AC)
	Protective conductor terminal To identify any terminal which is intended for connection to an external conductor for protection against electric shock in case of a fault, or the terminal of a protective earth		Direct/alternating current (DC/AC)
	Earth (Ground)		Class II Equipment to identify equipment meeting the safety requirements specified for Class II equipment (device protected by double or reinforced insulation)
	Frame or chassis Ground terminal		EU labeling for batteries and accumulators For additional information, see section "Waste disposal/Environmental protection", item 1.
	Be careful when handling electrostatic sensitive devices		EU labeling for separate collection of electrical and electronic devices For additional information, see section "Waste disposal/Environmental protection", item 2.
	Warning! Laser radiation For additional information, see section "Operation", item 7.		

### Signal words and their meaning

The following signal words are used in the product documentation in order to warn the reader about risks and dangers.

Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

Indicates information considered important, but not hazard-related, e.g. messages relating to property damage.

In the product documentation, the word ATTENTION is used synonymously.

These signal words are in accordance with the standard definition for civil applications in the European Economic Area. Definitions that deviate from the standard definition may also exist in other economic areas or military applications. It is therefore essential to make sure that the signal words described here are always used only in connection with the related product documentation and the related product. The use of signal words in connection with unrelated products or documentation can result in misinterpretation and in personal injury or material damage.

## Basic Safety Instructions

### Operating states and operating positions

*The product may be operated only under the operating conditions and in the positions specified by the manufacturer, without the product's ventilation being obstructed. If the manufacturer's specifications are not observed, this can result in electric shock, fire and/or serious personal injury or death. Applicable local or national safety regulations and rules for the prevention of accidents must be observed in all work performed.*

1. Unless otherwise specified, the following requirements apply to Rohde & Schwarz products: predefined operating position is always with the housing floor facing down, IP protection 2X, use only indoors, max. operating altitude 2000 m above sea level, max. transport altitude 4500 m above sea level. A tolerance of  $\pm 10\%$  shall apply to the nominal voltage and  $\pm 5\%$  to the nominal frequency, overvoltage category 2, pollution degree 2.
2. Do not place the product on surfaces, vehicles, cabinets or tables that for reasons of weight or stability are unsuitable for this purpose. Always follow the manufacturer's installation instructions when installing the product and fastening it to objects or structures (e.g. walls and shelves). An installation that is not carried out as described in the product documentation could result in personal injury or even death.
3. Do not place the product on heat-generating devices such as radiators or fan heaters. The ambient temperature must not exceed the maximum temperature specified in the product documentation or in the data sheet. Product overheating can cause electric shock, fire and/or serious personal injury or even death.

### Electrical safety

*If the information on electrical safety is not observed either at all or to the extent necessary, electric shock, fire and/or serious personal injury or death may occur.*

1. Prior to switching on the product, always ensure that the nominal voltage setting on the product matches the nominal voltage of the mains-supply network. If a different voltage is to be set, the power fuse of the product may have to be changed accordingly.
2. In the case of products of safety class I with movable power cord and connector, operation is permitted only on sockets with a protective conductor contact and protective conductor.
3. Intentionally breaking the protective conductor either in the feed line or in the product itself is not permitted. Doing so can result in the danger of an electric shock from the product. If extension cords or connector strips are implemented, they must be checked on a regular basis to ensure that they are safe to use.
4. If there is no power switch for disconnecting the product from the mains, or if the power switch is not suitable for this purpose, use the plug of the connecting cable to disconnect the product from the mains. In such cases, always ensure that the power plug is easily reachable and accessible at all times. For example, if the power plug is the disconnecting device, the length of the connecting cable must not exceed 3 m. Functional or electronic switches are not suitable for providing disconnection from the AC supply network. If products without power switches are integrated into racks or systems, the disconnecting device must be provided at the system level.
5. Never use the product if the power cable is damaged. Check the power cables on a regular basis to ensure that they are in proper operating condition. By taking appropriate safety measures and carefully laying the power cable, ensure that the cable cannot be damaged and that no one can be hurt by, for example, tripping over the cable or suffering an electric shock.

## Basic Safety Instructions

6. The product may be operated only from TN/TT supply networks fuse-protected with max. 16 A (higher fuse only after consulting with the Rohde & Schwarz group of companies).
7. Do not insert the plug into sockets that are dusty or dirty. Insert the plug firmly and all the way into the socket provided for this purpose. Otherwise, sparks that result in fire and/or injuries may occur.
8. Do not overload any sockets, extension cords or connector strips; doing so can cause fire or electric shocks.
9. For measurements in circuits with voltages  $V_{rms} > 30$  V, suitable measures (e.g. appropriate measuring equipment, fuse protection, current limiting, electrical separation, insulation) should be taken to avoid any hazards.
10. Ensure that the connections with information technology equipment, e.g. PCs or other industrial computers, comply with the IEC 60950-1 / EN 60950-1 or IEC 61010-1 / EN 61010-1 standards that apply in each case.
11. Unless expressly permitted, never remove the cover or any part of the housing while the product is in operation. Doing so will expose circuits and components and can lead to injuries, fire or damage to the product.
12. If a product is to be permanently installed, the connection between the protective conductor terminal on site and the product's protective conductor must be made first before any other connection is made. The product may be installed and connected only by a licensed electrician.
13. For permanently installed equipment without built-in fuses, circuit breakers or similar protective devices, the supply circuit must be fuse-protected in such a way that anyone who has access to the product, as well as the product itself, is adequately protected from injury or damage.
14. Use suitable overvoltage protection to ensure that no overvoltage (such as that caused by a bolt of lightning) can reach the product. Otherwise, the person operating the product will be exposed to the danger of an electric shock.
15. Any object that is not designed to be placed in the openings of the housing must not be used for this purpose. Doing so can cause short circuits inside the product and/or electric shocks, fire or injuries.
16. Unless specified otherwise, products are not liquid-proof (see also section "Operating states and operating positions", item 1). Therefore, the equipment must be protected against penetration by liquids. If the necessary precautions are not taken, the user may suffer electric shock or the product itself may be damaged, which can also lead to personal injury.
17. Never use the product under conditions in which condensation has formed or can form in or on the product, e.g. if the product has been moved from a cold to a warm environment. Penetration by water increases the risk of electric shock.
18. Prior to cleaning the product, disconnect it completely from the power supply (e.g. AC supply network or battery). Use a soft, non-linting cloth to clean the product. Never use chemical cleaning agents such as alcohol, acetone or diluents for cellulose lacquers.

## Operation

1. Operating the products requires special training and intense concentration. Make sure that persons who use the products are physically, mentally and emotionally fit enough to do so; otherwise, injuries or material damage may occur. It is the responsibility of the employer/operator to select suitable personnel for operating the products.

## Basic Safety Instructions

2. Before you move or transport the product, read and observe the section titled "Transport".
3. As with all industrially manufactured goods, the use of substances that induce an allergic reaction (allergens) such as nickel cannot be generally excluded. If you develop an allergic reaction (such as a skin rash, frequent sneezing, red eyes or respiratory difficulties) when using a Rohde & Schwarz product, consult a physician immediately to determine the cause and to prevent health problems or stress.
4. Before you start processing the product mechanically and/or thermally, or before you take it apart, be sure to read and pay special attention to the section titled "Waste disposal/Environmental protection", item 1.
5. Depending on the function, certain products such as RF radio equipment can produce an elevated level of electromagnetic radiation. Considering that unborn babies require increased protection, pregnant women must be protected by appropriate measures. Persons with pacemakers may also be exposed to risks from electromagnetic radiation. The employer/operator must evaluate workplaces where there is a special risk of exposure to radiation and, if necessary, take measures to avert the potential danger.
6. Should a fire occur, the product may release hazardous substances (gases, fluids, etc.) that can cause health problems. Therefore, suitable measures must be taken, e.g. protective masks and protective clothing must be worn.
7. Laser products are given warning labels that are standardized according to their laser class. Lasers can cause biological harm due to the properties of their radiation and due to their extremely concentrated electromagnetic power. If a laser product (e.g. a CD/DVD drive) is integrated into a Rohde & Schwarz product, absolutely no other settings or functions may be used as described in the product documentation. The objective is to prevent personal injury (e.g. due to laser beams).
8. EMC classes (in line with EN 55011/CISPR 11, and analogously with EN 55022/CISPR 22, EN 55032/CISPR 32)
  - Class A equipment:  
Equipment suitable for use in all environments except residential environments and environments that are directly connected to a low-voltage supply network that supplies residential buildings  
Note: Class A equipment is intended for use in an industrial environment. This equipment may cause radio disturbances in residential environments, due to possible conducted as well as radiated disturbances. In this case, the operator may be required to take appropriate measures to eliminate these disturbances.
  - Class B equipment:  
Equipment suitable for use in residential environments and environments that are directly connected to a low-voltage supply network that supplies residential buildings

### Repair and service

1. The product may be opened only by authorized, specially trained personnel. Before any work is performed on the product or before the product is opened, it must be disconnected from the AC supply network. Otherwise, personnel will be exposed to the risk of an electric shock.

## Basic Safety Instructions

- Adjustments, replacement of parts, maintenance and repair may be performed only by electrical experts authorized by Rohde & Schwarz. Only original parts may be used for replacing parts relevant to safety (e.g. power switches, power transformers, fuses). A safety test must always be performed after parts relevant to safety have been replaced (visual inspection, protective conductor test, insulation resistance measurement, leakage current measurement, functional test). This helps ensure the continued safety of the product.

### Batteries and rechargeable batteries/cells

*If the information regarding batteries and rechargeable batteries/cells is not observed either at all or to the extent necessary, product users may be exposed to the risk of explosions, fire and/or serious personal injury, and, in some cases, death. Batteries and rechargeable batteries with alkaline electrolytes (e.g. lithium cells) must be handled in accordance with the EN 62133 standard.*

- Cells must not be taken apart or crushed.
- Cells or batteries must not be exposed to heat or fire. Storage in direct sunlight must be avoided. Keep cells and batteries clean and dry. Clean soiled connectors using a dry, clean cloth.
- Cells or batteries must not be short-circuited. Cells or batteries must not be stored in a box or in a drawer where they can short-circuit each other, or where they can be short-circuited by other conductive materials. Cells and batteries must not be removed from their original packaging until they are ready to be used.
- Cells and batteries must not be exposed to any mechanical shocks that are stronger than permitted.
- If a cell develops a leak, the fluid must not be allowed to come into contact with the skin or eyes. If contact occurs, wash the affected area with plenty of water and seek medical aid.
- Improperly replacing or charging cells or batteries that contain alkaline electrolytes (e.g. lithium cells) can cause explosions. Replace cells or batteries only with the matching Rohde & Schwarz type (see parts list) in order to ensure the safety of the product.
- Cells and batteries must be recycled and kept separate from residual waste. Rechargeable batteries and normal batteries that contain lead, mercury or cadmium are hazardous waste. Observe the national regulations regarding waste disposal and recycling.

### Transport

- The product may be very heavy. Therefore, the product must be handled with care. In some cases, the user may require a suitable means of lifting or moving the product (e.g. with a lift-truck) to avoid back or other physical injuries.
- Handles on the products are designed exclusively to enable personnel to transport the product. It is therefore not permissible to use handles to fasten the product to or on transport equipment such as cranes, fork lifts, wagons, etc. The user is responsible for securely fastening the products to or on the means of transport or lifting. Observe the safety regulations of the manufacturer of the means of transport or lifting. Noncompliance can result in personal injury or material damage.
- If you use the product in a vehicle, it is the sole responsibility of the driver to drive the vehicle safely and properly. The manufacturer assumes no responsibility for accidents or collisions. Never use the product in a moving vehicle if doing so could distract the driver of the vehicle. Adequately secure the product in the vehicle to prevent injuries or other damage in the event of an accident.

## Instrucciones de seguridad elementales

### Waste disposal/Environmental protection

1. Specially marked equipment has a battery or accumulator that must not be disposed of with unsorted municipal waste, but must be collected separately. It may only be disposed of at a suitable collection point or via a Rohde & Schwarz customer service center.
2. Waste electrical and electronic equipment must not be disposed of with unsorted municipal waste, but must be collected separately.  
Rohde & Schwarz GmbH & Co. KG has developed a disposal concept and takes full responsibility for take-back obligations and disposal obligations for manufacturers within the EU. Contact your Rohde & Schwarz customer service center for environmentally responsible disposal of the product.
3. If products or their components are mechanically and/or thermally processed in a manner that goes beyond their intended use, hazardous substances (heavy-metal dust such as lead, beryllium, nickel) may be released. For this reason, the product may only be disassembled by specially trained personnel. Improper disassembly may be hazardous to your health. National waste disposal regulations must be observed.
4. If handling the product releases hazardous substances or fuels that must be disposed of in a special way, e.g. coolants or engine oils that must be replenished regularly, the safety instructions of the manufacturer of the hazardous substances or fuels and the applicable regional waste disposal regulations must be observed. Also observe the relevant safety instructions in the product documentation. The improper disposal of hazardous substances or fuels can cause health problems and lead to environmental damage.

For additional information about environmental protection, visit the Rohde & Schwarz website.

## Instrucciones de seguridad elementales

### ¡Es imprescindible leer y cumplir las siguientes instrucciones e informaciones de seguridad!

El principio del grupo de empresas Rohde & Schwarz consiste en tener nuestros productos siempre al día con los estándares de seguridad y de ofrecer a nuestros clientes el máximo grado de seguridad. Nuestros productos y todos los equipos adicionales son siempre fabricados y examinados según las normas de seguridad vigentes. Nuestro sistema de garantía de calidad controla constantemente que sean cumplidas estas normas. El presente producto ha sido fabricado y examinado según el certificado de conformidad de la UE y ha salido de nuestra planta en estado impecable según los estándares técnicos de seguridad. Para poder preservar este estado y garantizar un funcionamiento libre de peligros, el usuario deberá atenerse a todas las indicaciones, informaciones de seguridad y notas de alerta. El grupo de empresas Rohde & Schwarz está siempre a su disposición en caso de que tengan preguntas referentes a estas informaciones de seguridad.

Además queda en la responsabilidad del usuario utilizar el producto en la forma debida. Este producto está destinado exclusivamente al uso en la industria y el laboratorio o, si ha sido expresamente autorizado, para aplicaciones de campo y de ninguna manera deberá ser utilizado de modo que alguna persona/cosa pueda sufrir daño. El uso del producto fuera de sus fines definidos o sin tener en cuenta las instrucciones del fabricante queda en la responsabilidad del usuario. El fabricante no se hace en ninguna forma responsable de consecuencias a causa del mal uso del producto.

## Instrucciones de seguridad elementales

Se parte del uso correcto del producto para los fines definidos si el producto es utilizado conforme a las indicaciones de la correspondiente documentación del producto y dentro del margen de rendimiento definido (ver hoja de datos, documentación, informaciones de seguridad que siguen). El uso del producto hace necesarios conocimientos técnicos y ciertos conocimientos del idioma inglés. Por eso se debe tener en cuenta que el producto solo pueda ser operado por personal especializado o personas instruidas en profundidad con las capacidades correspondientes. Si fuera necesaria indumentaria de seguridad para el uso de productos de Rohde & Schwarz, encontraría la información debida en la documentación del producto en el capítulo correspondiente. Guarde bien las informaciones de seguridad elementales, así como la documentación del producto, y entréguelas a usuarios posteriores.

Tener en cuenta las informaciones de seguridad sirve para evitar en lo posible lesiones o daños por peligros de toda clase. Por eso es imprescindible leer detalladamente y comprender por completo las siguientes informaciones de seguridad antes de usar el producto, y respetarlas durante el uso del producto. Deberán tenerse en cuenta todas las demás informaciones de seguridad, como p. ej. las referentes a la protección de personas, que encontrarán en el capítulo correspondiente de la documentación del producto y que también son de obligado cumplimiento. En las presentes informaciones de seguridad se recogen todos los objetos que distribuye el grupo de empresas Rohde & Schwarz bajo la denominación de "producto", entre ellos también aparatos, instalaciones así como toda clase de accesorios. Los datos específicos del producto figuran en la hoja de datos y en la documentación del producto.

### Señalización de seguridad de los productos

Las siguientes señales de seguridad se utilizan en los productos para advertir sobre riesgos y peligros.

Símbolo	Significado	Símbolo	Significado
	Aviso: punto de peligro general Observar la documentación del producto		Tensión de alimentación de PUESTA EN MARCHA / PARADA
	Atención en el manejo de dispositivos de peso elevado		Indicación de estado de espera (standby)
	Peligro de choque eléctrico		Corriente continua (DC)
	Advertencia: superficie caliente		Corriente alterna (AC)
	Conexión a conductor de protección		Corriente continua / Corriente alterna (DC/AC)
	Conexión a tierra		El aparato está protegido en su totalidad por un aislamiento doble (reforzado)
	Conexión a masa		Distintivo de la UE para baterías y acumuladores Más información en la sección "Eliminación/protección del medio ambiente", punto 1.

## Instrucciones de seguridad elementales

Símbolo	Significado	Símbolo	Significado
	Aviso: Cuidado en el manejo de dispositivos sensibles a la electrostática (ESD)		Distintivo de la UE para la eliminación por separado de dispositivos eléctricos y electrónicos  Más información en la sección "Eliminación/protección del medio ambiente", punto 2.
	Advertencia: rayo láser  Más información en la sección "Funcionamiento", punto 7.		

### Palabras de señal y su significado

En la documentación del producto se utilizan las siguientes palabras de señal con el fin de advertir contra riesgos y peligros.

Indica una situación de peligro que, si no se evita, causa lesiones graves o incluso la muerte.

Indica una situación de peligro que, si no se evita, puede causar lesiones graves o incluso la muerte.

Indica una situación de peligro que, si no se evita, puede causar lesiones leves o moderadas.

Indica información que se considera importante, pero no en relación con situaciones de peligro; p. ej., avisos sobre posibles daños materiales.

En la documentación del producto se emplea de forma sinónima el término CUIDADO.

Las palabras de señal corresponden a la definición habitual para aplicaciones civiles en el área económica europea. Pueden existir definiciones diferentes a esta definición en otras áreas económicas o en aplicaciones militares. Por eso se deberá tener en cuenta que las palabras de señal aquí descritas sean utilizadas siempre solamente en combinación con la correspondiente documentación del producto y solamente en combinación con el producto correspondiente. La utilización de las palabras de señal en combinación con productos o documentaciones que no les correspondan puede llevar a interpretaciones equivocadas y tener por consecuencia daños en personas u objetos.

### Estados operativos y posiciones de funcionamiento

*El producto solamente debe ser utilizado según lo indicado por el fabricante respecto a los estados operativos y posiciones de funcionamiento sin que se obstruya la ventilación. Si no se siguen las indicaciones del fabricante, pueden producirse choques eléctricos, incendios y/o lesiones graves con posible consecuencia de muerte. En todos los trabajos deberán ser tenidas en cuenta las normas nacionales y locales de seguridad del trabajo y de prevención de accidentes.*

## Instrucciones de seguridad elementales

1. Si no se convino de otra manera, es para los productos Rohde & Schwarz válido lo que sigue: como posición de funcionamiento se define por principio la posición con el suelo de la caja para abajo, modo de protección IP 2X, uso solamente en estancias interiores, utilización hasta 2000 m sobre el nivel del mar, transporte hasta 4500 m sobre el nivel del mar. Se aplicará una tolerancia de  $\pm 10\%$  sobre el voltaje nominal y de  $\pm 5\%$  sobre la frecuencia nominal. Categoría de sobrecarga eléctrica 2, índice de suciedad 2.
2. No sitúe el producto encima de superficies, vehículos, estantes o mesas, que por sus características de peso o de estabilidad no sean aptos para él. Siga siempre las instrucciones de instalación del fabricante cuando instale y asegure el producto en objetos o estructuras (p. ej. paredes y estantes). Si se realiza la instalación de modo distinto al indicado en la documentación del producto, se pueden causar lesiones o, en determinadas circunstancias, incluso la muerte.
3. No ponga el producto sobre aparatos que generen calor (p. ej. radiadores o calefactores). La temperatura ambiente no debe superar la temperatura máxima especificada en la documentación del producto o en la hoja de datos. En caso de sobrecalentamiento del producto, pueden producirse choques eléctricos, incendios y/o lesiones graves con posible consecuencia de muerte.

### Seguridad eléctrica

*Si no se siguen (o se siguen de modo insuficiente) las indicaciones del fabricante en cuanto a seguridad eléctrica, pueden producirse choques eléctricos, incendios y/o lesiones graves con posible consecuencia de muerte.*

1. Antes de la puesta en marcha del producto se deberá comprobar siempre que la tensión preseleccionada en el producto coincida con la de la red de alimentación eléctrica. Si es necesario modificar el ajuste de tensión, también se deberán cambiar en caso dado los fusibles correspondientes del producto.
2. Los productos de la clase de protección I con alimentación móvil y enchufe individual solamente podrán enchufarse a tomas de corriente con contacto de seguridad y con conductor de protección conectado.
3. Queda prohibida la interrupción intencionada del conductor de protección, tanto en la toma de corriente como en el mismo producto. La interrupción puede tener como consecuencia el riesgo de que el producto sea fuente de choques eléctricos. Si se utilizan cables alargadores o regletas de enchufe, deberá garantizarse la realización de un examen regular de los mismos en cuanto a su estado técnico de seguridad.
4. Si el producto no está equipado con un interruptor para desconectarlo de la red, o bien si el interruptor existente no resulta apropiado para la desconexión de la red, el enchufe del cable de conexión se deberá considerar como un dispositivo de desconexión. El dispositivo de desconexión se debe poder alcanzar fácilmente y debe estar siempre bien accesible. Si, p. ej., el enchufe de conexión a la red es el dispositivo de desconexión, la longitud del cable de conexión no debe superar 3 m). Los interruptores selectores o electrónicos no son aptos para el corte de la red eléctrica. Si se integran productos sin interruptor en bastidores o instalaciones, se deberá colocar el interruptor en el nivel de la instalación.
5. No utilice nunca el producto si está dañado el cable de conexión a red. Compruebe regularmente el correcto estado de los cables de conexión a red. Asegúrese, mediante las medidas de protección y de instalación adecuadas, de que el cable de conexión a red no pueda ser dañado o de que nadie pueda ser dañado por él, p. ej. al tropezar o por un choque eléctrico.

## Instrucciones de seguridad elementales

6. Solamente está permitido el funcionamiento en redes de alimentación TN/TT aseguradas con fusibles de 16 A como máximo (utilización de fusibles de mayor amperaje solo previa consulta con el grupo de empresas Rohde & Schwarz).
7. Nunca conecte el enchufe en tomas de corriente sucias o llenas de polvo. Introduzca el enchufe por completo y fuertemente en la toma de corriente. La no observación de estas medidas puede provocar chispas, fuego y/o lesiones.
8. No sobrecargue las tomas de corriente, los cables alargadores o las regletas de enchufe ya que esto podría causar fuego o choques eléctricos.
9. En las mediciones en circuitos de corriente con una tensión  $U_{\text{eff}} > 30 \text{ V}$  se deberán tomar las medidas apropiadas para impedir cualquier peligro (p. ej. medios de medición adecuados, seguros, limitación de tensión, corte protector, aislamiento etc.).
10. Para la conexión con dispositivos informáticos como un PC o un ordenador industrial, debe comprobarse que éstos cumplan los estándares IEC60950-1/EN60950-1 o IEC61010-1/EN 61010-1 válidos en cada caso.
11. A menos que esté permitido expresamente, no retire nunca la tapa ni componentes de la carcasa mientras el producto esté en servicio. Esto pone a descubierto los cables y componentes eléctricos y puede causar lesiones, fuego o daños en el producto.
12. Si un producto se instala en un lugar fijo, se deberá primero conectar el conductor de protección fijo con el conductor de protección del producto antes de hacer cualquier otra conexión. La instalación y la conexión deberán ser efectuadas por un electricista especializado.
13. En el caso de dispositivos fijos que no estén provistos de fusibles, interruptor automático ni otros mecanismos de seguridad similares, el circuito de alimentación debe estar protegido de modo que todas las personas que puedan acceder al producto, así como el producto mismo, estén a salvo de posibles daños.
14. Todo producto debe estar protegido contra sobretensión (debida p. ej. a una caída del rayo) mediante los correspondientes sistemas de protección. Si no, el personal que lo utilice quedará expuesto al peligro de choque eléctrico.
15. No debe introducirse en los orificios de la caja del aparato ningún objeto que no esté destinado a ello. Esto puede producir cortocircuitos en el producto y/o puede causar choques eléctricos, fuego o lesiones.
16. Salvo indicación contraria, los productos no están impermeabilizados (ver también el capítulo "Estados operativos y posiciones de funcionamiento", punto 1). Por eso es necesario tomar las medidas necesarias para evitar la entrada de líquidos. En caso contrario, existe peligro de choque eléctrico para el usuario o de daños en el producto, que también pueden redundar en peligro para las personas.
17. No utilice el producto en condiciones en las que pueda producirse o ya se hayan producido condensaciones sobre el producto o en el interior de éste, como p. ej. al desplazarlo de un lugar frío a otro caliente. La entrada de agua aumenta el riesgo de choque eléctrico.
18. Antes de la limpieza, desconecte por completo el producto de la alimentación de tensión (p. ej. red de alimentación o batería). Realice la limpieza de los aparatos con un paño suave, que no se deshilache. No utilice bajo ningún concepto productos de limpieza químicos como alcohol, acetona o diluyentes para lacas nitrocelulósicas.

## Instrucciones de seguridad elementales

### Funcionamiento

1. El uso del producto requiere instrucciones especiales y una alta concentración durante el manejo. Debe asegurarse que las personas que manejen el producto estén a la altura de los requerimientos necesarios en cuanto a aptitudes físicas, psíquicas y emocionales, ya que de otra manera no se pueden excluir lesiones o daños de objetos. El empresario u operador es responsable de seleccionar el personal usuario apto para el manejo del producto.
2. Antes de desplazar o transportar el producto, lea y tenga en cuenta el capítulo "Transporte".
3. Como con todo producto de fabricación industrial no puede quedar excluida en general la posibilidad de que se produzcan alergias provocadas por algunos materiales empleados —los llamados alérgenos (p. ej. el níquel)—. Si durante el manejo de productos Rohde & Schwarz se producen reacciones alérgicas, como p. ej. irritaciones cutáneas, estornudos continuos, enrojecimiento de la conjuntiva o dificultades respiratorias, debe avisarse inmediatamente a un médico para investigar las causas y evitar cualquier molestia o daño a la salud.
4. Antes de la manipulación mecánica y/o térmica o el desmontaje del producto, debe tenerse en cuenta imprescindiblemente el capítulo "Eliminación/protección del medio ambiente", punto 1.
5. Ciertos productos, como p. ej. las instalaciones de radiocomunicación RF, pueden a causa de su función natural, emitir una radiación electromagnética aumentada. Deben tomarse todas las medidas necesarias para la protección de las mujeres embarazadas. También las personas con marcapasos pueden correr peligro a causa de la radiación electromagnética. El empresario/operador tiene la obligación de evaluar y señalar las áreas de trabajo en las que exista un riesgo elevado de exposición a radiaciones.
6. Tenga en cuenta que en caso de incendio pueden desprenderse del producto sustancias tóxicas (gases, líquidos etc.) que pueden generar daños a la salud. Por eso, en caso de incendio deben usarse medidas adecuadas, como p. ej. máscaras antigás e indumentaria de protección.
7. Los productos con láser están provistos de indicaciones de advertencia normalizadas en función de la clase de láser del que se trate. Los rayos láser pueden provocar daños de tipo biológico a causa de las propiedades de su radiación y debido a su concentración extrema de potencia electromagnética. En caso de que un producto Rohde & Schwarz contenga un producto láser (p. ej. un lector de CD/DVD), no debe usarse ninguna otra configuración o función aparte de las descritas en la documentación del producto, a fin de evitar lesiones (p. ej. debidas a irradiación láser).
8. Clases de compatibilidad electromagnética (conforme a EN 55011 / CISPR 11; y en analogía con EN 55022 / CISPR 22, EN 55032 / CISPR 32)
  - Aparato de clase A:  
Aparato adecuado para su uso en todos los entornos excepto en los residenciales y en aquellos conectados directamente a una red de distribución de baja tensión que suministra corriente a edificios residenciales.  
Nota: Los aparatos de clase A están destinados al uso en entornos industriales. Estos aparatos pueden causar perturbaciones radioeléctricas en entornos residenciales debido a posibles perturbaciones guiadas o radiadas. En este caso, se le podrá solicitar al operador que tome las medidas adecuadas para eliminar estas perturbaciones.
  - Aparato de clase B:  
Aparato adecuado para su uso en entornos residenciales, así como en aquellos conectados directamente a una red de distribución de baja tensión que suministra corriente a edificios residenciales.

## Instrucciones de seguridad elementales

### Reparación y mantenimiento

1. El producto solamente debe ser abierto por personal especializado con autorización para ello. Antes de manipular el producto o abrirlo, es obligatorio desconectarlo de la tensión de alimentación, para evitar toda posibilidad de choque eléctrico.
2. El ajuste, el cambio de partes, el mantenimiento y la reparación deberán ser efectuadas solamente por electricistas autorizados por Rohde & Schwarz. Si se reponen partes con importancia para los aspectos de seguridad (p. ej. el enchufe, los transformadores o los fusibles), solamente podrán ser sustituidos por partes originales. Después de cada cambio de partes relevantes para la seguridad deberá realizarse un control de seguridad (control a primera vista, control del conductor de protección, medición de resistencia de aislamiento, medición de la corriente de fuga, control de funcionamiento). Con esto queda garantizada la seguridad del producto.

### Baterías y acumuladores o celdas

*Si no se siguen (o se siguen de modo insuficiente) las indicaciones en cuanto a las baterías y acumuladores o celdas, pueden producirse explosiones, incendios y/o lesiones graves con posible consecuencia de muerte. El manejo de baterías y acumuladores con electrolitos alcalinos (p. ej. celdas de litio) debe seguir el estándar EN 62133.*

1. No deben desmontarse, abrirse ni triturarse las celdas.
2. Las celdas o baterías no deben someterse a calor ni fuego. Debe evitarse el almacenamiento a la luz directa del sol. Las celdas y baterías deben mantenerse limpias y secas. Limpiar las conexiones sucias con un paño seco y limpio.
3. Las celdas o baterías no deben cortocircuitarse. Es peligroso almacenar las celdas o baterías en estuches o cajones en cuyo interior puedan cortocircuitarse por contacto recíproco o por contacto con otros materiales conductores. No deben extraerse las celdas o baterías de sus embalajes originales hasta el momento en que vayan a utilizarse.
4. Las celdas o baterías no deben someterse a impactos mecánicos fuertes indebidos.
5. En caso de falta de estanqueidad de una celda, el líquido vertido no debe entrar en contacto con la piel ni los ojos. Si se produce contacto, lavar con agua abundante la zona afectada y avisar a un médico.
6. En caso de cambio o recarga inadecuados, las celdas o baterías que contienen electrolitos alcalinos (p. ej. las celdas de litio) pueden explotar. Para garantizar la seguridad del producto, las celdas o baterías solo deben ser sustituidas por el tipo Rohde & Schwarz correspondiente (ver lista de recambios).
7. Las baterías y celdas deben reciclarse y no deben tirarse a la basura doméstica. Las baterías o acumuladores que contienen plomo, mercurio o cadmio deben tratarse como residuos especiales. Respete en esta relación las normas nacionales de eliminación y reciclaje.

### Transporte

1. El producto puede tener un peso elevado. Por eso es necesario desplazarlo o transportarlo con precaución y, si es necesario, usando un sistema de elevación adecuado (p. ej. una carretilla elevadora), a fin de evitar lesiones en la espalda u otros daños personales.

## Instrucciones de seguridad elementales

2. Las asas instaladas en los productos sirven solamente de ayuda para el transporte del producto por personas. Por eso no está permitido utilizar las asas para la sujeción en o sobre medios de transporte como p. ej. grúas, carretillas elevadoras de horquilla, carros etc. Es responsabilidad suya fijar los productos de manera segura a los medios de transporte o elevación. Para evitar daños personales o daños en el producto, siga las instrucciones de seguridad del fabricante del medio de transporte o elevación utilizado.
3. Si se utiliza el producto dentro de un vehículo, recae de manera exclusiva en el conductor la responsabilidad de conducir el vehículo de manera segura y adecuada. El fabricante no asumirá ninguna responsabilidad por accidentes o colisiones. No utilice nunca el producto dentro de un vehículo en movimiento si esto pudiera distraer al conductor. Asegure el producto dentro del vehículo debidamente para evitar, en caso de un accidente, lesiones u otra clase de daños.

### Eliminación/protección del medio ambiente

1. Los dispositivos marcados contienen una batería o un acumulador que no se debe desechar con los residuos domésticos sin clasificar, sino que debe ser recogido por separado. La eliminación se debe efectuar exclusivamente a través de un punto de recogida apropiado o del servicio de atención al cliente de Rohde & Schwarz.
2. Los dispositivos eléctricos usados no se deben desechar con los residuos domésticos sin clasificar, sino que deben ser recogidos por separado. Rohde & Schwarz GmbH & Co.KG ha elaborado un concepto de eliminación de residuos y asume plenamente los deberes de recogida y eliminación para los fabricantes dentro de la UE. Para desechar el producto de manera respetuosa con el medio ambiente, dirijase a su servicio de atención al cliente de Rohde & Schwarz.
3. Si se trabaja de manera mecánica y/o térmica cualquier producto o componente más allá del funcionamiento previsto, pueden liberarse sustancias peligrosas (polvos con contenido de metales pesados como p. ej. plomo, berilio o níquel). Por eso el producto solo debe ser desmontado por personal especializado con formación adecuada. Un desmontaje inadecuado puede ocasionar daños para la salud. Se deben tener en cuenta las directivas nacionales referentes a la eliminación de residuos.
4. En caso de que durante el trato del producto se formen sustancias peligrosas o combustibles que deban tratarse como residuos especiales (p. ej. refrigerantes o aceites de motor con intervalos de cambio definidos), deben tenerse en cuenta las indicaciones de seguridad del fabricante de dichas sustancias y las normas regionales de eliminación de residuos. Tenga en cuenta también en caso necesario las indicaciones de seguridad especiales contenidas en la documentación del producto. La eliminación incorrecta de sustancias peligrosas o combustibles puede causar daños a la salud o daños al medio ambiente.

Se puede encontrar más información sobre la protección del medio ambiente en la página web de Rohde & Schwarz.

# Quality management and environmental management

Certified Quality System  
**ISO 9001**

Certified Environmental System  
**ISO 14001**

## Sehr geehrter Kunde,

Sie haben sich für den Kauf eines Rohde&Schwarz Produktes entschieden. Sie erhalten damit ein nach modernsten Fertigungsmethoden hergestelltes Produkt. Es wurde nach den Regeln unserer Qualitäts- und Umweltmanagementsysteme entwickelt, gefertigt und geprüft. Rohde&Schwarz ist unter anderem nach den Managementsystemen ISO9001 und ISO 14001 zertifiziert.

## Der Umwelt verpflichtet

- Energie-effiziente, RoHS-konforme Produkte
- Kontinuierliche Weiterentwicklung nachhaltiger Umweltkonzepte
- ISO 14001-zertifiziertes Umweltmanagementsystem

## Dear customer,

You have decided to buy a Rohde&Schwarz product. This product has been manufactured using the most advanced methods. It was developed, manufactured and tested in compliance with our quality management and environmental management systems. Rohde&Schwarz has been certified, for example, according to the ISO9001 and ISO 14001 management systems.

## Environmental commitment

- Energy-efficient products
- Continuous improvement in environmental sustainability
- ISO 14001-certified environmental management system

## Cher client,

Vous avez choisi d'acheter un produit Rohde&Schwarz. Vous disposez donc d'un produit fabriqué d'après les méthodes les plus avancées. Le développement, la fabrication et les tests de ce produit ont été effectués selon nos systèmes de management de qualité et de management environnemental. La société Rohde&Schwarz a été homologuée, entre autres, conformément aux systèmes de management ISO9001 et ISO 14001.

## Engagement écologique

- Produits à efficience énergétique
- Amélioration continue de la durabilité environnementale
- Système de management environnemental certifié selon ISO 14001

# Customer Support

## Technical support – where and when you need it

For quick, expert help with any Rohde & Schwarz equipment, contact one of our Customer Support Centers. A team of highly qualified engineers provides telephone support and will work with you to find a solution to your query on any aspect of the operation, programming or applications of Rohde & Schwarz equipment.

## Up-to-date information and upgrades

To keep your instrument up-to-date and to be informed about new application notes related to your instrument, please send an e-mail to the Customer Support Center stating your instrument and your wish. We will take care that you will get the right information.

Installing Local Printers.....	A.1
To install a local printer .....	A.1
<b>Appendix B: LAN Interface.....</b>	<b>B.1</b>
Configuring the Network .....	B.1
To change the computer name .....	B.2
To change the domain or workgroup.....	B.2
To operate the instrument without a network .....	B.3
To create users .....	B.3
To change the user password.....	B.5
To log on to the network.....	B.6
To deactivate the automatic login mechanism .....	B.6
To reactivate the automatic login mechanism .....	B.7
To map network drives.....	B.7
To disconnect network drives.....	B.8
To install a network printer .....	B.9
To share directories (only with Microsoft networks) .....	B.13
Remote Operation with XP Remote Desktop.....	B.14
To configure the R&S FSL for remote operation .....	B.14
To configure the controller .....	B.16
To set up a connection to the R&S FSL.....	B.20
To end Remote Desktop control .....	B.22
To restore the connection to the R&S FSL.....	B.23
To deactivate the R&S FSL via remote operation .....	B.23
RSIB Protocol .....	B.23

## Documentation Overview

The user documentation for the R&S FSL is divided as follows:

- Quick Start Guide
- Online Help
- Operating Manual
- Service Manual
- Internet Site
- Release Notes

### Quick Start Guide

This manual is delivered with the instrument in printed form and in PDF format on the CD. It provides the information needed to set up and start working with the instrument. Basic operations and basic measurements are described. Also a brief introduction to remote control is given. The manual includes general information (e.g. Safety Instructions) and the following chapters:

Chapter 1	Front and Rear Panel
Chapter 2	Putting into Operation
Chapter 3	Firmware Update and Installation of Firmware Options
Chapter 4	Basic Operations
Chapter 5	Basic Measurement Examples
Chapter 6	Brief Introduction to Remote Control
Appendix A	Printer Interface
Appendix B	LAN Interface

### Online Help

The Online Help is part of the firmware. It provides a quick access to the description of the instrument functions and the remote control commands. For information on other topics refer to the Quick Start Guide, Operating Manual and Service Manual provided in PDF format on CD or in the Internet. For detailed information on how to use the Online Help, refer to the chapter "Basic Operations" in the Quick Start Guide.

## Operating Manual

This manual is a supplement to the Quick Start Guide and is available in PDF format on the CD delivered with the instrument. To retain the familiar structure that applies to all operating manuals of Rohde&Schwarz Test & Measurement instruments, the chapters 1 and 3 exist, but only in form of references to the corresponding Quick Start Guide chapters.

In this manual, all instrument functions are described in detail. For additional information on default settings and parameters, refer to the data sheets. The set of measurement examples in the Quick Start Guide is expanded by more advanced measurement examples. In addition to the brief introduction to remote control in the Quick Start Guide, a description of the commands and programming examples is given. Information on maintenance, instrument interfaces and error messages is also provided.

The manual includes the following chapters:

- Chapter 1      Putting into Operation, see Quick Start Guide chapters 1 and 2
- Chapter 2      Advanced Measurement Examples
- Chapter 3      Manual Operation, see Quick Start Guide chapter 4
- Chapter 4      Instrument Functions
- Chapter 5      Remote Control - Basics
- Chapter 6      Remote Control - Commands
- Chapter 7      Remote Control - Programming Examples
- Chapter 8      Maintenance
- Chapter 9      Error Messages

This manual is delivered with the instrument on CD only. The printed manual can be ordered from Rohde & Schwarz GmbH & Co. KG.

## Service Manual

This manual is available in PDF format on the CD delivered with the instrument. It informs on how to check compliance with rated specifications, on instrument function, repair, troubleshooting and fault elimination. It contains all information required for repairing the R&S FSL by the replacement of modules. The manual includes the following chapters:

- Chapter 1      Performance Test
- Chapter 2      Adjustment
- Chapter 3      Repair
- Chapter 4      Software Update / Installing Options
- Chapter 5      Documents

## Internet Site

The Internet site at: [R&S FSL Spectrum Analyzer](#) provides the most up to date information on the R&S FSL. The current operating manual at a time is available as printable PDF file in the download area.

Also provided for download are firmware updates including the associated release notes, instrument drivers, current data sheets and application notes.

## Release Notes

The release notes describe the installation of the firmware, new and modified functions, eliminated problems, and last minute changes to the documentation. The corresponding firmware version is indicated on the title page of the release notes. The current release notes are provided in the Internet.

## Conventions Used in the Documentation

To visualize important information quickly and to recognize information types faster, a few conventions has been introduced. The following character formats are used to emphasize words:

<b>Bold</b>	All names of graphical user interface elements as dialog boxes, softkeys, lists, options, buttons etc.
	All names of user interface elements on the front and rear panel as keys, connectors etc.
<b>Courier</b>	All remote commands (apart from headings, see below)
<b>Capital letters</b>	All key names (front panel or keyboard)

The description of a softkey (Operating Manual and Online Help) always starts with the softkey name, and is followed by explaining text and one or more remote control commands framed by two lines. Each remote command is placed in a single line.

The description of remote control commands (Operating Manual and Online Help) always starts with the command itself, and is followed by explaining text including an example, the characteristics and the mode (standard or only with certain options) framed by two grey lines. The remote commands consist of abbreviations to accelerate the procedure. All parts of the command that have to be entered are in capital letters, the rest is added in small letters to complete the words and transport their meaning.

## Supplement

### VGA connector replaces DVI-D connector

On newer instruments, a VGA monitor connector on the rear panel of the R&S FSL replaces the DVI-D connector.

You can use the female VGA output to connect an external monitor. Refer to chapter "Preparing for use" in this manual for an extensive description on how to connect an external monitor to the R&S FSL.

# **1 Front and Rear Panel**

This chapter describes the front panel and the rear panel of the instrument, including all function keys and connectors.

# Front Panel View

Fig. 1–1 Front panel view

## Function Keys on the Front Panel

For details on the ON/STANDBY key refer to chapter 2, section "Power Supply Options". A detailed description of the corresponding menus and the other function keys is provided in the Operating Manual on CD or in the Online Help.

Function key	Assigned functions
ON/STANDBY 	Switches the instrument on and off. For details on the standby mode (only available when the R&S FSL is supplied with AC power) refer to chapter 2, "Preparing for Use", section "Power Supply Options".
PRESET	Resets the instrument to the default state.
FILE	Provides the functions for storing/loading instrument settings and for managing stored files.
SETUP	Provides basic instrument configuration functions: <ul style="list-style-type: none"> <li>• Frequency reference (ext/int), noise source, video/IF output (option Additional Interfaces, R&amp;S FSL–B5), transducer factors</li> <li>• Date, time, display configuration</li> <li>• LAN interface, remote control (option GPIB Interface, R&amp;S FSL–B10)</li> <li>• Self-alignment</li> <li>• Firmware update and enabling of options</li> <li>• Information about instrument configuration incl. firmware version and system error messages</li> <li>• Service support functions (self test etc.)</li> </ul>
PRINT	Customizes the printout, selects and configures the printer.
HELP	Displays the Online Help.
MODE	Provides the selection between measurement modes and firmware options.
MENU	Jumps to the highest softkey menu level of the current measurement mode.
FREQ	Sets the center frequency as well as the start and stop frequencies for the frequency range under consideration. This key is also used to set the frequency offset and the signal track function.
SPAN	Sets the frequency span to be analyzed.
AMPT	Sets the reference level, the displayed dynamic range, the RF attenuation and the unit for the level display. Sets the level offset and the input impedance. Activates the preamplifier (option RF Preamplifier, R&S FSL–B22).
BW	Sets the resolution bandwidth and the video bandwidth.
SWEEP	Sets the sweep time and the number of measurement points. Selects continuous measurement or single measurement.
TRIG	Sets the trigger mode, the trigger threshold, the trigger delay, and the gate configuration in the case of gated sweep (option Gated Sweep, R&S FSL–B8).

Function key	Assigned functions
MKR	<p>Sets and positions the absolute and relative measurement markers (markers and delta markers). In addition, the following measurement functions are assigned under this key:</p> <ul style="list-style-type: none"> <li>• Frequency counter</li> <li>• Noise marker</li> <li>• Phase noise marker</li> <li>• Fixed reference point for relative measurement markers</li> <li>• n dB down function</li> <li>• AF demodulation</li> <li>• Marker list</li> </ul>
MKR→	<p>Used for search functions of the measurement markers (maximum/minimum of the trace).  Assigns the marker frequency to the center frequency, and the marker level to the reference level.  Restricts the search area and characterizes the maximum points and minimum points.</p>
RUN	Starts a new measurement.
MEAS	<p>Used to perform advanced measurements:</p> <ul style="list-style-type: none"> <li>• Time domain power</li> <li>• Channel, adjacent channel and multicarrier adjacent channel power</li> <li>• Occupied bandwidth</li> <li>• Signal statistics: amplitude probability distribution (APD) and cumulative complementary distribution function (CCDF)</li> <li>• Carrier to noise spacing</li> <li>• AM modulation depth</li> <li>• Third-order intercept point (TOI)</li> <li>• Harmonics</li> </ul>
LINES	Configures display lines and limit lines.
TRACE	Configures the measured data acquisition and the analysis of the measurement data.

## Connectors on the Front Panel

All connectors on the front panel are placed on the bottom of the right-hand side. The inscriptions on your instrument are in match with the captions of the connector descriptions below.

### Standard Front Panel Connectors

All connectors described in this chapter are provided by the R&S FSL models 03 and 06.

## RF INPUT 50 $\Omega$

The RF input is to be connected to the DUT via a cable equipped with a male N connector. It is AC-coupled.

### NOTICE Instrument damage caused by disregarding the following precautions!

Do not overload the input!

R&S FSL models with an upper frequency limit  $\leq 6$  GHz:

An input DC voltage of 50 V must never be exceeded in order to avoid damage to the instrument. The maximum continuous power at the RF input is 30 dBm (1 W).

For R&S FSL models with an upper frequency limit  $> 6$  GHz:

- Input attenuation  $< 10$  dB:  
An input DC voltage of 25 V must never be exceeded in order to avoid damage to the instrument (due to charging of the input capacitor). The maximum continuous power at the RF input is 20 dBm.
- Input attenuation  $\geq 10$  dB:  
An input DC voltage of 50 V must never be exceeded in order to avoid damage to the instrument. The maximum continuous power at the RF input is 30 dBm.

## PROBE POWER

The R&S FSL provides a connector for supply voltages of +15 V to –12 V and ground for active probes and preamplifiers. A maximum current of 140 mA is available. This connector is suitable as power supply for high-impedance probes from Agilent.

## AF OUT

Headphones equipped with a miniature jack plug can be connected to the AF output female connector. To use the AF OUTPUT, in the setup menu (**SETUP** key), select video output. The output voltage (volume) is set via the marker menu or the **MENU** key.

### CAUTION Risk of hearing damage

Using headphones can result in hearing damage.

Check the volume setting carefully before putting on the headphones in order to protect your hearing.

**Note:** *This connector cannot be used simultaneously to the IF/Video output connector on the rear panel.*

## USB

The front panel provides two female USB connectors to connect devices like keyboard (recommended: R&S PSL-Z2, order number 1157.6870.04) and mouse (recommended: R&S PSL-Z10, order number 1157.7060.04). Also a memory stick can be connected to store and reload instrument settings and measurement data. Using an adapter cable (R&S NRP-Z4), a power sensor can be connected, as an alternative to the power sensor connector on the rear panel that is only available with option Additional Interfaces, R&S FSL-B5.

---

**NOTICE**      **Instrument damage caused by disregarding the following precautions!**

Use suitable double shielded cables. Passive USB connecting cables must not exceed 1 m in length.  
Use only USB devices that keep the permissible EMI limits.

---

## Optional Front Panel Connectors

The R&S FSL models 13, 16 and 28 are equipped with a tracking generator and therefore provide a tracking generator output connector

---

### GEN OUTPUT 50Ω

The output of the tracking generator is to be connected to the DUT via a cable equipped with a male N connector.

---

**NOTICE**      **Instrument damage caused by disregarding the following precautions!**

A reverse power of 1 W or 50 V DC must never be exceeded in order to avoid damage to the tracking generator.

---

---

**Note:**      *In the case of DUTs with sensitive RF characteristics with regard to matching (VSWR) at the input, insert a 10 dB attenuator between the DUT and the tracking generator.*

---

# Rear Panel View

Fig. 1-2 Rear panel view

## Connectors on the Rear Panel

All standard connectors are placed at the bottom of the rear panel. Above all optional connectors are grouped according to their option. The inscriptions on your instrument or in Fig. 1–2 Rear panel view match with the captions of the connector descriptions below, if existing.

### Standard Rear Panel Connectors

Unless otherwise stated, all connectors described in this chapter are provided by the standard models R&S FSL Var 03, R&S FSL Var 06, R&S FSL Var 13, R&S FSL Var 16 R&S FSL Var 18 and R&S FSL Var 28.

#### **AC power supply connector and AC power switch**

The AC power supply connector and the AC power switch are located on the rear panel of the instrument. For an overview on available power supplies refer to chapter 2, "Preparing for Use", section "Power Supply Options".

AC power switch function:

**Position I** Depending on the setting of the ON/STANDBY function key on the front panel, the instrument is either in standby mode or in operation.

**Position O** The entire instrument is disconnected from the AC power supply.

For details on switching on and off refer to chapter 2, sections "Switching On the Instrument" and "Switching Off the Instrument".

---

**Note:** *The AC power switch also interrupts the power supply of the OCXO (option OCXO Reference Frequency, R&S FSL–B4). When switching the instrument back on, be sure to comply with the extended warm–up phase specified in the data sheet.*

---

#### **LAN**

The LAN interface can be used to connect the R&S FSL to a local network for remote control, printouts and data transfer. The assignment of the RJ–45 connector supports twisted–pair category 5 UTP/STP cables in a star configuration (UTP stands for "unshielded twisted pair", and STP for "shielded twisted pair").

#### **EXT TRIGGER / GATE IN**

The female connector for external trigger/gate input is used to control the measurement by means of an external signal.

The voltage levels are TTL levels (low <0.7 V; high >1.4 V). The typical input impedance is 10 k $\Omega$ .

**EXT REF**

The setup menu is used to switch between the internal and an external reference. The external reference female connector is used as an input for a 10 MHz reference signal, if **Reference Ext** is selected. The required input level is  $\geq 0$  dBm.

**EXT REF with OCXO option (R&S FSL-B4)**

This option generates a very precise 10 MHz reference signal with an output level of  $\geq 0$  dBm for other devices. The standard connector EXT REF at the rear panel is used as output, but can also be used as input. Whether it is used as input or output is set via the setup menu: with **Reference Ext** as input, with **Reference Int** as output.

For the R&S FSL18, the R&S FSL-B4 is included in the delivery.

---

**Note:** *The AC power switch also interrupts the power supply of the OCXO (option OCXO Reference Frequency, R&S FSL-B4). When you switch the instrument back on, be sure to comply with the extended warm-up phase specified in the data sheet.*

---

**MONITOR (DVI-D)**

The female DVI-D connector is used to connect an external monitor. Step-by-step instructions how to connect an external monitor are provided in chapter 2, "Preparing for Use".

---

**Note:** *For the R&S FSL18, the MONITOR connector is standard. For R&S FSL3 and R&S FSL6, its availability depends on the serial number of the instrument.*

---

## Optional Rear Panel Connectors

All connectors described in this chapter are only provided, if the instrument is equipped with the indicated option.

**POWER SENSOR (option Additional Interfaces, R&S FSL-B5)**

The LEMOSA female connector is used for connecting power sensors of the R&S NRP-Zxy family. Alternatively, the USB port on the front panel can be used for this purpose, if an adapter cable R&S NRP-Z4 is supplied.

**NOISE SOURCE CONTROL (option Additional Interfaces, R&S FSL–B5)**

The noise source control female connector is used to provide the supply voltage for an external noise source, e.g., to measure the noise figure and gain of amplifiers and frequency converting DUTs.

Conventional noise sources require a voltage of +28 V in order to be switched on and 0 V to be switched off. The output supports a maximum load of 100 mA.

An LED indicates the status: green for +28 V, red for overload and off for 0 V.

**IF/VIDEO OUT (option Additional Interfaces, R&S FSL–B5)**

The female BNC connector is used as an intermediate frequency (IF) output of approximately 20 MHz or as video output at the set video and resolution bandwidth. The setup menu (**SETUP** key) is used to select between the IF and video output.

**Note:** This connector cannot be used simultaneously with the AF output connector on the front panel.

**AUX PORT (option Additional Interfaces, R&S FSL–B5)**

The 9 pole SUB–D male connector provides control signals for controlling external devices. The voltage levels are of the TTL type (max. 5 V).

Pin	Signal	Description
1	+5 V / max. 250 mA	Supply voltage for external circuits
2 to 7	I/O	Reserved for future use
8	GND	Ground
9	READY FOR TRIGGER	Signal indicating that the instrument is ready to receive trigger signal.

**NOTICE** Instrument damage caused by disregarding the following precautions!

Watch the pin assignment carefully. A short–circuit may damage the instrument.

**GPIB interface (option R&S FSL–B10)**

The GPIB interface is in compliance with IEEE488 and SCPI. A computer for remote control can be connected via this interface. To set up the connection, a shielded cable is recommended. For more details refer to the Operating Manual on CD, chapter "Remote Control – Basics", section "Interfaces and Protocols".

**DC power supply (option R&S FSL–B30)**

A DC power supply can be connected alternatively to the AC power supply. DC power supplies from +11 to +28 V and from 7 to 2.7 A can be used. The connector is supplied with the accessories and is connected according to the following diagram:

Pin	Description
1	Plus
2	Ground
3	Not used

**NOTICE****Instrument damage caused by disregarding the following precautions!**

The used power supply (SELV) must fulfill the requirements for reinforced/double insulation for main supply circuits in accordance to DIN/EN/IEC 61010 (UL 61010B–1, CSA C22.2 No. 1010.1) or DIN/EN/IEC 60950 (UL 1950, CSA C22.2 No. 950). It is recommended to fuse the DC power supply according to the table below. Before switching on the instrument check the connection for correct polarity.

In continuous operation the actual breaking current can differ from the rated breaking current. For fuse selection take the characteristics of the fuse into account.

Input voltage	Max. current or power
11 V to 12.5 V	max. 125 VA
12.5 V to 18.7 V	max. 10 A
18.7 V to 28 V	max. 200 VA

Table 1: Fuse selection

The instrument is switched on or off using the ON/STANDBY function key on the front panel. For details refer to chapter 2, "Preparing for Use", sections "Switching On the Instrument" and "Switching Off the Instrument". For an overview on available power supplies and different modes refer to chapter 2, "Preparing for Use", section "Power Supply Options".

**BATTERY PACK (option R&S FSL–B31)**

The battery pack can be used alternatively as power supply. If the battery runs low during operation, a message is displayed. In this case, use another power supply or switch off the instrument. For an overview on available power supplies refer to chapter 2, "Preparing for Use", section "Power Supply Options".

The power supply can be changed during operation. To switch from battery to AC or DC power supply, connect the R&S FSL to the AC or DC power supply and, in case of the AC power supply, press the AC power switch on the rear panel to position I.

The instrument is switched on or off using the ON/STANDBY function key on the front panel. For details refer to chapter 2, "Preparing for Use", sections "Switching On the Instrument" and "Switching Off the Instrument". For an overview on available power supplies and different modes refer to chapter 2, "Preparing for Use", section "Power Supply Options".

The battery pack can be reloaded via the AC or DC power supply. For details on charging refer to chapter 2, "Charging the Battery Pack (Option R&S FSL–B31)".

**NOTICE      Instrument damage caused by disregarding the following precautions!**

The used power supply (SELV) must fulfill the requirements for reinforced/double insulation for main supply circuits in accordance to DIN/EN/IEC 61010 (UL 61010B–1, CSA C22.2 No. 1010.1) or DIN/EN/IEC 60950 (UL 1950, CSA C22.2 No. 950). Before switching on the instrument check the connection for correct polarity.

**Note:**      *If the battery is not to be used for a longer time, it is recommended to remove it and store it separately.*

## 2 Preparing for Use

This chapter describes all procedures to prepare the instrument for use. It starts from putting into operation, proceeds with connecting external devices, configuring the instrument and the LAN interface, and ends with information on the operating system:

- Preparing for Operation
- Connecting External Devices
- R&S FSL Setup
- LXI Configuration
- Configuring the LAN Interface
- Operating System Properties

---

**CAUTION****Risk of injury and instrument damage**

Handling and working with the instrument can cause injury to people or damage to the instrument.

Make sure to follow the instructions in the following sections in order not to endanger people and to avoid damage to the instrument.

This is of particular importance when you use the instrument for the first time. Also read the general safety instructions at the beginning of this manual.

---

## Preparing for Operation

This section describes how to prepare the instrument for operation. It includes the following topics:

- Unpacking the Instrument and its Accessories
- Checking the Accessories
- Ship Damage Inspection
- Warranty
- Recommended Calibration Interval
- Preparing the Instrument for Operation
- Power Supply Options
- Connecting the AC Power
- Switching On the Instrument
- Performing a Self Alignment and a Self Test
- Checking the Furnished Items
- Switching Off the Instrument
- Replacing the Fuses
- Charging the Battery Pack (Option R&S FSL–B31)
- Cleaning the Outside

**CAUTION****Risk of injury and instrument damage**

Prior to switching on the instrument, make sure that the following conditions are fulfilled:

- The instrument cover is in place and tightly screwed on.
- Fan openings are not obstructed.
- Signal levels at the inputs are within specified limits.
- Signal outputs are connected correctly and not overloaded.

Any non-compliance may endanger people and may cause damage to the instrument.

## Unpacking the Instrument and its Accessories

The instrument is shipped together with its mandatory accessories in a cardboard box. In order to unpack its contents proceed as follows:

1. Remove the instrument from its packaging and check the equipment for completeness using the delivery note and the accessory lists for the various items.
2. First, pull off the polyethylene protection pads from the instrument's rear feet and then carefully remove the pads from the instrument handles at the front.
3. Pull off the corrugated cardboard cover that protects the rear of the instrument.
4. Carefully unthread the corrugated cardboard cover at the front that protects the instrument handles and remove it.
5. Check the instrument for any damage. If there is damage, immediately contact the carrier who delivered the instrument. In this case, make sure not to discard the box and packing material.

It is advisable to keep the original packing material in order to prevent control elements and connectors from being damaged in case the instrument is to be transported or shipped at a later date.

6. In order to move the handle into the desired position, pull at both side knobs and turn the handle.

Fig. 2–1 Moving the handle of the instrument

**CAUTION****Risk of injury**

Place the instrument on a stable and level surface before moving the handle. Do not place anything on top of the instrument, if the instrument is not in a level position.

## Checking the Accessories

The instrument comes with the following accessories:

- Power cable
- Quick Start Guide
- CD "R&S FSL Spectrum Analyzer User Documentation"

## Ship Damage Inspection

Before inspecting the instrument, check the shipping container and cushioning material for damage. If it is damaged, immediately notify the carrier. Keep the box and packing material until you have verified that the contents are complete and until the R&S FSL has been tested electrically and mechanically.

For further transport or shipment of the R&S FSL, the original packaging should be used. Rohde & Schwarz will only accept claims of warranty if the instrument is shipped with sufficient packaging.

Prior to switching on the instrument check the housing and handle for visible damages or loose parts. If it is damaged, immediately notify the carrier and keep the box and packing material.

Make sure that the fan openings at the sides and on the rear panel of the instrument are not obstructed.

## Warranty

For information on warranty conditions for the R&S FSL refer to the terms of the delivery documents.

## Recommended Calibration Interval

For information on the recommended calibration interval for the R&S FSL refer to the R&S FSL data sheet.

## Preparing the Instrument for Operation

The instrument can be used in standalone operation or can be installed in a rack.

### Standalone Operation

The instrument is designed for use under general laboratory conditions.

---

**NOTICE**      **Risk of instrument damage**

Make sure that the ambient conditions required at the site of operation are met:

- The ambient temperature must be in the range specified in the data sheet.
- All fan openings must be unobstructed and the air flow at the side-panel perforations must be unimpeded. The distance to the wall should be at least 10 cm.

Any non-compliance may cause damage to the instrument.

---

**Note:**      *To protect DUTs against electrostatic discharge in the event of human contact, use proper protective equipment:*

### Rackmounting

The instrument may be installed in a 19" rack mount by using a rack adapter kit (Order No. see data sheet). The installation instructions are part of the adapter kit.

---

**NOTICE**      **Risk of overheating and wrong measurement results**

For rack installation, ensure that the air flow at the side-panel perforations are not obstructed to avoid overheating of the instrument and wrong measurement results.

---

## Power Supply Options

By standard the R&S FSL is equipped with an AC power supply connector. In order to use the R&S FSL independently from an AC power supply, the R&S FSL can be additionally fitted with a DC power supply connector (option DC Power Supply, R&S FSL-B30) or a battery pack (option NiMH Battery Pack, R&S FSL-B31). For details on the connectors refer to chapter 1 "Front and Rear Panel".

From the available power supplies, the R&S FSL selects the one to use according to the following priority scheme:

Priority	Power supply
1	AC power supply
2	DC power supply
3	battery

For example, if the R&S FSL is connected to both an AC and a DC power supply, it uses the AC power supply. If it is suddenly disconnected from the AC power supply, it switches to the DC power supply.

## Instrument modes

Three different instrument modes exist:

- On mode  
The instrument is supplied with AC power, DC power or battery. After booting, the instrument is ready for operation. A green LED above the ON/STANDBY key indicates this mode.
- Standby mode  
This mode is only available if the instrument is connected to the AC power supply (AC power switch in position I; for details refer to chapter 1, "Front and Rear Panel", section "AC power supply connector and AC power switch"). A yellow LED above the ON/STANDBY key indicates this mode. Parts of the instrument are still active, e.g. the oven of the OCXO unit (option OCXO Reference Frequency, R&S FSL-B4) is kept active or the battery (option NiMH Battery Pack, R&S FSL-B31) will be charged. To prevent the instrument from overheating, the fan remains active.  
  
When switched on in this mode, the R&S FSL will rapidly resume operation. It preserves the current settings and when switched back on, the last measurement is displayed.
- Off mode  
The instrument is switched off completely. Both LEDs are off. When switched on again, the instrument starts booting. If the OCXO unit (option OCXO Reference Frequency, R&S FSL-B4) is used, an extended warm-up phase as specified in the data sheet is required.

### Behavior of the ON/STANDBY key

Depending on the used power supply, the ON/STANDBY key on the front panel leads to different modes. The following table gives an overview. For step-by-step instructions refer to sections "Switching On the Instrument" and "Switching Off the Instrument".

Power supply	Instrument mode	Performed Action	Instrument reaction
AC	on	pressing the ON/STANDBY key	changes into standby or off mode, depending on the status of the <b>Shutdown Off/Standby</b> softkey ( <b>SETUP</b> key, for details refer to the Operating Manual)
	on	disconnecting instrument from AC power supply or switching AC power switch in position 0 (not recommended)	changes into off mode without saving the current settings
	standby	pressing the ON/STANDBY key	changes into on mode
	standby	disconnecting instrument from AC power supply or switching AC power switch in position 0	changes into off mode
	off	connecting instrument to AC power supply and/or switching AC power switch at the rear panel in position I	starts booting
DC	on	pressing the ON/STANDBY key	changes into off mode
	off	pressing the ON/STANDBY key	starts booting
	on/off	switching the AC power switch at the rear panel in position I	no action
battery	on	pressing the ON/STANDBY key	changes into off mode
	off	pressing the ON/STANDBY key	starts booting
	on/off	switching the AC power switch at the rear panel in position I	no action

When switched on from standby mode, the R&S FSL will directly display the measurement screen and resume operation after a few moments. Otherwise, after being switched on, the R&S FSL starts booting. It displays the Analyzer BIOS screen and performs a self test of the computer hardware. The firmware starts as soon as Windows XP has resumed operation.

## Connecting the AC Power

The R&S FSL can be used with different AC power voltages and adapts itself automatically to it. Refer to the datasheet for the requirements of voltage and frequency. The AC power connector is located on the rear panel of the instrument.

AC power connector

- Connect the R&S FSL to the AC power supply, using the power cable that is supplied.

Since the instrument is assembled in line with the specifications for safety class EN61010, it may only be connected to an outlet that has a ground contact.

## Switching On the Instrument

For an overview on available power supplies refer to chapter 2, "Preparing for Use", section "Power Supply Options".

### To switch on the instrument

- AC power supply: Press the AC power switch on the rear panel into position I.
- DC power supply/battery or standby mode: Press the ON/STANDBY key on the front panel.

## Performing a Self Alignment and a Self Test

---

**Note:** *This functional test should only be performed when the operating temperature is reached (approx. 15 minutes after the instrument is switched on, refer to the data sheet for details).*

---

### To perform a self alignment

1. Press the **SETUP** key.
2. Press the **Alignment** softkey
3. Press the **Self Alignment** softkey.  
Once the system correction values have been calculated successfully, a message will be displayed.

### To perform a self test

1. Press the **SETUP** key.
2. Press the **More** ↓ key.
3. Press the **Service** softkey.
4. Press the **Selftest** softkey.  
Once the instrument modules have been checked successfully, a message will be displayed.

Once both steps have been completed successfully, the instrument will be ready for operation.

---

**Note:** *The self test does not need to be repeated every time the instrument is switched on. It is only necessary when instrument malfunction is suspected.*

---

## Checking the Furnished Items

The instrument may be equipped with both hardware and firmware options. A message box informs if an option is about to expire. Press the OK button to resume using the R&S FSL. If an option already has expired, a message box that informs about the expiry opens. All instrument functions are unavailable (including remote control) until the R&S FSL is rebooted.

In order to check whether the installed options correspond to the options indicated on the delivery note, proceed as follows.

### To check the installed options

1. Press the **SETUP** key.
2. Press the **More** ↓ key.
3. Press the **System Info** softkey.
4. Press the **Versions + Options** softkey.  
A list with hardware and firmware information is displayed.
5. Check the availability of the hardware options: as indicated in the delivery note. The options correspond to the hardware list entries as follows:

Option	Hardware Info Name	Available from Firmware Version
R&S FSL-B4*	OCXO	1.00
R&S FSL-B5	Additional Interfaces	1.00
R&S FSL-B10	GPIB Interface	1.00
R&S FSL-B30	DC Power Supply	1.00
R&S FSL-B31	NiMH Battery Pack	1.00

\* For the R&S FSL18, the R&S FSL-B4 is included in the delivery.

6. Check the availability of the firmware options enabled via license keys as indicated in the delivery note. The following list gives an overview of the options available according to the state of press date. For more recent information refer to the CD.

Option	Option List Name	Available from Firmware Version
R&S FSL-B6	TV Trigger	1.10
R&S FSL-B7	Narrow IF Filters	1.00
R&S FSL-B8	Gated Sweep	1.00
R&S FSL-B22	RF Preamplifier	1.00
R&S FSL-K7	Analog Demodulation	1.10
R&S FSL-K8	Bluetooth Measurements	1.30
R&S FSL-K9	Power Sensor Support	1.00
R&S FSL-K14	Spectrogram Measurement	1.60
R&S FSL-K20	Cable TV Measurements	1.30
R&S FSL-K30	Noise Figure Measurements	1.50
R&S FSL-K72	3GPP Base Station Measurements	1.40
R&S FSL-K82	CDMA2000 BTS Analyzer	1.90
R&S FSL-K84	1xEV-DO BTS Analyzer	1.91
R&S FSL-K91	WLAN TX Measurements	1.20
R&S FSL-K92	WIMAX 802.16 OFDM Measurements	1.40
R&S FSL-K93	WIMAX 802.16e, WiBro Measurements	1.50

## Switching Off the Instrument

Depending on the used power supply, the instrument changes to different modes when pressing the ON/STANDBY key on the front panel or switching off the AC power at the rear panel. An overview is given in section "Power Supply Options".

---

**Note:** Do not press the ON/STANDBY key longer than 3 seconds.

---

### To switch to standby mode

Prerequisites:

- The instrument is in operation.
- The instrument connected to the AC power supply.
- The AC power switch on the rear panel is in position I.
- The shutdown behavior is configured accordingly (**SETUP** key; for details refer to the Operating Manual).

- Press the ON/STANDBY key on the front panel.

The R&S FSL will store the current settings on the hard disk and switch to standby mode (for details on the standby mode refer to section "Power Supply Options").

**CAUTION**

**Shock hazard**

In standby mode, there is still AC supply voltage present in the instrument.

**To change into off mode**

- DC power supply/battery:
  - Press the ON/STANDBY key on the front panel.

The R&S FSL changes into off mode.

- AC power supply:

Prerequisite: The shutdown behavior is configured accordingly (**SETUP** key; for details refer to the Operating Manual).

- Press the ON/STANDBY key on the front panel.
- Change the AC power switch on the rear panel to position O, or disconnect the instrument from the AC power supply.

The R&S FSL changes into off mode, if no other power supply (DC or battery) is connected.

**Note:** *The R&S FSL will preserve its current instrument settings if switched off via the ON/STANDBY key. It will lose its settings if switched off at the rear panel or if the power cord is disconnected without pressing the ON/STANDBY key first. In this case, the last settings that were stored on the hard disk will be loaded when you switch the instrument back on.*  
*The AC power switch also interrupts the power supply of the OCXO (option OCXO Reference Frequency, R&S FSL-B4). When you switch the instrument back on, be sure to comply with the extended warm-up phase specified in the data sheet.*

## Replacing the Fuses

The instrument is protected by two fuses (IEC 127 – T 3.15 H / 250 V) located on the rear panel at the right side of the AC power switch.

### CAUTION

### Shock hazard

Replacing the fuse while the instrument is switched on and connected to the power supply can cause shock.

Ensure that the instrument is switched off and disconnected from the power supply by removing the plug from the AC and DC power connector to avoid shock.

### To replace the fuses

1. Open the lid of the AC power connector.
2. Lift the fuse holder out of its slot.
3. Exchange the two fuses.
4. Put the fuse holder back in its slot and close the lid.

## Charging the Battery Pack (Option R&S FSL–B31)

The battery pack can be charged without removing via the AC or the DC power supply:

- To charge the battery using the AC power supply, plug in the AC power supply and switch on the AC power on the rear panel. The ON/STANDBY key on the front panel can be set either way.
- To charge the battery pack using the DC power supply, connect the instrument to the DC power supply.

If you have more than one battery packs in use, you can charge the battery pack outside the instrument using the power supply unit of R&S FSL–Z4 (DC Supply for R&S FSL–B31, stock no. 4052.3041.00). An LED with the inscription "Charge" is switched on during charging.

Charging conditions	Charging duration (approximately)
AC power supply, STANDBY mode	5 h
AC power supply, instrument is switched on	9 h
DC power supply, instrument is switched off	5 h
DC power supply, instrument is switched on	9 h
external charging (battery removed)	5 h

## Cleaning the Outside

The outside of the instrument is suitably cleaned using a soft, line-free dust cloth. Make sure that the air vents are not obstructed.

**CAUTION****Shock hazard**

Cleaning the instrument while it is switched on and connected to the power supply can cause shock.

Before cleaning the instrument, ensure that the instrument is switched off and disconnected from all power supplies: AC power supply, DC power supply, battery pack.

**NOTICE****Risk of instrument damage caused by cleaning agents**

Cleaning agents contain substances that may damage the instrument, e.g. solvent-containing cleaning agents may damage the front panel labeling or plastic parts.

Never use cleaning agents such as solvents (thinners, acetone, etc), acids, bases, or other substances.

## Connecting External Devices

The following interfaces for external devices are provided:

- USB interfaces (refer to section Connecting USB Devices)
- DVI-D connector (refer to section Connecting an External Monitor)

## Connecting USB Devices

The two USB interfaces on the front panel of the R&S FSL allow you to connect USB devices directly to the analyzer. This number can be increased as necessary by using USB hubs.

Due to the large number of available USB devices, there is almost no limit to the expansions that are possible with the R&S FSL. The following list shows various USB devices that can be useful for the R&S FSL:

- Power sensors of the NRP Zxy family
- Memory stick for easy transfer of data to/from a computer (e.g. firmware updates)
- CD-ROM drives for easy installation of firmware applications
- Keyboard for entering comments, file names, etc
- Mouse for easy operation of Windows dialog boxes
- Printer for printing out measurement results

Installing USB devices is easy under Windows XP, because all USB devices are plug&play. All USB devices can be connected to or disconnected from the R&S FSL during operation.

After a device is connected to the USB interface of the R&S FSL, Windows XP automatically searches for a suitable device driver.

If Windows XP does not find a suitable driver, it will prompt you to specify a directory that contains the driver software. If the driver software is on a CD, connect a USB CD-ROM drive to the R&S FSL before proceeding.

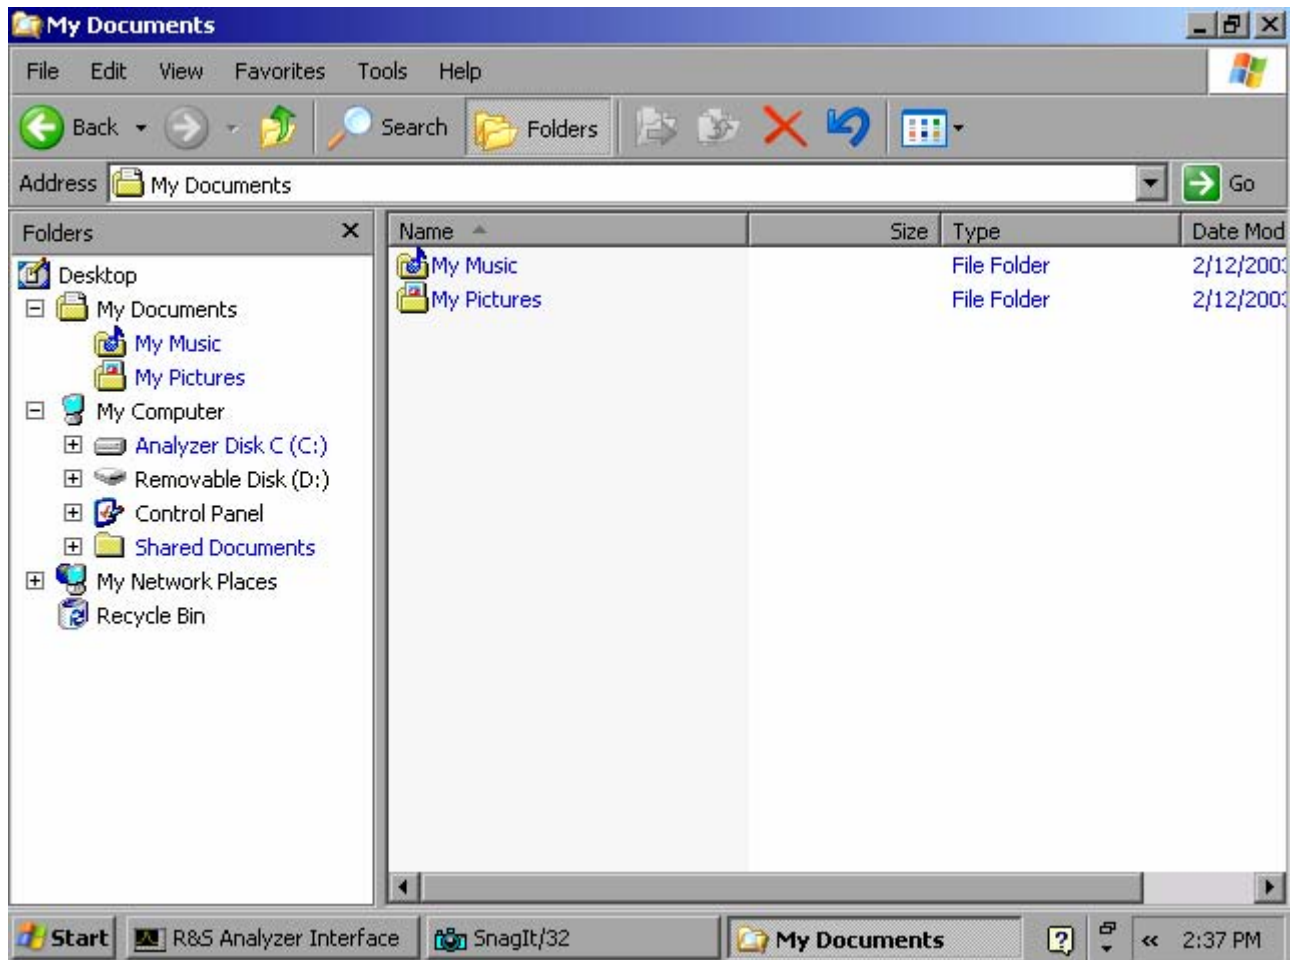

When a USB device is subsequently disconnected from the R&S FSL, Windows XP immediately detects the change in hardware configuration and deactivates the corresponding driver.

### **Example: To connect a memory stick to the R&S FSL**

1. Connect the memory stick to the USB interface.

Windows XP detects the new hardware and installs the corresponding driver. If installation is successful, Windows XP informs you that the device is ready to use.

The memory stick is made available as a new drive (D:) and is displayed under Windows Explorer. The name of the memory stick is manufacturer-dependent (in this example it is called "Removable Disk"). The memory stick can be used like a normal drive to load or store data.

2. If you no longer need the memory stick or if you want to transfer files to another computer, simply disconnect the memory stick.  
Windows XP automatically deactivates the driver. If the drive is still selected in Explorer, an error message will appear indicating that the drive is no longer available.

## Connecting an External Monitor

You can connect an external monitor at the MONITOR connector on the instrument's rear panel. For details on the connector refer to chapter 1, "Front and Rear Panel".

1. Connect the external monitor to the R&S FSL.
2. Press the **SETUP** key.  
The setup menu is displayed.
3. Press the **General Setup** softkey.
4. Press the **More**  key.
5. Press the **Monitor Int/Ext** softkey.  
The softkey switches from the internal monitor (**Int**) to the external monitor (**Ext**). The R&S FSL display is disabled (turns dark). The screen content (measurement screen) formerly displayed on the R&S FSL is displayed on the external screen.
6. To display the screen content on the R&S FSL and the external monitor simultaneously, perform the following steps:
  - Press the **CTRL+ESC** key combination to display the taskbar.
  - On the right side of the taskbar, click the monitor icon.
  - Select **Graphics Options - Output To - Intel(R) Dual Display Clone - Monitor + Digital Display**.The R&S FSL screen and the external screen are both active.

## R&S FSL Setup

This section describes how to setup the instrument. It includes the following topics:

- Selecting the Frequency Reference
- Setting the Date and Time
- Configuring the GPIB Interface (Option R&S FSL–B10)
- Setting the Screen Colors
- Setting the Automatic Display Off Function
- Selecting and Configuring Printers

### Selecting the Frequency Reference

You can switch the reference signal for frequency processing of the R&S FSL between the internal reference and an external reference signal at 10 MHz as follows:

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **Reference Int/Ext** softkey until it is in the desired state.

---

**Note:** *If the reference signal is missing when switching to external reference, the message **EXREF** is displayed to indicate that no synchronization is performed. It is important, that the external reference signal is deactivated when switching from external to internal reference to avoid interactions with the internal reference signal.*

---

→ Remote command: `ROSC:SOUR INT`

### Setting the Date and Time

You can set date and time for the internal real time clock as follows:

#### To open the Date and Time Properties dialog box

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **General Setup** softkey.  
The general setup submenu is displayed.
3. Press the **Time + Date** softkey to open the **Date and Time Properties** dialog box.  
The **Date & Time** tab is displayed. You can change hours, minutes and seconds independently of each other.

## To change the date

1. Under **Date**, select the month using the rotary knob.
2. Press the **FIELD RIGHT** key to set the focus on the year field and select the year using the rotary knob.
3. Press the **FIELD RIGHT** key to set the focus on the calendar and select the day using the tab keys.

→ Remote command: `SYST:DATE 2004,10,1`

## To change the time

1. Press the **FIELD RIGHT** key until the focus is set on the hours of the time field and change the hour setting using the rotary knob.
2. Press the **FIELD RIGHT** key to set the focus on the minutes and change the minute setting using the rotary knob.
3. Press the **FIELD RIGHT** key to set the focus on the seconds and change the second setting using the rotary knob.

→ Remote command: `SYST:TIME 12,30,30`

## Configuring the GPIB Interface (Option R&S FSL-B10)

The GPIB interface is offered with option R&S FSL-B10. You can set the GPIB address and the ID response string. The GPIB language is by default set as SCPI and cannot be changed for the R&S FSL.

### To display the GPIB submenu

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **General Setup** softkey.  
The general setup submenu is displayed.
3. Press the **GPIB** softkey.  
The submenu for setting the parameters of the remote control interface is displayed.

### To set the GPIB address

- In the **GPIB** menu, press the **GPIB Address** softkey.  
The edit dialog box for the GPIB address is displayed.  
  
The setting range is from 0 to 30. If SCPI is selected as the GPIB language, the default address is 20.

→ Remote command: `SYST:COMM:GPIB:ADDR 20`

## To set the ID response string

- In the **GPIB** menu, press the **ID String Factory** softkey to select the default response to the command \*IDN?.
- Remote command: --
- In the **GPIB** menu, press the **ID String User** softkey to enter a user-defined response to the command \*IDN?. The max. length of the output string is 36 characters.
- Remote command: --

## Setting the Screen Colors

To change the colors of the displayed objects, two default color settings are provided. Alternatively you can change the color of objects individually using predefined colors or using colors of your own definition. The following step-by-step instructions only describe the process via keys. It is also possible to use the rotary knob as described in chapter 4 "Basic Operations" in principle.

### To display the screen colors submenu

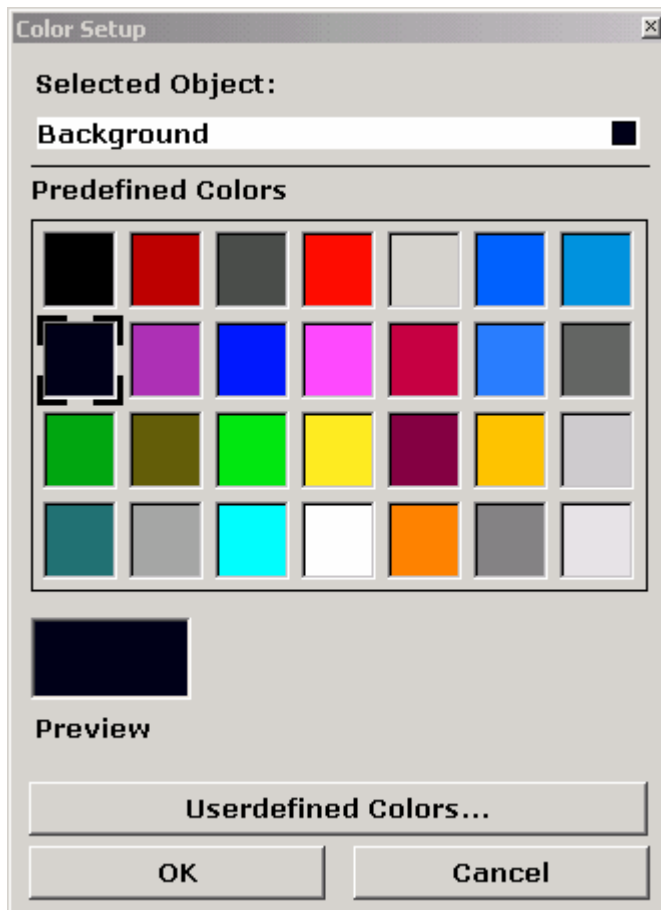

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **General Setup** softkey.  
The general setup submenu is displayed.
3. Press the **Meas Display** softkey.  
The meas display submenu is displayed.
4. Press the **Screen Colors** softkey.  
The screen colors submenu is displayed.

### To use the default color settings

1. In the screen colors submenu (see "To display the screen colors submenu"), press the **Set to Default** softkey to select the default setting for brightness, tint and color saturation of all screen objects.  
The **Set User Colors to Default** dialog box is displayed.
  2. Select one of the default color sets by using the arrow keys and confirm the selection by pressing the **ENTER** key. The color schemes are selected in such a manner that all screen elements will be optimally visible regardless whether viewed from above or below. In the instrument's default setting, **Default Colors 1** is active.
- Remote command: `DISP:CMAP:DEF1`
  - Remote command: `DISP:CMAP:DEF2`

## To use the predefined color set

1. In the screen colors submenu (see "To display the screen colors submenu"), press the **Select Screen Color Set** softkey.  
The **Select Screen Color Set** dialog box is displayed.
2. Select the **User Defined Colors** option by using the arrow keys and confirm the selection by pressing the **ENTER** key.
3. In the screen colors submenu, press the **Select Object** softkey.  
The **Color Setup** dialog box is displayed.

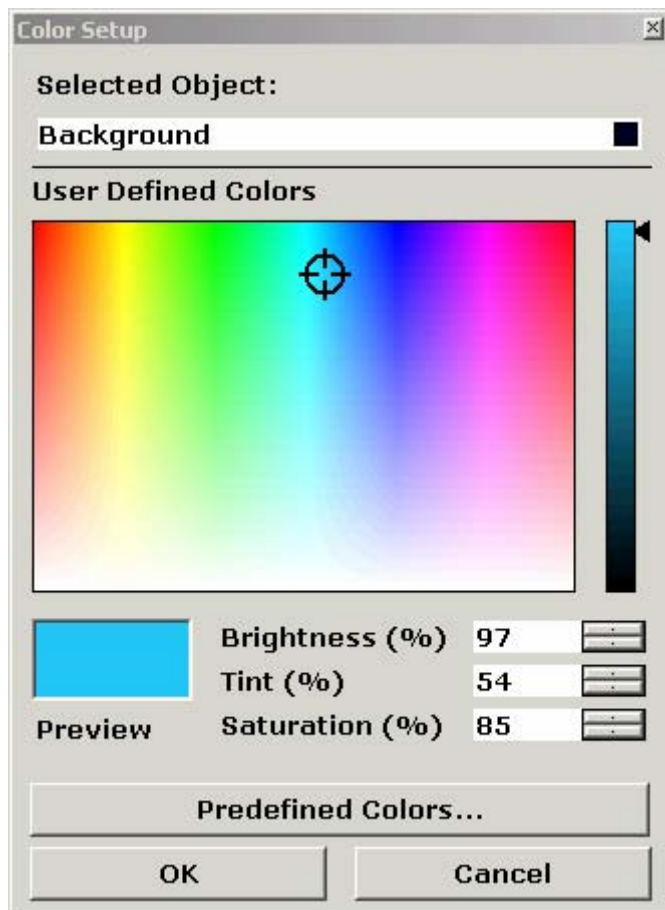

4. In the **Selected Object** list, select the object for which you want to change the color setting by using the arrow keys and confirm the selection by pressing the **ENTER** key.
5. Set the focus on **Predefined Colors** by pressing the **FIELD RIGHT** key.
6. Set the focus on the color you want to select by using the arrow keys and confirm the selection by pressing the **ENTER** key.  
The new setting is displayed on the measurement screen.
7. Repeat the steps for all objects that you want to change in color.
8. To change to predefined colors, press the **Userdefined Colors** softkey, or set the focus on the **Userdefined Colors** button by using the **FIELD RIGHT** key and confirm the selection by pressing the **ENTER** key. For details refer to "To define and use your own color set".

- Focus the **OK** button by using the **FIELD RIGHT** key and confirm by pressing the **ENTER** key to accept the new color settings and to close the dialog box. If you press the **Cancel** button, your changes are discarded.

→ Remote command: `DISP:CMAP1 ... 26:PDEF <color>`

## To define and use your own color set

- In the screen colors submenu (see "To display the screen colors submenu"), press the **Select Screen Color Set** softkey.  
The **Select Screen Color Set** dialog box is displayed.
- Select the **User Defined Colors** option by using the arrow keys and confirm the selection by pressing the **ENTER** key.
- In the screen colors submenu, press the **Select Object** softkey.  
The **Color Setup** dialog box is displayed.
- In the **Selected Object** list, select the object for which you want to change the color setting by using the arrow keys and confirm the selection by pressing the **ENTER** key.
- Press the **Userdefined Colors** softkey.

- Set the focus on **User Defined Colors** by pressing the **FIELD RIGHT** key.
- Define the color by setting values for brightness, tint and saturation. Set the focus on the corresponding field by using the **FIELD RIGHT** key, set the value by using the rotary knob and confirm the selection by pressing the rotary knob. In the continuous color spectrum (**Tint**) red is represented by 0% and blue by 100%.  
The defined color is displayed in the **Preview** box.

8. Repeat the steps for all objects you want to change the color.
9. To change to predefined colors, press the **Predefined Colors** softkey, or set the focus on the **Predefined Colors** button by using the **FIELD RIGHT** key and confirm the selection by pressing the **ENTER** key. For details refer to "To use the predefined color set".

→ Remote command: `DISP:CMAP1 ... 26:HSL <hue>,<sat>,<lum>`

## Setting the Automatic Display Off Function

The R&S FSL provides a feature for automatically switching off its screen after a user-defined period of time. The background lighting will be disabled if no entries are made from the front panel after the selected response time (key, softkey and rotary knob).

### To activate automatic display off

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **General Setup** softkey.  
The general setup submenu is displayed.
3. Press the **Meas Display** softkey.  
The meas display submenu is displayed.
4. Press the **Display Pwr Save On/Off** softkey.  
The power save mode is activated (indicated by softkey background color), and the dialog box to enter the response time is displayed.
5. Enter the desired response time in minutes and confirm the entry with the **ENTER** key.  
The screen is disabled (turns dark) after the selected period of time.

### To deactivate automatic display off

- In the meas display submenu (see above), press the **Display Pwr Save On/Off** softkey twice.

The softkey background color will disappear. The power save mode is switched off.

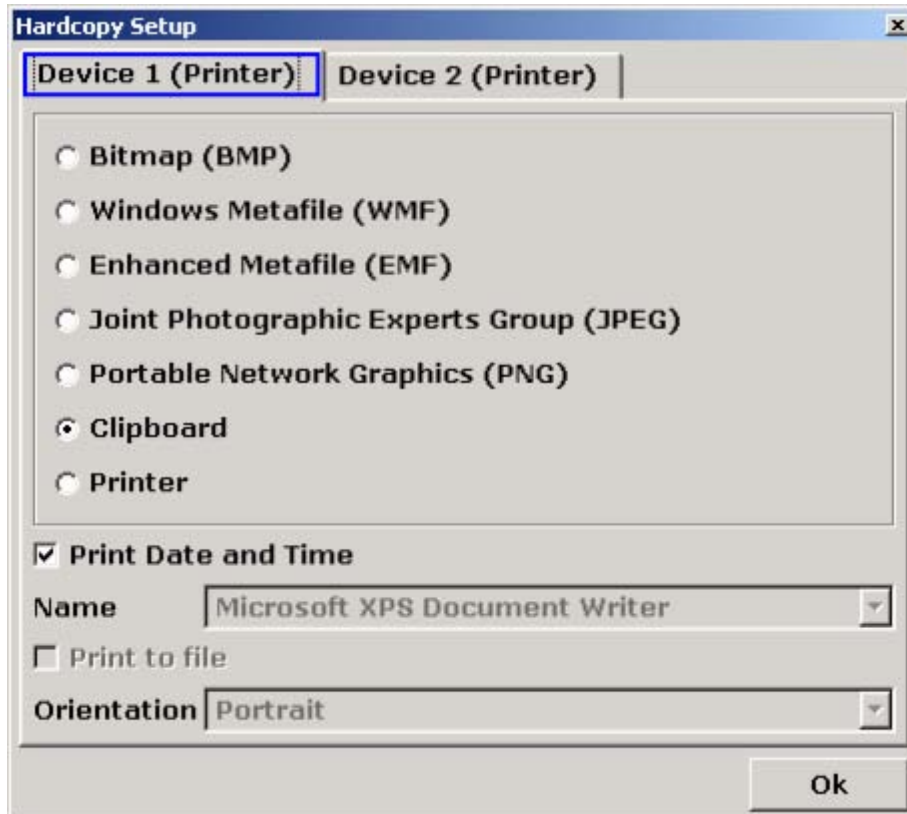

## Selecting and Configuring Printers

You can printout your measurement results using a local printer or a network printer. The analyzer supports two independent printout settings. This allows you to quickly switch between output to a file and a printer.

The procedure for installing a local printer is described in Appendix A. How to install a network printer is described in Appendix B.

## To configure the printer and the printout

1. Press the **PRINT** key.  
The print menu is displayed.
2. Press the **Device Setup** softkey.  
The **Hardcopy Setup** dialog box is displayed.

3. If you want to change the tab in order to define the second print setting, press the **Device 1/2** softkey.
4. Define the output via the options. Set the focus on the options area using the **FIELD RIGHT** key and select an option by using the arrow keys:
  - To save the hardcopy in an image file, select one of the image types. Depending on the image type, the color depth varies (e.g. 4-bit for BMP, 24-bit for PNG and JPEG).
  - To copy the image to the clipboard, select the **Clipboard** option.
  - To use a preconfigured network printer, select the **Printer** option.

---

**Note:** The **Name**, **Print to File** and **Orientation** fields are only available if the **Printer** option is selected. You can perform the following steps only with the **Printer** option selected.

---

5. Deactivate the **Print Date and Time** option to omit the date and time from the printout by using the **FIELD RIGHT** key and deactivate the option by pressing the **CHECKMARK** key.
6. Focus the **Name** field by using the **FIELD RIGHT** key and select the desired printer type by using the arrow keys.

7. If you want to redirect the output to a postscript file rather than a printer, focus the **Print to file** option by using the **FIELD RIGHT** key and activate the option by pressing the **CHECKMARK** key.
8. Focus the **Orientation** field by using the **FIELD RIGHT** key and select the desired orientation by using the arrow keys.
9. Close the dialog box by pressing the **ESC** key or by focusing and confirming the **Close** button.

### To select the printout colors

1. Press the **PRINT** key.  
The print menu is displayed.
2. Press the **Colors** softkey.  
The colors submenu is displayed.
3. If you want to print in color, press the **Select Print Color Set** softkey to select the color set.  
The **Select Print Color Set** dialog box is displayed.
4. Select the color set by using the arrow keys and confirm your selection by pressing the **ENTER** key.
  - **Screen Colors (Print)** option: The current screen colors are used for the printout. Independently of the current screen colors, the background is printed in white and the grid in black.  
Remote command: `HCOP:CMAP:DEF1`
  - **Screen Colors (Hardcopy)** option: The current screen colors without any changes for a hardcopy. For details on the output format see "To configure the printer and the printout".  
Remote command: `HCOP:CMAP:DEF4`
  - **Optimized Colors** option: This setting improves the color clarity of the printout. Trace 1 is printed in blue, trace 2 in black, trace 3 in bright green, trace 4 in pink, trace 5 in sea green, trace 6 in dark red, and the markers in sky blue. The background is printed in white and the grid in black. The other colors correspond to the screen colors of the default color setting of the setup menu.  
Remote command: `HCOP:CMAP:DEF2`
  - **User Defined Colors** option: You define and use your own color set for the printout. For details how to proceed refer to "Setting the Screen Colors".  
Remote command: `HCOP:CMAP:DEF3`
5. If you want a black-and-white printout, press the **Color On/Off** softkey to switch off the color. In the black-and-white printout, all background colors will be printed out in white and all color lines in black. This allows you to improve contrast on the printout.  
→ Remote command: `HCOP:DEV:COL ON`

# LXI Configuration

LAN eXtensions for Instrumentation (LXI) is an instrumentation platform for measuring instruments and test systems that is based on standard Ethernet technology. LXI is intended to be the LAN-based successor to GPIB, combining the advantages of Ethernet with the simplicity and familiarity of GPIB.

## LXI classes and LXI functionality

LXI-compliant instruments are divided into three classes, A, B and C, with the functionality of the classes hierarchically based one upon the other:

- Class C instruments are characterized by a common LAN implementation, including an ICMP ping responder for diagnostics. The instruments can be configured via a web browser; a LAN Configuration Initialize (LCI) mechanism resets the LAN configuration. The LXI class C instruments shall also support automatic detection in a LAN via the VXI-11 discovery protocol and programming by means of IVI drivers.
- Class B adds IEEE 1588 Precision Time Protocol (PTP) and peer-to-peer communication to the base class. IEEE 1588 allows all instruments on the same network to automatically synchronize to the most accurate clock available and then provide time stamps or time-based synchronization signals to all instruments with exceptional accuracy.
- Class A instruments are additionally equipped with the eight-channel hardware trigger bus (LVDS interface) defined in the LXI standard.

Instruments of classes A and B can generate and receive software triggers via LAN messages and communicate with each other without involving the controller.

The R&S ESL complies with LXI class C. In addition to the general class C features described above, it provides the following LXI-related functionality:

- Integrated LXI Configuration dialog for LXI activation and reset of the LAN configuration (LAN Configuration Initialize, LCI).

**Note:** The LXI functionality requires a Windows XP operating system that has been upgraded to service pack 2. Please contact your Rohde & Schwarz service representative if your R&S FSL's operating system needs an upgrade. To check the version of your operating system, open the Versions+Options dialog box in the General Setup submenu (**SETUP** key – for details refer to the Operating Manual, chapter 4: Instrument Functions – Basic Settings).

After a firmware update, use the standby key to shut-down and re-start the instrument in order to enable the full LXI functionality.

For information about the LXI standard refer to the LXI website at <http://www.lxistandard.org>. See also "News from Rohde & Schwarz, article [2006/II - 190](#)".

## LXI Configuration Dialog

This dialog provides basic LXI information for the R&S FSL. Press the Info softkey in the General Setup menu to open the LXI Configuration dialog box (for details refer to the Operating Manual, chapter 4: Instrument Functions – Basic Settings).

Current LXI Configuration	
Item	Value
Current Version	1.1
LXI Class	C
Computername	FSX-000000
MAC Address	00:C0:3A:50:05:55
IP Adress	10.113.11.3
Auto MDIX	Yes

### Default state of the network settings

According to the LXI standard, an LCI must place the following parameters to a default state. For details on resetting the R&S FSL refer to the Operating Manual, chapter 4: Instrument Functions – Basic Settings.

Parameter	Value
TCP/IP Mode	DHCP + Auto IP Address
Dynamic DNS	Enabled
ICMP Ping	Enabled
Password for LAN configuration	LxiWebIfc

The LCI for the R&S FSL also resets the following parameters:

Parameter	Value
Description	R&S Spectrum Analyzer/FSL/<serial number>
Negotiation	Auto Detect
VXI-11 Discovery	Enabled

The LAN settings are configured using the instrument's LXI Browser Interface.

## LXI Browser Interface

The instrument's LXI browser interface works correctly with all W3C compliant browsers. Typing the instrument's host name or IP address in the address field of the browser on your PC, e.g. <http://10.113.10.203>, opens the Instrument Home Page (welcome page).

**Instrument Home Page**

**Instrument Properties**

<b>Instrument Model</b>	Rohde & Schwarz FSL Spectrum Analyzer
<b>Manufacturer</b>	Rohde & Schwarz GmbH & Co. KG
<b>Serial Number</b>	100005
<b>Description</b>	Rohde & Schwarz Spectrum Analyzer / FSL / 100005
<b>LXI Class</b>	C
<b>LXI Version</b>	1.1
<b>Host Name</b>	10.113.11.3
<b>MAC Address</b>	00:C0:3A:50:05:55
<b>TCP/IP Address</b>	10.113.11.3
<b>Firmware Revision</b>	1.90b 16
<b>Current Time</b>	Tuesday, 2008/02/19, 22:41:12
<b>Current Time source</b>	Operating System
<b>VISA resource string</b>	TCPIP::10.113.11.3::inst0::INSTR
<b>Device Indicator</b>	<a href="#">INACTIVE (press to toggle)</a>

**Status**

No error

© 2008 ROHDE&SCHWARZ. All rights reserved.

The instrument home page displays the device information required by the LXI standard including the VISA resource string in read-only format.

The LAN Status toggle button causes the LXI logo in the status bar of the R&S FSL to blink (if active). A green LXI status symbol indicates that a LAN connection has been established; a red symbol indicates that no LAN cable is connected. The LAN Status setting is not password-protected.

The navigation pane of the browser interface contains the following control elements:

- LAN Configuration opens the LAN Configuration page.
- LXI Glossary opens a document with a glossary of terms related to the LXI standard.
- Status displays information about the LXI status of the instrument.

## LAN Configuration

The LAN Configuration web page displays all mandatory LAN parameters and allows their modification.

The TCP/IP Mode configuration field controls how the IP address for the instrument gets assigned (see also <Link to IP Address Settings>). For the manual configuration mode, the static IP address, subnet mask, and default gateway are used to configure the LAN. The automatic configuration mode uses DHCP server or Dynamic Link Local Addressing (Automatic IP) to obtain the instrument IP address.

**Note:** *Changing the LAN configuration is password-protected. The password reads LxiWebIfc (notice upper and lower case characters).*

The links across the bottom of the LAN Configuration page open other pages:

- Ping Client provides the ping utility to verify the connection between the instrument and other devices.
- Advanced LAN Configuration provides LAN settings that are not declared mandatory by the LXI standard.

Advanced LAN Configuration

LAN Parameters

Negotiation

ICMP Ping  Disabled  Enabled

VXI-11 Discovery  Disabled  Enabled

(Password required!)

Status

No error

© 2008 ROHDE&SCHWARZ. All rights reserved.

The Advanced LAN Configuration parameters are used as follows:

- The Negotiation configuration field provides different Ethernet speed and duplex mode settings. In general, the Auto Detect mode is sufficient.
- ICMP Ping must be enabled to use the ping utility.
- VXI-11 is the protocol that is used for discovery of the instrument in the LAN. According to the standard, LXI devices must use VXI-11 to provide a discovery mechanism; other additional discovery mechanisms are permitted.

## Ping

Ping is a utility that verifies the connection between the LXI-compliant instrument and another device. The ping command uses the ICMP echo request and echo reply packets to determine whether the LAN connection is functional. Ping is useful for diagnosing IP network or router failures.

The ping utility is not password-protected. To initiate a ping between the LXI-compliant instrument and a second connected device,

1. Enable ICMP Ping on the Advanced LAN Configuration page (enabled after an LCI).
2. Enter the IP address of the second device without the ping command and without any further parameters into the Destination Address field (e.g. 10.113.10.203).
3. Click Submit.

## Configuring the LAN Interface

This section describes how to configure the LAN interface. It includes the following topics:

- Connecting the Instrument to the Network
- Configuring the Network Card

For further information on the LAN interface refer to "Appendix B: LAN Interface".

The instrument can be connected to an Ethernet LAN (local area network) using the LAN interface connector on the rear panel (for details refer to chapter 1, "Front and Rear Panel"). This makes it possible to transfer data over the network and to use network printers. In addition, the instrument can be remote-controlled via the network. The network card can be operated with a 10 MHz Ethernet IEEE 802.3 or a 100 MHz Ethernet IEEE 802.3u interface.

## Connecting the Instrument to the Network

### **NOTICE**      **Risk of network errors!**

Before connecting the instrument to the network, consult your network administrator, particularly in the case of large LAN installations. Connection errors may affect the entire network.

Never connect your analyzer to a network unprotected against virus infection because this may cause damage to the instrument software.

Setting up the connection does not cause any problems on the network. Likewise, disconnecting the instrument from the network does not cause any problems as long as no data traffic to and from the instrument is in progress.

## Configuring the Network Card

Under Windows XP, network card drivers do not need to be installed separately. If the instrument is connected to the LAN, Windows XP automatically detects the network connection and activates the required drivers.

### **Changing the IP address and configuring the network protocols (TCP/IP protocol)**

Before starting, check the following:

- Which IP addresses and subnet masks are suitable for your network? If necessary, ask your network administrator.
- Has your network a DHCP server? If necessary, ask your network administrator. If your network has a DHCP server, the IP address is to be requested from a DHCP server automatically. For the further proceeding refer to "To configure the network protocol in a network with DHCP server".

If your network has no DHCP server, refer to "To configure the network protocol in a network without DHCP server".

**To display the network address submenu**

1. Press the **SETUP** key.
2. Press the **General Setup** softkey.
3. Press the **Network Address** softkey.  
The submenu is displayed.

**To configure the network protocol in a network without DHCP server**

1. In the network address submenu, set the **DHCP On/Off** softkey to **Off**. If the status is changed from **On** to **Off**, the previous set IP address and subnet mask are retrieved.
2. Press the **IP Address** softkey and enter the IP address, for example *10.0.0.10*. The IP address consists of four number blocks separated by dots. Every block contains 3 numbers in maximum.
3. Press the **Subnet Mask** softkey and enter the subnet mask, for example *255.255.255.0*. The subnet mask consists of four number blocks separated by dots. Every block contains 3 numbers in maximum.
4. If you have entered an invalid IP address or subnet mask, in the status line, the message "out of range" is displayed. The edit dialog box keeps open, and you can start afresh. If the settings are correct, the configuration is saved, and you are prompted to restart the instrument.
5. Confirm the displayed message (**Yes** button) to restart the instrument.

**To configure the network protocol in a network with DHCP server**

6. In the network address submenu, set the **DHCP On/Off** softkey to **On**.  
The IP address of the DHCP server is obtained automatically. The configuration is saved, and you are prompted to restart the instrument.
7. Confirm the displayed message (**Yes** button) to restart the instrument.

## Operating System Properties

This section describes the operating system properties. It includes the following topics:

- Windows XP Software Approved for the R&S FSL
- Windows XP Service Packs
- Login
- Windows XP Start Menu

The instrument contains the Windows XP operating system. To ensure that the instrument software functions properly, certain rules must be adhered to when using the operating system.

---

### **NOTICE**      **Possible impairment of the instrument functioning**

The instrument is equipped with the Windows XP operating system. It is thus possible to install commercial off-the-shelf software on the instrument. The use and installation of commercial off-the-shelf software may impair the instrument function. For this reason, we recommend that you only execute programs tested by Rohde & Schwarz with regard to their compatibility with the instrument software. The tested program packages are listed in section Windows XP Software Approved for the R&S FSL.

In certain cases, the use of these programs can impair the performance of the instrument.

The drivers and programs used on the instrument under Windows XP have been adapted to the instrument. Existing instrument software must only be modified with update software released by Rohde & Schwarz.

---

## Windows XP Software Approved for the R&S FSL

The driver software that is used and the system settings of Windows XP have been fine-tuned to support the measurement functions of the R&S FSL. Thus, for flawless instrument function software and hardware approved or offered by Rohde & Schwarz must be used.

Using other software or hardware may cause the functions of the R&S FSL to perform improperly or fail. The following program packages have been successfully tested for compatibility with the measurement instrument software:

- R&S FS-K3 – Software for measuring noise factor and gain
- R&S FS-K4 – Software for measuring phase noise
- R&S Power Viewer (virtual power meter for displaying results of the R&S NRP power sensors)
- Windows XP Remote Desktop
- FileShredder – For reliable deletion of files on the hard disk
- Symantec Norton AntiVirus 2005 – Virus-protection software
- McAfee Virusscan

## Windows XP Service Packs

The Windows XP operating system on the instrument is supplied with pre-installed Windows XP service packs that are necessary and suitable for operating the instrument.

---

**NOTICE**      **Risk of malfunctions**

To prevent malfunctions that might in the worst case require instrument repair, only service packs approved by Rohde & Schwarz may be installed on the instrument.

You should be particularly careful not to use service packs from Windows XP Home Edition or Professional Edition because they are not compatible with Windows XP.

---

## Login

Windows XP requires that users identify themselves by entering a user name and password in a login window. The instrument provides a factory-installed auto login function, i.e. login is carried out automatically in the background. The ID used for autologin has administrator rights. The user name is by default "instrument" and the password "123456".

For information on how to deactivate the automatic login, refer to "Appendix B: LAN Interface", section "To deactivate the automatic login mechanism".

## Windows XP Start Menu

The Windows XP Start menu provides access to the Windows XP functionality and installed programs. From the start menu, you can navigate to the submenus by using the mouse or the cursor keys of the keyboard.

---

**Note:**      *The following operations require an external keyboard.*

---

### To open the Windows XP Start menu

- On your keyboard, press the Windows key or the **CTRL+ESC** key combination.

### To return to the measurement screen

- Press the **ALT+TAB** key combination to switch to the analyzer application.
- On the task bar, click the **R&S Analyzer Interface** button.

## **3      Firmware Update and Installation of Firmware Options**

This chapter describes how to update the firmware and how to activate optional firmware packages.

# Firmware Update

You can install a new firmware version via USB devices (e.g. a memory stick), GPIB (option GPIB Interface, R&S FSL-B10), or LAN. Normally, you install a new version as described in "To update the firmware". If an exception occurs and you cannot proceed according to this description, you can install a new firmware version via the Windows XP Start menu as described in "To update the firmware (via Windows XP)".

## To update the firmware

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **More** **↓** softkey.  
The side menu is displayed.
3. Press the **Firmware Update** softkey.  
The submenu for installing new firmware versions is displayed.
4. Press the **Firmware Update** softkey.  
The **Firmware Update** dialog box with the default update path "D:\FW\_UPDATE" is displayed.
5. If you install from a memory stick or another USB device and the update path is different from the default path, enter the drive name and directory via the keypad.

*Example:* The installation files are stored on a memory stick in the "Update" directory. After you insert the memory stick, it will be detected as drive "D:". Therefore, the required path specification is "D:\UPDATE".

6. If you install via LAN using the Remote Desktop application and the update path is different from the default path, enter the drive name and directory or press the **Browse** button to locate the directory:
  - In the displayed dialog box, select the drive.
  - On the selected drive, select the folder that contains the installation files (\*.msi).
  - Press the **Select** button to confirm your selection and go back to the **Firmware Update** dialog box.
7. Focus the **Execute** button using the **FIELD RIGHT** key and press the **ENTER** key to start the installation program.  
The installation program will guide you through the installation.
8. After the firmware update, the **UNCAL** status display indicates the necessity of a self alignment. Perform a self alignment (for details refer to chapter 2, "Performing a Self Alignment and a Self Test").

→ Remote command: "SYST:FIRM:UPD 'D:\FW\_UPDATE' "

If you cannot proceed according to the above described step-by-step instructions, you can install a new firmware version via the Windows XP Start menu.

## To update the firmware (via Windows XP)

This procedure is only recommended, if the procedure described above is not practical.

---

**Note:** *For the following step-by-step instructions, a mouse or an external keyboard is required.*

---

1. Close all applications.
2. In the Windows XP **Start** menu, select **Programs**, **Accessories**, and then **R&S FSL Update Tool**.  
The Windows dialog box to open a file is displayed.
3. Select the R&S FSL.package file.
4. Click the **Open** button.  
The **Install Manager** dialog box is displayed. To call help for this dialog box, press F1 or the **HELP** key on the front panel of the R&S FSL.  
If desired, you can activate or deactivate firmware options.
5. Click the **Install** button.

## Firmware Options

Firmware options are enabled by entering license keys via the following operating sequence.

### To activate firmware options

1. Press the **SETUP** key.  
The setup menu is displayed.
2. Press the **More** **↓** softkey.  
The side menu is displayed.
3. Press the **Option Licenses** softkey.
4. Press the **Install Option** softkey.  
An edit dialog box is displayed.
5. Enter the option key number using the keypad.
6. Press the **ENTER** key.  
On a successful validation the message **option key valid** is displayed. If the validation failed, the option software is not installed.

## **4 Basic Operations**

This chapter gives an overview how to work with the R&S FSL. It describes what kind of information is displayed in the diagram area, how to operate the R&S FSL via the front panel keys and softkeys, and how to use the Online Help. The conventions used in the documentation are explained at the beginning of this manual.

# Information in the Diagram Area

The following figure shows a measurement diagram during analyzer operation. All different information areas are labeled. Some areas display information in short form that is explained in more detail in the following sections:

- Display of Hardware Settings
- Status Displays
- Trace Information
- Enhancement Labels

Fig. 4–1 Screen layout of the R&S FSL during analyzer operation

## Display of Hardware Settings

<b>Ref</b>	Reference level
<b>Offset</b>	Reference level offset
<b>Att</b>	RF attenuation that has been set.
<b>RBW</b>	Resolution bandwidth that has been set. If the bandwidth does not correspond to the value for automatic coupling, a green asterisk "*" will appear in front of the field.
<b>VBW</b>	Video bandwidth that has been set. If the bandwidth does not correspond to the value for automatic coupling, a green asterisk "*" will be displayed in front of the field.
<b>SWT</b>	Sweep time that has been set. If the sweep time does not correspond to the value for automatic coupling, an asterisk "*" will displayed in front of the field. The color of the asterisk will turn to red if the sweep time is set below the value for automatic coupling. In this case, the sweep time must be increased.
<b>LIMIT CHECK</b>	Results of the limit check.
<b>Marker / Delta</b>	<p>The x and y axis positions of the last marker or delta marker that was set as well as its index. The value in the square brackets after the index indicates both the trace to which the marker is assigned and the active measurement function.</p> <p>The measurement functions of the markers are indicated with the following abbreviations:</p> <ul style="list-style-type: none"><li>• <b>FXD</b> Reference fixed marker active</li><li>• <b>PHN</b> Phase noise measurement active</li><li>• <b>CNT</b> Frequency counter active</li><li>• <b>TRK</b> Signal track active</li><li>• <b>NOI</b> Noise measurement active</li><li>• <b>MOD</b> Measurement of the AM modulation depth active</li><li>• <b>TOI</b> TOI measurement active</li></ul>

## Status Displays

The status displays on the left side of the diagram indicate any irregularities.

**UNCAL** One of the following conditions is present:

Correction data has been switched off.

⇒ Switch on the correction data.

No correction values are available. This occurs, for example, if a firmware update is performed followed by a cold start of the instrument.

⇒ Record the correction data by performing a self alignment (for details refer to chapter 2, "Performing a Self Alignment and a Self Test").

**OVLD** Overload of the input mixer.

⇒ Increase the RF attenuation.

**IFOVL** Overload of the IF signal path after the input mixer.

⇒ Increase the reference level.

**LOUNL** Error in the instrument's frequency processing hardware was detected.

**ExtRef** Instrument was set to an external reference but no signal was detected on the reference input.

**OVEN** OCXO reference frequency (option R&S FSL-B4) has not yet reached its operating temperature. The message usually disappears a few minutes after power has been switched on.

## Trace Information

**Trace #** = trace number (1 to 6)

**Detector** = selected detector:

**AP** AUTOPEAK detector

**Pk** MAX PEAK detector

**Mi** MIN PEAK detector

**Sa** SAMPLE detector

**Av** AVERAGE detector

**Rm** RMS detector

**QP** QUASIPEAK detector

**auto / manual** = The selected detector does not match the one for automatic coupling.

**Trace Mode** = display of the sweep mode:

**Clrw** CLEAR/WRITE

**Max** MAX HOLD

**Min** MIN HOLD

**Avg** AVERAGE

**View** VIEW

## Enhancement Labels

The enhancement labels on the right-hand side of the measurement diagram indicate that the user chose instrument settings that affect the measurement results even though this is not immediately apparent from the display of the measured values.

\* The current instrument setting does not match the one during which the displayed traces were recorded. This occurs in the following cases:

- The instrument setting is changed while a measurement is in progress.
- In the single sweep mode, the instrument setting has been changed after the end of the sweep, and a new sweep is not started.
- The instrument setting has been changed after a trace has been set to view.

The display remains on screen until the user eliminates the cause. In some cases, this involves starting a new sweep (single sweep mode) or changing the mode of the affected trace to **Blank**.

<b>BAT</b>	The power is supplied by battery.
<b>DC</b>	An external DC power supply is in use.
<b>Ext</b>	The instrument is configured for operation with an external reference.
<b>Sgl</b>	The sweep is set to single sweep mode.
<b>Trg</b>	Instrument triggering is not free running.
<b>Vid</b>	The video trigger is activated.
<b>Frq</b>	A frequency offset $\neq 0$ Hz is set.
<b>Tdf</b>	A transducer factor is activated.
<b>PA</b>	The preamplifier is activated.
<b>NCor</b>	Correction data are not used.
<b>GAT</b>	The frequency sweep is controlled via the <b>EXT TRIG / GATE IN</b> connector.
<b>75 <math>\Omega</math></b>	The input impedance of the instrument is set to 75 $\Omega$ .
<b>Pwr Max</b>	The power mode Max Hold is activated.

## Setting Parameters

This section describes how to operate the R&S FSL. The instrument provides a user interface for operation without external keyboard:

- Keypad
- Rotary Knob
- Softkeys
- Dialog Boxes

All tasks necessary to operate the instrument can be performed using this user interface. Apart from instrument specific keys all other keys that correspond to an external keyboard (e.g. arrow keys, **ENTER** key) operate conform to Microsoft. The following basic tasks are described in this section:

- To enter numeric parameters
- To enter alphanumeric parameters
- To navigate in dialog boxes
- Specialties in Windows dialog boxes

### Keypad

The keypad is used to enter alphanumeric parameters. It contains the following keys:

- Alphanumeric keys  
Enters numbers and (special) characters in edit dialog boxes. For details refer to "To enter numeric parameters" and "To enter alphanumeric parameters".
- Decimal point  
Inserts a decimal point "." at the cursor position.
- Sign key  
Changes the sign of a numeric parameter. In the case of an alphanumeric parameter, inserts a "-" at the cursor position.
- Unit keys (GHz/-dBm MHz/dBm, kHz/dB and Hz/dB)  
These keys add the selected unit to the entered numeric value and complete the entry.  
In the case of level entries (e.g. in dB) or dimensionless values, all units have the value "1" as multiplying factor. Thus, they have the same function as an **ENTER** key. The same is true for an alphanumeric entry.
- **ESC CANCEL** key  
Closes all kinds of dialog boxes, if the edit mode is not active. Quits the edit mode, if the edit mode is active. In dialog boxes that contain a **Cancel** button it activates that button.  
For edit dialog boxes the following mechanism is used:
  - If the data entry has been started, it will retain the original value .
  - If the data entry has not been started or has been completed, it will close the dialog.

- **ENTER** key
  - Concludes the entry of dimensionless entries. The new value is accepted.
  - With other entries, this key can be used instead of the **Hz / dB..** unit key.
  - In a dialog box, presses the default or focused button.
  - In a dialog box, activates the edit mode for the focused area, if available. For details on the edit mode refer to section "To navigate in dialog boxes".
  - In a dialog box, activates or deactivates the selected option of the focused area, if the edit mode is active.
- **BACK** key
  - If an alphanumeric entry has already been started, this key deletes the character to the left of the cursor.
  - If an entry has been completed or not yet started, this key toggles between the currently and the previously entered value (undo function).

## Rotary Knob

The rotary knob has several functions:

- Increments (clockwise direction) or decrements (counter-clockwise direction) the instrument parameter at a defined step width in the case of a numeric entry.
- Moves the focus from one element of the graphical user interface to another like the **FIELD RIGHT** and **FIELD LEFT** keys.
- Shifts the selection bar within focused areas (e.g. lists), if the edit mode is activated.
- Shifts markers, limit lines, etc on the screen.
- Acts like the **ENTER** key, when it is pressed. For details refer to section "Keypad".
- Moves the scroll bar vertically, if the scroll bar is focused and the edit mode is activated.

For details on the edit mode refer to section "To navigate in dialog boxes".

## Arrow and Position Keys

Key	Name
	<b>LEFTARROW</b> key
	<b>RIGHTARROW</b> key
	<b>UPARROW</b> key
	<b>DNARROW</b> key
	<b>FIELD LEFT</b> key
	<b>FIELD RIGHT</b> key
	<b>CHECKMARK</b> key
	<b>NEXT TAB</b> key

Table 4–1 Front panel keys for navigation

The **UPARROW** or **DNARROW** keys do the following:

- In a numeric edit dialog box, increase or decrease the instrument parameter.
- In a list, scroll forward and backward through the list entries.
- In a table, move the selection bar vertically.
- In windows or dialog boxes with vertical scroll bar, move the scroll bar.

The **LEFTARROW** or **RIGHTARROW** keys do the following:

- In an alphanumeric edit dialog box, move the cursor.
- In a list, scroll forward and backward through the list entries.
- In a table, move the selection bar horizontally.
- In windows or dialog boxes with horizontal scroll bar, move the scroll bar.

Within a dialog box, the tab keys do the following.

- The **FIELD LEFT** key moves the focus to the previous element of the graphical user interface (e.g. fields, buttons) in edit mode. The corresponding Windows function is **BACK TAB**.
- The **FIELD RIGHT** key moves the focus to the next element of the graphical user interface in edit mode (e.g. fields, buttons).
- The **NEXT TAB** key opens the next tab of the dialog box.

For details on the edit mode refer to "To navigate in dialog boxes".

The **CHECKMARK** key works as follows in dialog boxes:

- Inserts a blank in an edit dialog box. The corresponding Windows function is SPACE.
- Selects the option on which the focus is set without closing the dialog box. If more than one option can be chosen, it also deselects a selected option.
- Presses the button on which the focus is set.

## Softkeys

The softkeys are displayed according to the selected menu. All menus are accessed by the function keys on the front panel (for details on function keys in general see chapter 1, "Front and Rear Panel").

A particular softkey is selected by pressing the corresponding key next to it. The **More** ↓ softkey indicates that the menu contains more softkeys than can be displayed all at once. When pressed, it displays these softkeys. The ▲ key switches to the next higher level of the menu. If the highest level of the menu is reached, the ▲ key switches to the menu of the current measurement mode. The same menu is accessed directly by pressing the **MENU** key on the front panel.

A softkey performs one of the following actions when pressed:

- Opens a dialog box to enter data.
- Switches a function on or off.
- Opens a submenu (only softkeys with a ↓ sign).

In the factory configuration, a softkey is highlighted green when activated. If it is a toggle softkey, the current state is highlighted green. If a dialog box is displayed by pressing a softkey, the corresponding softkey is highlighted red.

If an instrument function is not available temporarily due to a specific setting, the associated softkey is deactivated and its text is grey-colored.

Some softkeys belong to a certain option. If this option is not fitted, the associated softkeys are not displayed.

## Dialog Boxes

In most cases, the R&S FSL dialog boxes are designed to enter a numeric value. In the documentation, these dialog boxes are called "edit dialog boxes". Dialog boxes that are not only designed for parameter entry have a more complex structure and, in the documentation, are called "dialog boxes". They are described in section "To navigate in dialog boxes". The navigation in Windows dialog boxes differs in some aspects from the navigation in R&S FSL dialog boxes. For details refer to "Specialties in Windows dialog boxes".

The following figure shows an example of a edit dialog box:

Fig. 4-1 Edit dialog box for parameter entry

The title bar shows the name of the parameter that was selected. The entry is performed in the editing line. When the dialog box is displayed, the focus is on the editing line and it contains the currently used parameter value and its unit. The optional third line shows status and error messages which always refer to the current entry.

### To enter numeric parameters

If a field requires numeric input, the keypad provides only numbers.

1. Enter the parameter value using the keypad, or change the currently used parameter value by using the rotary knob (small steps) or the **UPARROW** or **DNARROW** keys (large steps).
2. After entering the numeric value via keypad, press the corresponding unit key. The unit is added to the entry.
3. If the parameter does not require a unit, confirm the entered value by pressing the **ENTER** key or one of the unit keys. The editing line is highlighted in order to confirm the entry.

### To enter alphanumeric parameters

If a field requires alphanumeric input, the keypad provides numbers and (special) characters. Every alphanumeric key provides several characters and one number. The decimal point key (.) provides special characters, and the sign key (–) toggles between capital and small letters. For the assignment refer to Table 4–2. In principle, the input of alphanumeric parameters works like writing an SMS on your cell phone.

1. To enter the numbers and (special) characters via the keypad:
  - Press the key once to enter the first possible value. All characters available via this key are displayed in a popup.

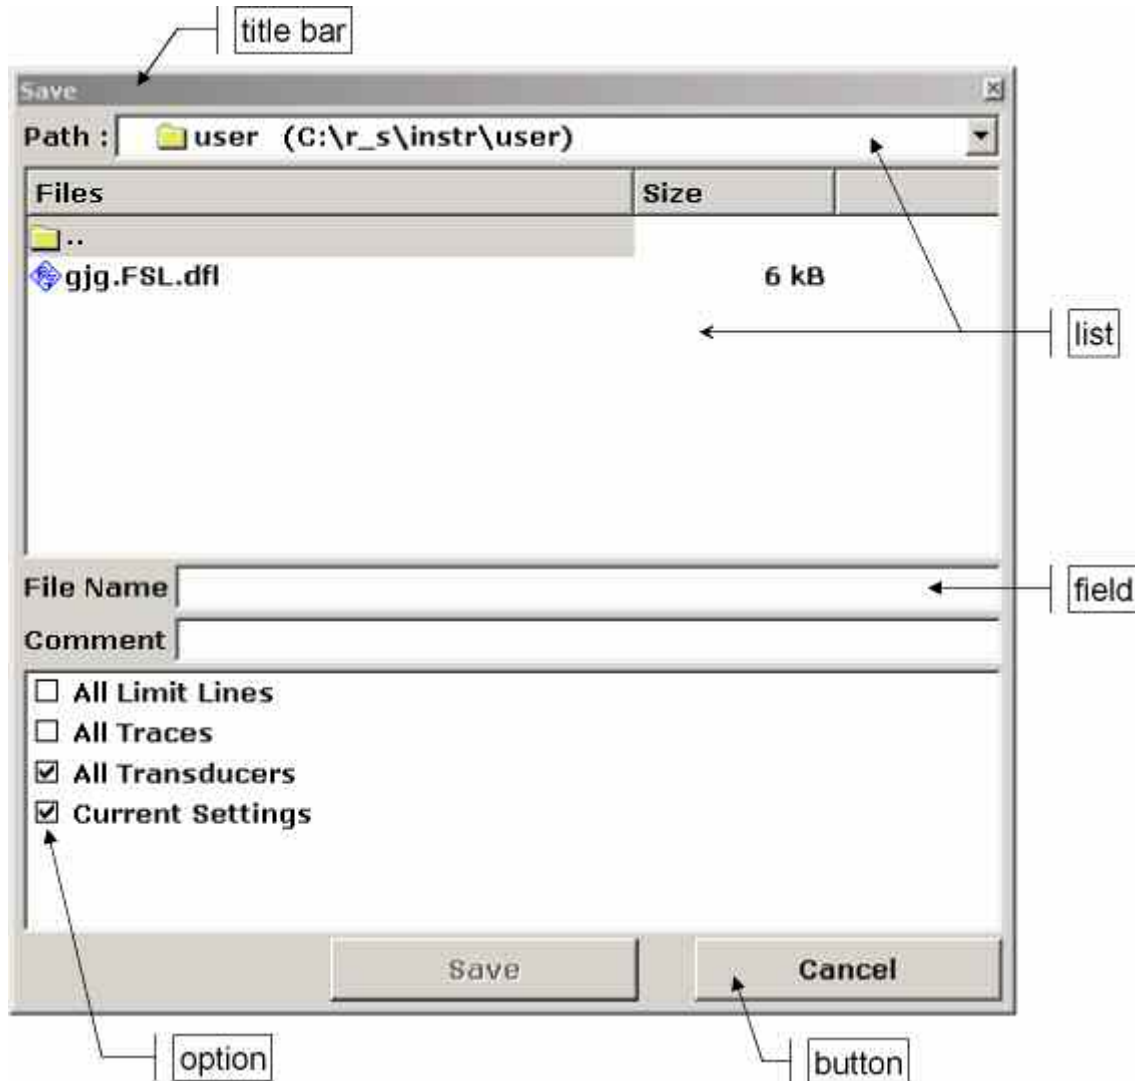

- If you want to choose another value provided by this key, press the key again, until your desired value is displayed.  
With every key stroke the next possible value of this key is displayed. If all possible values have been displayed, the series starts with the first value again. For information on the series refer to Table 4–2.
  - If you want to change from capital to small letters and vice versa, press the sign key (–).
  - If you have chosen the desired value, wait for 2 seconds (if you want to use the same key again), or start the next entry by pressing another key.
2. To enter a blank, press the **CHECKMARK** key, or press the **0** key and wait 2 seconds.
  3. To correct an entry:
    - Using the arrow keys, move the cursor to the right of the entry you want to delete.
    - Press the **BACK** key.  
The entry to the left of the cursor is deleted.
    - Enter your correction.
  4. To complete the entry, press the **ENTER** key or the rotary knob.
  5. To abort the entry, press the **ESC CANCEL** key.  
The dialog box is closed without changing the settings.

Key name (upper inscription)	Series of (special) characters and number provided
7	7 μ Ω ° € ¥ \$ ¢
8	A B C 8 Ä Æ Å Ç
9	D E F 9 É
4	G H I 4
5	J K L 5
6	M N O 6 Ñ Ö
1	P Q R S 1
2	T U V 2 Ü
3	W X Y Z 3
0	<blank> 0 - @ + / \ < > = % &
.	. * : _ , ; " ' ? ( ) #
–	<toggles between capital and small letters>

Table 4–2 Keys for alphanumeric parameters

### To navigate in dialog boxes

Some of the dialog boxes are not only for parameter entry, and therefore have a more complex structure. The following figure shows an example. The element names that are used in the step-by-step instructions of the Operating Manual and the Online Help are assigned to all dialog box elements.

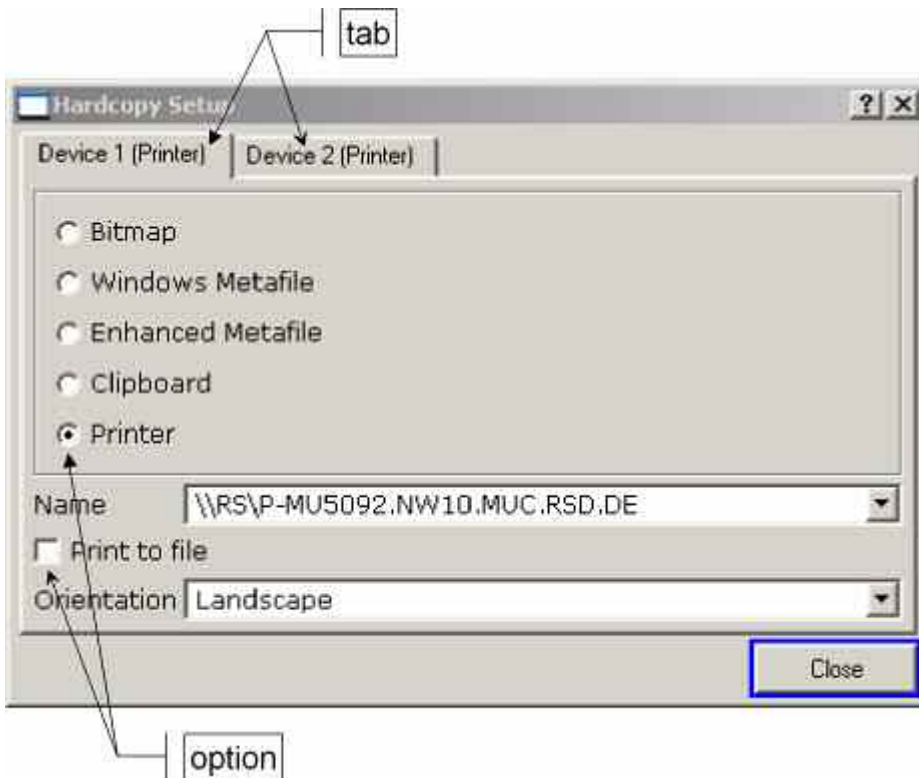

Fig. 4-2 Naming conventions for dialog boxes

The focus on the graphical user interface is moved via the **FIELD LEFT** and **FIELD RIGHT** keys or the rotary knob. The focused area is marked with a blue frame (see Fig. 4-3). If this area consists of more than one elements, e.g. lists of options or tables, it is necessary to enter into the edit mode in order to make changes. A focused area in the edit mode is marked with a dashed blue frame (see Fig. 4-4).

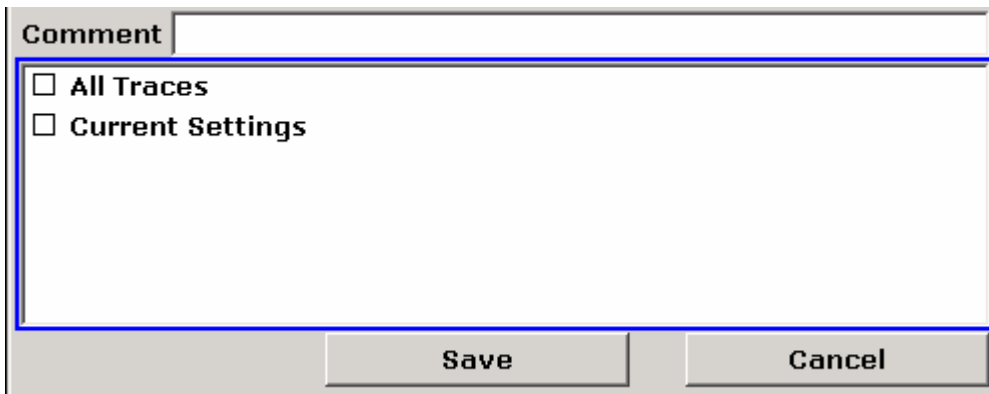

Fig. 4-3 Focused area

Fig. 4-4 Focused area in edit mode

When using the **FIELD LEFT** and **FIELD RIGHT** keys for focus changes, all focused areas are in the edit mode automatically, if available. When using the rotary knob for focus changes, a manual change into the edit mode (if existent, see above) is necessary. To change into the edit mode, press the rotary knob or the **ENTER** key. To quit the edit mode, press the **ESC** key.

1. To edit alphanumeric parameters, use the keypad. For details see "To enter numeric parameters" and "To enter alphanumeric parameters". If you edit fields, the edit mode is activated automatically when you start typing.
2. To move the focus to the next interface element (e.g. field, option, list), press the **FIELD RIGHT** key, or, if the edit mode is off, turn the rotary knob to the right.
3. To move the focus to the previous interface element, press the **FIELD LEFT** key, or, if the edit mode is off, turn the rotary knob to the left.
4. To select or deselect an option:
  - If the focused area consists of more than one options and the edit mode is not active, change into the edit mode.
  - Scroll through the list of options using the arrow keys or the rotary knob (only for vertical direction) until the option you want to activate or deactivate is highlighted.
  - Press the rotary knob, the **ENTER** key or the **CHECKMARK** key to confirm your choice.  
The option is activated or deactivated, depending on its previous setting.
  - To leave the edit mode, press the **ESC** key.
5. To open a drop-down list, press the **ENTER** key or the rotary knob. When opened, the list is in the edit mode.
6. To select an entry without opening a drop-down list, use the arrow keys to browse through the list entries.
7. To select a list entry:
  - If the edit mode is not active, change into the edit mode.
  - Scroll through the list using the arrow keys or the rotary knob until the list entry you want to select is highlighted.
  - Confirm your choice by pressing the rotary knob or the **ENTER** key.  
If a drop-down list was opened, it is closed.

8. To change from one tab to the next, press the **NEXT TAB** key or press the rotary knob to enter the edit mode and use the rotary knob.
9. To press a button in a dialog box:
  - Place the focus on the desired button by using the **FIELD RIGHT**, **FIELD LEFT** keys or the rotary knob.
  - Confirm your choice by pressing the rotary knob or the **ENTER** key.
10. To close the dialog box and accept the changes, press the **OK** button.
11. To close the dialog box without accepting the changes, press the **ESC** key or the **Cancel** button.

## Specialties in Windows dialog boxes

In some occasions, e.g. if you want to install a printer, you are working in original Windows dialog boxes. In these dialog boxes, the navigation behavior is different to the one you are used from R&S FSL applications. In the following, the important differences and useful tips are listed:

- The rotary knob does not work. Do not use it.
- If you want to activate or deactivate options, use the **CHECKMARK** key and not the **ENTER** key.
- To set the focus on the menu bar, press the **MENU** key. Open the menu via the **ENTER** key and scroll through the commands using the arrow keys.
- To change between the current running Windows programs (under Windows displayed in the task bar), press the **MENU+FIELD RIGHT** key combination.
- To change from tab to tab, press the **NEXT TAB** key as in R&S FSL applications.

## How to Use the Help System

For every softkey context-sensitive help is available. In addition, the help system provides a table of contents to access non context-sensitive information.

### To call context-sensitive and non context-sensitive help

1. Press the **HELP** key on the front panel to display the help dialog box.  
The help dialog box – **View** tab is displayed. A topic containing information about the current menu or the currently opened dialog box and its function is displayed.  
The help dialog box contains four tabs: **Contents**, **View**, **Index** and **Zoom**. To change between these tabs, press the **NEXT TAB** key.
2. If the help is already displayed, press the softkey for which you want to display help.  
A topic containing information about the softkey and its function is displayed.
3. If a softkey opens a submenu and you press the softkey a second time, the submenu of the softkey is displayed.

### To navigate in the table of contents

1. To move through the displayed contents entries, use the **UPARROW** and **DNARROW** keys. Entries that contain further entries are marked with a plus sign.
2. To display contents entries of a lower hierarchy, press the **RIGHTARROW** key.
3. To hide the entries of a lower hierarchy, press the **LEFTARROW** key.
4. To change to the next higher hierarchy level, press the **LEFTARROW** key.
5. To display a help topic, press the **ENTER** key.

The **View** tab with the corresponding help topic is displayed.

6. To change to the next tab, press the **NEXT TAB** key.

### To navigate in the help topics (with front panel keys)

1. To scroll through a page, use the rotary knob or press the arrow key.
2. To move from one link to the next, press the **FIELD RIGHT** key.
3. To move from one link to the previous, press the **FIELD LEFT** key.
4. To jump to the linked topic, press the **ENTER** key.
5. To jump to the previous topic, press the **BACK** key.

### To search for a topic

1. Change to the **Index** tab using the **NEXT TAB** key.
2. Enter the first characters of the topic you are interested in.  
The entries starting with these characters are displayed.
3. Change the focus by pressing the **FIELD RIGHT** key.
4. Select the suitable keyword by using the **UPARROW** or **DNARROW** keys or the rotary knob.
5. Press the **ENTER** key to display the help topic.

The **View** tab with the corresponding help topic is displayed.

### To change the zoom

1. Change to the **Zoom** tab using the **NEXT TAB** key.
2. Set the zoom using the rotary knob. Four settings are available: 1–4. The smallest size is selected by number 1, the largest size is selected by number 4.

### To close the help window

- Press the **ESC** key or a hardkey on the front panel.

## 5 Basic Measurement Examples

The measurement examples provided in this chapter are intended as an introduction to operating the R&S FSL. For advanced applications, refer to chapter 1 of the operating manual on CD. The following topics are included:

- High–Sensitivity Harmonics Measurements
- Separating Signals by Selecting an Appropriate Resolution Bandwidth
- Intermodulation Measurements
- Measuring Signals in the Vicinity of Noise
- Measuring Noise Power Density
- Measurement of Noise Power within a Transmission Channel
- Measuring Phase Noise
- Measuring Channel Power and Adjacent Channel Power

For a more detailed description of the basic operating steps, e.g. selecting menus and setting parameters, refer to chapter 4, "Basic Operations".

## Measuring a Sinusoidal Signal

One of the most common measurement tasks that can be handled by using a spectrum analyzer is determining the level and frequency of a signal. When measuring an unknown signal, you can usually start with the preset setting.

---

**Note:** *If levels higher than +30 dBm (=1 W) are expected or are possible, a power attenuator must be inserted before the RF input of the analyzer. If this is not done, signal levels exceeding 30 dBm can damage the RF attenuator or the input mixer. The total power of all signals that are present must be taken into account.*

---

In the following examples, a signal generator is used as a signal source.

### Test setup:

- Connect the RF output of the signal generator to the RF input of R&S FSL.

### Signal generator settings (e.g. R&S SMU):

Frequency: 128 MHz  
Level: -30 dBm

## Measuring the Level and Frequency Using Markers

The level and frequency of a sinusoidal signal can be measured easily by using the marker function. The R&S FSL always displays its amplitude and frequency at the marker position. The frequency measurement uncertainty is determined by the frequency reference of the R&S FSL, the resolution of the marker frequency display and the resolution of the screen.

### Procedure:

1. Reset the instrument.
  - Press the **PRESET** key.
2. Connect the signal to be measured to the RF INPUT analyzer input on the instrument front panel.
3. Set the center frequency to 128 MHz.
  - Press the **FREQ** key.  
The dialog box for the center frequency is displayed.
  - In the dialog box, enter *128* using the numeric keypad and confirm the entry with the **MHz** key.
4. Reduce the frequency span to 1 MHz.
  - Press the **SPAN** key.
  - In the dialog box, enter *1* using the numeric keypad and confirm the entry with the **MHz** key.

---

**Note:** *When the frequency span is defined, the resolution bandwidth, the video bandwidth and the sweep time are automatically reset, because these functions are defined as coupled functions in the preset setting.*

---

5. Measure the level and frequency using the marker and read the results from the screen.
- Press the **MKR** key.

The marker is activated and automatically set on the maximum of the trace.

---

**Note:** *When a marker is initially activated, it automatically performs the peak search function (as shown in the example).*

*If a marker was already active, you have to press the **Peak** softkey in the marker→ menu in order to set the currently active marker to the maximum of the displayed signal.*

---

The level and frequency values measured by the marker are displayed in the marker field at the top edge of the screen. They can be taken as the measurement result.

```
M1[1]      -30.00 dBm
128.000000000 MHz
```

The field header indicates the number of the marker (Marker 1) and the trace on which the marker is located ([1] = Trace 1).

## Increasing the Frequency Resolution

The frequency resolution of the marker is predefined by the pixel resolution of the trace. A trace uses 501 pixels, i.e. when the frequency span is 1 MHz, each pixel corresponds to a span of approx. 2 kHz. This corresponds to a maximum uncertainty of +/- 1 kHz.

You can increase the pixel resolution of the trace by reducing the frequency span.

- Reduce the frequency span to 10 kHz.
  - Press the **SPAN** key.
  - Using the numeric keypad, enter *10* in the dialog box and confirm the entry with the **kHz** key.

The generator signal is measured using a span of 10 kHz. The pixel resolution of the trace is now approx. 20 Hz (10 kHz span / 501 pixels) , i.e. the precision of the marker frequency display increases to approx. ±10 Hz.

## Setting the Reference Level

With spectrum analyzers, the reference level is the level at the upper limit of the diagram. To achieve the widest dynamic range possible for a spectrum measurement, use the entire level span of the spectrum analyzer. In other words, the highest level that occurs in the signal should be located at the top edge of the diagram (=reference level) or immediately below it.

---

**Note:** *If the reference level that is selected is less than the highest signal that occurs in the spectrum, the signal path in the R&S FSL will be overloaded. In this case, the message **IFOVL** is displayed on the left-hand edge of the diagram.*

---

In the preset setting, the value of the reference level is  $-20$  dBm. If the input signal is  $-30$  dBm, the reference level can be reduced by 10 dB without causing the signal path to be overloaded.

1. Reduce the reference level by 10 dB.

- Press the **AMPT** key.

The amplitude menu is displayed in the softkey bar. The **Ref Level** softkey is highlighted in red to indicate that it is activated for data entry. The dialog box for the reference level is also opened and displays a value of  $-20$  dBm.

- Using the numeric keypad, enter 30 and confirm the entry with the **-dBm** key.

The reference level is set to  $-30$  dBm. The maximum of the trace is near the maximum of the measurement diagram. However, the increase in the displayed noise is not substantial. Thus, the distance between the signal maximum and the noise display (=dynamic range) has increased.

2. Setting the marker level equal to the reference level

The marker can also be used to shift the maximum value of the trace directly to the top edge of the diagram. If the marker is located at the maximum level of the trace (as in this example), the reference level can be moved to the marker level as follows:

- Press the **MKR →** key.
- Press the **Peak** softkey.
- Press the **Ref Lvl=Mkr Lvl** softkey.

The reference level is set equal to the measured level where the marker is located.

Thus, setting the reference level is reduced to two keystrokes.

## Measuring the Signal Frequency Using the Frequency Counter

The built-in frequency counter makes it possible to measure the frequency more accurately than measuring it with the marker. The frequency sweep is stopped at the marker, and the R&S FSL measures the frequency of the signal at the marker position.

In the following example, the frequency of the generator at 128 MHz is shown by using the marker.

1. Set the spectrum analyzer to the default state.

- Press the **PRESET** key.

The R&S FSL is set to its default state.

2. Set the center frequency and the span.
  - Press the **FREQ** key and enter *128 MHz*.  
The center frequency of the R&S FSL is set to 128 MHz.
  - Press the **SPAN** key and enter *1 MHz*.  
The frequency span of the R&S FSL is set to 1 MHz.
3. Activate the marker
  - Press the **MKR** key.  
The marker is activated and set to the signal maximum. The level and the frequency of the marker are displayed in the marker field.
4. Activate the frequency counter.
  - In the marker menu, press the **Sig Count On/Off** softkey.  
The result of frequency counting is displayed in the selected resolution in the marker field at the top edge of the screen.

Fig. 5–1 Measurement of the frequency with the frequency counter

---

**Note:** *Obtaining a correct result when measuring the frequency with the internal frequency counter requires that an RF sinusoidal signal or a spectral line be present. The marker must be located more than 25 dB above the noise level to ensure that the specified measurement accuracy is adhered to.*

---

## Measuring Harmonics of Sinusoidal Signals

Measuring the harmonics of a signal is a very common task that can be optimally performed by using a spectrum analyzer.

In the following example, the generator signal with 128 MHz and  $-20$  dBm is used again.

### Measuring the Suppression of the First and Second Harmonic of an Input Signal

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.  
The R&S FSL is in the default state.
2. Set the start frequency to 100 MHz and the stop frequency to 400 MHz.
  - Press the **FREQ** key.
  - Press the **Start** softkey and enter *100 MHz*.
  - Press the **Stop** softkey and enter *400 MHz*.  
The R&S FSL displays the fundamental and the first and second harmonics of the input signal.
3. To average (smooth) the noise, reduce the video bandwidth.
  - Press the **BW** key.
  - Press the **Video BW Manual** softkey and enter 100 kHz.
4. Activate the marker.
  - Press the **MKR** key.  
Marker 1 is activated and positioned to the signal maximum (fundamental at 128 MHz). The level and frequency of the marker is displayed in the marker field.
5. Activate the delta marker and measure the harmonic suppression.
  - In the marker menu, press the **Marker 2** softkey.  
Marker 2 is activated as a delta marker (D 2 [1]). It is automatically set on the largest harmonic of the signal. The frequency offset and level offset from marker 1 are displayed in the marker field at the top edge of the screen.
  - In the marker menu, press the **More**  $\downarrow$  softkey and then the **Marker 3** softkey.  
Marker 3 is activated as a delta marker (D 3 [1]). It is automatically set on the next largest harmonic of the signal. The frequency offset and level offset from marker 1 on the fundamental are displayed in the marker field at the top edge of the screen. (see Fig. 5–2)

Fig. 5–2 Measuring the harmonic suppression of the internal reference generator. Delta markers D2 [1] and D3 [1] show the offset of the first and second harmonics from the fundamental.

## Reducing Noise

The spectrum analyzer offers three means of effectively differentiating the harmonics of a signal from the noise:

- Reducing the video bandwidth
- Averaging the trace
- Reducing the resolution bandwidth

Reducing the video bandwidth and averaging the traces cause the noise from the analyzer or the DUT to be reduced, depending on which component is larger. Both averaging methods reduce the measurement uncertainty particularly in the case of small signal-to-noise ratios, because the measurement signal is also separated from the noise.

1. Reducing the noise by reducing the video bandwidth.
  - Press the **BW** key.
  - Press the **Video BW Manual** softkey.
  - Using the rotary knob (turning it counterclockwise), reduce the video bandwidth to 1 kHz (for example), or enter *1 kHz*.

This clearly smooths the noise, and the sweep time is increased to 200 ms. In other words, the measurement will clearly take more time. The video bandwidth that is displayed is marked with an asterisk (\*VBW) to indicate that it is no longer coupled to the resolution bandwidth (see Fig. 5–3).

Fig. 5–3 Suppression of noise during harmonics measurement by reducing video bandwidth

2. Recouple the video bandwidth to the resolution bandwidth.

- Press the **BW** key.
- Press the **Video BW Auto** softkey.

3. Reduce the noise by averaging the curve.

- Press the **TRACE** key.
- Press the **Trace Mode** softkey.
- Press the **Average** softkey.

The noise component of the trace is smoothed by averaging 10 successive traces.

4. Switch off trace averaging.

- Press the **Trace Mode** softkey.
- Press the **Clear Write** softkey.

5. Reduce the noise by reducing the measurement bandwidth.

The noise is reduced in proportion to the bandwidth by reducing the resolution bandwidth, i.e. reducing the resolution bandwidth by a factor of 10 also reduces the noise by a factor of 10 (which corresponds to 10 dB). The amplitude of sinusoidal signals is not affected by reducing the resolution bandwidth.

6. Set the resolution bandwidth to 10 kHz.
  - Press the **BW** key.
  - Press the **Res BW Manual** softkey and enter *10 kHz*.

The noise decreases by approx. 25 dB with respect to the previous setting. Since the video bandwidth is coupled to the resolution bandwidth, it is reduced to 30 kHz in proportion to the resolution bandwidth. This causes the sweep time to increase to 3.0 seconds.

7. Reset the resolution bandwidth (couple it to the span)
  - In the bandwidth menu, press the **Res BW Auto** softkey.

## Measuring Signal Spectra with Multiple Signals

### Separating Signals by Selecting the Resolution Bandwidth

A basic feature of a spectrum analyzer is the ability to separate the spectral components of a mixture of signals. The resolution at which the individual components can be separated is determined by the resolution bandwidth. Selecting a resolution bandwidth that is too large may make it impossible to distinguish between spectral components, i.e. they are displayed as a single component.

An RF sinusoidal signal is displayed by means of the passband characteristic of the resolution filter (RBW) that has been set. Its specified bandwidth is the 3 dB bandwidth of the filter.

Two signals with the same amplitude can be resolved if the resolution bandwidth is smaller than or equal to the frequency spacing of the signal. If the resolution bandwidth is equal to the frequency spacing, the spectrum display shows a level drop of 3 dB precisely in the center of the two signals. Decreasing the resolution bandwidth makes the level drop larger, which thus makes the individual signals clearer.

Higher spectral resolution at a narrower bandwidth is accomplished through longer sweep times at the same span. Reducing the resolution bandwidth by a factor of 3 increases the sweep time by a factor of 9.

## Separating Two Signals with a Level of $-30$ dBm each at a Frequency Spacing of 30 kHz

Test setup:

Signal generator settings (e.g. R&S SMU):

	Level	Frequency
Signal generator 1	$-30$ dBm	128,00 MHz
Signal generator 2	$-30$ dBm	128,03 MHz

Procedure:

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.
  - The R&S FSL is set to its default state.
2. Set the center frequency to 128.015 MHz and the frequency span to 300 kHz.
  - Press the **FREQ** key and enter *128.015 MHz*.
  - Press the **SPAN** key and enter *300 kHz*.
3. Set the resolution bandwidth to 30 kHz and the video bandwidth to 1 kHz.
  - Press the **BW** key.
  - Press the **Res BW Manual** softkey and enter *30 kHz*.
  - Press the **Video BW Manual** softkey and enter *1 kHz*.

The two signals can be clearly distinguished by a 3 dB level drop in the center of the screen.

---

**Note:** *The video bandwidth is set to 1 kHz in order to make the level drop in the center of the two signals clearly visible. At larger video bandwidths, the video voltage that results from envelope detection is not sufficiently suppressed. This produces additional voltages, which are visible in the trace, in the transition area between the two signals.*

---

Fig. 5–4 Measurement of two equally–leveled RF sinusoidal signals with the resolution bandwidth which corresponds to the frequency spacing of the signals

**Note:** *The level drop is located exactly in the center of the screen only if the generator frequencies exactly match the frequency display of the R&S FSL. To achieve exact matching, the frequencies of the generators and the R&S FSL must be synchronized.*

4. Set the resolution bandwidth to 100 kHz.
  - In the bandwidth menu, press the **Res BW Manual** softkey and enter *100 kHz*.  
It is no longer possible to clearly distinguish the two generator signals.

Fig. 5–5 Measurement of two equally–leveled RF sinusoidal signals with a resolution bandwidth which is larger than their frequency spacing

---

**Note:** The resolution bandwidth (RBW) can be reduced again by turning the rotary knob counterclockwise, thus yielding a higher frequency resolution.

---

5. Set the resolution bandwidth to 1 kHz.
  - Turn the rotary knob counterclockwise until the bandwidth indicates 1 kHz.

The two generator signals are shown with high resolution. However, the sweep time becomes noticeably longer (600 ms), since it increases at a rate of  $1/RBW^2$ . At smaller bandwidths, the noise display decreases simultaneously (10 dB decrease in noise floor per a decrease in bandwidth by a factor of 10).

Fig. 5–6 Measurement of two equally–leveled RF sinusoidal signals with a resolution bandwidth (1 kHz) which is clearly smaller than their frequency spacing

6. Activate the FFT bandwidths.

- Press the **Filter Type** softkey.
- In the **Filter Type** dialog box, select **FFT**.

IF filtering is now performed using the FFT algorithm. The sweep time decreases significantly from 600 ms to 15 ms (a factor of 40). The display update rate also increases by almost the same ratio.

## Measuring the Modulation Depth of an AM–Modulated Carrier (Span > 0)

In the frequency range display, the AM side bands can be resolved with a narrow bandwidth and measured separately. The modulation depth of a carrier modulated with a sinusoidal signal can then be measured. Since the dynamic range of a spectrum analyzer is very large, extremely small modulation depths can also be measured precisely. For this purpose, the R&S FSL provides measurement routines that directly output the modulation depth numerically in %.

**Test setup:**

**Signal generator settings (e.g. R&S SMU):**

Frequency: 128 MHz  
 Level: -30 dBm  
 Modulation: 50 % AM, 10 kHz AF

**Procedure:**

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.
  - The R&S FSL is set to its default state.
2. Set the center frequency to 128 MHz and span to 50 kHz.
  - Press the **FREQ** key and enter *128 MHz*.
  - Press the **SPAN** key and enter *50 kHz*.
3. Activate the marker function for measuring the AM modulation depth.
  - Press the **MEAS** key.
  - Press the **AM Mod Depth** softkey.

The R&S FSL automatically sets a marker to the carrier signal in the center of the diagram and one delta marker each to the upper and lower AM sidebands. The R&S FSL calculates the AM modulation depth from the level differences of the delta markers to the main marker and outputs the numeric value in the marker field.

Fig. 5-7 Measurement of the AM modulation depth. The modulation depth is displayed as **MDEP**. The frequency of the AF signal can be obtained from the frequency display of the delta marker.

## Measuring of AM–Modulated Signals

The spectrum analyzer rectifies the RF input signal and displays it as a magnitude spectrum. The rectification also demodulates AM–modulated signals. The AF voltage can be displayed in zero span if the modulation sidebands fall within the resolution bandwidth.

### Displaying the AF of an AM–Modulated Signal (Zero Span)

#### Test setup:

#### Signal generator settings (e.g. R&S SMU):

Frequency: 128 MHz  
Level: 0 dBm  
Modulation: 50 % AM, 1 kHz AF

#### Procedure:

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.  
The R&S FSL is set to its default state.
2. Set the center frequency to 128 MHz and the span to 0 Hz.
  - Press the **FREQ** key and enter *128 MHz*.
  - Press the **SPAN** key and enter *0 Hz* or press the **Zero Span** softkey.
3. Set the reference level to +6 dBm, the display range to linear and the unit to Volt.
  - Press the **AMPT** key and enter *6 dBm*.
  - Press the **Range Linear** softkey.
  - Press the **More ↓** softkey
  - Press the **Unit** softkey and select Volt.
4. Triggering in response to the AF signal by using the video trigger to produce a static image.
  - Press the **TRIG** key.
  - Press the **Trg/Gate Source** softkey and select **Video** using the arrow keys.
  - Press the **Trg/Gate Level** softkey and enter *50%*.

The trigger level is displayed as a horizontal line across the entire measurement diagram. The R&S FSL displays the 1 kHz AF signal as a static image in zero span. The AF can be listened to by using a headset.

Fig. 5–8 Measurement of the AF signal of a carrier that is AM-modulated with 1 kHz

5. Activate the internal AM demodulator.

- Press the **MKR** key.
- Press the **More ↓** softkey.
- Press the **Marker Demod** softkey.

The R&S FSL automatically switches on the AM audio demodulator and opens the **Volume** edit dialog box to regulate up the volume. A 1 kHz tone can be heard over headset.

## Measurements in Zero Span

In the case of radio transmission systems that use the TDMA method (e.g. GSM or IS136), transmission quality is determined not only by spectral characteristics but also by characteristics in zero span. A timeslot is assigned to each user since several users share the same frequency. Smooth operation is ensured only if all users adhere exactly to their assigned timeslots.

Both the power during the send phase as well as the timing and duration of the TDMA burst, and rise and fall times of the burst, are important.

### Measuring the Power Characteristic of Burst Signals

For measuring power in zero span, the R&S FSL offers easy-to-use functions that measure the power over a predefined time.

#### Measuring the Power of a GSM Burst During the Activation Phase

##### Test setup:

##### Signal generator settings (e.g. R&S SMU):

Frequency: 890 MHz  
Level: 0 dBm  
Modulation: GSM, one timeslot activated

##### Procedure:

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.  
The R&S FSL is set to its default state.
2. Set the center frequency to 890 MHz, the span to 0 Hz and the resolution bandwidth to 1 MHz.
  - Press the **FREQ** key and enter *890 MHz*.
  - Press the **SPAN** key and enter *0 Hz*, or press the **Zero Span** softkey.
3. Set the reference level of the R&S FSL to 10 dBm (= level of the signal generator +10 dB).
  - Press the **AMPT** key and enter *10 dBm*.
4. Set the sweep time to 1 ms.
  - Press the **SWEEP** key.
  - Press the **Sweeptime Manual** softkey and enter *1 ms*.

The R&S FSL shows the GSM burst continuously across the display.

5. By using the video trigger, triggering on the rising edge of the burst.
  - Press the **TRIG** key.
  - Press the **Trg/Gate Source** softkey and select **Video** using the arrow keys.
  - Press the **Trg/Gate Level** softkey and enter **70%**.

The R&S FSL shows a static image with the GSM burst at the start of the trace. The trigger level is displayed as a horizontal line labeled with the absolute level for the trigger threshold in the measurement diagram.

6. Configure power measurement in zero span.
  - Press the **MEAS** key.
  - Press the **Time Domain Power** softkey to open the submenu.
  - Switch the **Limits** softkey to **On**.
  - Press the **Left Limit** softkey.
  - By turning the rotary knob clockwise, move the vertical line to the start of the burst.
  - Press the **Right Limit** softkey.
  - By turning the rotary knob counterclockwise, set the second vertical line to the end of the burst.

The R&S FSL displays the average (mean) power during the activation phase of the burst.

Fig. 5–9 Measurement of the average power during the burst of a GSM signal

## Measuring the Edges of a GSM Burst with High Time Resolution

Because of the high time resolution of the R&S FSL at the 0 Hz display range, the edges of TDMA bursts can be measured precisely. The edges can be shifted to the screen area by using the trigger offset.

### Test setup:

### Signal generator settings (e.g. R&S SMU):

Frequency: 890 MHz  
Level: 0 dBm  
Modulation: GSM, one timeslot activated

### Procedure:

The measurement is based on the setting in the example above for measuring the power of the GSM during the activation phase.

1. Switch off the power measurement.
  - Press the **MEAS** key.
  - Press the **All Functions Off** softkey.
2. Increase the time resolution to 100  $\mu$ s.
  - Press the **SWEEP** key.
  - Press the **Sweeptime Manual** softkey and enter 100  $\mu$ s.
3. Using the trigger softkey, shift the rising edge of the GSM burst to the center of the screen.
  - Press the **TRIG** key.
  - Press the **Trigger Offset** softkey.
  - By turning the rotary knob counterclockwise, move the trigger offset until the burst edge can be seen in the center of the screen, or enter  $-50 \mu$ s.

The R&S FSL displays the rising edge of the GSM burst.

Fig. 5–10 Rising edge of the GSM burst displayed with high time resolution

4. Using the trigger offset, move the falling edge of the burst to the center of the screen.
  - Switch the **Trg/Gate Polarity** softkey to **Neg**.

The R&S FSL displays the falling edge of the GSM burst.

Fig. 5–11 Falling edge of the GSM burst displayed with high time resolution

## Measuring the Signal-to-Noise Ratio of Burst Signals

When TDMA transmission methods are used, the signal-to-noise ratio or the deactivation dynamic range can be measured by comparing the power values during the activation phase and the deactivation phase of the transmission burst. For this purpose, the R&S FSL provides the function for measuring absolute and relative power in zero span. In the following example, the measurement is performed using a GSM burst.

### Signal-to-Noise Ratio of a GSM Signal

#### Test setup:

#### Signal generator settings (e.g. R&S SMU):

Frequency: 890 MHz

Level: 0 dBm

Modulation: GSM, one time slot is switched on

#### Procedure:

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.  
The R&S FSL is set to its default state.
2. Set the center frequency to 890 MHz, the span to 0 Hz and the resolution bandwidth to 1 MHz.
  - Press the **FREQ** key and enter *890 MHz*.
  - Press the **SPAN** key and enter *0 Hz* or press the **Zero Span** softkey.
  - Press the **BW** key.
  - Press the **Res BW Manual** softkey and enter *1 MHz*.
3. Set the reference level of the R&S FSL to 0 dBm (= level of the signal generator).
  - Press the **AMPT** key and enter *0 dBm*.
4. Set the sweep time to 2 ms.
  - Press the **SWEEP** key.
  - Press the **Sweeptime Manual** softkey and enter *2 ms*.  
The R&S FSL shows the GSM burst continuously across the display.

5. Use the trigger source **Video** and the trigger polarity **Pos** to trigger on the rising edge of the burst and shift the start of burst to the center of the screen.

- Press the **TRIG** key.
- Press the **Trg/Gate Source** softkey and select **Video** using the arrow keys.
- Press the **Trg/Gate Level** softkey and enter **70%**.

The R&S FSL shows a static image with the GSM burst at the start of the trace.

- Press the **Trigger Offset** softkey and enter **-1 ms**.

The R&S FSL shows the GSM burst in the right-hand half of the measurement diagram.

6. Configure the power measurement in zero span.

- Press the **MEAS** key.
- Press the **Time Domain Power** softkey to open the submenu.
- Switch the **Limits** softkey to **On**.
- Press the **Left Limit** softkey.
- Using the rotary knob, move the vertical line to the start of the burst.
- Press the **Right Limit** softkey.
- Using the rotary knob, move the second vertical line to the end of the burst.

The R&S FSL displays the power during the activation phase of the burst.

Fig. 5–12 Power measurement during the activation phase of the burst

7. Measure the power during the deactivation phase of the burst.

- Press the **TRIG** key.
- Switch the **Trg/Gate Polarity** softkey to **Neg**.

The R&S FSL initiates triggering in response to the falling edge of the burst. This shifts the burst to the left-hand half of the measurement diagram. The power is measured in the deactivation phase. The start of the burst is shifted to the center of the screen and the power during the deactivation phase is measured.

Fig. 5–13 Measurement of the signal-to-noise ratio of a GSM burst signal in zero span.

## Measuring of FM-Modulated Signals

Since spectrum analyzers can display only the magnitude of the measurement signal by using the envelope detector, the modulation of FM-modulated signals cannot be measured directly as in the case of AM-modulated signals. The voltage at the output of the envelope detector remains constant for FM-modulated signals as long as the frequency deviation of the signal is located within the flat part of the passband characteristic of the resolution filter that is used. Amplitude variation occurs only if the instantaneous frequency extends into a falling edge of the filter curve. This behavior can be used to demodulate FM-modulated signals. The center frequency of the analyzer is set in such a manner that the nominal frequency of the measurement signal is located on a filter edge (below or above the center frequency). The resolution bandwidth and the frequency offset must be selected in such a manner that the instantaneous frequency is located in the linear part of the filter edge. As a result, the frequency variation of the FM-modulated signal is transformed into an amplitude variation that can be displayed on screen in zero span.

## Displaying the AF of an FM–Modulated Carrier

### Test setup:

### Signal generator settings (e.g. R&S SMU):

Frequency: 128 MHz

Level: –20 dBm

Modulation: FM 0 kHz deviation (i.e. FM modulation is deactivated), 1 kHz AF

### Procedure:

1. Set the spectrum analyzer to the default state.
  - Press the **PRESET** key.  
The R&S FSL is set to its default state.
2. Set the center frequency to 127.50 MHz and the span to 300 kHz.
  - Press the **FREQ** key and enter *127.50 MHz*.
  - Press the **SPAN** key and enter *300 kHz*.
3. Set the resolution bandwidth to 300 kHz.
  - Press the **BW** key.
  - Press the **Res BW Manual** softkey and enter *300 kHz*.
  - Press the **Video BW Manual** softkey and enter *30 kHz*.
4. Set the display range to 20 dB and shift the filter trace to the center of the screen.
  - Press the **AMPT** key.
  - Press the **Range Log** softkey and enter *20 dB*.
  - Press the **More** **↓** key.
  - Switch the **Grid** softkey to **Rel**.
  - Press the **▲** key.
  - Press the **Ref Level** softkey.
  - Using the rotary knob, set the reference level such that the filter edge at the center frequency intersects the –10 dB level line.

The filter edge of the 300 kHz filter is displayed. This corresponds to the demodulator characteristic for FM signals with a steepness of approx. 18 dB/140 kHz. This can be verified using marker and delta marker.

Fig. 5–14 Display of the filter edge of the 300 kHz filter as an FM discriminator characteristic

5. Set the FM deviation to 50 kHz on the signal generator.
6. Set the span to 0 Hz on the R&S FSL.
  - Press the **SPAN** key.
  - Press the **Zero Span** softkey.

The demodulated FM signal is displayed. The signal crosses the screen continuously.
7. Establish a stable display using video triggering.
  - Press the **TRIG** key.
  - Press the **Trg/Gate Source** softkey and select **Video** using the arrow keys.
  - Press the **Trg/Gate Level** softkey and enter **50%**.

A static image for the FM AF signal is produced.

Result:  $(-10 \pm 5)$  dB; this yields a deviation of 100 kHz when the steepness of the demodulator characteristic is 5 dB/100 kHz.

Fig. 5–15 Demodulated FM signal

8. Determine the deviation

- Press the **MKR** key.

Marker 1 is activated and placed on the peak of the curve.

- Press the **Marker 2** softkey.
- Press the **MKR →** key.
- Press the **More ↓** softkey.
- Press the **Min** softkey.

Marker 2 (delta marker) is placed on the minimum of the curve. The level difference is 13.4 dB, which corresponds to the peak-to-peak deviation. With the filter slope of 18 dB/140 kHz can be calculated:

$$deviation = \frac{1}{2} \times \frac{13.4 \times 140}{18} \text{ kHz} = \frac{1}{2} 104 \text{ kHz} = 52 \text{ kHz}$$

## Storing and Loading Instrument Settings

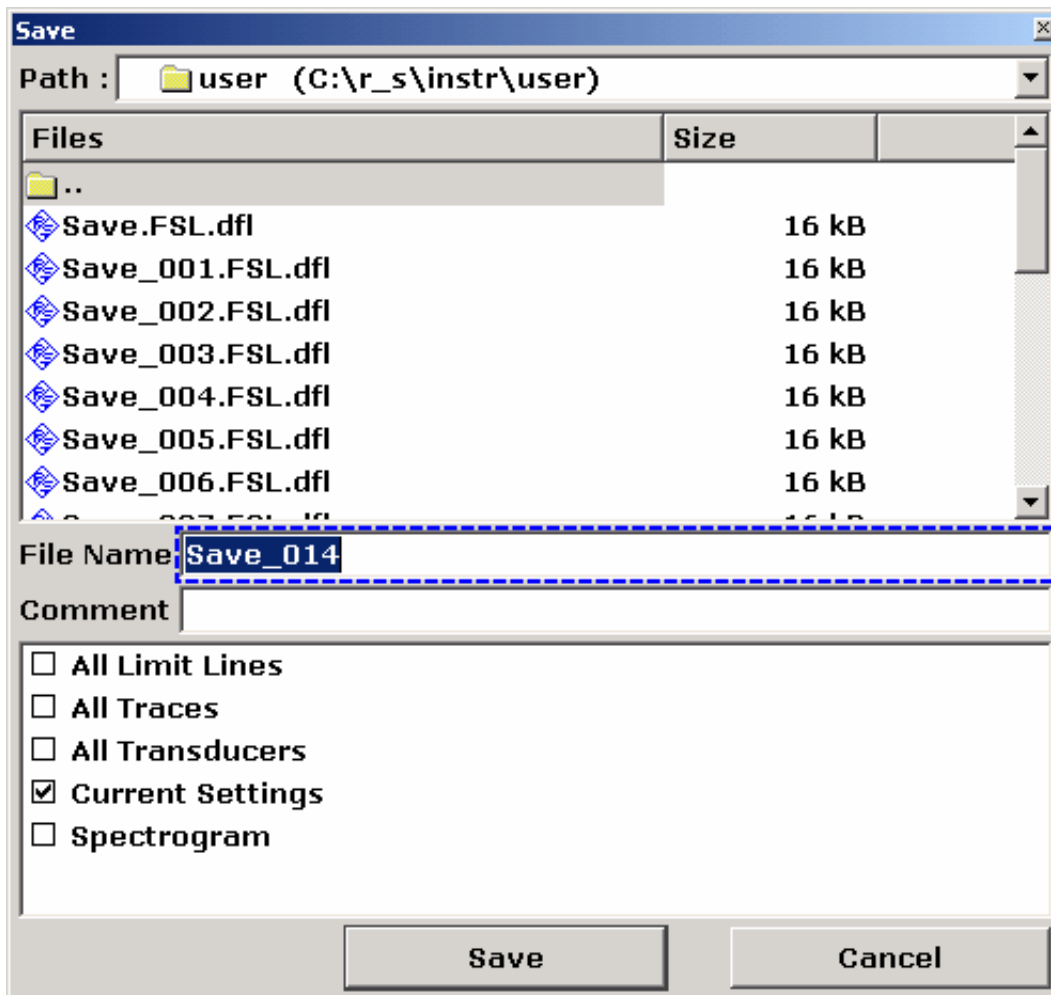

The R&S FSL can store complete instrument settings together with instrument configurations and measurement data in a settings file. The data is stored on the built-in hard disk or – if selected – on a USB device (e.g. memory stick) or on a network drive. The hard disk has the drive name C:

In the default state, the current settings are stored. This includes the settings of the measurement functions, the activated limit lines and the active transducer factor.

### Storing an Instrument Configuration (without Traces)

1. Press the **FILE** key.
2. Press the **Save** softkey.

The dialog box for instrument configurations is displayed. The **File Name** field is in edit mode and contains already a suggestion for a new name.

3. If you want to change the suggested name, enter a name for the settings file to be stored.

The name may contain letters and digits. Enter the name via the front panel keypad (for details on alphanumeric entries see chapter 4, "Basic Operations").

To store the file in a directory different to the default directory, change the path using the **Select Path** softkey (the directory is automatically used for any further save and recall operations).

4. Press the **Save File** softkey.  
If the path is not changed, the settings file is stored under the default path for the instrument configurations (C:\R\_S\Instruser). The dialog box is closed.

## Storing Traces

Before you can store traces, you must first select the corresponding item entry. For this purpose proceed as follows:

1. Press the **FILE** key.
2. Press the **Save** softkey.
3. If you want to change the suggested name, enter a file name.
4. Press the **Select Items** softkey to focus the items list.
5. Select the **All Traces** option using the arrow keys and confirm by pressing the **CHECKMARK** key.
6. Press the **FIELD RIGHT** key to set the focus on the **Save** button and confirm by pressing the **ENTER** key, or press the **▲** key to leave the submenu and press the **Save File** softkey.

## Loading an Instrument Configuration (with Traces)

1. Press the **FILE** key.
2. Press the **Recall** softkey.
3. If necessary, select the path, under which the file to be loaded is stored.
  - Press the **Select Path** softkey and select a drive by using the arrow keys.
4. Define the settings file to be loaded. One of the following ways is possible:
  - a) By selecting the settings file from a list:
    - If you have changed the path, press the **Select File** softkey.  
The focus is set on the files list again.
    - Using the rotary knob or arrow keys, focus the settings file to be loaded and confirm by pressing the rotary knob or the **ENTER** key.
  - b) By directly entering the settings file name:
    - Press the **Edit File Name** softkey.
    - Enter the name of the settings file to be loaded (which is a digit from 0 to 9 in the simplest case).

5. If you want to load traces:
  - Press the **Select Items** softkey to set the focus on the items list.
  - Select the **All Traces** option using the arrow keys and confirm by pressing the **CHECKMARK** key. The **All Traces** option is only available, if the selected file contains traces.
6. Press the **Recall File** softkey.  
The settings file is loaded.

---

**Note:** *During loading, the R&S FSL detects which items the selected settings file contains and, if applicable, ignores any items that were selected but are not available.*

---

## Configuring Automatic Loading

If the R&S FSL is switched on in the factory default state, it loads the instrument settings that it had when switched off (provided that it was switched off using the ON / STANDBY key on the front panel; see chapter 2, section "Preparing for Operation"). If the instrument is preset, it loads the default settings.

You can alter these settings and define a settings file to be loaded. This requires performing the following procedure. Be aware that the chosen settings file is loaded both during booting and preset.

1. Press the **FILE** key.
2. If the **Startup Recall** softkey is not activated, press it.  
The **Startup Recall Setup** softkey is activated.
3. Press the **Startup Recall Setup** softkey.  
The **Startup Recall** dialog box is displayed.
4. Focus the settings file to be loaded (DFL file) by using the arrow keys and confirm by pressing the **ENTER** key.  
If you want to select the settings file from another directory, under **Path**, change the directory.

## **6 Brief Introduction to Remote Control**

The instrument can be remote-controlled via the network (LAN interface). For details on configuring the LAN interface see chapter 2, section "Configuring the LAN Interface". Remote control via a GPIB interface is only provided with option R&S FSL-B10. For details on setting the interface see chapter 2, section "Setting the GPIB Interface".

The following programming examples are hierarchical in structure, i.e. the later examples are based on the preceding ones. This makes it possible to easily assemble a well-functioning program by using the modules of the program examples. More complex examples are provided in the Operating Manual, chapter 7 "Remote Control – Programming Examples"

## Basic Steps in Remote Control Programming

The following examples explain how to program the instrument and can be used as a basis for solving enhanced programming tasks.

Visual Basic was used as the programming language. However, the programs can be implemented in other languages as well.

---

**Note:** In programming languages as C, C++ or programmes as MATLAB, NI Interactive Control, a backslash starts an escape sequence (e.g. “\n” is used to start a new line). In these programming languages and programmes, two backslashes instead of one must be used in remote commands, e.g. in [Storing Instrument Settings](#): instead of `MMEM:STOR:STAT 1,'D:\USER\DATA\TEST1'` use `MMEM:STOR:STAT 1,'D:\\USER\\DATA\\TEST1'`

---

## Linking the Remote Control Library for Visual Basic

### Programming notes:

- **Outputting text by using the print function**

Using the print method, this example displays the value of the variable `MyVar` in the **Immediate** window of the Visual Basic development environment. Note that the print method only applies to objects that can display text.

```
Debug.Print MyVar
```

- **Accessing the functions of the VISA32.DLL**

To enable users to create Visual Basic control applications, the file VISA32.BAS must be added to a project so that functions of the VISA32.DLL can be called. In addition, the file VPPTYPE.BAS must be added to the project. This file contains constants and definitions for error handling, timeout values, etc.

The modules `visa32.bas` and `vpptype.bas` can be found in the `<VXIpnPath>\WinNT\include` (typically `C:\VXIpnPath\WinNt\include`).

As an alternative a reference to the VISA32.DLL can be added to the project.

- **Creating a response buffer**

Since the DLL returns zero-terminated strings in responses, a string of sufficient length must be created before the functions `InstrRead()` and `ilrd()` are called, because Visual Basic inserts a length specification in front of the strings and this specification is not updated by the DLL. The following two means of creating the length specification for a string are provided:

- `Dim Rd as String * 100`
- `Dim Rd as String`
- `Rd = Space$(100)`

- **Creating Wrapper Procedures for Writing and Reading**

Since the VISA functions require command and response strings and their corresponding length in two separate parameters, the main program code is easier to read and maintain if the read and write functions are encapsulated. Here the procedure `InstrWrite()` encapsulates the function `viWrite()` and `InstrRead()` encapsulates `viRead()`. In addition these wrappers include status checking:

```
Public Sub InstrWrite(ByVal vi As Long, ByVal Cmd As String)
Dim status As Long
Dim retCount As Long

'Send command to instrument and check for status
status = viWrite(vi, Cmd, Len(Cmd), retCount)
'Check for errors - this will raise an error if status is not VI_SUCCESS
CALL CheckError(vi, status)

End Sub
```

```
Public Sub InstrRead(ByVal vi As Long, Response As String, ByVal count As Long,
retCount As Long)
Dim status As Long

'Initialize response string
Response = Space(count)
'...and read
status = viRead(vi, Response, count, retCount)
'Check for errors - this will raise an error if status is not VI_SUCCESS
CALL CheckError(vi, status)

'adjust string length
Response = Left(Response, retCount)

End Sub
```

The following function illustrates status/error checking. The procedure raises an exception, when a VISA error occurs:

```
Public Sub CheckError(ByVal vi As Long, status As Long)
Dim ErrorMessage As String * 1024

'Initialize error message string
ErrorMessage = ""
If (status < 0) Then
    'Query the error message from VISA
    If (viStatusDesc(vi, status, ErrorMessage) = VI_SUCCESS) Then
        Err.Description = ErrorMessage
    End If
    Err.Raise (status)
End If

End Sub
```

## Initialization and Default State

At the start of each program, the global variables used by all subroutines must be created. The remote control and the instrument settings will then be changed to a defined default state. The two subroutines "InitController" and "InitDevice" are used for this purpose.

### Creating Global Variables

In Visual Basic, global variables are stored in modules (data extension .BAS). Thus, at least one module (e.g. GLOBALS.BAS) must be created that contains the variable used by all subroutines, e.g. the variables for device addresses used by the remote control driver. For all example programs shown below, the file must contain the following instructions:

```
Global analyzer As Long
Global defaultRM As Long
```

### Initializing the Remote Control Session

```
REM ----- Initializing the remote control session -----
Public SUB Initialize()
    Dim status As Long

    'CALL viOpenDefaultRM to get the resource manager handle
    'Store this handle in defaultRM. The function viStatusDesc
    'returns a text description of the status code returned by viOpenDefaultRM

    status = viOpenDefaultRM(defaultRM)
    status = viStatusDesc(defaultRM, status, Response)

    'Open the connection to the device and store the handle
    'Note: The timeout value in viOpen() applies only for opening the interface
    'For setting the communication timeout, set the VI_ATTR_TMO_VALUE attribute
    'timeout values are in milliseconds
    'This example assumes the instrument IP address 10.0.0.10
    'If the network provides a name resolution mechanism, the hostname of
    'the instrument can be used instead of the numeric IP address
    'the resource string for GPIB would be "GPIB::20::INSTR"
    status = viOpen(defaultRM, "TCPIP::10.0.0.10::INSTR", 0, 1000, analyzer)
    'status = viOpen(defaultRM, "TCPIP::<hostname>::INSTR", 0, 1000, analyzer)
    'status = viOpen(defaultRM, "GPIB::20::INSTR", 0, 1000, analyzer)

    'Set timeout value - here 5s
    status = viSetAttribute(vi, VI_ATTR_TMO_VALUE, 5000)

END SUB
REM *****
```

## Initializing the Instrument

Set the remote control status registers and instrument settings to the default state.

```
REM ----- Initializing the instrument -----
Public SUB InitDevice()

CALL InstrWrite(analyzer, "*CLS")      'Reset status register
CALL InstrWrite(analyzer, "*RST")     'Reset instrument

END SUB
REM*****
```

## Switching the Screen Display On and Off

In the default setting, all remote control commands are carried out with the screen display switched off in order to attain optimum measurement speed. During the development phase of remote control programs, however, the screen display is required in order to visually check both the programming of the settings and the measurement results.

The following examples show functions with which the screen display can be switched on or off during remote control operation.

```
REM ----- Switching on the screen display -----
Public SUB DisplayOn()

CALL InstrWrite(analyzer, "SYST:DISP:UPD ON")
                                'Switch on screen display

END SUB
REM*****

REM ----- Switching off the screen display -----
Public SUB DisplayOff()

CALL InstrWrite(analyzer, "SYST:DISP:UPD OFF")
                                'Switch off screen display

END SUB
REM*****
```

## Configuring the Power Save Function for the Display

During remote control operation, it is often unnecessary to display the measurement results on screen. Although the command `SYSTem:DISPlay:UPDate OFF` switches off the display of the measurement results, thus significantly improving speed in remote control operation, the display itself and the background lighting in particular remain switched on.

If you also want to switch off the display itself, you must use the power save function by setting the response time in minutes prior to activation.

---

**Note:** *The display will be immediately reactivated if you press a key on the instrument's front panel.*

---

```
Public SUB PowerSave()

CALL InstrWrite(analyzer, "DISPlay:PSAVE:HOLDoff 1")
                        'Set response time to 1 minute
CALL InstrWrite(analyzer, "DISPlay:PSAVE ON")
                        'Switch on Power Save function
```

## Sending Simple Instrument Setting Commands

This example shows how the center frequency, span and reference level of the instrument are set.

```
REM ----- Instrument setting commands -----
PUBLIC SUB SimpleSettings()

CALL InstrWrite(analyzer, "FREQUENCY:CENTER 128MHz")
                        'Center frequency 128 MHz
CALL InstrWrite(analyzer, "FREQUENCY:SPAN 10MHZ")
                        'Set span to 10 MHz
CALL InstrWrite(analyzer, "DISPLAY:TRACE:Y:RLEVEL -10dBm")
                        'Set reference level to -10dBm

END SUB
REM *****
```

## Switching to Manual Operation

```
REM ----- Switching instrument to manual operation -----
CALL viGpibControlREN(analyzer, VI_GPIB_REN_ADDRESS_GTL)
                        'Set instrument to Local state
REM *****
```

## Reading Out Instrument Settings

The settings made above can now be read out. To do so, the abbreviated commands are used.

```

REM ----- Reading out instrument settings -----
PUBLIC SUB ReadSettings()
Dim retCount as Long

CFfrequency$ = SPACE$(20)           'Provide text variable (20 characters)
CALL InstrWrite(analyzer, "FREQ:CENT?")
                                   'Request center frequency
CALL InstrRead(analyzer, CFfrequency$, 20, retCount)
                                   'Read value
CFspan$ = SPACE$(20)                'Provide text variable (20 characters)
CALL InstrWrite(analyzer, "FREQ:SPAN?")
                                   'Request span
CALL InstrRead(analyzer, CFspan$, 20, retCount)
                                   'Read value

RLlevel$ = SPACE$(20)               'Provide text variable (20 characters)
CALL InstrWrite(analyzer, "DISP:TRAC:Y:RLEV?")
                                   'Request ref level setting
CALL InstrRead(analyzer, RLlevel$, 20, retCount)
                                   'Read value

REM ----- Displaying values in the Immediate window -----
Debug.Print "Center frequency: "; CFfrequency$,
Debug.Print "Span:           "; CFspan$,
Debug.Print "Reference level: "; RLlevel$,

END SUB
REM*****

```

## Marker Positioning and Readout

```

REM ----- Example of marker function -----
PUBLIC SUB ReadMarker()
Dim retCount as Long

CALL InstrWrite(analyzer, "CALC:MARKER ON;MARKER:MAX")
                                   'Activate marker 1 and search for peak
MKmark$ = SPACE$(30)              'Provide text variable (30 characters)
CALL InstrWrite(analyzer, "CALC:MARK:X?;Y?")
                                   'Query frequency and level
CALL InstrRead(analyzer, MKmark$, 30, retCount)
                                   'Read value

REM ----- Displaying values in the Immediate window -----
Debug.Print "Marker frequency/level "; MKmark$,

END SUB
REM *****

```

## Command Synchronization

The synchronization methods used in the following example are described in the Operating Manual on CD, chapter 4 "Remote Control – Basics", section "Command Sequence and Command Synchronization".

```

REM ----- Commands for command synchronization -----
PUBLIC SUB SweepSync()
Dim retCount as Long
Dim SRQWaitTimeout As Long
Dim eventType As Long
Dim eventVi As Long
REM The command INITiate[:IMMEDIATE] starts a single sweep if the
REM command INIT:CONT OFF has already been sent. The next command
REM must not be carried out until a full sweep has been completed.
CALL InstrWrite(analyzer, "INIT:CONT OFF")

REM ----- First method: Using *WAI -----
CALL InstrWrite(analyzer, "ABOR;INIT:IMM; *WAI")

REM ----- Second method: Using *OPC? -----
OpcOk$ = SPACE$(2) 'Provide space for *OPC? response
CALL InstrWrite(analyzer, "ABOR;INIT:IMM; *OPC?")

REM ----- In this case, the controller can use other instruments -----
CALL InstrRead(analyzer, OpcOk$, 2, retCount)
'Wait for "1" from *OPC?

REM ----- Third method: Using *OPC -----
REM In order for the Service Request function to be used with a GPIB
REM driver from National Instruments, the setting "Disable
REM Auto Serial Poll" must be set to "yes" with IBCONF!
CALL InstrWrite(analyzer, "*SRE 32") 'Enable Service Request for ESR
CALL InstrWrite(analyzer, "*ESE 1") 'Set event enable bit for operation
'complete bit
CALL viEnableEvent(vi, VI_EVENT_SERVICE_REQ, VI_QUEUE, 0)
'Enable the event for service request
CALL InstrWrite(analyzer, "ABOR;INIT:IMM; *OPC")
'Start sweep with Synchronization to OPC
SRQWaitTimeout = 5000 'Allow 5s for sweep completion
'Now wait for the service request
CALL viWaitOnEvent(vi, VI_EVENT_SERVICE_REQ, SRQWaitTimeout, eventType, eventVi)
CALL viClose(eventVi) 'Close the context before continuing
CALL viDisableEvent(vi, VI_EVENT_SERVICE_REQ, VI_QUEUE)
'Disable subsequent events
REM Resume main program here.

END SUB
REM *****

```

## Reading Output Buffers

```

REM ----- Subroutine for the individual STB bits -----
Public SUB Outputqueue()           'Reading the output queue
Dim retCount as Long

result$ = SPACE$(100)             'Create space for response
CALL InstrRead(analyzer, result$, 100, retCount)
Debug.Print "Contents of Output Queue : "; result$

END SUB
REM *****

```

## Reading Error Messages

```

REM ----- Subroutine for evaluating the error queue -----
Public SUB ErrorQueueHandler()
Dim retCount as Long

ERROR$ = SPACE$(100)             Subroutine for evaluating the error queue
CALL InstrWrite(analyzer, "SYSTEM:ERROR?")
CALL InstrRead(analyzer, ERROR$, 100, retCount)
Debug.Print "Error Description : "; ERROR$

END SUB
REM *****

```

# Detailed Programming Examples

In the following sections typical programming examples for setting measurement parameters and functions, general settings, printout and data management are provided.

## Default Setting of the R&S FSL

The following settings provide typical examples of how to change the default setting of the R&S FSL.

Note that only some of the settings are necessary depending on the application example. In many cases, it is not necessary to set resolution bandwidth, video bandwidth and sweep time since these parameters are automatically calculated in the default setting when the span is changed. Likewise, the input attenuation is automatically calculated in the default setting as a function of the reference level. Last of all, the level detectors are linked to the selected trace mode in the default setting.

The settings automatically calculated in the default setting are indicated with an asterisk (\*) in the following program example.

## Setting the Remote Control Status Registers

```

REM *****
Public Sub SetupStatusReg()

'----- IEEE 488.2 status register -----
CALL InstrWrite(analyzer,"*CLS")      'Reset status registers
CALL InstrWrite(analyzer,"*SRE 168")  'Enable Service Request for
                                       'STAT:OPER-,STAT:QUES- and ESR-Register
CALL InstrWrite(analyzer,"*ESE 61")   'Set event enable bit for:
                                       'operation complete 'command-, execution-,
                                       'device dependent- and query error

'----- SCPI status register -----
CALL InstrWrite(analyzer,"STAT:OPER:ENAB 0")
                                       'Disable OPERation Status reg
CALL InstrWrite(analyzer,"STAT:QUES:ENAB 0")
                                       'Disable questionable Statusreg

End Sub
REM *****

```

## Default Settings for Measurements

```

REM *****
Public Sub SetupInstrument()

'----- Default setting of the R&S FSL -----
CALL SetupStatusReg                  'Configure status registers
CALL InstrWrite(analyzer,"*RST")     'Reset instrument
CALL InstrWrite(analyzer,"SYST:DISP:UPD ON")
                                       'ON: screen display on
                                       'OFF: off (improved performance)
CALL InstrWrite(analyzer,"DISP:FORM SINGLE")
                                       'Full screen display
CALL InstrWrite(analyzer,"DISP:WIND1:SEL")
                                       'Active Screen A
CALL InstrWrite(analyzer,"INIT:CONT OFF")
                                       'Single sweep mode

'----- Frequency setting -----
CALL InstrWrite(analyzer,"FREQUENCY:CENTER 100MHz")
                                       'Center frequency
CALL InstrWrite(analyzer,"FREQ:SPAN 1 MHz")
                                       'Span

'----- Level setting -----
CALL InstrWrite(analyzer,"DISP:WIND:TRAC:Y:RLEV -20dBm")
                                       'Reference level
CALL InstrWrite(analyzer,"INP:ATT 10dB")
                                       'Input attenuation (*)

'----- Level scaling -----
CALL InstrWrite(analyzer,"DISP:WIND:TRAC:Y:SPAC LOG")
                                       'Log level axis
CALL InstrWrite(analyzer,"DISP:WIND:TRAC:Y:SCAL 100dB")
                                       'Level range
CALL InstrWrite(analyzer,"DISP:WIND:TRAC:Y:SCAL:MODE ABS")

```

```

                                'Absolute scaling
CALL InstrWrite(analyzer,"CALC:UNIT:POW DBM")
                                'y meas. unit

'----- Trace and detector setting -----
CALL InstrWrite(analyzer,"DISP:TRAC1:MODE AVER")
                                'Trace1 average
CALL InstrWrite(analyzer,"AVER:TYPE VID")
                                'Average mode video; "LIN" for linear
CALL InstrWrite(analyzer,"SWE:COUN 10")
                                'Sweep count
CALL InstrWrite(analyzer,"DISP:TRAC2 OFF")
                                'Trace2 blank
CALL InstrWrite(analyzer,"DISP:TRAC3 OFF")
                                'Trace3 blank

CALL InstrWrite(analyzer,"SWE:TIME 100ms")
                                'Sweep time          (*)

END SUB
REM *****

```

## Using Markers and Delta Markers

The markers are used for marking points on traces, reading out measurement results and for quickly selecting a display section.

### Marker Search Functions, Restricting the Search Range

The following example is based on an AM-modulated signal at 100 MHz that has the following characteristics:

- Carrier signal level: -30 dBm
- AF frequency: 100 kHz
- Modulation depth: 50 %

Marker 1 and then delta marker 2 are set to the largest maximum points on the trace. The frequency and level are then read. In the following measurements, the instrument's default setting can be used for measurements (SetupInstrument) .

```

REM *****
Public Sub MarkerSearch()
Dim retCount as Long

result$ = Space$(100)
CALL SetupInstrument           'Default Setting
'----- Peak search without search range limits-----
CALL InstrWrite(analyzer,"INIT:CONT OFF")
                                'Switch to single sweep
CALL InstrWrite(analyzer,"CALC:MARK:PEXC 6DB")
                                'Define peak excursion
CALL InstrWrite(analyzer,"CALC:MARK:STAT ON")
                                'Enable marker 1
CALL InstrWrite(analyzer,"CALC:MARK:TRAC 1")
                                'Set marker 1 to trace 1
CALL InstrWrite(analyzer,"INIT;*WAI") 'Perform sweep with sync
CALL InstrWrite(analyzer,"CALC:MARK:MAX;X?;Y?")
                                'Marker to peak; read frequency and level
CALL InstrRead(analyzer, result$, 100, retCount)
Debug.Print "Marker 1: ";result$
CALL InstrWrite(analyzer,"CALC:DELT2:STAT ON;MAX;MAX:LEFT")
                                'Activate delta marker 2,
                                'set to peak and then to next peak left
CALL InstrWrite(analyzer,"CALC:DELT2:X?;Y?")
                                'Read delta marker 2 frequency and level

result$ = Space$(100)
CALL InstrRead(analyzer, result$, 100, retCount)
Debug.Print "Delta 2: ";result$

'----- Peak search with search range limit in x direction -----
CALL InstrWrite(analyzer,"CALC:MARK:X:SLIM:STAT ON;LEFT 0Hz;RIGHT 100.05MHz")
                                'Activate search limit,
                                'set at right below AF
CALL InstrWrite(analyzer,"CALC:DELT3:STAT ON;MAX;MAX:RIGHT")
                                'Activate delta marker 3,
                                'set to peak and then to next peak right

```

```

CALL InstrWrite(analyzer,"CALC:DELT3:X:REL?;;CALC:DELT3:Y?")
                                'Read delta marker 3 frequency and level;
                                'both must have a value of 0

result$ = Space$(100)
CALL InstrRead(analyzer, result$, 100, retCount)
Print "Delta 3: ";result$
'----- Peak search with search range limit in y direction -----
CALL InstrWrite(analyzer,"CALC:THR:STAT ON")
CALL InstrWrite(analyzer,"CALC:THR -35DBM")
                                'Activate threshold and set it above the AF
CALL InstrWrite(analyzer,"CALC:DELT3:STAT ON;MAX;MAX:NEXT")
                                'Activate delta marker 3,
                                'set to peak and then to next peak
                                '=> is not found
CALL InstrWrite(analyzer,"CALC:DELT3:X:REL?;;CALC:DELT3:Y?")
                                'Query and read delta marker 3
                                'frequency and level;
                                'both must have a value of 0

result$ = Space$(100)
CALL InstrRead(analyzer, result$, 100, retCount)
Debug.Print "Delta 3: ";result$

'---- Setting center frequency and reference level with markers -----
CALL InstrWrite(analyzer,"CALC:MARK2:FUNC:CENT")
                                'Delta marker 2 -> marker and
                                'center frequency = marker 2
CALL InstrWrite(analyzer,"CALC:MARK2:FUNC:REF")
                                'Ref level = marker 2
CALL InstrWrite(analyzer,"INIT;*WAI") 'Sweep with sync

END SUB
REM *****

```

## Frequency Counting

The following example is based on a signal at 100 MHz with a level of –30 dBm. Also in this measurement, the instrument's default setting can be used (SetupInstrument). The purpose of frequency counting is to determine the exact frequency of the signal at 100 MHz.

```

REM *****
Public Sub MarkerCount()
Dim retCount as Long

CALL SetupInstrument           'Default setting
'----- Defining signal frequency with frequency counter -----
CALL InstrWrite(analyzer,"INIT:CONT OFF")
                                'Switch to single sweep

## Working with a Fixed Reference Point

The following example is based on a signal at 100 MHz with a level of –20 dBm. Thus, the harmonics of the signal are located at 200 MHz, 300 MHz, etc. In the case of high-quality signal sources, these harmonics may be located outside the dynamic range of the R&S FSL. Nevertheless, to measure the harmonic suppression, the level setting must be changed to higher sensitivity when measuring the harmonics, in which case it may be necessary to suppress the carrier by using a notch filter in order to prevent the RF input of the R&S FSL from being overloaded.

Thus, two measurements with different level settings are performed in the following example. First, a high reference level is used on the carrier frequency, and then a low reference level is used on the frequency of the third harmonic.

The default setting of the R&S FSL for measurements (SetupInstrument) is also used as a starting point here, after which adaptations for the measurement are carried out.

```

REM *****

END SUB
REM *****

```

## Measuring Noise and Phase Noise

When phase noise is measured, the noise power related to a bandwidth of 1 Hz is set in relation to the power of an adjacent carrier signal. A commonly used offset between the measured frequency and the carrier frequency is 10 kHz.

When noise is measured, the measured absolute level is related to a bandwidth of 1 Hz.

The following example is also based on a signal at 100 MHz with a level of  $-30$  dBm. Two markers are used to determine both the noise and the phase noise at a 10 kHz offset from the carrier signal.

```

REM *****

## Reading Out Trace Data

In the following example, the trace data obtained with the default setting is read from the instrument and displayed in a list on screen. Readout occurs first in binary format and then in ASCII format, once with the span > 0 and once with the span = 0.

In binary format, the header of the message with the length specification is evaluated and used to calculate the x axis values.

In ASCII format, merely the list of level values is output.

Binary data is read out in three steps:

1. The number of digits in the length specification is read out.
2. The length specification itself is read out.
3. The trace data itself is read out.

The procedure is required in the case of programming languages that only support structures with data types of the same type (arrays) (such as with Visual Basic), because the data types of the header and data sections are different in binary data.

The VISA library provides only a mechanism for reading into string buffers. In order to convert the data into an array of single precision values, the string contents must be copied into a buffer of that type. The following example uses an operating system function for the copy operation. The function declaration must be added to a module (.bas) as follows:

```
Private Declare Sub CopyMemory Lib "kernel32" Alias "RtlMoveMemory" (pDest As Any, pSource As Any, ByVal ByteLen As Long)
```

---

**Note:** *The arrays for the measured data are dimensioned in such a way that they provide sufficient space for trace data of the R&S FSL (501 measurement points).*

---

```

END SUB
REM *****

```

## Storing and Loading Instrument Settings

Settings and measured data can be stored and loaded. The data set that is loaded when the instrument is preset or started, can be set.

## Storing Instrument Settings

In the following example, the settings/measured data to be stored are initially defined, in which case only the hardware settings are stored. However, the selection commands for the other settings are specified with the state "OFF" for the sake of completeness.

```

REM *****
Public Sub StoreSettings()

'----- Default settings of the R&S FSL -----
'This subroutine selects the settings to be stored and creates the
'data record "TEST1" in the directory C:\R_S\Instr\user. It uses the default
'setting and resets the instrument after the setting is stored.
'-----
CALL SetupInstrument
CALL InstrWrite(analyzer,"INIT:CONT OFF")
'Change to single sweep
CALL InstrWrite(analyzer,"INIT;*WAI") 'Perform sweep with sync
'----- Selection of settings to be stored -----
CALL InstrWrite(analyzer,"MMEM:SEL:HWS ON")
'Store hardware settings
CALL InstrWrite(analyzer,"MMEM:SEL:TRAC OFF")
'Do not store any traces
CALL InstrWrite(analyzer,"MMEM:SEL:LIN:ALL OFF")
'Store only the activated limit lines
'----- Storing on the instrument -----
CALL InstrWrite(analyzer,"MMEM:STOR:STAT 1,'C:\R_S\Instr\user\TEST1'")
'----- Resetting the instrument -----
CALL InstrWrite(analyzer,"*RST")

END SUB
REM *****

```

## Loading Instrument Settings

In the following example, the TEST1 data record stored under C:\R\_S\Instr\user is loaded by the instrument:

```

REM *****
Public Sub LoadSettings()

'----- Default setting of the status register -----
'This subroutine loads the TEST1 data record in the directory
'C:\R_S\Instr\user.
'-----
CALL SetupStatusReg 'Configure status register
'----- Loading the data record -----
CALL InstrWrite(analyzer,"MMEM:LOAD:STAT 1,'C:\R_S\Instr\user\TEST1'")
'----- Perform measurement using loaded data record -----
CALL InstrWrite(analyzer,"DISP:TRAC1:MODE WRIT")
'Set trace to Clr/Write
CALL InstrWrite(analyzer,"INIT;*WAI") 'Start sweep

END SUB
REM *****

```

## Setting the Data Record for Startup Recall

In the following example, the first step is to change the R&S FSL to the default state. In the next step, the TEST1 data record stored under C:\R\_S\Instr\user is selected for the startup recall function, i.e. the data record is then set after each \*RST, preset and each time the instrument is started. For demonstration purposes, the command \*RST is carried out again.

```

REM *****
Public Sub StartupRecallSettings()

'----- Resetting the R&S FSL -----
CALL InstrWrite(analyzer,"*RST")
'----- Default setting of the status register -----
CALL SetupStatusReg           'Configure status register
'----- Selecting the startup recall data record -----
CALL InstrWrite(analyzer,"MMEM:LOAD:AUTO 1,'C:\R_S\Instr\user\TEST1'")
'----- Activating the startup recall data record -----
CALL InstrWrite(analyzer,"*RST")

END SUB
REM *****

```

## Configuring and Starting a Printout

The following example shows how to configure the output format and output device for printing out a measurement screen. The procedure is as follows:

1. Set the measurement you want for the printout.
2. Check which output devices are available on the instrument.
3. Select an output device.
4. Select the output interface.
5. Configure the output format.
6. Start the printout with synchronization to completion.

It is assumed that the desired setting is a signal at 100 MHz with a power of –20 dBm. It is also assumed that the sixth printer out of the available printers that are listed is the one you want. The printout is first output to the selected printer and then to a file.

```

REM *****
Public Sub HCopy()

# Appendix

## Appendix A: Printer Interface

For printout local USB printers or network printers can be used. In this appendix, the installation of local printers is described. Network printer installation is described in section "To install a network printer" in Appendix B, LAN Interface.

---

**Note:** *The following step-by-step instructions describe the process via a mouse and an external keyboard. It is also possible to install local printers using the front panel of the instrument. For details on the operation via the front panel refer to chapter 4 "Basic Operations".*

---

After installation the instrument must be configured for printout with a printer. How to select and configure printers is described in chapter 2 "Preparing for Use", section "R&S FSL Setup".

### Installing Local Printers

As a local printer, only USB printers can be connected. For details on connectors see chapter 1 "Front and Rear Panel".

---

**Note:** *When you install printer drivers that are not preinstalled on the computer, you can use one of the following external devices: LAN, USB device (memory stick or CD-ROM).*

---

You can install a local printer via manual or remote control. In the following step-by-step instructions, the installation process is described via Remote Desktop. Alternatively, you can connect a mouse and an external keyboard for the installation instead of using the R&S FSL front panel (for details see chapter 2 "Preparing for Use", section "Connecting External Devices"). Refer also to the documentation of the printer manufacturer on how to install the printer.

#### To install a local printer

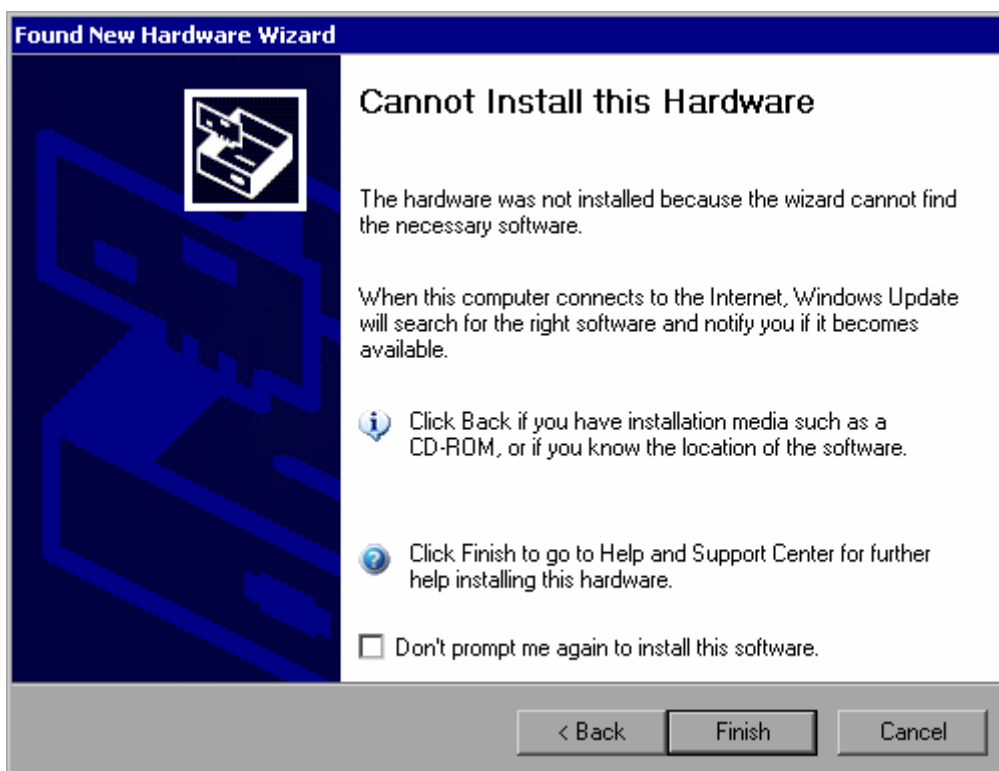

1. If you use a USB device for driver installation, install the USB device on the instrument and connect it to the instrument before starting the installation.
2. If you use a LAN connection for driver installation, the corresponding network drives must be mounted before starting the installation.

3. Connect the printer via the USB connector on the front panel to the R&S FSL. The first page of the **Found New Hardware Wizard** dialog box is displayed.

4. Select the **Install the software automatically** option. The installation process runs automatically and a dialog box is displayed after the installation is completed. Proceed with step 15.

If the driver software cannot be found, an error message is displayed.

5. Deactivate the **Don't prompt me again to install this software** option.
6. Click **Finish**.  
The first page of the wizard is displayed again.
7. Select the **Install from a list or specific location** option.
8. Click **Next**.  
The second page of the wizard is displayed.

9. Insert the CD into the CD-ROM drive.
10. Activate the **Include this location in the search** option.
11. Click the **Browse** button.  
The dialog box to browse for a folder is displayed.
12. On the CD-ROM drive, select the folder containing the printer drivers.
13. Click **OK**. This button is only active, if the selected folder contains drivers.  
The second page of the wizard is displayed again.

14. Click **Next**.

The selected folder is searched for the printer driver and the printer driver files are copied to C:. After the installation is finished, a dialog box is displayed.

15. Click **Finish** to complete the installation.

## Appendix B: LAN Interface

In this appendix, additional information on the LAN interface is given. How to connect the instrument to the network and configure the network protocols is described in chapter 2 "Preparing for Use", section "Configuring the LAN Interface".

---

**Note:** *In some of the following step-by-step instructions, user names and passwords must be entered. This requires a mouse and an external keyboard (see chapter 2, section "Connecting External Devices"). Therefore the operation is described via mouse and keyboard.*

---

### Configuring the Network

After network support has been installed, data can be exchanged between the instrument and other computers, and network printers can be used.

Network operation is only possible if you are authorized to access network resources. Typical resources are file directories of other computers or even central printers. Authorization is assigned by the network or server administrator.

The operation on the network requires the following administration and actions:

- To change the computer name
- To change the domain or workgroup
- To operate the instrument without a network
- To create users
- To change the user password
- To log on to the network
- To deactivate the automatic login mechanism
- To reactivate the automatic login mechanism
- To map network drives
- To disconnect network drives
- To install a network printer
- To share directories (only with Microsoft networks)

---

**NOTICE****Risk of network errors!**

Before connecting the instrument to the network or configuring the network, consult your network administrator, particularly in the case of large LAN installations. Errors may affect the entire network.

Never connect your analyzer to a network unprotected against virus infection because this may cause damage to the instrument software.

---

To integrate the instrument into your network, you can change the following system properties: computer name, domain, workgroup.

### To change the computer name

1. Press the **Network Address** softkey.  
The submenu is displayed.
2. Press the **Computer Name** softkey and enter the computer name.
3. If you have entered an invalid name, in the status line, the message "out of range" is displayed. The edit dialog box keeps open, and you can start afresh.  
If the settings are correct, the configuration is saved, and you are prompted to restart the instrument.
4. Confirm the displayed message (**Yes** button) to restart the instrument.

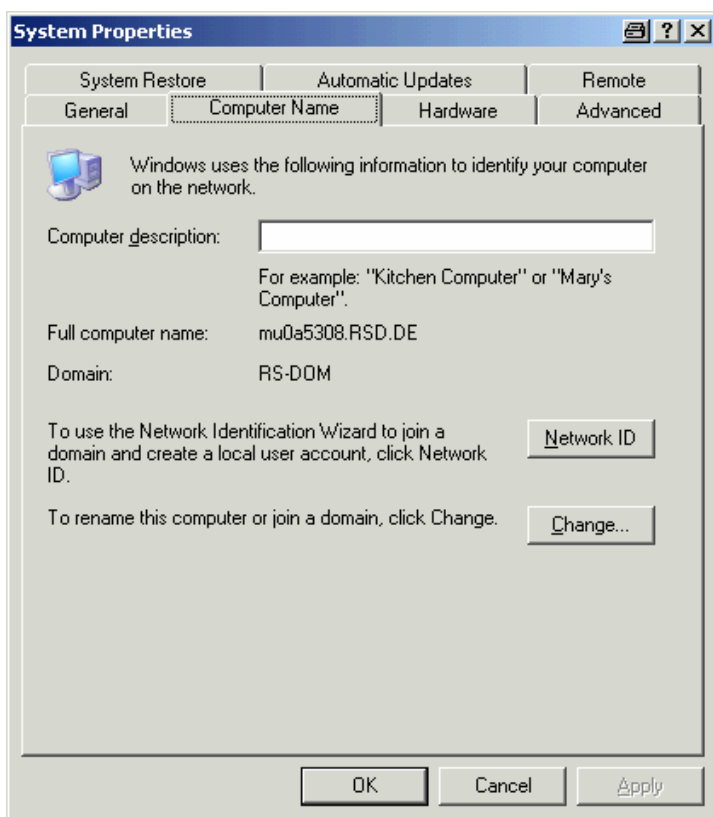

### To change the domain or workgroup

---

**Note:** Before you change other settings than described here, contact your network administrator.

---

1. In the **Start** menu, select **Settings, Control Panel** and then select **System**.  
The **System Properties** dialog is displayed.
2. Select the **Computer Name** tab.

3. Click the **Change** button.

The dialog box for changing the computer name, domain and workgroup is displayed.

4. Enter a **Domain** or **Workgroup**.
5. Confirm the changes with **OK**.
6. If you are now prompted to restart the instrument, click **Yes**.  
Windows will restart the system.

## To operate the instrument without a network

If you want to operate the instrument either temporarily or permanently without a network connection, no special measures are necessary in contrast to Windows NT. Windows XP automatically detects the interruption of the network connection and does not set up the connection when the instrument is switched on.

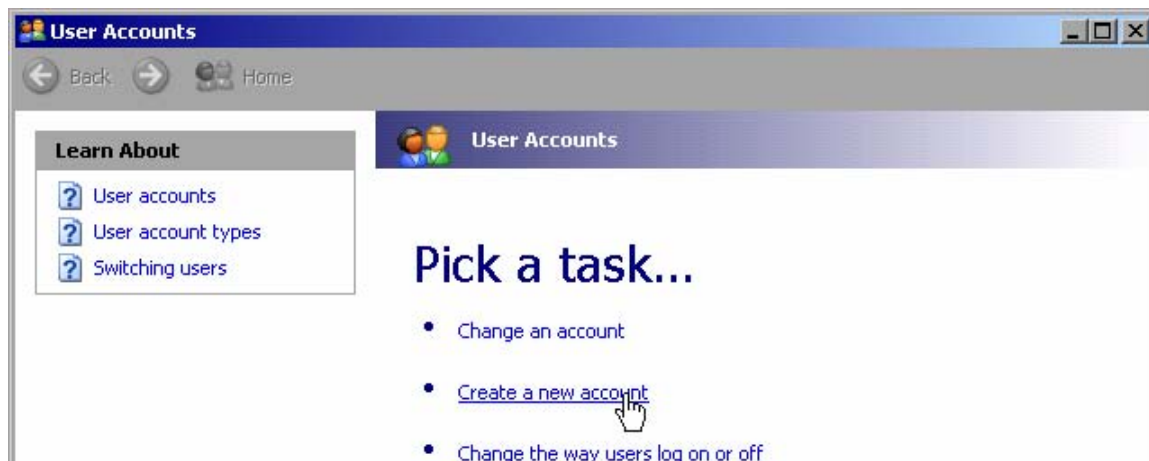

If you are not prompted to enter the user name and password, proceed as described in the section "To reactivate the automatic login mechanism".

## To create users

After the software for the network has been installed, the instrument will issue an error message the next time it is switched on, because there is no user named "instrument" (= user ID for Windows XP automatic login) in the network. Thus, a matching user must be created in Windows XP and in the network, the password must be adapted to the network password, and the automatic login mechanism must then be deactivated.

The network administrator is responsible for creating new users in the network. A new user can be created on the instrument by using the User Account wizard:

1. In the **Start** menu, select **Settings, Control Panel** and then select **User Accounts**. The wizard for managing the user starts with the **Pick a task** dialog box.

2. Click **Create a new account**. The dialog box for entering a new computer name is displayed.

3. Enter the name of the new user in the text field and click **Next**. The **Pick an account type** dialog box for defining the user's rights is displayed.

4. Select **Computer administrator**.
5. Click the **Create Account** button. The new user has now been created.

---

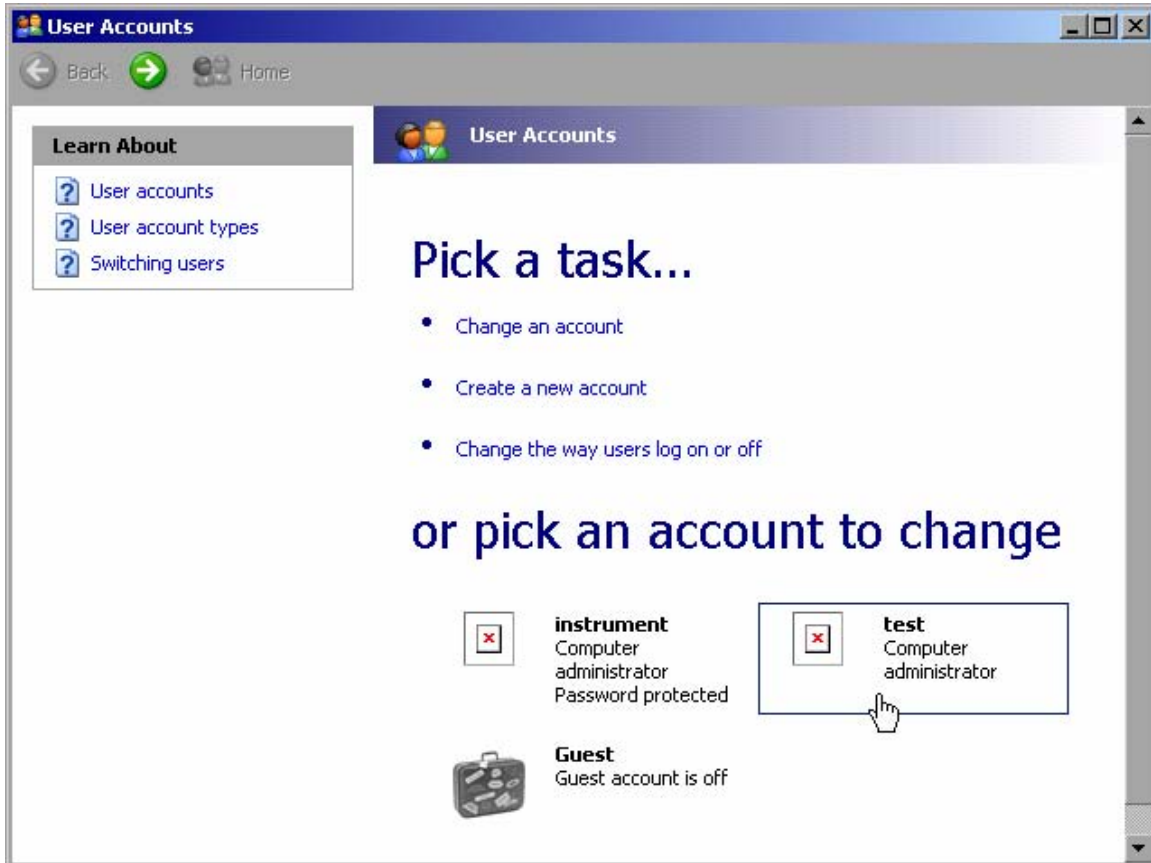

**Note:** Proper firmware function requires administrator rights.

---

### To change the user password

After the new user has been created on the instrument, the password must be adapted to the network password. This is also done by using the User Account wizard.

1. In the **Start** menu, select **Settings, Control Panel** and then select **User Accounts**. The wizard for managing the user starts with the **Pick a task** dialog box.

2. Click the desired user account (in the example: user **Test**). The dialog box for selecting the desired action is displayed.

3. Click **Create a password**.

The dialog box for entering a new password is displayed.

## 4. Enter the new password in the upper text line and repeat it in the following line.

5. Click the **Create Password** button (at the end of the page).

The new password is now active.

## To log on to the network

At the same time you log on to the operating system, you are automatically logged on to the network. As a prerequisite, the user name and the password must be identical under Windows XP and on the network.

## To deactivate the automatic login mechanism

When shipped, the instrument is already configured to automatically log on under Windows XP. To deactivate the automatic login mechanism, perform the following steps:

1. In the **Start** menu, select **Run**.  
The **Run** dialog box is displayed.
2. Enter the command `C:\R_S\INSTR\USER\NO_AUTOLOGIN.REG`.
3. Press the **ENTER** key to confirm.  
The automatic login mechanism will be deactivated. The next time you switch on the instrument, you will be prompted to enter your user name and password before the firmware is started.

## To reactivate the automatic login mechanism

1. In the **Start** menu, select **Run**.  
The **Run** dialog box is displayed.
2. Enter the command C:\R\_S\INSTR\USER\AUTOLOGIN.REG.
3. Press the **ENTER** key to confirm.  
The automatic login mechanism will be reactivated. It will be applied the next time the instrument is switched on.

## To map network drives

1. Press the **FILE** key.
2. Press the **File Manager** softkey.
3. Press the **More** softkey.
4. Press the **Network Drive** softkey.  
The **Map Network Drive** dialog box is displayed.

5. Press the **Map Network Drive** softkey to set the focus on the **Drive** list.
6. Press **ENTER** to open the network drive list and select the drive you want to map using the arrow keys.
7. If you want the connection to be set up automatically each time the instrument is started, in the **Map Network Drive** dialog box, activate the **Reconnect at logon** option.
8. If you want to connect using a different user name, activate the **Connect using a different user name** option.  
The **Map Network Drive** dialog box is extended by the **User name** and **Password** fields.

9. Enter your user name and password.
10. Confirm with **OK**.  
The drive is displayed in the Explorer.

---

**Note:** Only networks are connected that you authorized to access.

---

### To disconnect network drives

1. Press the **FILE** key.
2. Press the **File Manager** softkey.
3. Press the **More** softkey.
4. Press the **Network Drive** softkey.
5. Press the **Disconnect Network Drive** softkey.  
The **Disconnect Network Drive** dialog box is displayed.
6. In the **Drive** list, select the drive you want to disconnect.
7. Confirm with **OK**.

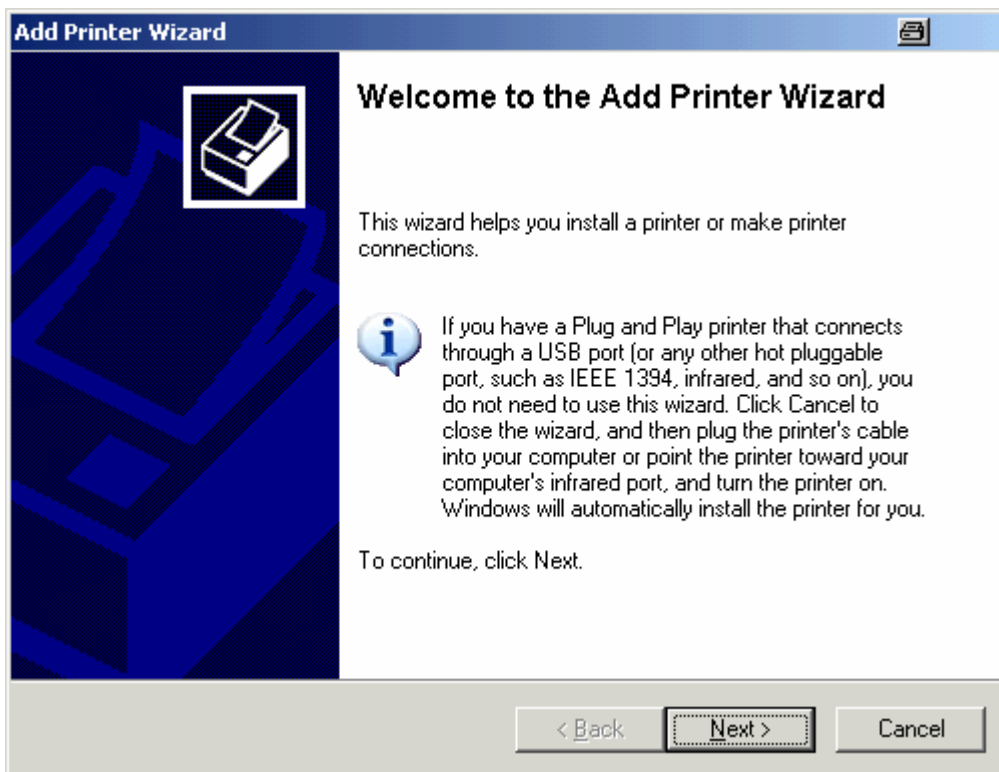

## To install a network printer

After installation the instrument must be configured for printout with this printer. How to select and configure printers is described in chapter 2, section "R&S FSL Setup".

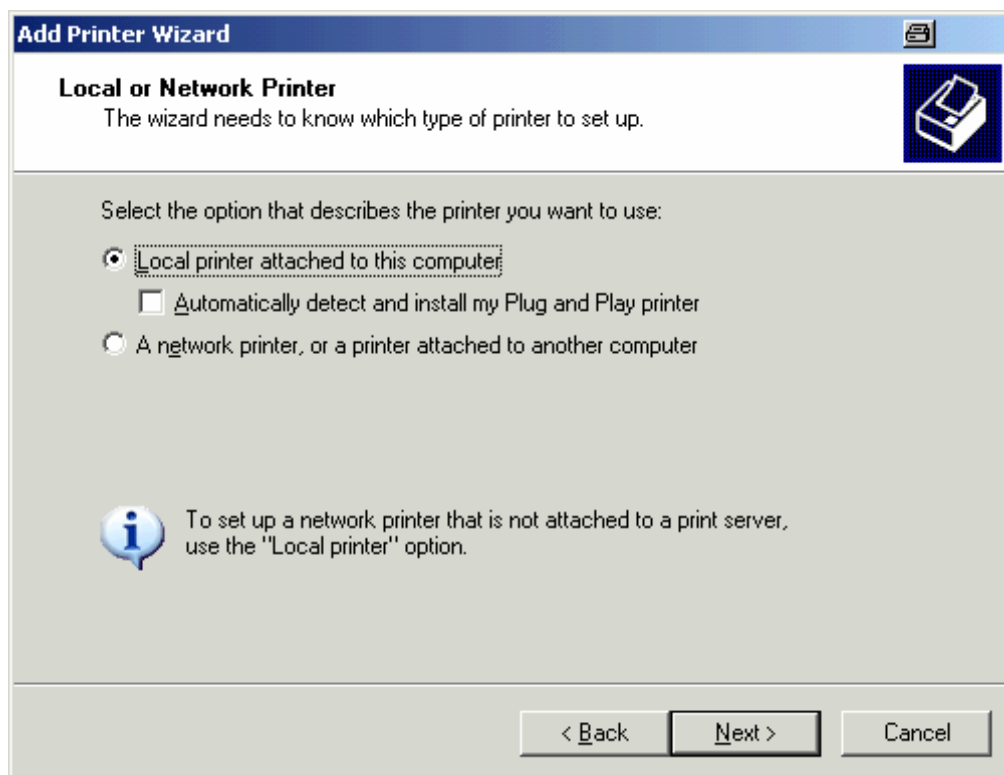

1. Press the **Print** key on the front panel.  
The menu will be displayed.
2. Press the **Install Printer** softkey to open the **Printers and Faxes** dialog box.

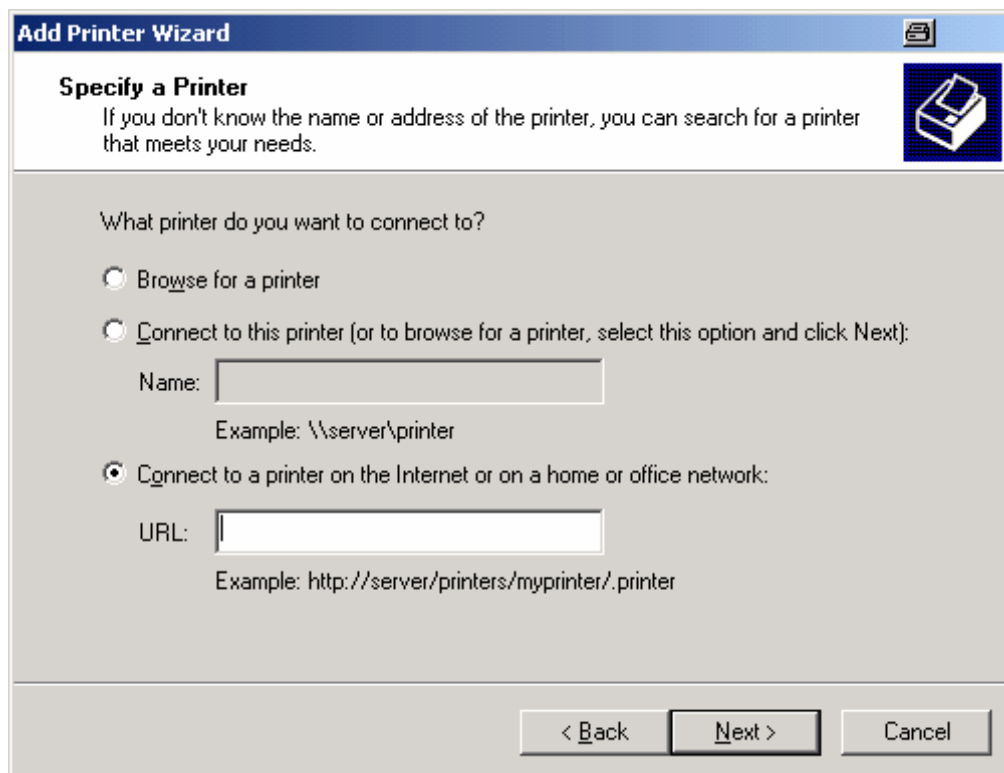

3. Mark the focused **Add Printer** list item by pressing the **RIGHTARROW** key and confirm by pressing the **ENTER** key.  
The printer wizard with its first pane is displayed.

4. Press the rotary knob or **ENTER** key to continue.  
The **Local or Network Printer** pane is displayed.

5. Press the **DNARROW** key to activate the **A network printer, or a printer attached to another computer** option.
6. Confirm by pressing **ENTER** key.  
The **Specify a Printer** pane is displayed.

7. Confirm the activated **Browse for a printer** option by pressing the **ENTER** key.

8. Focus the **Next** button using the tab keys and confirm by pressing the **ENTER** key. All available printers are displayed.

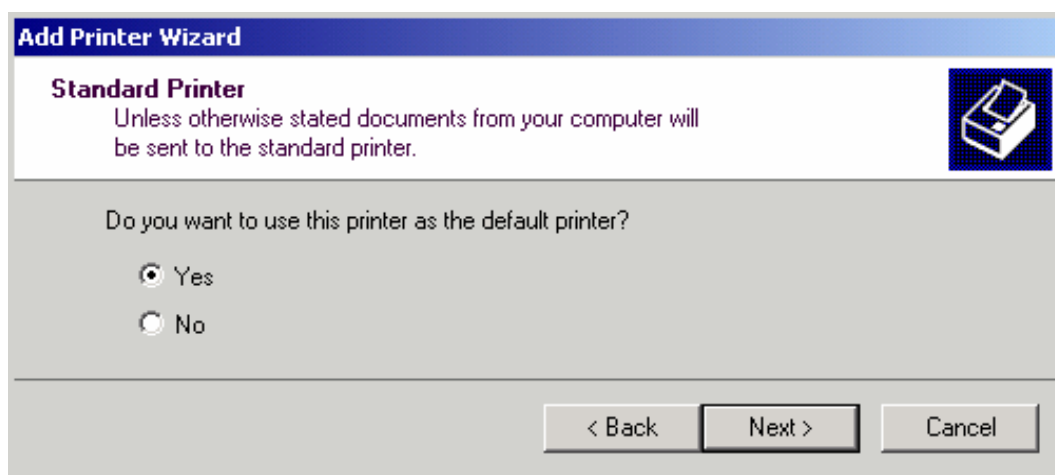

9. Mark a printer using the arrow keys and confirm by pressing the **ENTER** key.
10. When you are prompted to confirm the installation of a suitable printer driver, press the **ENTER** key. The available printer drivers are displayed.

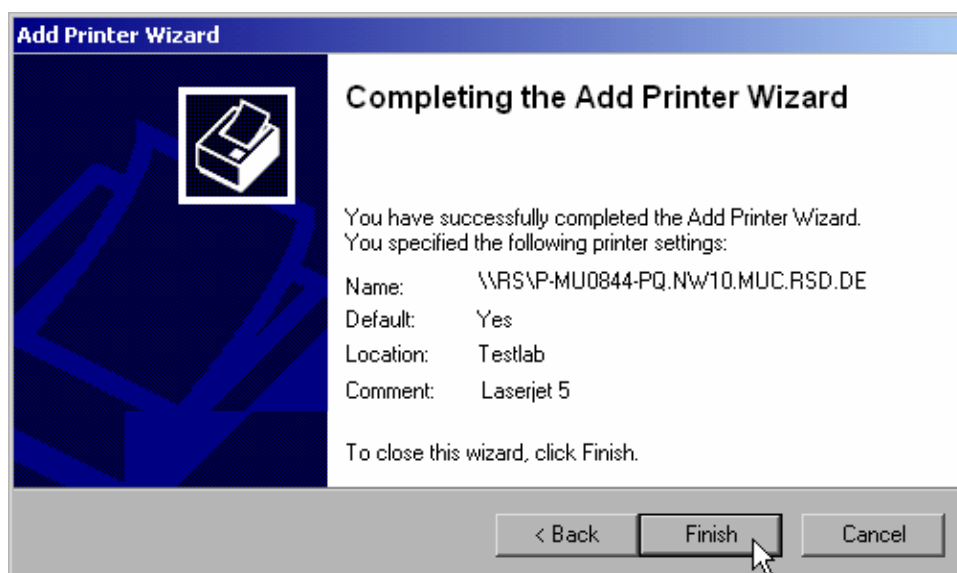

11. In the **Manufacturers** list, mark the appropriate manufacturer using the arrow keys and confirm by pressing the **ENTER** key. In this example, an HP Laserjet 5 printer is installed as a network printer.
12. Press the **FIELD RIGHT** key to go to the **Printers** list.

13. In the **Printers** list, mark the appropriate printer driver using the arrow keys and confirm by pressing the **ENTER** key.
14. If the desired printer type is not in the list, its driver has not yet been installed. In this case, focus the **Have Disk** button and confirm by pressing the rotary knob or the **ENTER** key. Insert the disk with the corresponding printer driver. Close the **Install From Disk** dialog box (**OK** button) and select the desired printer driver.
15. Focus the **Next** button using the tab keys and confirm by pressing the **ENTER** key. The **Standard Printer** pane is displayed.

16. If you want to set the printer as default printer, press the **FIELD RIGHT** key and select **Yes** using the **UPARROW** key.
17. Focus the **Next** button using the tab keys and confirm by pressing the **ENTER** key. The final pane of the installation wizard is displayed.

18. Focus the **Finish** button using the tab keys and confirm by pressing the **ENTER** key.

## To share directories (only with Microsoft networks)

Sharing directories makes data available for other users. This is possible only in Microsoft networks. Sharing is a property of a file or directory.

1. In the **Start** menu, select **Programs, Accessories** and then select **Windows Explorer**.
2. Click the desired folder with the right mouse button.
3. In the context menu, select **Sharing and Security**.  
The dialog for sharing a directory is displayed.

4. Open the **Sharing** tab.
5. Select the **Share this folder** option.
6. You can change the following settings as necessary:

<b>Share name</b>	Name under which the directory is displayed in the Explorer
<b>Comment</b>	Comments regarding the shared directory
<b>User limit</b>	Maximum number of users who can access the directory simultaneously
<b>Permissions</b>	User access rights (read only, read and write, all)
<b>Caching</b>	Local buffering of the directory contents for quicker access

7. Click **OK** to confirm the settings.  
The drive will be shared and, in the Explorer, marked with a hand under the directory symbol:

## Remote Operation with XP Remote Desktop

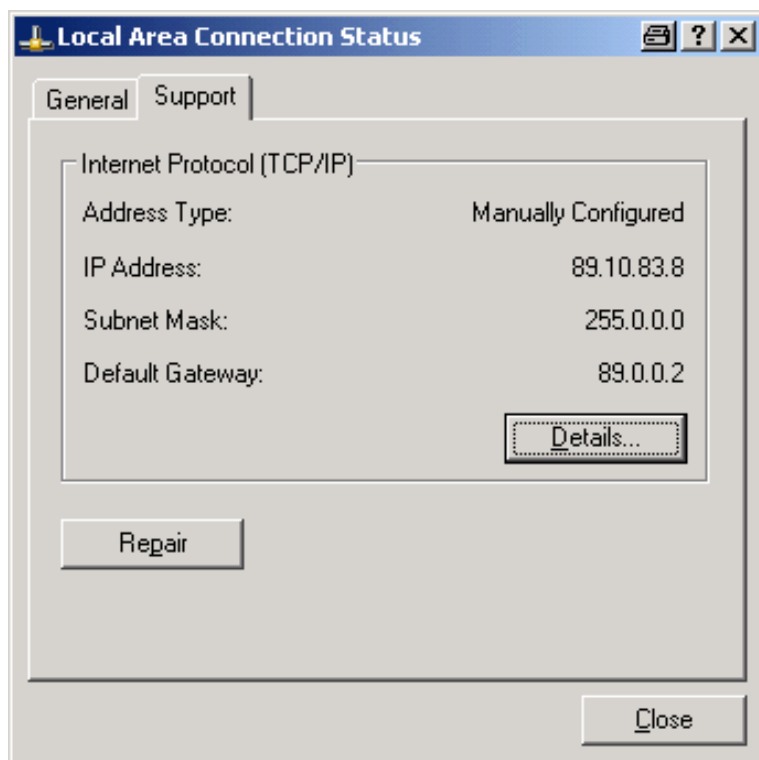

In production test and measurement, a common requirement is central monitoring of the T&M instruments for remote maintenance and remote diagnostics. Equipped with the Remote Desktop software of Windows XP, the R&S FSL ideally meets requirements for use in production. The computer that is used for remote operation is here called "controller":

- Access to the control functions via a virtual front panel (*soft front panel*)
- Printout of measurement results directly from the controller
- Storage of measured data on the controller's hard disk

The analyzer is connected via a LAN, in which case Windows XP also supports a connection via a modem. This section describes the configuration of the R&S FSL and the Remote Desktop Client of the controller. Details on how to set up a modem connection are described in the Window XP documentation.

### To configure the R&S FSL for remote operation

1. In the **Start** menu, select **Settings** and then select **Network Connections**.
2. In the **Network Connections** dialog box, select **Local Area Connection**. The **Local Area Connection Status** dialog box is displayed.

3. Open the **Support** tab. The current TCP/IP configuration is displayed.
4. If, in the **Address Type** field, **Assigned by DHCP** is displayed, proceed with the next step. Otherwise, simply note the IP address and proceed with step 6.
5. Create a fixed IP address for the TCP/IP protocol as described in chapter 2 "Preparing for Use", section "Configuring the Network Card".

**Note:** To avoid problems, use a fixed IP address. When a DHCP server is used, a new IP address is assigned each time the instrument is restarted. This address must first be determined on the instrument itself. Thus, using a DHCP server is not suitable for remote operation of the R&S FSL.

6. In the **Start** menu, select **Settings, Control Panel** and then select **System**.

7. Open the **Remote** tab.
8. Under **Remote Desktop**, activate the **Allow users to connect remotely to this computer** option.
9. If necessary, click **Select Remote Users** and select users created on the R&S FSL who are to be given access to the R&S FSL also via Remote Desktop.

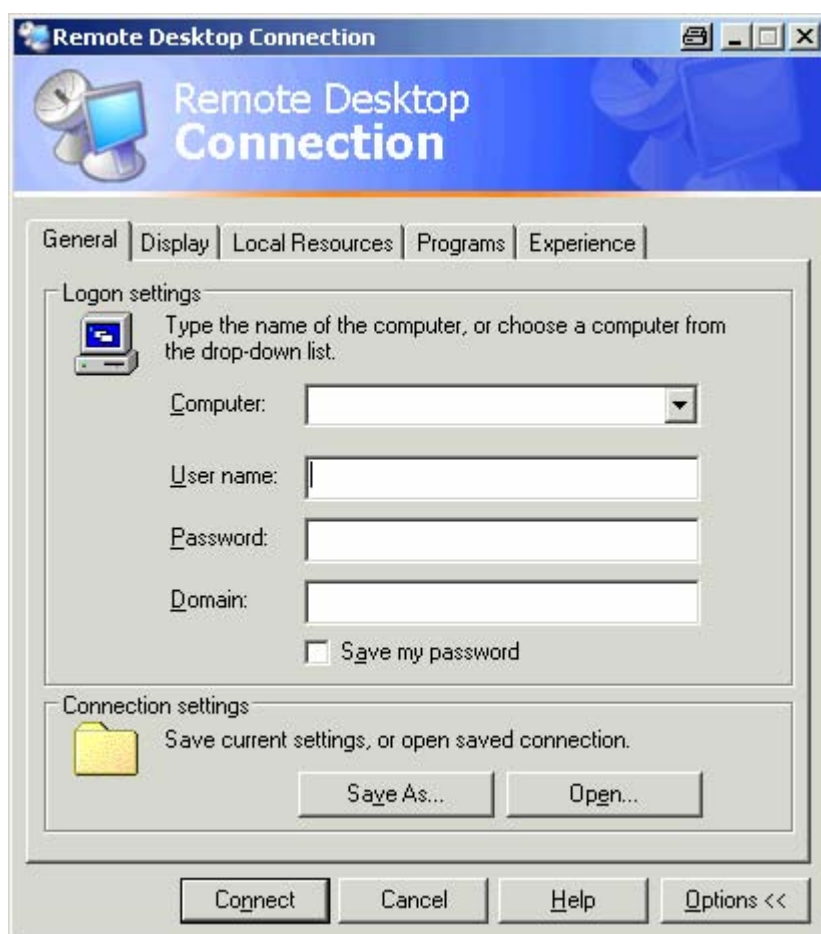

**Note:** The user account under which configuration is carried out is automatically enabled for Remote Desktop.

10. Click **OK** to confirm the settings.  
The R&S FSL is now ready for connection setup with the Remote Desktop program of the controller.

## To configure the controller

**Note:** With Windows XP, Remote Desktop Client is part of the operating system and can be accessed via **Start – Programs – Accessories – Communications – Remote Desktop Connection**. For other versions of Windows, Microsoft offers the Remote Desktop Client as an add-on.

1. In the **Start** menu, select **Programs, Accessories, Communications** and then select **Remote Desktop Connection**.  
The **Remote Desktop Connection** dialog box is displayed.
2. Click the **Options >>** button.  
The dialog box is expanded to display the configuration data.

3. Open the **Experience** tab.  
The settings on this tab are used to select and optimize the connection speed.

4. In the list, select the appropriate connection (for example: LAN (10 Mbps or higher)). Depending on your selection (and how powerful the connection is), the options are activated or deactivated.
5. If you want to improve the performance, you can deactivate the **Desktop background**, **Show contents of window while dragging** and **Menu and window animation** options.

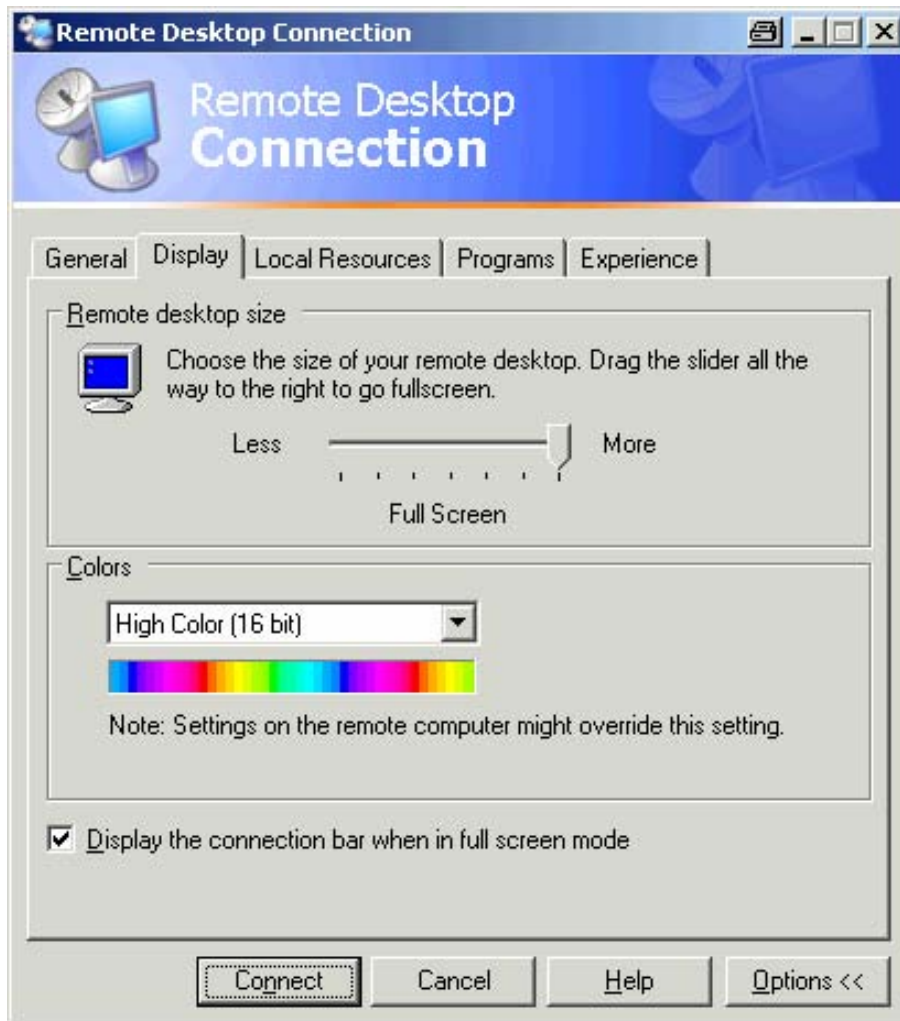

6. Open the **Local Resources** tab for enabling printers, local drives and serial interfaces.

7. If you will need to access drives of the controller from the R&S FSL (e.g. in order to store settings or to copy files from the controller to the R&S FSL), activate the **Disk drives** option.  
Windows XP will then map drives of the controller to the like network drives.
8. If you want to use printers connected to the controller by accessing them from the R&S FSL, activate the **Printers** options. Do not change the remaining settings.

9. Open the **Display** tab.

The options for configuring the R&S FSL screen display are displayed.

10. Under **Remote desktop size**, you can set the size of the R&S FSL window on the desktop of the controller.

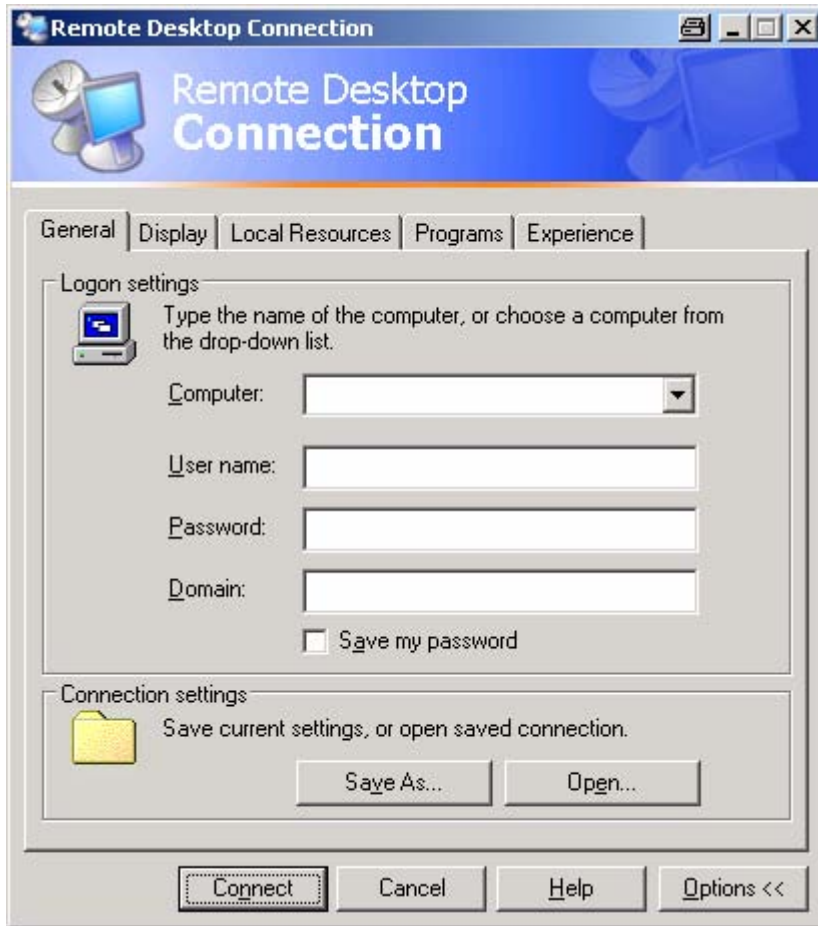

11. Under **Colors**, do not change the settings.

12. Set the **Display the connection bar when in full screen mode** option:

- If activated, a bar showing the network address of the R&S FSL will appear at the top edge of the screen. You can use this bar to reduce, minimize or close the window.
- If deactivated, the only way you can return to the controller desktop from the R&S FSL screen in full screen mode is to select **Disconnect** from the **Start** menu.

## To set up a connection to the R&S FSL

1. In the **Remote Desktop Connection** dialog box (see "To configure the controller"), open the **General** tab.

2. In the **Computer** field, enter the IP address of the R&S FSL.
3. In the **User name** field, enter "instrument".
4. In the **Password** field, enter "123456".
5. If you want to save the connection configuration for later use:
  - Click the **Save As** button.  
The **Save As** dialog box is displayed.
  - Enter the name for the connection information (\*.RDP).
6. If you want to load an existing connection configuration:
  - Click the **Open** button.  
The **Open** dialog box is displayed.
  - Select the \*.RDP file.
7. Click the **Connect** button.  
The connection will be set up.

8. If, on the **Local Resources** tab, the **Disk drives** option is activated, a warning is displayed indicating that the drives are enabled for access from the R&S FSL.

9. Click **OK** to confirm the warning.  
After a few moments, the R&S FSL screen is displayed. If the R&S FSL application is displayed on screen immediately after connection setup, shutdown and restart are not necessary.
10. If a dark screen appears or a dark square appears in the upper left-hand corner of the screen, you must restart the R&S FSL in order to see the modified screen resolution:
- Press the key combination **ALT+F4**.  
The R&S FSL firmware will be shut down, which may take a few seconds.
  - On the desktop, double-click the R&S FSL Analyzer Interface icon.

The firmware will restart and then automatically open the **Soft Front Panel**, i.e. the user interface on which all front panel controls and the rotary knob are mapped to buttons. To deactivate or activate the **Soft Front Panel**, press the F6 key.

After the connection is established, the R&S FSL screen is displayed in the **Remote Desktop** application window.

You can operate all keys and softkeys by using the mouse. The rotary knob is simulated by means of the knob buttons.

The Windows XP **Start** menu can be made available by expanding the **Remote Desktop** window to full size.

During the connection with the controller, the login entry is displayed on the R&S FSL screen.

## To end Remote Desktop control

The connection can be terminated by the controller or by a user at the R&S FSL:

- On the controller, close the **Remote Desktop** window.

The connection to the R&S FSL is terminated (any time is possible).

- On the R&S FSL, a user logs on.

The connection to the controller is terminated as a result. A message is displayed on the controller display indicating that another user has assumed control of the instrument.

### To restore the connection to the R&S FSL

- Follow the instructions provided in the section "To set up a connection to the R&S FSL". If the connection is terminated and then restored, the R&S FSL remains in the same state.

### To deactivate the R&S FSL via remote operation

1. Click the R&S FSL soft front panel and close the application with the key combination **ALT+F4**.
2. Click the desktop and press the key combination **ALT+F4**.  
A safety query is displayed to warn you that the instrument cannot be reactivated via remote operation and asks you whether you want to continue the shutdown process.
3. Respond to the safety query with **Yes**.  
The connection with the controller is terminated and the R&S FSL is deactivated.

## RSIB Protocol

When shipped, the instrument is equipped with the RSIB protocol, which allows you to control the instrument not only via Visual C++ and Visual Basic programs but also via the two Windows applications WinWord and Excel as well as via National Instruments LabView, LabWindows/CVI and Agilent VEE.

For more information about the RSIB protocol, refer to the Operating Manual on CD.
