

## Microwave Signal Generators R&S SMR 50/60

High-performance, cost-effective and reliable up to 60 GHz

- ◆ Extension of the successful R&S SMR family by two models
  - R&S SMR 50 (10 MHz to 50 GHz)
  - R&S SMR 60 (10 MHz to 60 GHz)
- ◆ CW generator with pulse modulation and digital frequency sweep
- ◆ High output level
  - R&S SMR 50 >0 dBm (50 GHz)
  - R&S SMR 60 >–4 dBm (60 GHz)
- ◆ Fast quasi-analog ramp sweep
- ◆ Level sweep with a minimum step time of 1 ms
- ◆ Easily upgradeable to AM/FM signal generator and synthesized sweep generator with analog ramp sweep owing to flexible options concept
- ◆ Optional pulse generator for radar and EMC applications
- ◆ Compact, lightweight, user-friendly – ideal in the lab and for field applications
- ◆ 3-year calibration cycle

**ROHDE & SCHWARZ**

# The allrounder with future-proof design

## Ease of operation

- ◆ High-contrast LC display
- ◆ Online help including IEC/IEEE-bus commands
- ◆ Simple and self-explanatory settings
- ◆ Storage of menu levels
- ◆ One-hand operation with EasyWheel

## Wide frequency range

- ◆ 1 GHz to 50 GHz (R&S SMR50)
- ◆ 1 GHz to 60 GHz (R&S SMR60)
- ◆ Extension of lower frequency limit to 10 MHz (option R&S SMR-B11)
- ◆ Frequency resolution 1 kHz or 0.1 Hz (option R&S SMR-B3)

## High output power

- ◆ Without option R&S SMR-B18
  - R&S SMR50 >+3 dBm (at 50 GHz)
  - R&S SMR60 >0 dBm (at 60 GHz)
- ◆ With option R&S SMR-B18
  - R&S SMR50 >0 dBm (at 50 GHz)
  - R&S SMR60 >−4 dBm (at 60 GHz)

## High-precision level control

- ◆ High-precision, frequency-response-compensated level control
- ◆ Setting range extendible to −110 dBm (option R&S SMR-B18)

## Three instruments in one

- ◆ CW generator with pulse modulation capability (standard version)
- ◆ Signal generator with AM/FM SCAN and LF generator (option R&S SMR-B5)
- ◆ Synthesized sweep generator with analog ramp sweep (option R&S SMR-B4)

## Optional pulse generator (R&S SMR-B14)

- ◆ Operating modes: single pulse, double pulse (automatically or externally triggered), delayed pulse (externally triggered), gate mode (external)
- ◆ Pulse repetition 100 ns to 85 s
- ◆ Pulse width 20 ns to 1 s

## Sweep capabilities

- ◆ Digital RF and level sweep (standard version)
- ◆ Analog ramp sweep (RF sweep, option R&S SMR-B4)
- ◆ Maximum sweep rate for ramp sweeps at least 600 MHz/ms ( $f > 2$  GHz)
- ◆ Digital sweep of LF generator (with option R&S SMR-B5)
- ◆ 10 user-selectable frequency markers for RF sweep
- ◆ Operating modes: automatic, single-shot, manual, externally triggered, linear or logarithmic

## Memory

- ◆ Space for 50 complete instrument setups

# CW, signal or synthesized sweep generator

## The CW generator

The R&S SMR50/60 are CW generators with pulse modulation capability and a lower limit frequency of 1 GHz. They cover the range up to 50 GHz (R&S SMR50) and 60 GHz (R&S SMR60). The lower limit can be expanded to 10 MHz by the Frequency Extension 0.01 GHz to 1 GHz (option R&S SMR-B11).

Owing to their excellent price/performance ratio the two models are ideal for economical microwave test setups up to 60 GHz. Should the measurement tasks become more demanding, both models can be upgraded any time by means of options to give an AM/FM signal generator or a synthesized sweep generator featuring fast, fully synthesized, analog ramp sweep.

## Excellent spectral purity

The R&S SMR50/60 stand out from other generators for their excellent spectral purity. Advanced frequency synthesis makes for low SSB phase noise and high spurious suppression, both of which are for example prerequisites for reliable receiver measurements. Special microwave filters in the output path of the instrument ensure excellent harmonics suppression. This is necessary to obtain unequivocal results in scalar network analysis measurements.

## High-precision output level

Microwave signal generators are frequently used for calibrating test receivers. This task calls for a highly accurate and stable output level settable with high resolution. This is ensured by a high-precision, frequency-response-compensated level control. A minimum level of  $-20$  dBm can be set. This range can be extended to  $-110$  dB with the optional RF Attenuator R&S SMR-B18.

## Stable output frequency

The crystal reference built in as standard ensures an accurate, low-drift output frequency. The R&S SMR50/60 can be fitted with the optional OCXO Reference Oscillator R&S SMR-B1 to satisfy the most stringent requirements in terms of accuracy and aging.

## High output level saves you real cash

All microwave test setups involve high losses caused by the use of long cables, power dividers, directional couplers and RF relays. Expensive microwave amplifiers are usually the only means to remedy this. But not with the R&S SMR50/60: the high output power provided by these generators eliminates the need for such a costly component.

FIG 1: SSB phase noise at 10 GHz

FIG 2: Typical max. output level as a function of frequency with RF Attenuator R&S SMR-B18

# Options and applications

## Application-oriented frequency resolution

The standard frequency resolution of 1 kHz of the R&S SMR50/60 offers a comfortable margin for most applications, for example frequency response measurements in the laboratory and in production and servicing. To satisfy more stringent requirements, e.g. for scientific applications and research, the R&S SMR-B3 option is available to improve frequency resolution to 0.1 Hz.

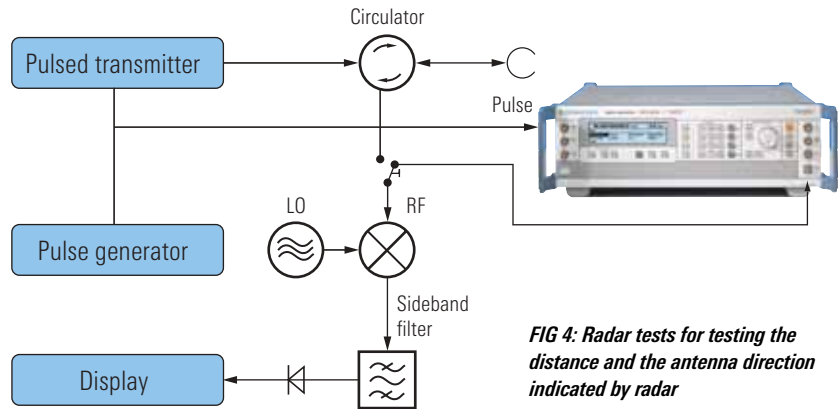

## Pulse modulator included

Pulse modulation is still the most important modulation mode for microwave applications. Each of our basic units is, therefore, equipped with a high-quality pulse modulator. The on/off ratio is better than 80 dB, the rise/fall time shorter than 12 ns. Pulse widths of up to 25 ns are possible.

FIG 3 illustrates that the R&S SMR50/60 are the ideal generators for use in the development, production and maintenance of radar equipment.

## Pulse generator option

The optional Pulse Generator R&S SMR-B14 is an ideal complement to the pulse modulator for generating single and double pulses with pulse frequencies up to 10 MHz. The pulse generator can be

**FIG 4: Radar tests for testing the distance and the antenna direction indicated by radar**

triggered externally and operated in the external gate mode. The pulse width and delay are user-selectable over a wide range.

## Pulse radar with rotating antenna

Combined SCAN and pulse modulation provides the type of signals occurring in pulse radar applications with rotating antenna.

In the example shown in FIG. 4, the external pulse from the pulse generator or radar display is applied to the external pulse input of the R&S SMR50/60 and used as a trigger for the internal pulse generator and modulator.

The main advantage of this kind of trigger is that it can be delayed to simulate distance and direction and to check the values on the display.

## Doppler effects

The combination of pulse and frequency modulation (FMDC) simulates Doppler effects and also chirp signals.

## Digital frequency and level sweeps

The digital frequency sweep with step times from 10 ms allows convenient frequency response measurements on microwave circuits. The start and stop frequencies are user-selectable. A trigger input enables synchronous operation with external equipment.

The very fast level sweep (with step times of min. 1 ms) up to 20 dB allows, for example, amplifier or mixer compression to be determined.

**FIG 3: Pulse modulator, universally used in microwave applications such as radar measurements**

### The world of R&S SMR applications:

The R&S SMR50/60 are ideal for use as a

- ◆ Source for optical components
- ◆ Source for radar receiver tests
- ◆ Source for scalar network analysis
- ◆ Normal CW source for LO substitution

### The signal generator

#### AM/FM/SCAN modulator option

The optional AM/FM/SCAN Modulator R&S SMR-B5 turns the models into fully-fledged signal generators with AM and FM modulation capability. The option also includes an LF generator for sinewave and squarewave signals from 0.1 Hz to 10 MHz.

#### FM and FSK

The FM modulator has a modulation bandwidth from DC to 5 MHz. Digital frequency shift keying (FSK) is possible with data rates from 0 Hz to 2 MHz.

#### Simultaneous modulation modes

All modulation modes of the R&S SMR50/60 can be combined. This allows the generation of complex modulation signals for modern communication and location systems. The combination of pulse modulation and FM simulates Doppler effects or chirp signals. Simultaneous AM and pulse modulation provides the types of signal occurring in pulse radar applications with rotating antenna. The combination of FM and AM can be used to check fading effects of FM receivers.

**FIG 5: Network analysis with R&S SMR50/60 as synthesized sweep generator**

### The synthesized sweep generator

#### Analog ramp sweep option

The analog ramp sweep mode corresponds to the analog sweep of classic sweep generators except that the sweep is fully synchronized over the complete range. In this way, the excellent frequency accuracy of digital step sweeps is achieved, and this at much higher sweep rates of min. 600 MHz/ms ( $f > 2$  GHz).

In conjunction with scalar network analyzers or suitable spectrum analyzers, realtime adjustment of microwave filters can be performed, for example (FIG 5).

To mark important frequency ranges such as filter bandwidths or the position of attenuation poles, the R&S SMR50/60 have 10 user-selectable frequency markers which can be output as pulse markers at the marker output (TTL level) or alternatively modulated on the RF level as level markers (level reduction of 1 dB).

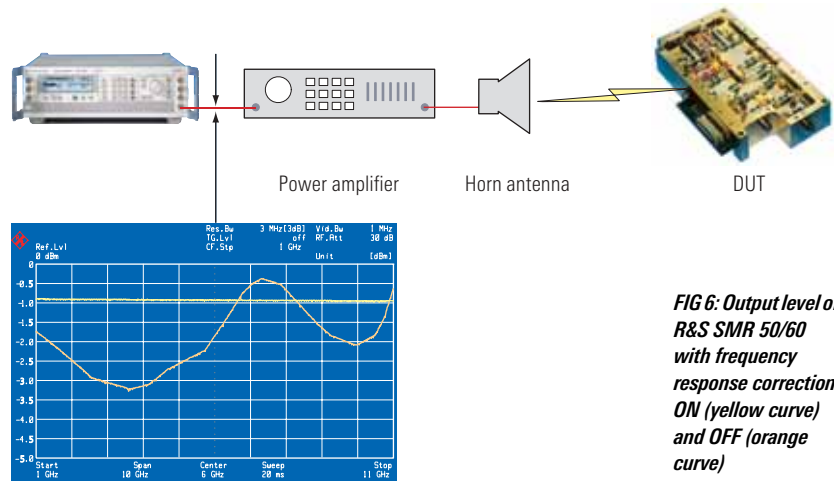

## User-defined correction of external frequency responses

The user correction function is extremely useful for fast RF sweeps, for example to compensate for nonlinearities of an amplifier.

The known frequency response can be compensated for by entering level correction values for up to 160 frequency points.

In addition, the R&S SMR50/60 can automatically measure the level correction values at a keystroke with the aid of external power meters such as the R&S NRVS or R&S NRVD. The correction values for the frequencies between these points are determined by means of automatic interpolation (FIG 6).

**FIG 6: Output level of R&S SMR 50/60 with frequency response correction ON (yellow curve) and OFF (orange curve)**

## External level control using a power meter

A very simple method is the external level control allowing very high level accuracy (FIG 7).

**FIG 7: External level control for Microwave Signal Generators R&S SMR50/60**

## Scalar network analysis

The Microwave Signal Generators R&S SMR50/60 used as tracking generators in conjunction with the Spectrum Analyzer R&S FSP and the option R&S FSP-B10 provide a unique scalar network analysis function. This application features an extremely wide dynamic range, which allows, for example, filter resonances in the stop band to be displayed at very low levels.

Due to the user-definable frequency offset, measurements on frequency-converting DUTs can also be performed with this configuration.

**FIG 8: Scalar network analysis with Microwave Signal Generators R&S SMR50/60 and Spectrum Analyzer R&S FSP with option R&S FSP-B10**

50.000 000 000 0 GHz		0.0 dBm

The FM modulation menu shows the clear-cut representation of selectable parameters and current instrument status. Each setting can be made quickly and easily by means of the spinwheel and a few keys.

### Automatic measurement functions for production and test labs

The Save/Recall (red-framed) function provides convenient execution of standard test routines or frequently required sequences of different types of single measurements.

Up to 50 complete instrument setups can be stored.

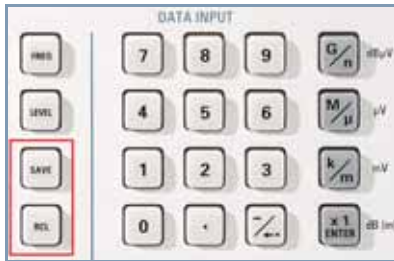

FIG 9: SAVE and RCL for storing and recalling settings

### Remote control to SCPI standard

The IEC/IEEE-bus remote control commands are in line with the SCPI guidelines. One of the advantages is that the user can exchange measuring instruments in an automatic system without having to modify the control software.

### Intelligent operating concept

#### Easy-to-follow menus

Neither multifunction keys nor obscure special functions burden the user. All functions are clearly arranged in menus. Menus and functions as well as parameter settings can conveniently and quickly be selected with a spinwheel.

FIG 10: General settings and menu selection with spinwheel, Back, Select and arrow keys

### Menu memories

Frequently used menu settings can be stored in two memories and called at a keystroke.

FIG 11: Storage of menu settings

### HELP Function

Explanatory remarks can be called up for each individual menu. This does away with wasting time in looking up functions in a manual.

FIG 12: Online help

# EasyWheel – the trick with the click

## Transparent menu structure

The EasyWheel makes it extremely simple to operate the R&S SMR50/60 user interface.

Just turn the wheel to go to the next menu item, then press the wheel to perform the desired function.

There is no easier way to operate a measuring instrument!

## Specifications

The specifications are valid under the following conditions:  
warmup time 30 minutes, specified environmental conditions met, calibration cycle adhered to and total calibration performed.  
Data designated "typ.", "overrange" or "underrange" are not warranted.

Frequency		
R&S SMR50		
Without option R&S SMR-B11	1 GHz to 50 GHz

f $\leq 15.625$ MHz	2.34375 MHz/ms
15.625 MHz < f $\leq 31.25$ MHz	4.6875 MHz/ms
31.25 MHz < f $\leq 62.5$ MHz	9.375 MHz/ms
62.5 MHz < f $\leq 125$ MHz	18.75 MHz/ms
125 MHz < f $\leq 250$ MHz	37.5 MHz/ms
250 MHz < f $\leq 500$ MHz	75 MHz/ms
500 MHz < f < 1 GHz	150 MHz/ms
1 GHz $\leq$ f $\leq 2$ GHz	300 MHz/ms
2 GHz < f $\leq 10$ GHz	600 MHz/ms
10 GHz < f $\leq 20$ GHz	1200 MHz/ms
20 GHz < f $\leq 40$ GHz	2400 MHz/ms
f > 40 GHz	4800 MHz/ms
Markers	10, user-selectable
MARKER output signal	TTL level, selectable polarity
X output	0 V to 10 V
BLANK output signal	TTL level, selectable polarity

<b>List mode</b>	
Frequency and level values can be stored in a list.	
Permissible level variation	max. 20 dB
Operating modes	auto, single-shot, manual or externally triggered
Maximum number of frequency/level entries	2003
Maximum number of lists	10
Step time	1 ms to 5 s
Resolution	0.1 ms
<b>Memory for instrument setups</b>	
Storable setups	50
<b>Remote control</b>	
System	IEC 625-1 (IEEE 488.1)
Command set	SCPI 1995.0
Connector	24-contact Amphenol
IEC/IEEE-bus address	0 to 30, selectable
Interface functions	SH1, AH1, T6, L4, SR1, RL1, PP1, DC1, DT1, C0

- <sup>1)</sup> R&S SMR50: level <0 dBm.  
R&S SMR60: level <0 dBm at f  $\leq 50$  GHz or <-4 dBm at f >50 GHz.
- <sup>2)</sup> Specifications for harmonics above 50 GHz (R&S SMR50) and 60 GHz (R&S SMR60) only typical.
- <sup>3)</sup> The maximum level is reduced by up to 2 dB in the temperature range 35 °C to 55 °C.
- <sup>4)</sup> From 10 MHz to 50 MHz, the specified total uncertainty is only valid in the temperature range 15 °C to 35 °C. The uncertainty outside this temperature range is likely to be higher by max. 0.7 dB.
- <sup>5)</sup> The modulation depth adjustable with adherence to the AM specifications continuously decreases from 6 dB below the maximum level up to the maximum level.
- <sup>6)</sup> This specification does not apply
  - a) to non-interrupting level setting (ATTENUATOR MODE FIXED) if option R&S SMR-B18 is used,
  - b) to levels below -8 dBm without option R&S SMR-B18,
  - c) to external level control mode (EXT ALC).
- <sup>7)</sup> 50 Ω or 600 Ω selectable by means of internal jumpers.
- <sup>8)</sup> Only valid if level control set to OFF (ALC OFF).
- <sup>9)</sup>  $\leq 30$  ms switching time at 1 GHz, 2 GHz, 10 GHz, 20 GHz and 40 GHz.

## General data

Temperature resistance	
Operating temperature range	0°C to +55°C meets DIN EN 60068-2-1 and DIN EN 60068-2-2
Storage temperature range	-40°C to +70°C
Damp heat	95% relative humidity, cyclic test at +25°C/+40°C; meets DIN EN 60068-2-3
Mechanical resistance	
Vibration, sinusoidal	5 Hz to 150 Hz, max. 2 g at 55 Hz, 0.5 g const. in range 55 Hz to 150 Hz, meets DIN EN 60068-2-6, DIN EN61001-1 and MIL-T-28800D, class 5
Vibration, random	10 Hz to 300 Hz, acceleration 1.2 g (rms)
Shock	40 g shock spectrum, meets MIL-STD-810D, MIL-T-28800D, class 3/5
Electromagnetic compatibility	
	meets EN 55011 and EN 61326-1 (EMC directive of EU)
Radiated susceptibility	10 V/m
Power supply	
	100 V to 120 V (AC), 50 Hz to 400 Hz, 200 V to 240 V (AC), 50 Hz to 60 Hz, autoranging, max. 300 VA
Safety	
	meets DIN EN 61010-1, DIN EN 61001-1, UL 3111-1, CSA 22.2 No. 1010-1
Dimensions (W x H x D)	
	426.7 mm x 131.4 mm x 450 mm
Weight	
	<13.5 kg when fully equipped

## Ordering information

Order designation	Type	Order No.
Microwave Signal Generator	R&S SMR50	1134.9008.50
Microwave Signal Generator	R&S SMR60	1134.9008.60
Accessories supplied		
Power cable, operating manual		
Options		
OCXO Reference Oscillator	R&S SMR-B1	1104.5485.02
Frequency Resolution 0.1 Hz	R&S SMR-B3	1104.5585.02
Ramp Sweep	R&S SMR-B4	1104.5685.02
AM/FM/SCAN Modulator	R&S SMR-B5	1104.3501.03
Frequency Extension 0.01 GHz to 1 GHz <sup>1)</sup>	R&S SMR-B11	1104.4250.60
Pulse Generator	R&S SMR-B14	1104.3982.02
RF Attenuator 60 GHz <sup>1)</sup>	R&S SMR-B18	1135.2907.02
Rear Connectors for AF	R&S SMR-B21	1135.2407.02
Recommended extras		
Service Kit	R&S SMR-Z1	1103.9506.02
Interface Cable	R&S SMR-Z3	1134.9772.02
19" Rack Adapter	R&S ZZA-311	1096.3277.00

<sup>1)</sup> Factory-fitted option.
