Specifications apply under the following conditions:

Based on a 24-month calibration interval unless otherwise stated.

Data without tolerance limits is not binding.

During the production process, each instrument is calibrated in line with defined procedures. All measurement results, including measurement uncertainties of the calibration system, have to be within the published specification limits to release the individual instrument. The expanded measurement uncertainties of the calibration system used in the production process are determined with a coverage factor of $k = 2$ (normally approx. 95 % probability).
