The R&S®TSML radio network analyzer family

At a glance

The radio network analyzers of the R&S®TSML family are the ideal choice if you want to carry out quick, efficient, precise, and cost-effective measurements in order to optimize your mobile radio network.

Do you need to cover only one specific application? Does your work focus on only one of the following: WCDMA, IS-95 and CDMA2000® 1X[1], GSM, or RF power measurements? Do you want to buy only what you truly need? Then the R&S®TSML radio network analyzers are the right choice for you.

Family concept

We offer five different radio network analyzers, allowing you to choose the instrument that optimally matches your specific requirements. The R&S®TSMU radio network analyzer from Rohde & Schwarz, which offers unparalleled functionality, is already firmly established on the market. It has now been joined by the R&S®TSML family of analyzers, which includes four different types. Each type has been designed to cover a specific application.

◆ R&S®TSML-W: WCDMA PN scanner
◆ R&S®TSML-C: IS-95 and CDMA2000® 1X PN scanner
◆ R&S®TSML-G: GSM network scanner
◆ R&S®TSML-CW: RF power measurements (CW application)

Benefits

◆ Wideband receivers (80 MHz to 6 GHz for the R&S®TSML-CW) → four different models covering all GSM, WCDMA, IS-95 and CDMA2000® 1X bands, and universal RF power → **universal usage of one technology reduces investment costs**
◆ Open user interface → allows customers to use the R&S®TSML-x in their own environment using dedicated or customized software as well as R&S®ROMES drive test software → **universal and customer-specific applications**
◆ Parallel operation of several R&S®TSML analyzers → for example, parallel WCDMA and GSM measurements for handover analysis → **reduces measurement time and costs**

◆ Light and compact design → ideal for drive test applications → **easy integration in vehicles and convenient use in a backpack**
◆ Software control via R&S®ROMES drive test software → flexible and powerful user interface → **reduces startup time and also offers powerful applications for post-processing**
◆ Easy system expansion by other data acquisition devices, e.g. test mobile phones, GPS, or other receivers, etc → **cost-effective upgrade to new applications**

R&S®TSML-C IS-95 and CDMA2000® 1X PN scanner

The R&S®TSML-C is the high-performance hardware platform for IS-95 and CDMA2000® 1X PN scanning. In addition, application software is needed, e.g. R&S®ROMES drive test software and, in most cases, an optional GPS system. The R&S®ROMES application software runs on a standard Windows PC or notebook.

The R&S®TSML-C IS-95 and CDMA2000® 1X pseudo random noise (PN) scanner system measures the basic RF parameters of an IS-95 and CDMA2000® 1X network. The system detects the PN codes, which carry the signal information, and determines their power values, scrambling codes and quality parameters or their S/N ratios and timing.

Data can be analyzed immediately or stored for subsequent processing. The system offers a wide variety of displays, which makes it easy to examine network parameters as well as network coverage and quality.

Open user interface

Experienced C++ developers are able to quickly integrate the R&S®TSML as a measurement device into their own application. This offers a wide range of dedicated customer-specific applications and allows the R&S®TSML to be used in existing standard drive test tools.

The R&S®TSML comes with a detailed description of the open user interface for controlling the R&S®TSML and forwarding measurement data to the PC. The equipment supplied includes C++ libraries and also a ready-made demo application.
