

# Wireless Wind Speed Monitor

## *Safety Device*

- High wind speed alarm
- Mast retracts to safety on alarm
- No cables - Receives data via wireless
- Large master display
- Remote displays
- Solar powered
- Totally waterproof

- Large LCD Screen
- Easy to Read
- Simple to Operate

For the first time, you can have wind information without running cables down the mast. The wind transmitter measures wind speed and direction and sends data to any Micronet display via wireless link. It can be fitted with the mast in place. Calibration for wind speed and direction is done at any display.

Overall dimensions of the unit: Height: 150mm Length: 390mm
