FO-4400	U	U.S.A./Canada

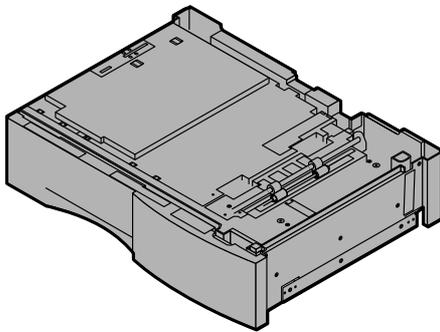

Illustration: FO-CS1

OPTION:PAPER CASSETTE MODEL FO-CS1

OPTION	
Toner cartridge:	FO-50ND
Drum cartridge:	FO-47DR
Option memory:	FO-8MK
Verification stamp:	FO-45VS
Paper cassette:	FO-CS1

CAUTION

This laser printer is a class 1 laser product that complies with 21CFR 1040.10 and 1040.11 of the CDRH or IEC60825-1 standard. This means that this machine does not produce a hazardous laser radiation. The use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

This laser radiation is not a danger to the skin, but when an exact focusing of the laser beam is achieved on the eyes retina, there is danger of spot damage to the retina.

The following cautions must be observed to avoid exposure of the laser beam to your eyes at the time of servicing.

- 1) When a problem in the laser optical unit has occurred, the whole optical unit must be exchanged as a unit, not an individual part.
- 2) Do not look into the machine with the main switch turned on after removing the toner/developer unit and drum cartridge.
- 3) Do not look into the laser beam exposure slit of the laser optical unit with the connector connected when removing and installing the optical system.
- 4) The cover of Laser Printer Unit contains the safety interlock switch.

Do not defeat the safety interlock by inserting wedges or other items into the switch slot.

Laser Wave Length : 770-795 nm
Laser Pulse Times : 51.3 ns
Laser Output Power : 5 mW

Parts marked with "△" is important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

- CAUTION FOR BATTERY REPLACEMENT
- PRECAUTIONS FOR USING LEAD-FREE SOLDER

PARTS GUIDE

CAUTION FOR BATTERY REPLACEMENT

(Danish) ADVARSEL !

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandoren.

(English) Caution !

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type
recommended by the equipment manufacturer.

Discard used batteries according to manufacturer's instructions.

(Finnish) VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.

Vaihda paristo ainoastaan laitevalmistajan suosittelemaan
tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

(French) ATTENTION

Il y a danger d'explosion s' il y a remplacement incorrect
de la batterie. Remplacer uniquement avec une batterie du
même type ou d'un type recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux
instructions du fabricant.

(Swedish) VARNING

Explosionsfare vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent
typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens
instruktion.

(German) Achtung

Explosionsgefahr bei Verwendung inkorrekt Batterien.
Als Ersatzbatterien dürfen nur Batterien vom gleichen Typ oder
vom Hersteller empfohlene Batterien verwendet werden.
Entsorgung der gebrauchten Batterien nur nach den vom
Hersteller angegebenen Anweisungen.

PRECAUTIONS FOR USING LEAD-FREE SOLDER**① Employing lead-free solder**

The **Power supply PWB** of this model employs lead-free solder. This is indicated by the "LF" symbol printed on the PWB and in the service manual.

The suffix letter indicates the alloy type of the solder.

Example:

LFa
Sn-Ag-Cu

Indicates lead-free solder of tin, silver and copper.

② Using lead-free solder

When repairing a PWB with the "LF" symbol, only lead-free solder should be used. (Using normal tin/lead alloy solder may result in cold soldered joints and damage to printed patterns.)

As the melting point of lead-free solder is approximately 40°C higher than tin/lead alloy solder, it is recommended that a dedicated bit is used, and that the iron temperature is adjusted accordingly.

③ Soldering

As the melting point of lead-free solder (Sn-Ag-Cu) is higher and has poorer wettability (flow), to prevent damage to the land of the PWB, extreme care should be taken not to leave the bit in contact with the PWB for an extended period of time. Remove the bit as soon as a good flow is achieved.

The high content of tin in lead free solder will cause premature corrosion of the bit.

To reduce wear on the bit, reduce the temperature or turn off the iron when it is not required.

Leaving different types of solder on the bit will cause contamination of the different alloys, which will alter their characteristics, making good soldering more difficult.

It will be necessary to clean and replace bits more often when using lead-free solder. To reduce bit wear, care should be taken to clean the bit thoroughly after each use.

CHAPTER 1. GENERAL DESCRIPTION

[1] Specifications

• GENERAL

Automatic dialing:	Conventional Auto Dialing: Rapid Key Dialing: 59 numbers Speed Dialing: 75 numbers Personal Auto Dial Books: 10 books (59 Rapid Keys, 16 Speed Dial numbers per book)	Halftone (grayscale):	64 levels
Memory size* :	2 MB (approx. 124 pages) Optional memory: FO-8MK (8 MB; approx. 500 pages)	Applicable telephone line:	Public switched telephone network
Modem speed:	33,600 bps (max.) with automatic fallback to lower speeds	Compatibility:	ITU-T (CCITT) G3 mode, Super G3 mode
Transmission time* :	Approx. 3 seconds	Printing resolution:	Horizontal: 406 lines/inch (16 lines/mm) Vertical: 391 lines/inch (15.4 lines/mm)
Toner cartridge yield: (continuous printing, 4% page coverage, letter paper)	Initial starter cartridge (included with fax machine): Approx. 3000 pages Replacement cartridge (FO-50ND): Approx. 6000 pages	Input document size:	Automatic feeding: Width: 5.8 to 10.1" (148 to 256mm) Length: 5.0 to 14.3" (128 to 364 mm) Manual feeding: Width: 5.8 to 11.0" (148 to 279 mm) Length: 5.0 to 19.0" (128 to 483 mm) 8.2" (208 mm) max.
Drum cartridge yield:	Initial starter cartridge (included with fax machine): 20,000 pages (avg.) Replacement cartridge (FO-47DR): 20,000 pages (avg.)	Effective scanning width:	8.2" (208 mm) max.
Resolution:	Horizontal: 203 pixels/inch (8 dots/mm) Vertical: Standard: 98 lines/inch (3.85 lines/mm) Fine/Halftone: 196 lines/inch (7.7 lines/mm) Super fine: 391 lines/inch (15.4 lines/mm)	Effective printing width:	8.0" (203 mm) max.
Automatic document feeder:	Letter paper (20 lb): Max. 50 pages Legal paper: Max. 20 pages (Note: 11" x 17" paper must be loaded one page at a time.)	Reception modes:	Auto/Manual
Paper capacity:	250 sheets (20 lb) (500-sheet cassette available as option)	Instascan speed:	1.3 sec/page (letter paper; scan time only, excludes document feeding time)
Compression scheme:	MMR, MR, MH, Sharp (H2)	Full Dual Access:	Yes
		Copy function:	Single/Multi/Sort (99 copies/page)
		Power requirements:	120 V AC, 60 Hz
		Operating temperature:	50 - 86°F (10 - 30°C)
		Humidity:	20 to 85 % RH
		Power consumption:	Stand-by: 9 W Maximum: 760 W
		Dimensions:	Width: 21.5" (546 mm) Depth: 16.2" (412 mm) Height: 13.6" (346 mm) (Not including paper tray or attachments)
		Weight:	Approx. 31.3 lbs. (14.2 kg) (Not including supplies paper tray or attachments)

* Based on ITU-T Test Chart #1 at standard resolution, excluding time for protocol signals (i.e., ITU-T phase C time only).

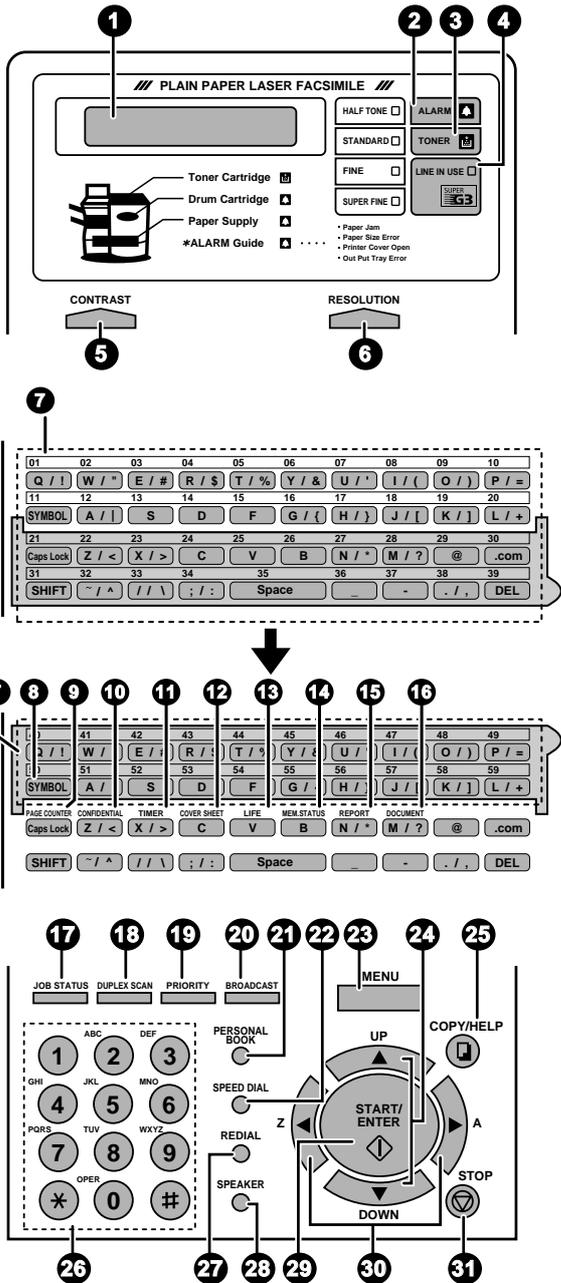

<IMPORTANT PLEASE READ FIRST>

To avoid problems with supplies, please don't use supplies from other units. Please use new supplies, when supply changes are required.

[2] Life of consumable

Section	Part	Estimated Life	Replaced by
Toner cartridge	Replacement cartridge (FO-50ND)	6,000 prints (at Letter/4% chart)	User
Drum cartridge	Replacement cartridge (FO-47DR)	20,000 prints (at Letter/4% chart)	User
Paper feed	Transfer roller (Refer to the P/G No. 10-8) (OKW4127410302)	50,000 prints	Service Engineer
Fuser	Fusing unit (Refer to the P/G No. 9-14) (OKW4127035501)	50,000 prints	Service Engineer
Paper transport	Paper transfer roller (Refer to the P/G No. 8-6) (OKW4127300101)	Cleaning as needed	_____
Unit	FO-4400	5 years or 75,000 prints of early either	_____

[3] Operation panel

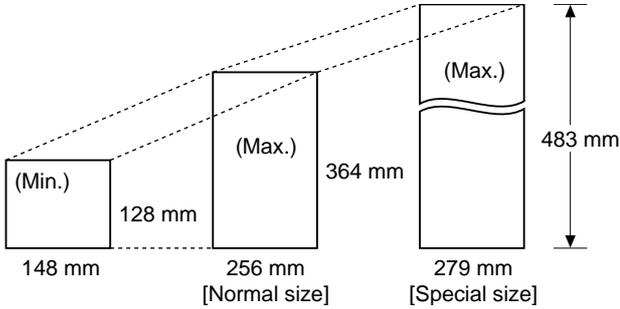

- 1 Display**
This displays messages and prompts to help you operate the machine.
- 2 ALARM indicator**
This blinks when one of the paper sources is empty or the drum cartridge is near the end of its life (printing is still possible). This lights steadily when the drum cartridge has reached the end of its life, all paper sources are empty, the print compartment cover is open, or a paper jam has occurred (printing is not possible). A message will appear in the display to indicate the problem.
- 3 TONER indicator**
This blinks when the toner cartridge nears empty, and lights steadily when the toner cartridge needs replacement.
- 4 LINE IN USE light**
This lights when the fax machine is using the telephone line.
- 5 CONTRAST key**
Press this key to adjust the contrast before sending or copying a document.
- 6 RESOLUTION key**
Press this key to adjust the resolution before sending or copying a document. An indicator will light next to the selected setting (HALFTONE, STANDARD, FINE or SUPER FINE).
- 7 Rapid Dial Keys**
Press one of these keys to dial a fax number automatically. (Note that you must attach the Rapid Key labels.) When navigating through the display menu, a Rapid Key can also be pressed in place of the numeric keys to enter a two-digit number (for example, you can press Rapid Key 01 to enter the number "01").
- 8 SYMBOL key**
When entering a name, press this key to enter the symbol on a letter key (the character to the right of the slash). Press the key again to turn off symbol entry mode.
- 9 PAGE COUNTER key**
Press this key to include a slash and the total number of pages after each page number on the pages of a transmitted document.
- 10 CONFIDENTIAL key**
Press this key to send or print out a confidential document.
- 11 TIMER key**
Press this key to set an operation to be performed automatically at a later time.
- 12 COVER SHEET key**
Press this key to include a cover sheet when sending a fax.
- 13 LIFE key**
Press this key, followed by **1**, to check the total number of pages printed by the fax machine.
- 14 MEM. STATUS key**
Press this key to check the status of fax transmission jobs, copy jobs, and fax receptions. This key can also be used to cancel a job.
- 15 REPORT key**
Press this key to print out a report on the most recently completed transmission or reception.
- 16 DOCUMENT key**
Press this key to transmit a document directly from the feeder without reading it into memory.
- 17 JOB STATUS key**
Two types of information appear in the display: prompts related to operations you are performing, and information about how the fax machine is using the telephone line (transmitting, receiving, etc.). Press this key to change between the two types of information.
- 18 DUPLEX SCAN key**
Press this key to transmit or copy a two-sided document.
- 19 PRIORITY key**
Press this key when you need to transmit a document ahead of other documents waiting in memory for transmission.
- 20 BROADCAST key**
Press this key to send a fax to a group of receiving fax machines.
- 21 PERSONAL BOOK**
Press this key to use or store an auto-dial number in a personal book. If the book has a passcode, enter the passcode; otherwise, select the book with **←** or **→** and press **START/ENTER**.
- 22 SPEED DIAL key**
Press this key to dial a Speed Dial number.
- 23 MENU key**
Press this key to select special functions and settings.
- 24 UP and DOWN arrow keys**
Volume setting: Press these keys to change the speaker volume when the **SPEAKER** key has been pressed, or the ringer volume at any other time.
- 25 COPY/HELP key**
When a document is in the feeder, press this key to make a copy of a document. At any other time, press this key to print out the Help List, a quick reference guide to the operation of your fax machine.
- 26 Dial keypad (numeric keys)**
Use these keys to dial and program fax numbers.
- 27 REDIAL key**
Press this key to automatically redial the last number dialed.
- 28 SPEAKER key**
Press this key when transmitting a document by Normal Dialing to listen to the line and verify the response of the receiving fax machine.
- 29 START/ENTER key**
Press this key to begin fax transmission when using Speed Dialing, Direct Keypad Dialing, or Normal Dialing. This key is also used to select settings and complete entries when storing names and numbers.
- 30 Left and right arrow keys**
Auto-dial numbers: Press these keys to search for an auto-dial number when sending a fax.
MENU key settings: Press these keys after pressing the **MENU** key to scroll through the **MENU** key settings.
- 31 STOP key**
Press this key to cancel an operation before it is completed.

[4] Transmittable documents

1. Document Sizes

Normal size	width	5.8" – 10.1" (148 – 256 mm)
	length	5.0" – 14.3" (128 – 364 mm)

* With special sizes, only one sheet can be fed into the machine at a time. Insert next page into feeder as current page is being scanned.

2. Paper Thickness & Weight

	Indication	Product specifications	
		Lower Limit	Upper Limit
Weight indication	Japanese indication Size 4 × 6	45kg paper	70kg paper
	Metric system indication	52g/m ²	80g/m ²
	American indication LB system indication	14 LB	20 LB
Thickness indication	Metric system indication	0.06mm	0.1mm
	Inch system indication	0.0024"	0.0035"
Document size	Document size Range	(148mm × 128mm) ~ W letter (279mm × 483mm) A4 (210mm × 297mm) Letter (216mm × 279mm)	
Number of ADF sheets	Document size	B6 ~ Letter/A4 size	50 sheets
		B4 size/Legal	20 sheets
	Weight	W letter size	1 sheet
		90 kg (104g/m ²) or more 135 kg (157g/m ²) or less	1 sheet
Paper quality	Kind	Paper of fine quality/bond paper/ Kent paper	

3. Document Types

- Normal paper
Documents handwritten in pencil (No. 2 lead or softer), fountain pen, ball point pen, or felt-tipped pen can be transmitted.
Documents of normal contrast duplicated by a copying machine can also be transmitted.
- Diazo copy (blueprint)
Diazo copy documents of a normal contrast may be transmitted.
- Carbon copy
A carbon copy may be transmitted if its contrast is normal.

4. Cautions on Transmitting Documents

- Documents written in yellow, greenish yellow, or light blue ink cannot be transmitted.
- Ink, glue, and correcting fluid on documents must be dry before the documents can be transmitted.
- All clips, staples and pins must be removed from documents before transmission.
- Patched (taped) documents should be copied first on a copier and then the copies used for transmission.
- All documents should be fanned before insertion into the feeder to prevent possible double feeds.

5. Automatic Document Feeder Capacity

Number of pages that can be placed into the feeder at anytime is as follows:

Normal size: max. 50 sheets (14 lbs - 20 lbs)

Special size: single sheet only (manual feed)

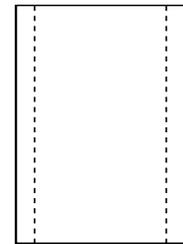

- NOTES:
- If you need to send or copy more 50 pages, place the additional pages and carefully in the feeder just before the last page is scanned. Do not try to force them in, as this may cause double-feeding or jamming.
 - If your document consists of several large or thick pages which must be loaded one at a time, insert each page into the feeder as the previous page is being scanned. Insert gently to prevent doublefeeding.

6. Readable Width & Length

The readable width and length of a document are slightly smaller than the actual document size.

Note that characters or graphics outside the effective document scanning range will not be read.

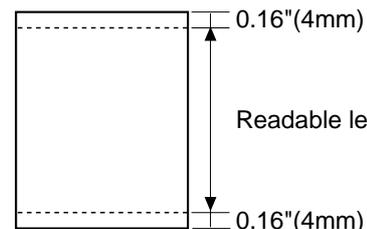

- **Readable width**
8.2" (208 mm) max.

Readable width

- **Readable length**

This is the length of the document sent minus 0.16" (4 mm) from the top and bottom edges.

Readable length

[5] Installation

1. Site selection

Take the following points into consideration when selecting a site for this model.

ENVIRONMENT

- The machine must be installed on a level surface.
- Keep the machine away from air conditioners, heaters, direct sunlight, and dust.
- Provide easy access to the front, back, and sides of the machine. In particular, keep the area in front of the machine clear, or the original document may jam as it comes out after scanning.
- The temperature should be between 50° and 86°F (10° and 30°C).
- The humidity should be between 30% and 85% (without condensation).

ELECTRICITY

AC 120 V, 60 Hz, grounded (3-prong) AC outlet is required.

Caution!

- Connection to a power source other than that specified will cause damage to the equipment and is not covered under the warranty.
- If your area experiences a high incidence of lightning or power surges, we recommend that you install a surge protector for the power and telephone lines. Surge protectors can be purchased at most telephone specialty stores.

TELEPHONE JACK

A standard RC11C telephone jack must be located near the machine. This is the telephone jack commonly used in most homes and offices.

- Plugging the fax machine into a jack which is not an RC11C jack may result in damage to the machine or your telephone system. If you do not know what kind of jack you have, or need to have one installed, contact the telephone company.

If the machine is moved from a cold to a warm place...

If the machine is moved from a cold to a warm place, it is possible that the reading glass may fog up, preventing proper scanning of documents for transmission. To remove the fog, turn on the power and wait approximately 2 hours before using the machine.

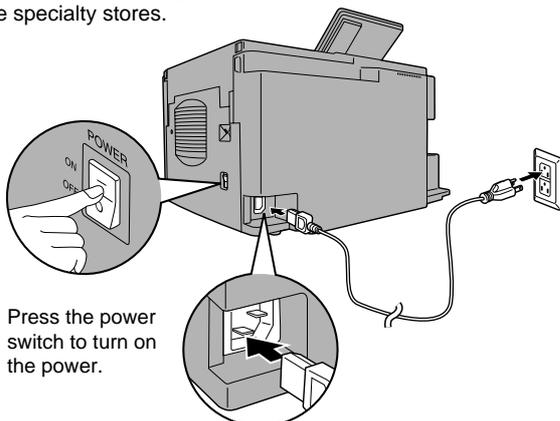

2. Assembly and connections

① Connecting the power cord

Connect the female end of the power cord to the fax machine as shown. Insert the male end into a 120 V, 60 Hz, grounded (3-prong) AC outlet.

Important!: The fax machine requires its own dedicated power outlet. The power outlet must not be shared with any other devices. In particular, do not use an extension cord to connect multiple devices to the outlet.

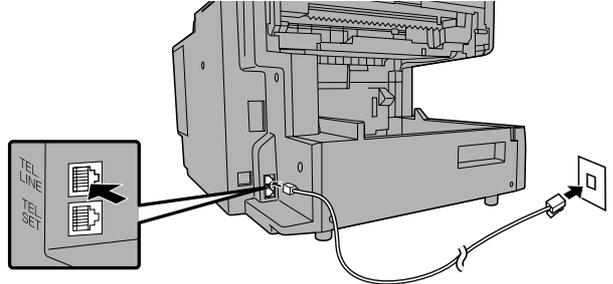

Note: If your area experiences a high incidence of lightning or power surges, we recommend that you install surge protectors for the power and telephone lines. Surge protectors can be purchased at most telephone specialty stores.

② Connecting the telephone line cord

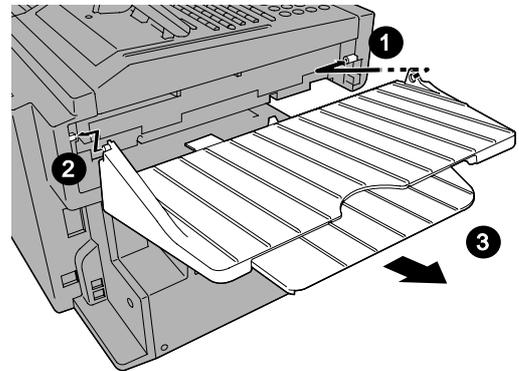

Insert one end of the line cord into the jack on the back of the machine marked **TEL. LINE**. Insert the other end into a standard (RJ11C) single-line wall telephone jack.

Note: The fax machine is set for touch-tone dialing. If you are on a pulse dial (rotary) line, you must set the fax machine for pulse dialing by changing Option Setting 22.

③ Attaching the ADF exit tray

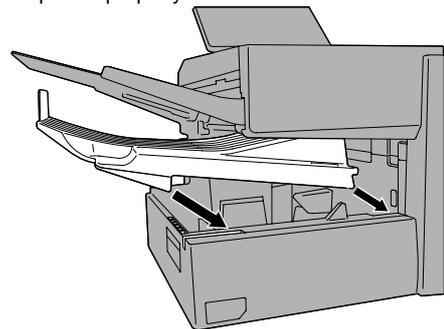

Insert the protrusion on the right side of the machine into the hole in the right side of the ADF exit tray **1**, then bend the tray slightly and insert so that the protrusion on the left side of the machine goes into the hole on the left side of the ADF exit tray **2**. Pull out the tray extension **3**.

④ Attaching the received document tray

Slide the received document tray into the machine as shown. When it stops, lift the end slightly and push in so that the tray locks into place.

Important!: The received document tray must be attached for the fax machine to operate properly.

⑤ Verification Stamp option (FO-45VS)

Note: This feature is available as an option. Consult your dealer if you wish to use this feature.

When transmitting a document, you can have the fax machine stamp each document page as it is scanned. After scanning, you can check to see if all document have been stamped to verify that no double feeds occurred. (A double feed occurs when two pages are fed through the scanner at once, which means that one of the pages is not scanned.)

To use this function, have your dealer install the Verification Stamp option, and then set Option Setting 29 to ON.

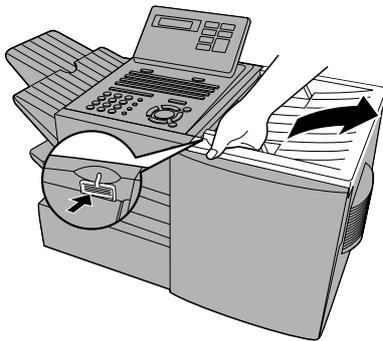

3. Installing the printer cartridges (Toner cartridge: FO-50ND) (Drum cartridge: FO-47DR)

Follow the steps below to install or replace the toner and drum cartridges.

- The initial starter toner cartridge included with the fax machine can print approximately 3000 letter-size pages (4% coverage of each page; continuous printing).
- The replacement toner cartridge (FO-50ND) can print approximately 6000 letter-size pages.
- The drum cartridge (FO-47DR) can print approximately 20,000 letter-size pages.

① Press the cover release to open the print compartment cover.

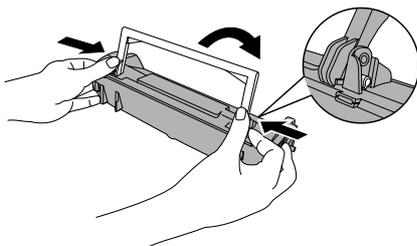

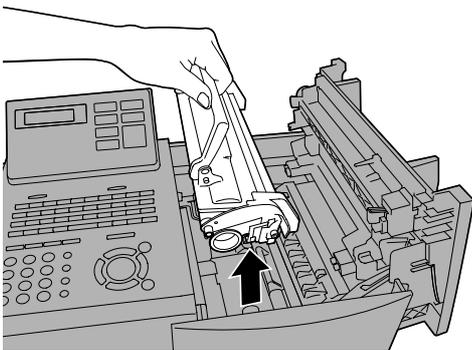

- **Caution!** The fusing unit inside the print compartment becomes very hot during operation. Be careful not to touch the inside of the compartment.

② If you are replacing the toner cartridge, remove the old cartridge and dispose of it according to local regulations.

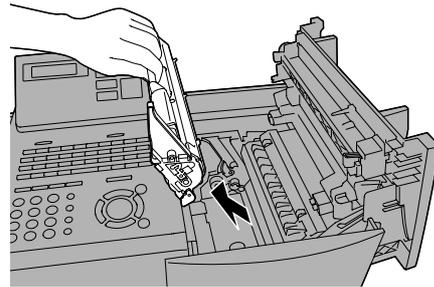

Go directly to STEP 6 if you are only replacing the toner cartridge and not the drum cartridge.

- If you are replacing the drum cartridge but not the toner cartridge, remove the toner cartridge and place it on a sheet of paper.

To make the cartridge more compact for disposal, press the buttons on the ends of the handle and fold the handle down.

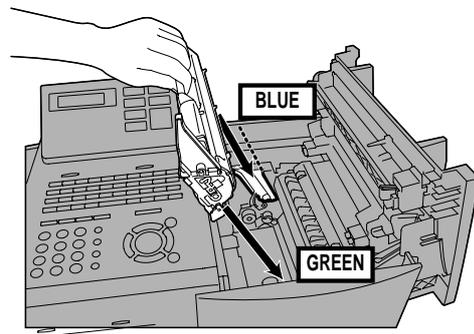

③ If you are replacing the drum cartridge, remove the old cartridge and dispose of it according to local regulations.

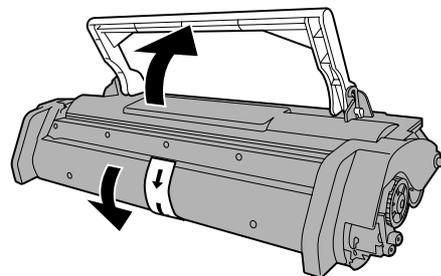

④ Remove the new drum cartridge from its packaging. Insert the drum cartridge into the print compartment.

- **Caution!** Excessive exposure to light will damage the drum cartridge. Install the cartridge promptly after removing it from its packaging.

- Make sure the drum cartridge is inserted in as far as it will go.

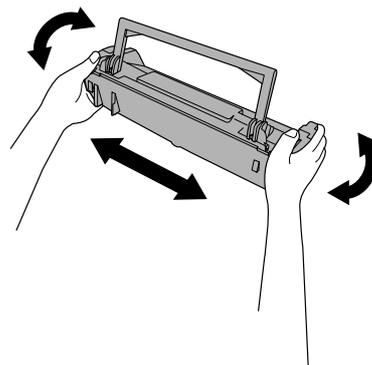

⑤ If you are installing a new toner cartridge, remove the new toner cartridge from its packaging. Remove the tape from the cartridge and then open the cartridge handle so that it stands straight up.

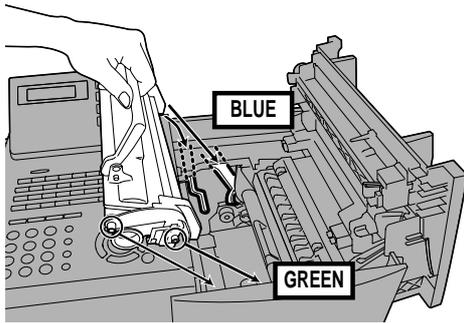

⑥ Shake as indicated by the arrows to distribute the toner evenly within the cartridge.

- If the toner is still lumpy after shaking, the gears in the cartridge may make a noticeable sound when the print compartment cover is closed after installing the cartridge. This is normal and does not indicate a problem.

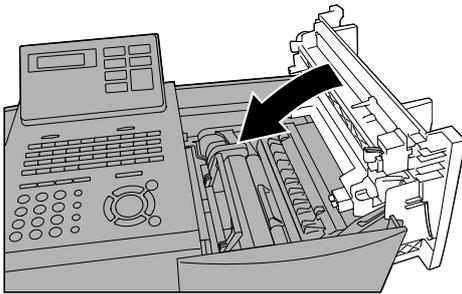

⑦ Hold the toner cartridge by the handle and insert it into the print compartment.

- Make sure the toner cartridge clicks into place.
- The handle can be left standing up.

⑧ Close the print compartment cover.

⑨ Reset the drum counter by pressing **LIFE** (flip up the Rapid Key overlay), **3**, and **START/ENTER**.

- **Note:** The toner counter automatically resets each time you replace the toner cartridge. There is normally no need to reset the toner counter manually. Should you find it necessary to manually reset the toner counter, press **LIFE** (flip up the Rapid Key overlay), **2**, and **START/ENTER**.

Note: The print compartment cover may become noticeably warm if a large number of pages are successively printed. This is normal and does not indicate a problem in the machine.

⑩ When to replace the toner cartridge

When the toner cartridge nears empty (about 100 pages can still be printed), the toner cartridge indicator on the operation panel will blink. When the toner cartridge is empty, the toner cartridge indicator will light steadily and REPLACE TONER will appear in the display. Printing will no longer be possible. Use the following replacement toner cartridge.

Sharp FO-50ND toner cartridge

Hint:

When the toner cartridge nears empty, try taking it out of the machine and shaking it. This may increase the number of pages that can be printed before the toner runs out.

⑪ When to replace the drum cartridge

When the drum cartridge nears the end of its life, the ALARM indicator on the operation panel will blink and DRUM LIFE REACHED will appear in the display. (this message appears when approximately 1000 pages can still be printed). Use the following replacement drum cartridge.

Sharp FO-47DR drum cartridge

4. Loading printing paper

You can load up to 250 sheets of letter or legal paper (max. 20 lbs.) in the paper tray.

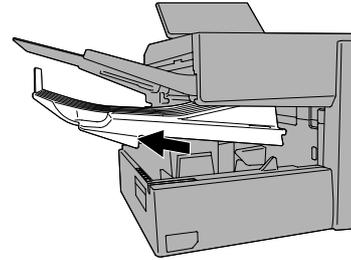

- A paper cassette is available as an option. Up to 500 sheets of letter or legal paper can be loaded in the paper cassette. To have the cassette installed, consult your dealer.

Important: Do not use the back side of paper that has already been printed on.

Note: If you need to add paper to the tray or cassette while paper still remains, remove the remaining paper and combine it into a single stack with the new paper.

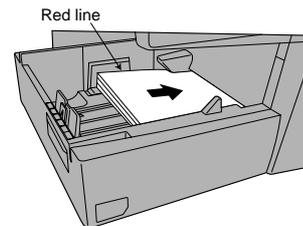

Loading paper in the paper tray

① Remove the received document tray.

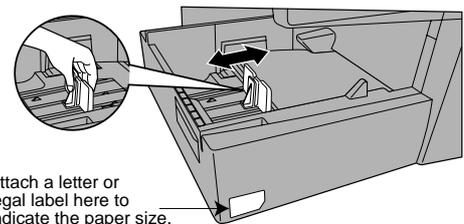

② Insert a stack of paper into the tray, print side up.

- **Important!** The stack of paper must not be higher than the red line on the paper tray.

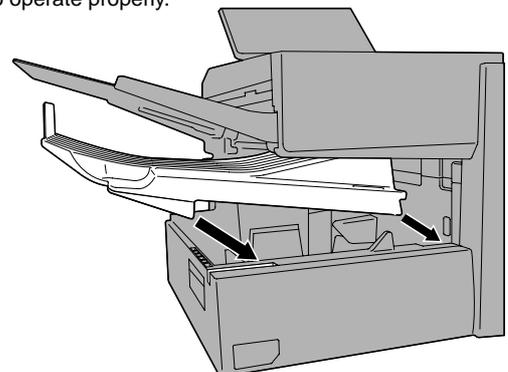

③ Squeeze the paper guide and move it to match the length of the paper you are loading.

④ Replace the received document tray.

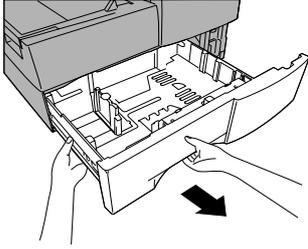

- The received document tray must be attached for the fax machine to operate properly.

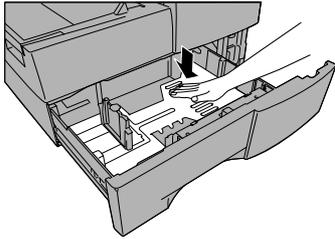

Loading paper in the paper cassette (if installed FO-CS1)

Note: To use A4 paper in the paper cassette, you must have a service technician adjust the cassette.

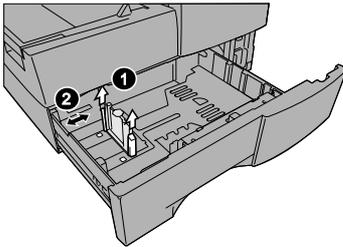

- ① Grasp the hand-hold on the cassette and pull the cassette out until it stops.

- ② Push the pressure plate down until it locks into position.

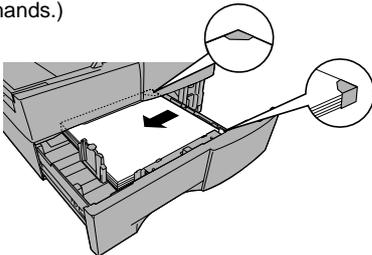

- ③ Squeeze the paper guide and pull up to move it to the appropriate holes for the length of the paper. Push the guide down into the holes.

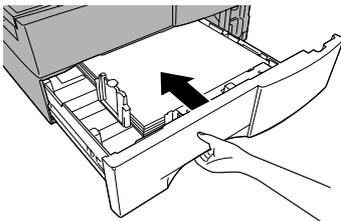

- ④ Place a stack of paper in the cassette, print side up.

- Make sure the stack of paper is not higher than the two tabs on the paper guide and the two metal tabs. If it is, remove some of the paper.
- If you find it difficult to load the paper, remove the cassette from the machine. (Pull the cassette out as far as it will go, grasp the left side of the cassette with your left hand, and then lift it up and out with both hands.)

- ⑤ Push the cassette back into the machine, making sure it clicks into place.

5. Clearing paper jams

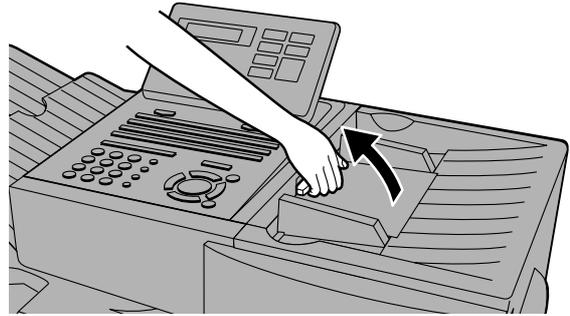

Clearing a jammed document

If the original document doesn't feed properly during transmission or copying, or REMOVE ORIGINAL(S) appears in the display, first try pressing . If the document doesn't feed out, open the operation panel and remove it.

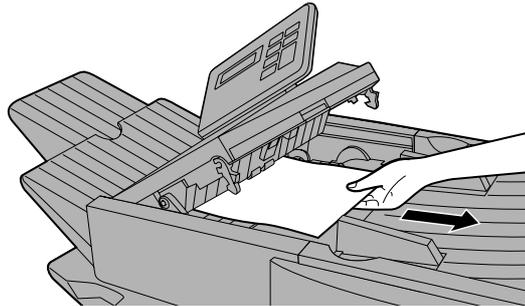

Important: Do not try to remove a document without opening the operation panel. This may damage the feeder mechanism.

- ① Open the operation panel.

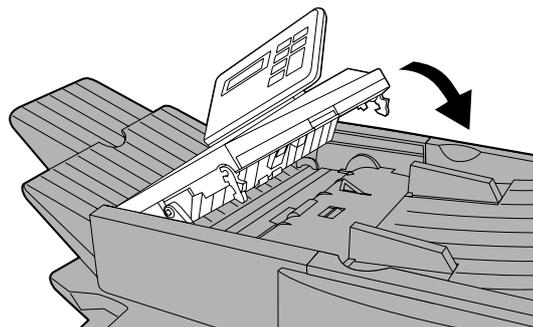

- Squeeze the release marked **PANEL RELEASE** and pull up.

- ② Remove the document.

- ③ Close the operation panel, making sure it clicks into place.

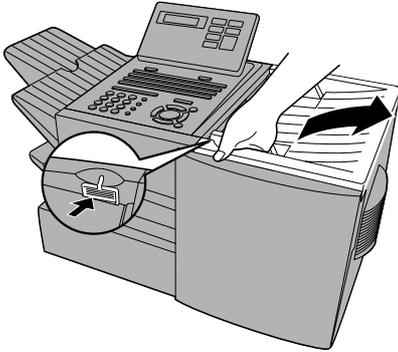

Clearing a jammed printing paper

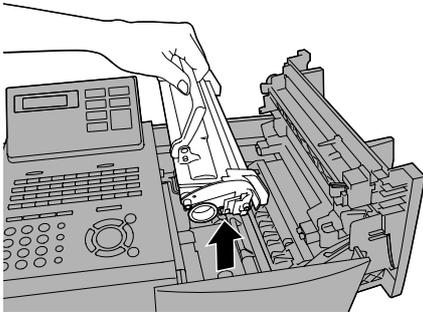

If the printing paper jams, PAPER JAM will appear in the display. Follow the steps below to clear the jam.

① Press the green release and open the print compartment cover.

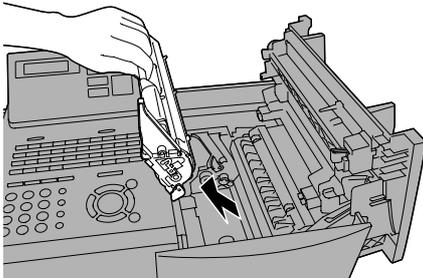

- **Caution!** The fusing unit inside the print compartment becomes very hot during operation. Be careful not to touch the inside of the compartment.

② Remove the toner cartridge and place it on a sheet of paper.

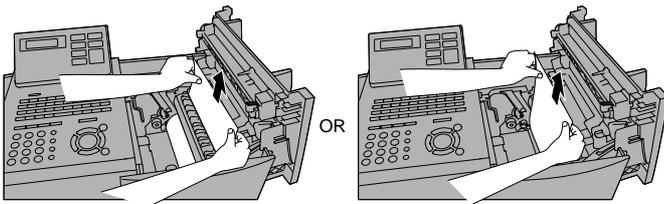

③ Remove the drum cartridge.

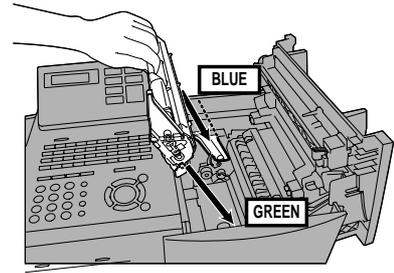

④ Remove the jammed paper.

- Make sure no torn pieces of paper remain in the print compartment and rollers.

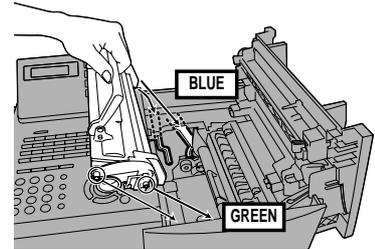

⑤ Replace the drum cartridge.

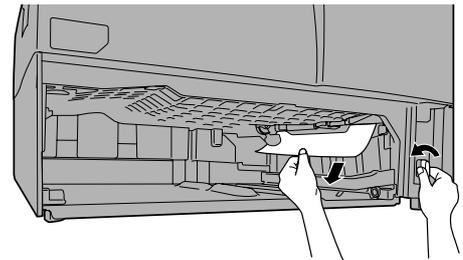

- Make sure the drum cartridge is inserted in as far as it will go.

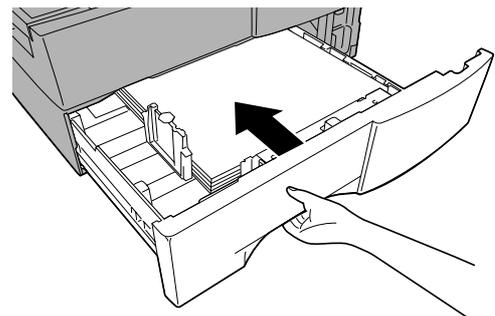

⑥ Replace the toner cartridge and then close the print compartment cover.

⑦ If you have a paper cassette and the display still indicates that paper is jammed, pull out the cassette and remove the jammed paper.

⑧ Replace the paper cassette.

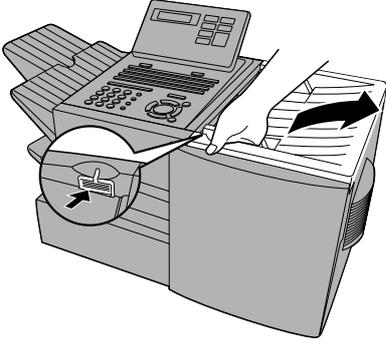

6. Installing the paper cassette (FO-CS1)

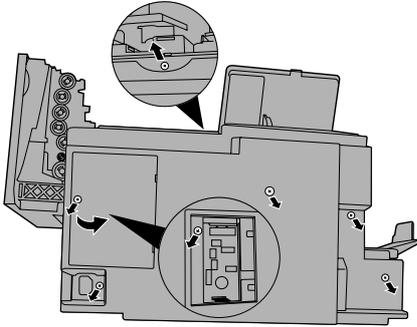

Installing the second paper cassette

Important: Be sure to turn off the power and unplug the power cord before proceeding.

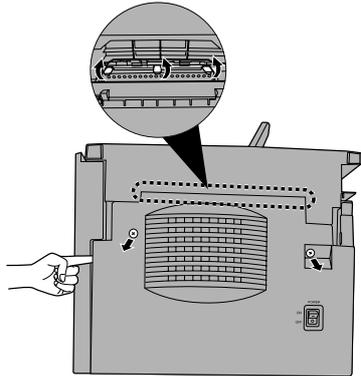

- ① Press the cover release to open the print compartment cover.

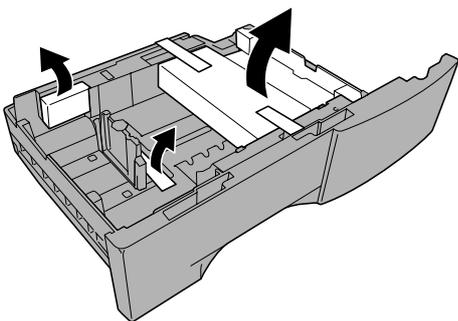

- ② Remove 6 screws from the rear cover. Remove the small cover on the left side of the rear cover, and then remove the screw underneath. Remove the rear cover.

- ③ Remove 2 screws from the right cover of the machine. From inside the print compartment, push the 3 tabs indicated in the blowup out. (Note: The blowup shows the inside of the print compartment.) Insert your left index finger in between the cover and the machine as shown, and then close the print compartment cover. With your index finger still inserted, grasp both sides of the cover and pull it off.

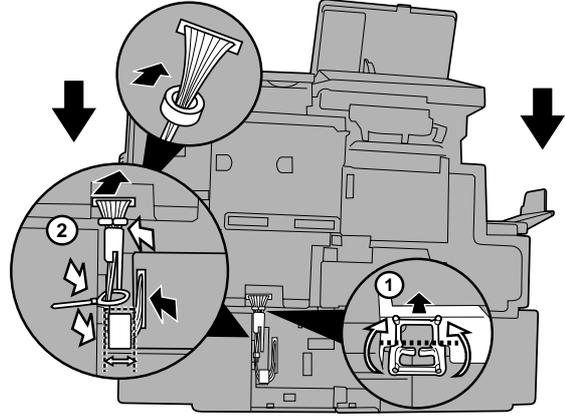

- ④ Remove the packing material and tape from the paper cassette.

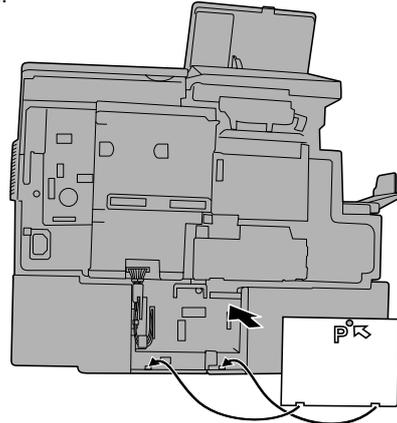

- ⑤ Place the machine on top of the cassette.

1. Insert the cable guide into the cut-out in the edge of the metal plate, and then fold it in half and hook the top and bottom edges together.
2. Insert the 15pin cable through the ferrite core, and then connect the cable to the connectors on the machine and the cassette as shown. Position the ferrite core in the gap between the bottom left-hand corner of the circuit board and the side of the compartment. Insert the cable into the cable guide, and then insert the remainder of the cable into the slot in the cassette below the cable guide. Tie the wires with the band.

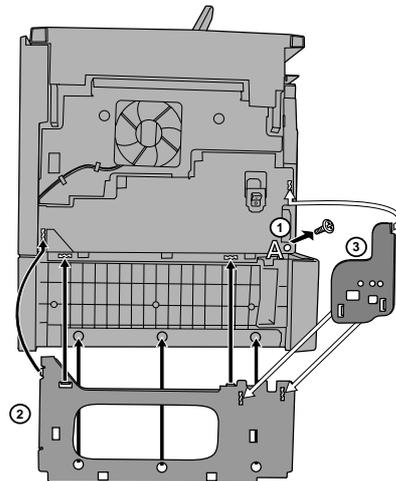

- ⑥ Replace the small cover over the circuit board and secure it with a 10 mm screw.

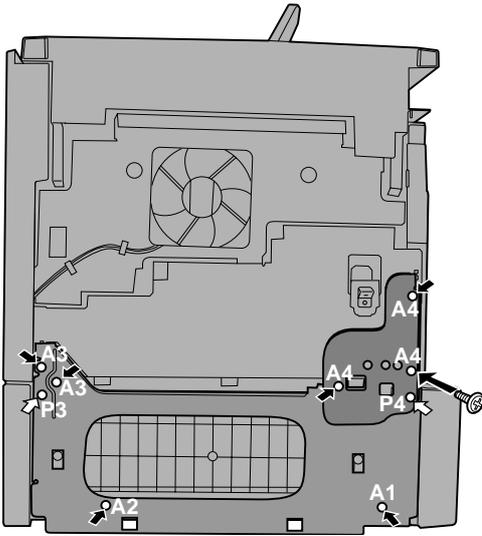

- ⑦ Attach the support plates to the right side of the machine.

1. Remove the indicated screw. (In Step 8 below, replace it in the same hole.)
2. Mount the large plate, making sure that the guides fit into the holes as shown.
3. Mount the small plate, making sure that the guides fit into the holes as shown.

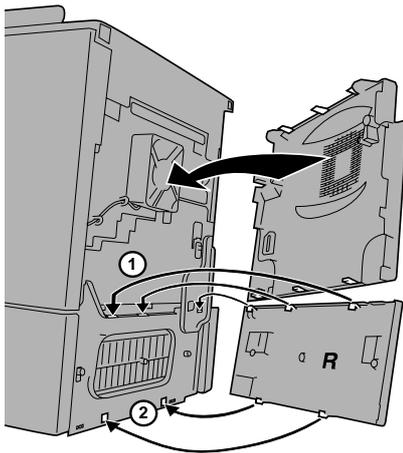

- ⑧ Secure the plates with screws as shown. Use 6 mm screws for the holes marked with "A", and 10 mm screws for the holds marked with "P". Secure the screws in the order indicated by the numbers.

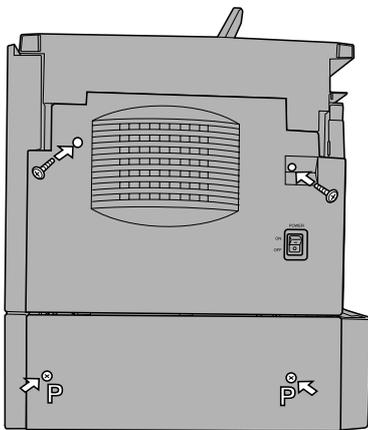

- ⑨ Replace the right side cover on the machine, inserting the tabs into the holes.

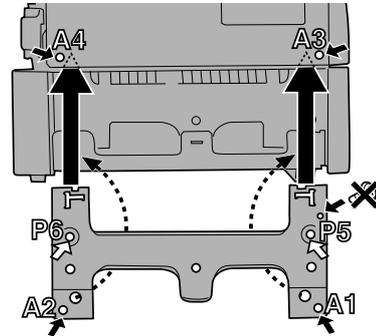

Attach the longer cassette cover to the right side of the cassette, inserting the tabs into the holes (first top, then bottom).

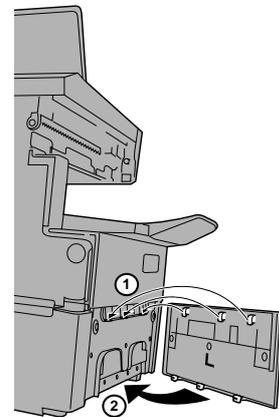

- ⑩ Replace the screws in the side cover on the machine. Secure the cassette cover with two 10 mm screws.

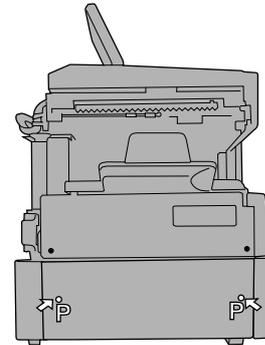

- ⑪ Attach the support plate to the left side of the machine, inserting the top edges of the plate under the machine housing. Make sure that the guides fit into the holes as shown. Secure the plate with screws as shown. Use 6 mm screws for the holes marked with "A", and 10 mm screws for the holes marked with "P". Secure the screws in the order indicated by the numbers. (Note that the top hole on the right does not require a screw.)

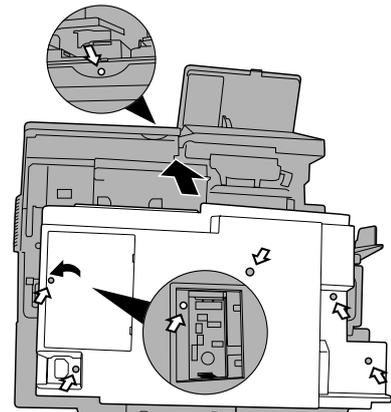

- ⑫ Attach the shorter cassette cover to the left side of the cassette, inserting the tabs into the holes (first top, then bottom).

- ⑬ Secure the cassette cover with two 10 mm screws.

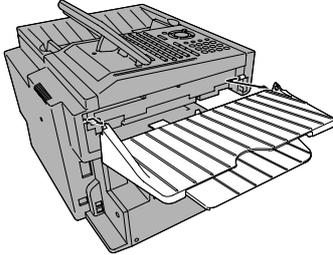

- ⑭ Replace the rear cover (replace the screw under the small cover on the left side of the rear cover first, and then replace the small cover).

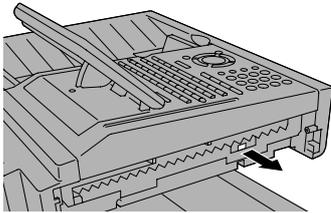

7. Replacing the Verification Stamp (FO-45VS)

If you are using the Verification Stamp function, you will need to replace the ink cartridge in the stamp unit when it runs out of ink (when the stamped mark on original documents becomes faint). A new ink cartridge can be obtained from your dealer.

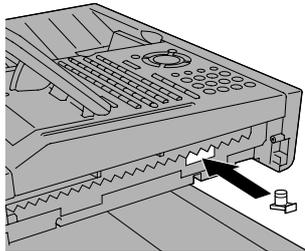

- 1 Remove the ADF exit tray.

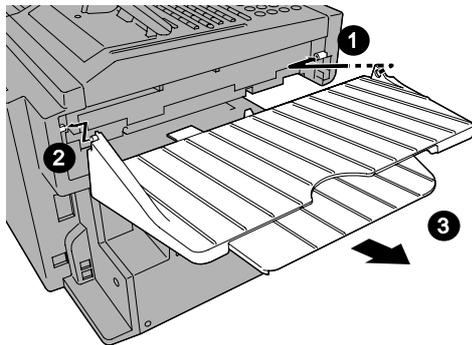

- 2 Press down on the protruding tab of the green ink cartridge and pull the cartridge out with your fingers.

- 3 Insert the new ink cartridge into the machine (make sure that the tab is facing out).

- 4 Replace the ADF exit tray.

[6] Quick reference guide

SENDING FAXES

Place your document (up to 50 letter-size pages) face down in the document feeder.

(Note: For Normal Dialing and Direct Keypad Dialing, you can also load the document after dialing the number.)

Press **RESOLUTION** or **CONTRAST** if needed.

Normal Dialing

1. Lift extension phone or press **SPEAKER**.
2. Dial the fax number (if using an extension phone, dial on the extension phone keypad).
3. Wait for the reception tone (if a person answers, ask them to press their Start key).
4. Press **START/ENTER**.

Rapid Key Dialing

1. Press the desired Rapid Key.

Speed Dialing

1. Press **SPEED DIAL** and enter the desired Speed Dial number (press **START/ENTER** if you entered a 1-digit number).
2. Press **START/ENTER**.

Direct Keypad Dialing

1. Dial the fax number.
2. Press **START/ENTER**.

BROADCASTING

1. Load the document and press **BROADCAST**.
2. Dial destination numbers:
Press a Rapid Key.
Press a Group Key.
Press **SPEED DIAL** and enter a Speed Dial number (press **START/ENTER** to complete entry if only one digit is entered).
Enter a full number and press **START/ENTER**.
3. When finished, press **START/ENTER**.
4. Press **RESOLUTION** or **CONTRAST** if needed.
5. Press **START/ENTER**.

STORING AUTO DIAL NUMBERS

1. Press **MENU**, **3**, **0**, **1**.
2. Press **1** to store a number.
(Press **2** to clear a number.)
3. To store a Rapid Key number, press the desired Rapid Key.
To store a Speed Dial number, press **SPEED DIAL** and enter a number from 1 to 75 (press **START/ENTER** if you entered a 1-digit number).
(If clearing a number, select it as explained above and then perform Step 7 and 9.)
4. Enter the full fax number.
5. Press **START/ENTER**.
6. Enter a name by pressing the letter keys.
7. Press **START/ENTER**.
8. Press **1** if this is a Chain Dial number.
Press **2** if this is a regular number.
9. Press **STOP** repeatedly to exit.

CHAPTER 2. ADJUSTMENTS

[1] Adjustments

General

Since the following adjustments and settings are provided for this model, make adjustments and/or setup as necessary.

1. Adjustments

Adjustments of output voltage (FACTORY ONLY)

1. Install the power supply unit in the machine.
2. Set the recording paper and document.
3. When the document is loaded, power is supplied to the output lines.
Confirm that outputs are within the limits below.

Output voltage settings

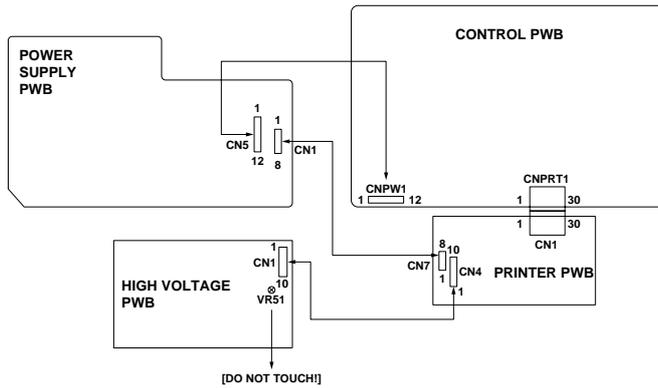

Fig. 1

Output	Voltage limits	Note
+5V MAIN	4.947V~5.25V	CN5 7pin ↔ 8pin
+24V SUB	23.04V~24.96V	CN5 1pin ↔ 2pin

Connector No. Pin No.	CN4	CN1
1	11	+5V
2	10	CH LREM
3	9	T VR
4	8	T MON V
5	7	T MON I
6	6	B VR
7	5	V REM
8	4	C MON
9	3	MG
10	2	+24V

Connector No. Pin No.	CN5	CNPW1
1	+24V SUB	
2	MG	
3	MG	
4	MG	
5	+24V MAIN	
6	+24V MAIN	
7	+5V MAIN	
8	DG	
9	DG	
10	DG	
11	+5V MAIN	
12	+5V MAIN	

Connector No. Pin No.	CN1	CN7
1	+24V MAIN	
2	MG	
3	DG	
4	DG	
5	+5V MAIN	
6	+5V MAIN	
7	HEATER ON	
8	H-RELAY OFF	

2. IC protectors replacement

ICPs (IC Protectors) are installed to protect the CIS unit, panel PWB unit, TX motor drive circuit and verification stamp drive circuit. ICPs protect various ICs and electronic circuits from an overcurrent condition. The location of ICPs are shown below:

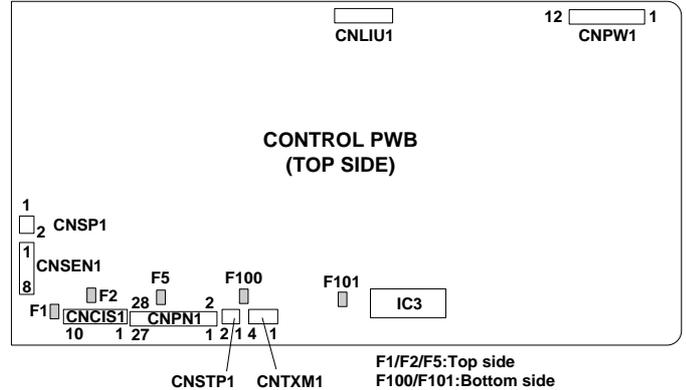

Fig. 2

- (1) F1 (ICP-S0.5) F2 (ICP-S1.0) is installed in order to protect IC's from an overcurrent generated in the CIS unit. If F1 or F2 are open, replace it with a new one.
- (2) F5 (ICP-S1.0) is installed in order to protect IC's from an overcurrent generated in the panel PWB unit. If F5 is open, replace it with a new one.
- (3) F100 (ICP-S1.0) is installed in order to protect IC's from an overcurrent generated in the verification stamp drive circuit. If F100 is open, replace it with a new one.
- (4) F101 (ICP-S1.8) is installed in order to protect IC's from an overcurrent generated in the TX motor drive circuit. If F101 is open, replace it with a new one.

In addition to the replacement of F1, F2, F5, F100 and F101, the factor causing F1, F2, F5, F100 and F101 to open must also be repaired. If not, F1, F2, F5, F100 and F101 will open again.

Replacement parts

- ICP-S0.5 (Sharp code: VHVICPS05//1)
- ICP-S1.0 (Sharp code: VHVICPS10//1)
- ICP-S1.8 (Sharp code: VHVICPS18//1)

3. Settings

(1) Dial mode selector

OPTION SETTING: DIAL MODE (Soft Switch No. SW2 DATA No. 1)
Use this to set the fax machine to the type of telephone line you are on.
• The factory setting is "TONE".

(step 1) Select "OPTIONAL SETTING".

KEY: (4)
DISPLAY: 4:OPTIONAL SETTING
ENTER # (01-36, ▶, ◀)

(step 2) Select "DIAL MODE".

KEY: (2) (2)
DISPLAY: 22: DIAL MODE
1=TONE, 2=PULSE

(step 3) Select, using "1" or "2".

KEY: (1)
DISPLAY: TONE SELECTED
KEY: (2)
DISPLAY: PULSE SELECTED

(step 4) End, using the "STOP" key.

KEY:

[2] Diagnostics and service soft switches

1. Operating procedure

Two kinds of diagnoses are supported.

1-1. Fax diagnosis

This diagnosis is concerned with the main body of fax which is used for production and service support.

Entering the diagnostic mode

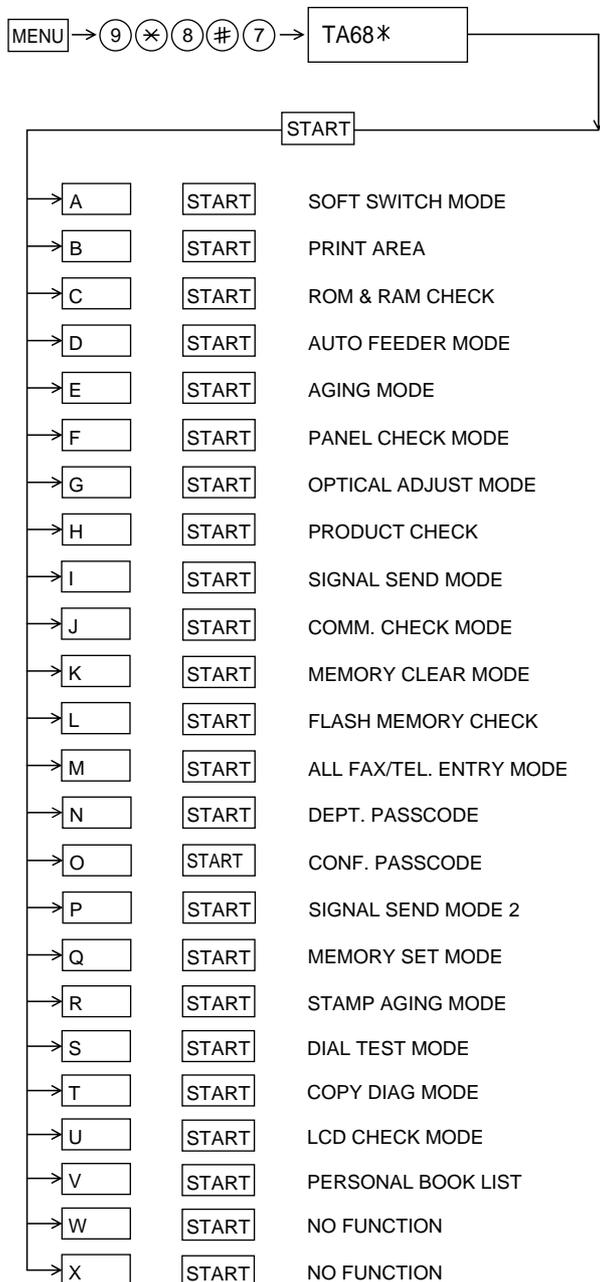

Press **MENU** → **9** → ***** → **8** → **#** → **7**, and the following display will appear.

MAIN: TA68*

Then press the **START** key. Select the desired item with the ***** key and the **#** key or select with the rapid key.

Enter the mode with the **START** key.

(Diag + specifications)

1-2. Print diagnosis

This diagnosis is concerned with the print which is used for production and service support.

Entering the diagnostic mode

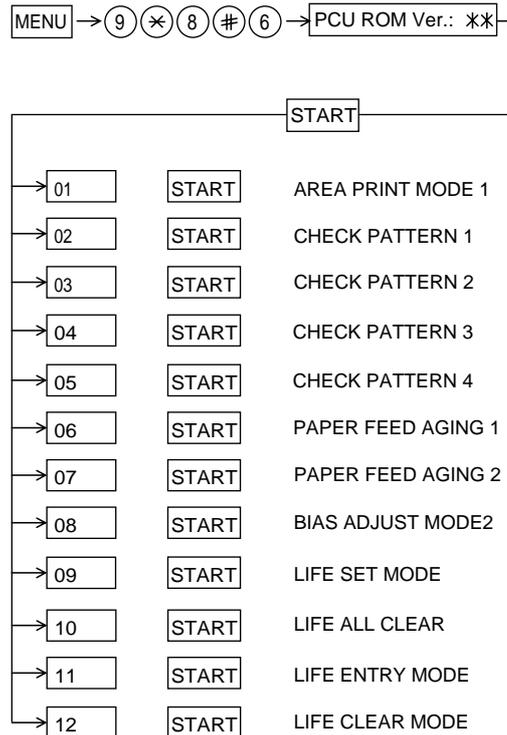

Press **MENU** → **9** → ***** → **8** → **#** → **6**, and the following display will appear.

PCU ROM VER.: **

Then press the **START** key. Select the desired item with ***** the key and the **#** key or select with the rapid key.

Enter the mode with the **START** key.

(Diag + specifications)

Memory clear when power is turned on

Pressing the **START** and **STOP** keys, turn on the main power, and the following message will be displayed.

MEMORY CLEAR ?
1 = ALL , 2 = IMAGE , 3 = NO

1 = All the data will be deleted including initially registered data.
2 = Delete the image file to be used in transmission. This will delete all the data related to communication such as reserved transmission or intercepting. However, the data initially registered will not be deleted.

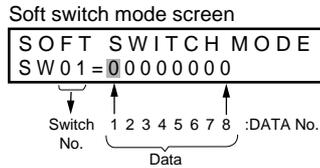

3 = Memory will not be cleared and the machine enters stand-by mode.

2. Diagnostic items description

2-1. Fax diagnosis

A) Soft switch mode

In this mode, the soft switch are set and the soft switch list is printed.

① Switch number selection

- Press START key for setting of the next soft switch. If the soft switch number is the final, pressing START key will exit the soft switch mode.
- Enter two digits of a soft switch number to set the switch number. If a switch number of nonexistent soft switch is entered, key error buzzer sounds to reject the input.

② Data number selection

The cursor position shows the data to be set.

Pressing # key or → key moves the cursor to the right. If, however, the cursor is on data number 8, pressing # key or → key shifts the cursor to data number 1 of the next switch number. If the switch number is the final, pressing # key or → key will exit the soft switch mode.

Pressing × key or ← key moves the cursor to the left. If, however, the cursor is on data number 1, pressing × key or ← key shifts the cursor to data number 1 of the former switch number. If the switch number is 1, pressing × key or ← key will not move the cursor and the error buzzer will sound.

③ Data setting method

Press the MENU key, and the data at the position of the cursor will be reversed to 0 when it is 1, or to 1 when it is 0. (If the soft switch can be changed at the bit (Refer to ⑥.), the error buzzer will sound with the process not received.)

④ Outputting method of soft switch list

In the soft switch mode, press the REPORT key, and the soft switch list will be output.

If the recording paper runs out or is clogged, the key error buzzer will sound with the process not received.

⑤ Storage of data

In the following case, the data of the soft switches set will be stored.

- It is shifted to set the next soft switch by pressing the START switch.
- It is shifted to set the next soft switch with the [#] key.
- It is shifted to set the last soft switch with the [×] key.
- It is shifted to set another soft switch by inputting two digits as the switch number. (When 2 digits are completely input.)
- Output of the soft switch list is started.

⑥ Inhibition of data change

(This is also applicable for the optional setting.)

In the following case, it is inhibited to change the data with the key error buzzer.

- Switching ON/OFF of ECM during the use of image memory.
- OFF to ON of telephone billing function which is using the image memory is used (Note: In the existing set, the telephone billing code function is specified from OFF to ON when the timer system communication (including the batch communication) is set.) Here, the memory is usable when the telephone billing code function is on. It can be set from ON to OFF while the memory is used. However, if setting is practically changed even once, it can not be returned from OFF to ON.

- OFF to ON of department control function during use of image memory.
(Note: In the existing set, the department control function is set from OFF to ON when the timer communication (including the batch sending) or the memory hold is set.)
- ON to OFF of continuous serial polling function when the continuous serial polling is started.
(Note: In the existing set, "ON to OFF of the continuous serial polling function when the continuous serial polling is registered" has been applied, but the conditions are now moderated. However, registration is impossible to the program of the new continuous serial polling when the continuous serial polling function is OFF.)
- In addition, change of all soft switches during communication

B) Print area

According to the size of the specified sheet, the effective printing area is printed.

C) ROM & RAM check

This is an item to check if the loaded memory device acts normally.

- The memory devices shown in the following table are checked.
- In case that an error occurs in the device check, the alarm buzzer shown in the table sounds.

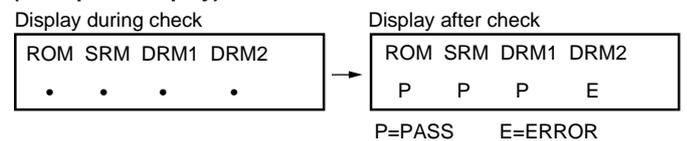

Check device and alarm buzzer

No.	Device checked	Number of buzzer sound	Remarks
1	ROM (PROGRAM FLASH)	<Short sound> 1 time	<Short sound>:
2	SRAM	<Short sounds> 2 times	0.5 sec.ON / 0.5 sec.OFF
3	Main D-RAM1 (*1)	<Short sounds> 3 times	<Long sounds>:
4		D-RAM2 (*2)	<Short sounds> 4 times
5	—	—	

*1: Work memory (SDRAM 8MB)

*2: Page memory (SDRAM 8MB)

(Example of display) In case that DRAM2 is erroneous.

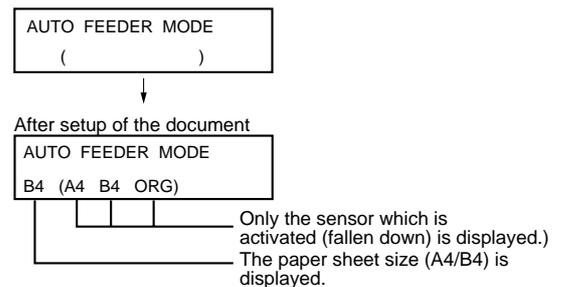

After the check is complete, the result is outputted.

D) Auto feeder mode

By executing the document insertion and discharge, the automatic feeding function can be checked. And the document sensor can be checked as well.

① Set the document

Before pressing the "START" key, only the document sensor check is carried out. And as the document sensor is ON, the document size (A4/B4) and the sensor information (A4/B4/ORG) are displayed.

- The automatic feeding starts by pressing the "START" key. This mode ends when the document ends, and the result is printed.

E) Aging mode

This is a mode to execute the copying action and the check pattern printing action once every 60 minutes and continue the action until 10 sheets are outputted in total.

- ① The printing action on the 1st sheet starts by pressing down the "START" key and entering the mode. When document is set at the time of the mode start-up the copy action is carried out, and when the document is not set the "check pattern 1" of the print dialog is printed.
- ② The number of printouts is displayed after printing.

F) Panel check mode

This is to check that each key acts normally and this is displayed on the LCD according to the key input. And during execution, the document reading lamp is ON. After inspection start, the LEDs light on sequentially. At the mode end with the "STOP" key, all of them go OFF. As to the test result, it is printed out after the mode end.

When the "NUMERIC" key is pressed during the panel check execution, sending of the DTMF signal corresponding to the key starts, and when another key is pressed sending of the DTMF signal stops.

- After inputting all the keys, input the "STOP" key at last, and then the result is displayed.

a) In case that all the keys are pressed.

PANEL CHECK MODE
ALL KEY OK !!

- After the mode end, the test result is printed.

b) In case that there is a key that is not pressed.

PANEL CHECK MODE
KEY ERROR !!

- At the time of NG, the keys that are not pressed are displayed sequentially, and it becomes the mode to input the key again.
- With the "STOP" key, the re-check is complete.
- After the mode end, the test result is printed.

G) Optical adjust mode

The optical system is adjusted.

- By pressing down the "START" key, the document reading lamp "100%: ON" is turned ON.

H) Product check

This is a dialog used in the production process and a mode to execute a specific mode in the series of the flow.

After the mode end, the rest result as to the checked items is printed.

- After moving to the mode, the following actions are sequentially executed.

- ① Memory clear (Same as Diagnosis K)
- ② Panel check (Same as Diagnosis F)
- ③ ROM & RAM test check (Same as the Diagnosis C)
- ④ Test result print
Memory clear printing
Panel check result printing
ROM & RAM test result printing
- ⑤ Print area (The specification of each item is the same as the specification of the simple mode.)

I) Signal send mode

After shift to the mode, press the START key, and the signals will be transmitted in the following sequence.

It can be used to check the modem and so on.

- [1] No signals
- [2] 4800BPS (V. 27ter)
- [3] 14400BPS (V. 33)
- [4] 12000BPS (V. 33)
- [5] 14400BPS (V. 17)
- [6] 12000BPS (V. 17)
- [7] 9600BPS (V. 17)
- [8] 7200BPS (V. 17)
- [9] 9600BPS (V. 29)
- [10] 7200BPS (V. 29)
- [11] 4800BPS (V. 29ter)
- [12] 2400BPS (V. 29ter)
- [13] 300BPS (FLAG)
- [14] 2100Hz (CED)
- [15] 1100Hz (CNG)

J) Comm. check mode

- ① Turn on the Line Monitor. (SW7 No.7, SW37 No.7)
- ② Turn off the Cover Sheet Function. (SW2 No.6, SW32 No.6)
- ③ Set Line Equivalence at 0 km. (SW8 No.1/No.2, SW38 No.1/No.2)

After the check, it is necessary to be sure to return the aforementioned soft switches into the initial state.
(Clear the memory with the diagnosis.)

K) Memory clear mode

Clear the back-up memory to initialize the soft switches.

The Flash Memory will be initialized. Then, the initialized list be output.

- ① Memory clear is executed.
- ② The result that says initialized is printed.

NOTE: The life system counter is not cleared.

L) Flash Memory check

This is a mode to check that the flash memory acts normally. The flash memories shown in the following table are checked.

No.	Flash memory	Number of buzzer sound	Remarks
1	NOR-Flash (Standard)	<Long sound> 1 time	<Short sound>:
2	NAND-Flash (Standard)	<Long sounds> 2 times	0.5 sec.ON / 0.5 sec.OFF
3	NAND-Flash (Option)	<Long sounds> 3 times	<Long sounds>:
4	—	—	1.0 sec.ON / 0.5 sec.OFF
5	—	—	

- NAND-Flash (optional) is valid only when the optional memory is mounted.

① The NOR flash memory test is executed.

② The concerned alarm buzzer sounds only when the error occurs.

③ The NAND flash memory test is executed.

④ The concerned alarm buzzer sounds only when the error occurs.

⑤ The result is printed.

NOTE:

- During operation of this diagnosis, dual operation is not possible at all.
- If this is excessively repeated, it will shorten the life of the flash memory.

M) All FAX/TEL. entry mode

This is a function to copy the FAX and TEL numbers registered in the one-touch dialing (RAPID) key [01] to the all one-touch dialing (RAPID) key and the all abbreviated number (SPEED DIAL) to simplify the FAX and TEL number registration at the time of aging.

① Copy the Fax and Tel numbers (including agency) registered in the one-touch dialing (RAPID) key [01] to all one-touch dialing (RAPID) key.

② Copy the FAX and TEL numbers registered in the one-touch dialing (RAPID) key [01] to the all abbreviated number (SPEED DIAL).

③ In case the chain dial is not set in the one-touch dialing (RAPID) key [01], register the one-touch dialing (dialing) keys [02] – [59] and all abbreviated number (SPEED DIAL) to the group number [01]. In case that the chain dial is set, do not create a group, but cancel only the chain dial setting of the one-touch dialing (RAPID) key [01]. (All except for the one-touch dialing (RAPID) key [01], chain dial is kept set.)

④ Enter all registered one-touch send (RAPID) keys and speed dial numbers (SPEED DIAL) on the personal books [01] - [10].

Following this, set the password registration and the password setting to ON, and set the TTI setting to OFF.

The call-receiver names and book names are specified as follows:

Rapid	R XX	XX	: Rapid key send
SPEED DIAL	S XXX	XXX	: Speed dial number
Personal book	BOOK XX	XX	: Book number

(The letters after 16th letter of the call-receiver's name registered in the one-touch dialing [01] are cut off.)

NOTE: Before entering this mode, FAX and TEL numbers must be registered in the one-touch dialing (RAPID) key [01].

(In case that they are not registered, or a program or a group is registered, it is not executed.)

N) Dept. passcode

The department passcode list is printed.

O) Conf. passcode

The confidential passcode list is printed.

Differing from printing of one box alone soon after registration, the confidential passcodes of all boxes are printed.

P) Signal send mode 2

The signals concerned with V.34 & V.8 are checked.

After this mode is activated, press the START key, and the signals will be sent in the following sequence.

It can be used to check the modem.

[1] No signal

[2] 33600BPS (V. 34)

[3] 31200BPS (V. 34)

[4] 28800BPS (V. 34)

[5] 26400BPS (V. 34)

[6] 24000BPS (V. 34)

[7] 21600BPS (V. 34)

[8] 19200BPS (V. 34)

[9] 16800BPS (V. 34)

[10] 14400BPS (V. 34)

[11] 12000BPS (V. 34)

[12] 9600BPS (V. 34)

[13] 7200BPS (V. 34)

[14] 4800BPS (V. 34)

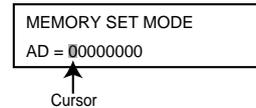

[15] 2400BPS (V. 34)

[16] 0 - 300BPS (V. 34)

[17] ANSam

Q) Memory set mode

The set and dump list of the memory content is output.

- The address (8 digits (P) generally including the bank information is input, and the data of 2 digits is continuously input. Inputting is done in the hexadecimal mode. The ten-key is used for 0 through 9, and the alphabetic keys A (RAPID 01 through 06) are used for A through F.

- During data inputting, the address can be moved forward and backward one byte by one byte with ">>" and "#". (The address prior to the address 0 is looped as the maximum address.)

- The Validity of the address is not checked. Accordingly, writing/ reading operations are possible in the address of the memory not assigned, the address of ROM and so on. (However, as practical, writing is not done, and the data content runs short each reading.)

Though writing is possible in the flash memory, a little time is required.

It is also necessary to take care that the life of the flash memory is excessively shortened if much data is written in the flash memory. Since it may run away depending the written content, take minute care for the writing address.

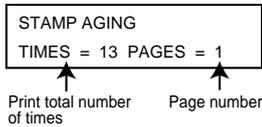

- When the REPORT key is input, the memory dump list is produced from the displayed address (here, it is limited at the 16-byte boundary address (address with end 0) which does not exceed the specified address and is just in front.). The dump list is output to a maximum of 99 pages. If any data of one page can be repeatedly developed and printed, the list is sufficient. But it is not desired that the content of plural pages are developed in the memory once and are then printed. If the STOP key is pressed, it will pass to the diagnosis after the page which is now being printed is completed printed. If the address exceeds the maximum address, it will return to the address 0 and printing will be continued.

R) Stamp aging mode

This is a mode to execute the continuous drive aging of the Verification stamp.

- ① Set the document and press down the “START” key and the continuous drive of the Verification stamp starts.
- ② Send the document at the interval of 10 mm and stamp the Verification stamp continuously. The total number of times of Verification stamp printing after entering this mode is displayed on the display.

• Displayed screen during execution

- ③ By pressing down the “STOP” key during the action, or when no more document is left, the continuous drive of the Verification stamp stops.

NOTE:

- In case that the document is not set, this cannot be executed.
- The normal action aging that one Verification stamp is pressed on one sheet of document is executed in the normal copying.

S) Dial test mode

The mode is used to inspect whether dialing is accurate in two kinds of dial modes. All data which can be dialed in this mode are automatically called up in both PB mode and DP mode.

[In case that 2 line optional is not mounted.]

- ① Turn on CML, and dial the following in the PB mode.
1, 2, 3, 4, 5, 6, 7, 8, 9, ✕, 0, #
- ② Dial the following in the DP mode.
1, 5, 9, 0

③ After dialing, turn off CML.

NOTE:

This mode uses the ordinary auto dial. (Accordingly, the signal sending time and minimum pause are all the same as ordinary. The measurement result in this mode is completely all the same as in the ordinary dial mode.)

T) Copy diag mode

This mode is for automatic mode selection of copy to reduce the time for treatment at the time of production.

- ① Set 2 sheets of document. (No problem if there are 2 sheets or more.)
- ② 3 sheet continuous copy: 1st sheet in the FINE AUTO
2nd sheet and after that are copied in the H-TONE DARK.

NOTE:

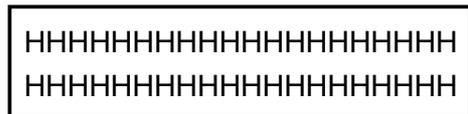

Input of the image quality and the darkness keys is invalid in this mode.

U) LCD check mode

This is an item to check that the LCD acts normally.

[In case of a 2 lines LCD]

Display “H” to all the digits. (20 letters x 2 lines)

V) Personal book list

The PASSCODE of the personal book 00 to 10 are output.

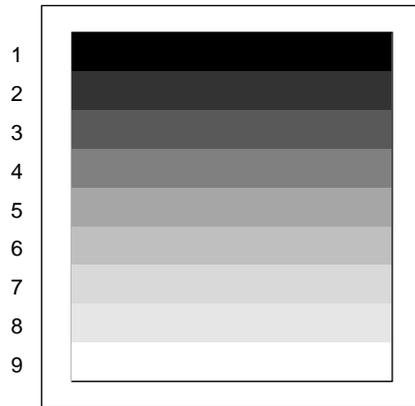

W) No function

X) No function

2-2. Print diagnosis

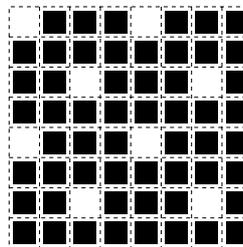

Rapid key 01: Area print mode 1

The effective printing area frame is printed in the specified sheet size.

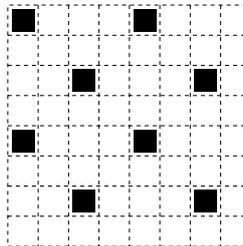

The data pattern used here are as follows and 1 data 30 mm is printed.

1. [Full black pattern]
2. [Intermediate tone 2 pattern]

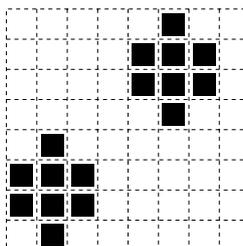

The left pattern is repeated.

3. [Intermediate tone 1 pattern]

The left pattern is repeated.

4. [Mesh point pattern]

The left pattern is repeated.

5. [Longitudinal strip 2 pattern]
Black 2 dot and white 2 dot are repeated in line.
6. [Lateral strip 2 pattern]
Black 2 line and white 2 line are repeated.
7. [Longitudinal strip 1 pattern]
Black 1 dot and white 1 dot are repeated in line.
8. [Lateral strip 1 pattern]
Black 1 line and white 1 line are repeated.
9. [Full White pattern]

Rapid key 02: Check pattern 1

The lateral stripe 2 pattern is printed on one sheet. (Black 2 line and white 2 line are repeated.)

Rapid key 03: Check pattern 2

The lateral stripe 2 pattern is printed on multiple pages. Press the STOP key to end the printing.

Rapid key 04: Check pattern 3

The intermediate tone 1 is printed on one sheet.

Rapid key 05: Check pattern 4

In this mode, 1 sheet is printed as to the square frame pattern for the skew measurement.

Rapid key 06: Paper feed aging 1

The mode is used for aging related to the printing. In this mode, the following modes are provided.

- ① Blank paper aging mode (ALL WHITE AGING)
- ② Whole black print aging mode (ALL BLACK AGING)
- ③ 5% printing aging mode (5% AGING)
- ④ 4% printing aging mode (4% AGING)
- ⑤ Outer frame check pattern
- ⑥ 4% check pattern

After selecting the paper-pass aging mode in the print diagnosis mode, input the number of each mode above with the ten-key, and the mode will be executed. The detailed specifications of each mode are described as follows. Here, the operation in each mode is stopped only when the STOP key is pressed by the operator or a printing-impossible error occurs.

- Blank paper aging mode
In the mode, printing is continued in the whole white (white paper) printing pattern until the STOP key is pressed by the operator. (In the printing area)
- Whole black printing aging mode
In the mode, printing is continued in the whole black (whole black) printing pattern until the STOP key is pressed by the operator. (In the printing area)
- 5% aging mode
In this mode, the 5% print pattern is repeatedly printed until the [STOP] key is pressed by the operator.
- Outer frame pattern aging mode
In this mode, the outer frame check pattern is repeatedly printed until the [STOP] key is pressed by the operator. For the outer frame, only the frame showing the printing area is printed.
- 4% chart aging mode
In this mode, the 4% chart is repeatedly printed until the [STOP] key is pressed by the operator.

Rapid key 07: Paper feed aging 2

This is a mode that is used for aging related to printing, and there are following modes. And also as to the print interval 5 sec. – 12 hour can be set.

- ① Blank paper aging mode (ALL WHITE AGING)
- ② Whole black print aging mode (ALL BLACK AGING)
- ③ 5% printing aging mode (5% AGING)
- ④ 4% printing aging mode (4% AGING)
- ⑤ Outer frame check pattern aging mode
- ⑥ 4% check pattern aging mode

After entering this mode and selecting the paper feeding aging mode, each mode is executed by inputting the number of the above each mode with the numeric number keys and then inputting the print interval with the numeric number keys. Refer to the paper feeding aging mode 1 for each mode. Each mode stops the action only when the STOP key is pressed by an operator or when an error for print impossible occurs.

Rapid key 08: Bias adjust mode

The mode is used to adjust the printing density of the printed image. The image printing density is adjustable in seven steps of 1 to 7.

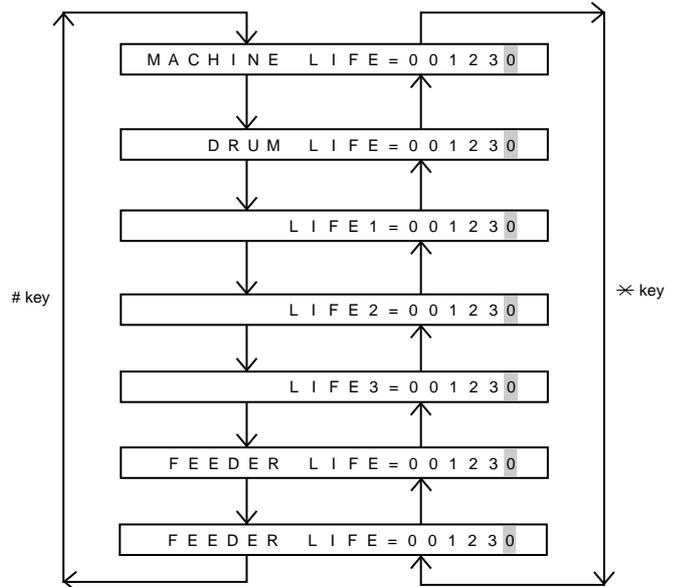

For details, refer to the following table. (For selection, use the keys 1 through 7.)

Image printing density	Thin ← → Thick						
	1	2	3	4	5	6	7
Default value				⊙			

Rapid key 09: Life set mode

The mode is used to set the life counter of the printer and the counter of the auto feeder at desired values. For setting, proceed with the following procedure.

- ① When the life counter setting mode is selected, the following will be displayed.

The cursor blinks at the top data. Five counters can be selected with the "#" and "x" keys.

- ② In the state ①, input a desired setting number of 6 digits with the ten-key.
- ③ After input of 6 digits, shift to another counter with the "#" and "x" keys as necessary. When all necessary counters are completely input, press the START key.
- ④ "STORED" will be displayed with the set values stored into the memory. For checking, retry this mode.

NOTE: The counter shows the operational state of the printer (how many sheets have been printed since start of use?). The ordinary memory does not reset the counter. Accordingly, it is necessary to reset this counter in addition to the ordinary memory clear if the content in the memory on the control PWB is broken because of PWB repair, etc. (In the production stage, it is necessary to execute this in the last process.)

Rapid key 10: Life all clear

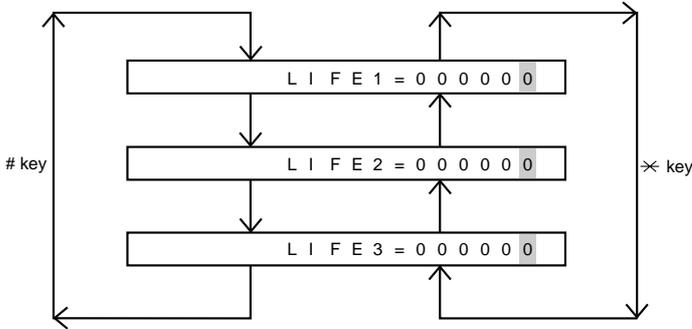

The mode is used to clear the life counter of the printer of the counter of the auto feeder.

NOTE: The counter shows the operational state of the printer (how many sheets have been printed since start of use?). The ordinary memory does not reset the counter. Accordingly, it is necessary to reset this counter in addition to the ordinary memory clear if the content in the memory on the control PWB is broken because of PWB repair, etc. (In the production stage, it is necessary to execute this in the last process.)

Rapid key 11: Life entry mode
(For Serviceman temporary counter)

The mode is used to set a desired value for the judgment value (alarm judgment counter value) of the general purpose life counters 1 through 3 of the printer. If the life of a consumable part (developer, imprinter, etc) is set, the model which has the error display and RMS function will inform RMS when the counter reaches the set value. For setting, proceed with the following procedure.

- ① When the life counter setting mode is selected, the following will be displayed.

The cursor blinks at the top data.

Three counters can be selected with the "#" and "≠" keys.

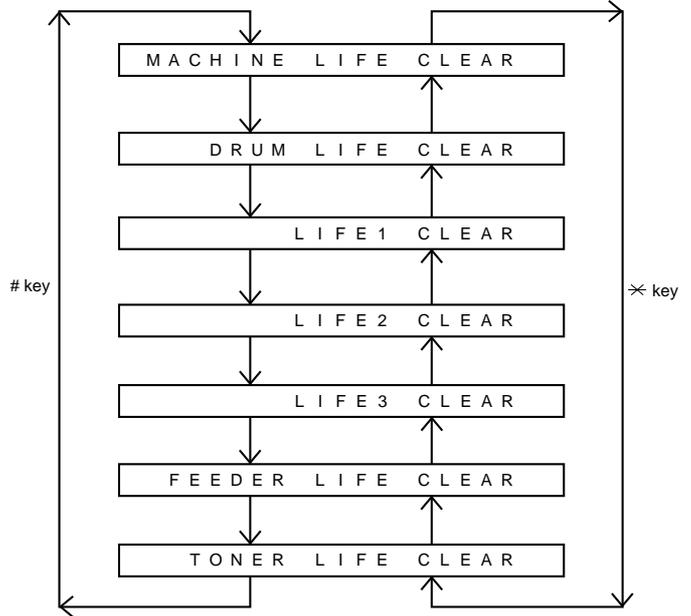

- ② In the state ①, input a desired setting number of 6 digits with the ten-key.
- ③ After input of 6 digits, shift to another counter with the "#" and "≠" keys as necessary. When all necessary counters are completely input, press the START key.
- ④ "STORED" will be displayed with the set values stored into the memory. For checking, retry this mode.

NOTE: The counter shows the operational state of the printer (how many sheets have been printed since start of use?). The ordinary memory does not reset the counter. Accordingly, it is necessary to reset this counter in addition to the ordinary memory clear if the content in the memory on the control PWB is broken because of PWB repair, etc. (In the production stage, it is necessary to execute this in the last process.)

Rapid key 12: Life clear mode

The mode is used to respectively clear the life counter of the printer and the counter of the auto feeder. For setting, proceed with the following procedure.

- ① When the life counter clearing mode is selected, the following will be displayed.

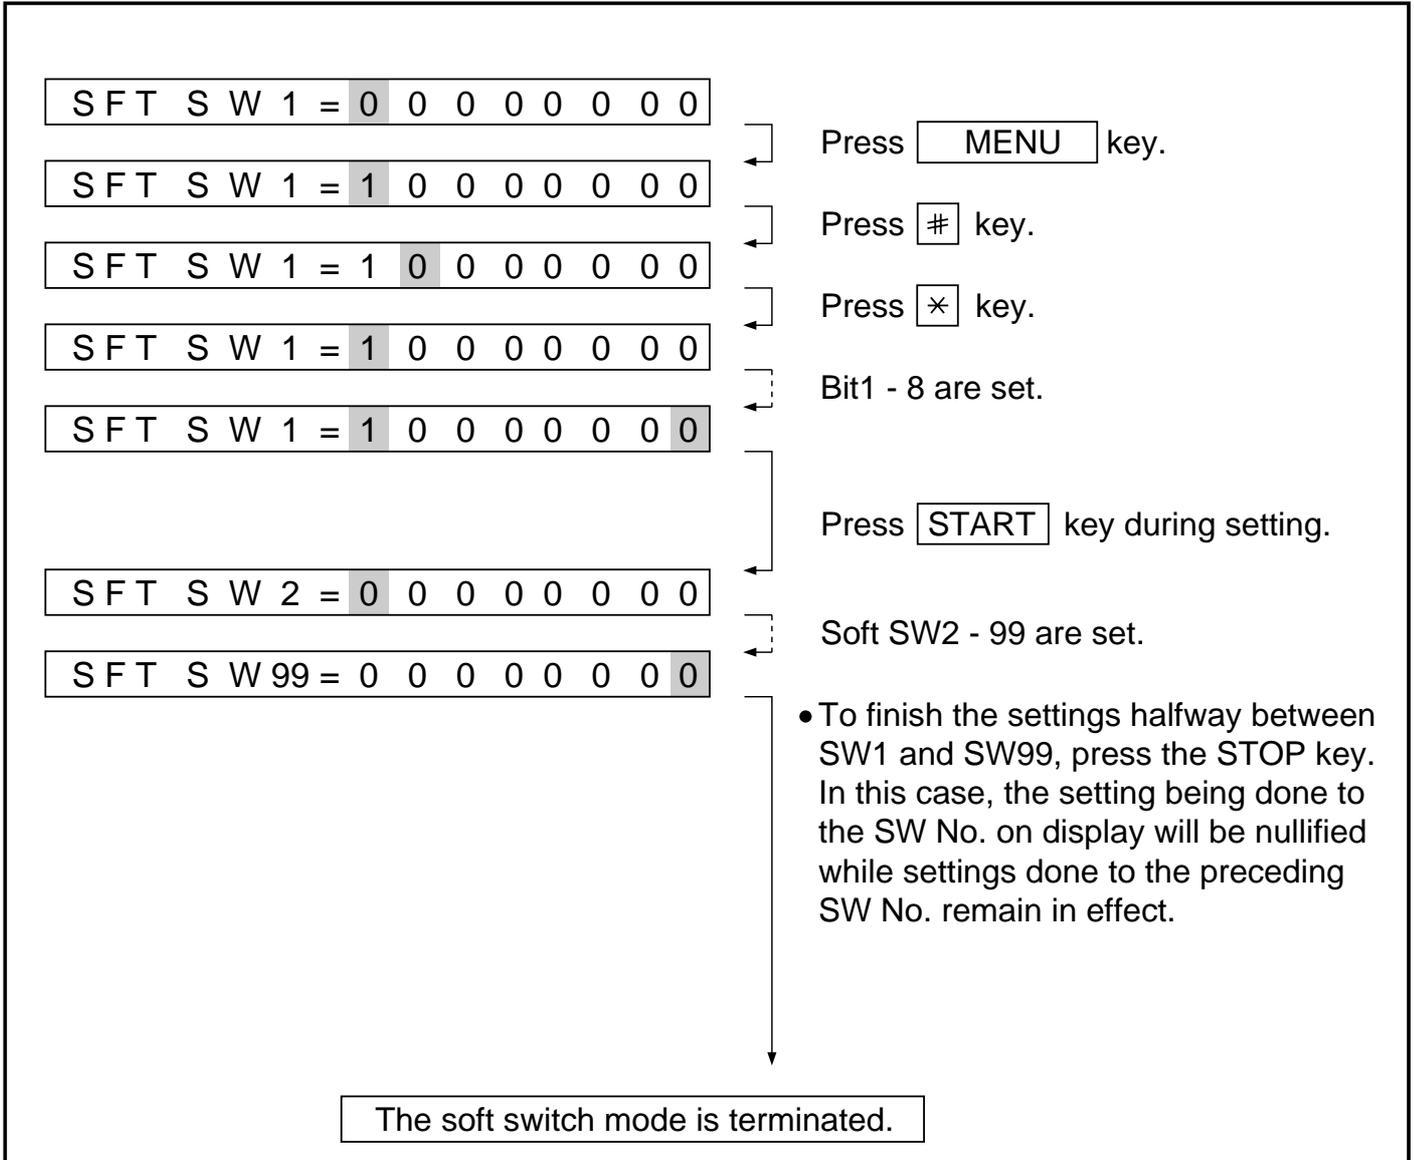

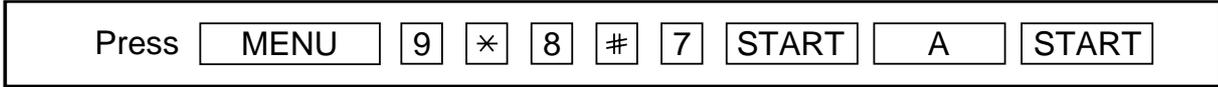

Seven counters can be selected with the "#" and "≠" keys.

- ② In the state ①, input the DEL key, and the counter will be respectively cleared.
- ③ "CLEARED" is displayed and clearing is complete. After ending one clear, move to another counter to clear with the "#" key, "≠" key, if necessary. After clearing the necessary counter press down the "STOP" key.

NOTE: The counter shows the operational state of the printer (how many sheets have been printed since start of use?). The ordinary memory does not reset the counter. Accordingly, it is necessary to reset this counter in addition to the ordinary memory clear if the content in the memory on the control PWB is broken because of PWB repair, etc. (In the production stage, it is necessary to execute this in the last process.)

3. How to make soft switch setting

To enter the soft switch mode, make the following key entries in sequence.

4. Soft switch description

• Soft switch

SW NO.	DATA NO.	ITEM	Switch setting and function					Initial setting	Remarks	
			1			0				
SW1	1	Recall interval	Binary input 8 4 2 1					0	OPTION Set to 1~15	
	2		No. = 1 2 3 4 (Data No.)					1		
	3		EX 0 1 0 1					0		
	4		eg. Recall interval is set to 5 min.					1		
	5	Recall times	Binary input 8 4 2 1					0	OPTION Set to 0~14

• Soft switch function description

SW1 No. 1 ~ No. 4 Recall interval

Choice is made for a recall interval for speed and rapid dial numbers. Use a binary number to program this. If set to 0 accidentally, 1 will be assumed.

SW1 No. 5 ~ No. 8 Recall times

Choice is made as to how many recall times should be made. Use a binary number to program this.

SW2 No. 1 Dial mode

Switch the type according to the telephone circuit connected to the facsimile.

0: PULSE DIAL

1: TONE DIAL

SW2 No. 2 Receive mode

Auto/manual receiving mode is set.

SW2 No. 3 ECM mode

Used to determine ECM mode function.

SW2 No. 4 Reserved

Set to "0".

SW2 No. 5 Polling security

This switch is employed to enable or disable the polling operation using the ID code verification function, in order to prevent unauthorized polling operation.

SW2 No. 6 Auto cover sheet

When "1" (=YES) is selected, the cover sheet is automatically sent after transmission of the original to notify the receiver of the number of original sheets transmitted.

SW2 No. 7 JUNK-FAX function in manual reception

It is set whether JUNK-FAX is functioned in the manual receiving mode or not.

SW2 No. 8 JUNK-FAX function

This function is used to receive data from a specific remote machine (station registered in entry mode). It is the function that refused a reception in the case that TSI of remote machine matched with fax number of the station registered.

0: No

1: Yes

SW3 No. 1 ~ No. 4 Number of rings for auto-receive

(0: No ring receive)

When the machine is set in the auto receive mode, the number of rings before answering can be selected. It may be set from one to nine rings using a binary number. If the soft switch was set to 1, a direct connection is made to the facsimile. If it was set to 0 accidentally, receive ring is set to 1. If it was above 9, receive rings are set to 9.

SW3 No. 5 ~ No. 8 Switch to auto-receive from manual receive

(0: No switch)

This setting allows machine to switch from manual to Auto Receive mode. Setting this number to 0 forces machine to stay in Manual receive mode. Entering the binary number 0 forces the machine to remain in the manual answer mode. If a number between 1 and 9 is entered, the machine will go into the answer mode after the given number of rings. However, it can be used as an ordinary telephone if the handset is taken off the hook before this programmed number is finished. If entry of a number above 9 by accident, it will be set to 9. In this case, it must be corrected to the proper number.

SW4 No. 1 ~ No. 3 Communication results printout

It is possible to obtain communication results after each transaction. Normally, the switch is set (No. 1: 0, No. 2: 0, No. 3: 1) so that the communication result is produced only a communication error is encountered. If No. 1 was set to 1, No. 2 was set to 1 and No. 3 was set to 0, the communication result will be produced every time a communication is done, even if the communication was successful.

If No. 1 was set to 0, No. 2 to 1 and No. 3 to 0, the communication result will be produced every transmission.

Setting No. 1 to 1 No. 2 to 0 and No. 3 to 0 will disable this function. No transaction report will be printed.

If No. 1 was set to 0, No. 2 to 0 and No. 3 to 0, the communication result is produced only after a timer and memory transmission or when a communication error is encountered.

SW4 No. 4 Image addition function to the communication result table (for memory transmission only)

Used to set addition of sending image to the communication result table.

SW4 No. 5 Reserved

Set to "0".

SW4 No. 6 TEL billing code function

When set to "1", the TEL billing code function is enabled.

SW4 No. 7 Billing code position

When set to "1", the billing code is delivered before dialing the remote number. When set to "0", the billing code is delivered after dialing.

SW4 No. 8 Multi-TTI feature

When this switch is set to "1", Multi TTI function is enabled.

SW5 No. 1 Time display format

When this switch is set to "0", time is displayed in 12-hour system.

When set to "1", 24-hour system.

SW5 No. 2 Date display format

Used to select date display/print formats.

0: DAY-Month-Year

1: Month-DAY-Year

SW5 No. 3 Header print

When it is set at 0, sender's name, sending page number and so on are automatically printed in the recording paper on the receiving side during transmission. Thus, the sender can be known on the receiving side.

0: Applied.

1: Not applied.

SW5 No. 4 Footer print

When set to "1", the date of reception, the sender machine No., and the page No. are automatically recorded at the end of reception.

SW5 No. 5 Reserved

Set to "0".

SW5 No. 6 Substitute reception

Selection of substitute reception in the case of recording paper ex-hausted or paper jam. If set to "NO", auto receive is disabled even when the receive memory is ready to receive.

Substitute reception is not performed even during receive operation.

SW5 No. 7 Substitute reception conditions

Selection of substitute reception according to existence of TEL number from transmitting side. Initial setting allows substitute reception without CSI. If set to "no", the receiver cannot receive any documents

SW5 No. 8 CSI transmission

CSI signal contains the sender's phone number registered in the machine. If this switch is set to "1", no sender's name will be printed at the receiving side.

SW6 No. 1 JBIG (Joint Bi-level Image Group)

An image compression encoding method recommended by ITU-T. It realizes 2-second transmission when the power is turned on.

SW6 No. 2 JBIG (Joint Bi-level Image Group) option

An optional function for JBIG.

SW6 No. 3 MMR

MMR (Modified MR) selects presence of the compression function.

SW6 No. 4 MR

MR (Modified READ) selects presence of the compression function.

SW6 No. 5 ~ No. 8 Modem speed

Used to determine the initial modem speed. The default is 14400BPS(V.17). It may be necessary to program it to a slower speed when frequent line fallback is encountered, in order to save the time required for the fallback procedure.

SW7 No. 1, No. 2 Reception speed fixed

The transferable speed of modem in the receiving mode is set.

SW7 No. 3 DIS receive acknowledge during G3 transmission

Used to make a choice of whether reception of NSF (DIS) is acknowledged after receiving two NSFs (DISs) or receiving one NSF (two DISs).

It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

SW7 No. 4 Non-modulated carrier in V.29 transmission mode

Though transmission of a non-modulated carrier is not required for transmission by the V29 modem according to the CCITT Recommendation, it may be permitted to send a non-modulated carrier before the image signal to avoid an echo suppression problem. It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

SW7 No. 5 CNG send when manual TX

CNG signal sending ON/OFF in case of manual transmission is set.

SW7 No. 6 Protocol monitor

Normally set to "0". If set to "1", communication can be checked, in case of troubles, without using a G3 tester or other tools.

When communication FSK data transmission or reception is made, the data is taken into buffer. When communication is finished, the data analyzed and printed out. When data is received with the line monitor (SW7-No. 7) set to "1" the reception level is also printed out.

SW7 No. 7 Line monitor

Normally set to "0". If set to "1", the transmission speed and the reception level are displayed on the LCD. Used for line tests.

SW7 No. 8 Reserved

Set to "0".

SW8 No. 1, No. 2 Compromised equalizer

The specific line equalizer is inserted.

No. 1	No. 2	
0	0	The line equalizer built in the modem is turned off.
0	1	Line equalizer corresponding to 1.8 km
1	0	Line equalizer corresponding to 3.6 km
0	1	Line equalizer corresponding to 7.2 km

SW8 No. 3 H2 mode

Used to determine H2 mode (15sec transmission mode). When set to OFF, H2 mode is inhibited even though the transmitting machine has H2 mode.

SW8 No. 4 ~ No. 8 Signal transmission level

Used to control the signal transmission level in the range of -0dB to -31dB.

SW9 No. 1, No. 2 CED tone signal interval

For international communication, the 2100Hz CED tone may act as an echo suppresser switch, causing a communication problem. Though this soft switch is normally set to "0", it should be set to "1" so as to change the time between CED tone and DIS signal from 75ms to 500ms to eliminate the communication problem caused by echo.

SW9 No. 3 Equalizer freeze

This switch is used to perform reception operation by fixing the equalizer control of modem for the line which is always in an unfavorable state and picture cannot be received. Usually, the control is executed according to the state of line where the equalizer setting is changed always.

SW9 No. 4 Equalizer freeze conditions

Setting which specifies SW9 No.3 control only in condition of 7200bps modem speed.

SW9 No. 5 CED detection time

The detection time of the CED signal from the called side in the auto calling mode is set.

SW9 No. 6, No. 7 Alarm buzzer

The length of the buzzer for normal end of operation is set.

SW9 No. 8 Action when RTN received

The operation is set when the RTN signal is received in the G3 transmission mode.

SW10 No. 1 ~ No. 4 Memory retransmission times

The number of memory retransmissions is set.

SW10 No. 5 ~ No. 8 Memory retransmission interval

The interval between memory retransmissions is set.

SW11 No. 1 ~ No. 4 V.34 mode transmission speed

Used to determine the initial modem speed when communication method is V.34 transmission mode.

SW11 No. 5 ~ No. 8 V.34 mode receiving speed

Used to determine the initial modem speed when communication method is V.34 reception mode.

SW12 No. 1 V.34 mode function in case of manual communication

Used to select whether the V.34 mode is made valid when automatically transmitting/receiving.

SW12 No. 2 V.34 mode function

Used to select the V.34 mode for communication when set to "1", communication method is V.34 mode..

SW12 No. 3 V.34 control channel communication speed

Used to select the control channel communication speed for V.34 mode.

SW12 No. 4, No. 5 EOL detection timer

Used to make a choice of whether to use the 25-second or 13-second timer for detection of End of line This is effective to override communication failures with some facsimile models that have longer End of line detection.

SW12 No. 6, No. 7 Processing of DIS reception after DIS transmission

When receiving , operation in case of DIS reception after DIS transmission is selected. Retransmitting command: To retransmit DIS in disregard of DIS reception.

Breaking circuit: To break circuit instantly. (Abnormal finish)

T. 30: To operate in accordance with T.30.

T. 30+α: To operate in accordance with T.30+α. (To operate differently according to cases.)

SW12 No. 8 The change to DB from DP by \times

When setting to 1, the mode is changed by pressing the \times key from the pulse dial mode to the tone dial mode.

SW13 No. 1 ~ No. 5 DTMF output level (High)

To set the level to output high group DTMF signals. -15 to 0 dBm (0.5 dBm unit)

SW13 No. 6 ~ No. 8 Reserved

Set to "0".

SW14 No. 1 ~ No. 5 DTMF output level (Low)

To set the level to output low group DTMF signals. -15 to 0 dBm (0.5 dBm unit)

SW14 No. 6 ~ No. 8 Reserved

Set to "0".

SW15 No. 1 ~ No. 4 Reserved

Set to "0".

SW15 No. 5 ~ No. 8 CI signal OFF detect enable time

Used to set the continuous detection time during OFF period of CI signal.

SW16 No. 1 ~ No. 4 Reserved

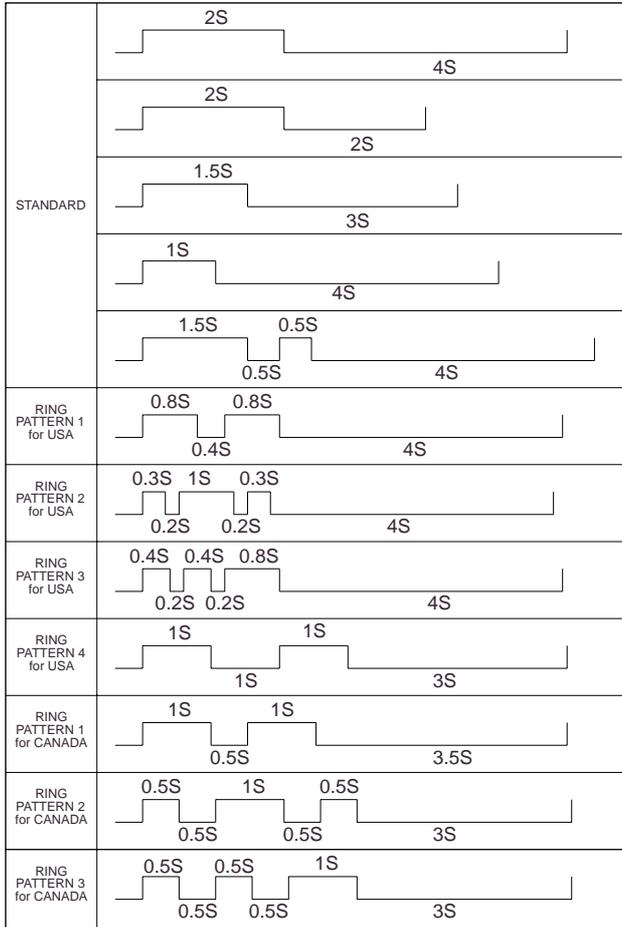

Set to "0".

SW16 No. 5 ~ No. 8 Distinctive ringing

When the ringing setting is turned off, all of the CI signal are received. When any of the standard, and ring patterns 1 through 3 is selected for the ringing setting, only the selected CI signal is received.

CI signal patterns

The CI signal patterns consists of the standard pattern, and ring patterns 1 through 7. The standard pattern is the conventional one.

SW64 No. 3 Continuous serial polling

Turns ON/OFF the continuous polling function.

SW64 No. 4, No. 5 Time interval for continuous serial polling

Used to set the interval time for continuous serial polling. Normally set to no interval (0 minute).

SW64 No. 6, No. 7 Reserved

Set to "0".

SW64 No. 8 Quick on line function

It is selected whether auto dial call is activated in the memory input mode when one document is completely read or when all pages are completely read.

SW65 No. 1, No. 2 Cassette selection

To set selective modes for detail paper cassettes of the printer.

00:	Manual	To select detail paper in the first priority cassette in accordance with setting by SW65 3-8 and SW65 1-3. If the detail paper in the first priority cassette runs short, the second priority cassette will be used.
01:	Automatic 1	To automatically select detail paper with optimum size among the first to third priority cassettes in accordance with setting by SW65 3-8 and SW65 1-3. The optimum paper is selected by every page. If all the cassettes have the same size paper, paper will be selected according to the cassette priority.
10:	Automatic 2	To automatically select detail paper with optimum size among the first to third priority cassettes in accordance with setting by SW65 3-8 and SW65 1-3. At the start of printing, the optimum paper is adopted only for the first page. Thereafter the same cassette selected for the first page will be used from the second page and after. If all the cassettes have the same size paper, paper will be selected according to the cassette priority.
11:	Except the above	01: the same setting as in the case of Automatic 1

SW65 No. 3 ~ No. 5 The 1st priority cassette

To select the first priority cassette.

001:	1st paper feeder (MP-TRAY)
010:	2nd paper feeder
011:	3rd paper feeder
Except the above	Printing started from the possible paper feeder

SW65 No. 6 ~ No. 8 The 2nd priority cassette

To select the second priority cassette.

000:	Not used (To set in case of using only paper feeder that has been set in the first priority cassette)
001:	1st paper feeder (MP-TRAY)
010:	2nd paper feeder
011:	3rd paper feeder
Except the above	Not used

SW66 No. 1 ~ No. 3 The 3rd priority cassette

To select the third priority cassette.

000:	Not used (To set in case of using only paper feeder that has been set in the first /second priority cassette)
001:	1st paper feeder (MP-TRAY)
010:	2nd paper feeder
011:	3rd paper feeder
Except the above	Not used

SW66 No. 4, No. 5 Cassette selection of separate page

The supply origin of a separate page is set.

SW66 No. 6 ~ No. 8 Reserved

Set to "0".

SW67 No.1, No. 2 Power save mode

The heater mode of a printer is set.

SW67 No. 3 ~ No. 5 Density adjustment of print bias

The density of printing is set.

It can be also set in the print diagnosis mode.

SW67 No. 6, No. 7 Drum life detection

The detection mode of Drum life is set.

SW67 No. 8 Reserved

Set to "0".

SW68 No. 1, No. 2 Distinctive ring pattern

The distinctive ring patten is set for country.

SW68 No. 3 Reserved

Set to "0".

SW73 No. 1 ~ No. 5 Reserved

Set to "0".

SW73 No. 6 ~ No. 8 Data reduction

Reduction ratio of receiving is set .

It can be changed even in the optional mode.

To set printing reduction rate of received images.

000:	Automatic
100:	100%
Except the above	100%

SW74 No. 1 Automatic printing of activity report

This soft switch is used to select; whether or not to produce the activity report when the memory is full (about 50 items). An activity report can be produced when the following key entry command is made.

"FUNC", "2", "#", "START"

After producing the activity report, all the data in the memory will be cleared.

When the switch function is set to "0" (NO), the data in memory will be deleted from the oldest as it reaches the maximum memory capacity (approx. 50 items).

SW74 No. 2 Print out of total time and total number of pages on activity report

Used to make a choice of whether the total communication time and pages are recorded in the activity report.

SW74 No. 3 Reserved

Set to "0".

SW74 No. 4 Department function

This model has the department audit feature, it has to be set to 1 to utilize this feature.

SW74 No. 5 ~ No. 8 Department ID digit

Used to set the department ID digit number .

When set to "D", the number is "4" .

SW75 No. 1 Copy protect switch

When this switch is set to "1", copy is for bidden.

SW75 No. 2 Cut-off mode (when copy mode)

When in copy, if the scanned data is out of the range of recording, the operator has one of the choices below using the switch.

0: Continue: Data is printed onto the next page with the last 20mm also printed at the beginning of the next page.

1: Cut off: Data scanned out of the limit is cut off (a page is printed.)

SW75 No. 3 Scanning ratio in memory input

In the case of memory transmission, etc., only letter size (A4) documents can be stored in the memory. To input B4 documents into the memory, therefore, the B4 documents must be reduced to letter size (A4) or the both ends of the B4 documents will be cut off to input the center letter-size (A4) portion. This switch provides the selection.

0: Reduced to A4 size and inputted.

1: Both ends are cut off and the center portion (A4 size) is inputted.

SW75 No. 4 Overseas communication mode selection function

When this switch is set to "1", the communication is Super G3 mode can be turned off by pressing the "SPACE" key before sending operation, for the transmission set after that (including polling).

SW75 No. 5 Reserved

Set to "0".

SW75 No. 6 ~ No. 8 Reduce ratio when copy mode

Reduction ratio of copying is set .

It can be changed even in the optional mode.

SW76 No. 1, No. 2 Reserved

Set to "0".

SW76 No. 3, No. 4 Density adjustment (when Fine/STD mode)

This is used for density adjustment in fine/standard mode. Adjust the density according to that of frequently used original.

Set to "Dark" for darker reading (either in the auto or the dark mode) of light original. Set to "Light" for lighter reading (either in the auto or the dark mode) of dark original.

Set to "Dark only in dark mode" for darker reading only in the dark mode.

SW76 No. 5, No. 6 Density adjustment (when half-tone mode)

This is used for density adjustment in the half tone. Setting procedures are the same as SW46 No. 3 and No. 4.

SW76 No. 7 MTF correction in half-tone mode

In the half tone mode, image area is separated from character area and processed separately to eliminate unclear character transmission. This switch is used to change the criteria of judgement of separation. When "Strong" (= 1) is selected, more area is judged as character area, providing clearer characters.

On the contrary, however, edges of image area may be emphasized.

It is advisable to restrict the use of this function only when clear characters must be transmitted, and to use the function of "Weak" (= 0) for general cases.

SW76 No. 8 MTF intensity in half-tone mode

This allows selection of MTF correction (dimness correction) in the half tone mode. When "NO" (= 1) is selected, the whole image becomes soft and mild, On the contrary, however, mildness of characters will be reduced. Normally set to "NO" (= 1).

SW77 No. 1 Cassette define LTR / A4:Tray

A4 cassette can be used .

Set "0" or "1" for all of three bits.

Do not change the setting during printing.

SW77 No. 2 Cassette define LTR / A4:Upper

A4 cassette can be used .

Set "0" or "1" for all of three bits.

Do not change the setting during printing.

SW77 No. 3 Cassette define LTR / A4:Lower

A4 cassette can be used .

Set "0" or "1" for all of three bits.

Do not change the setting during printing.

[3] Troubleshooting

1. Fax troubleshooting

Refer to the following actions to troubleshoot any of the problems mentioned in 1-4.

- [1] A communication error occurs.
- [2] Image distortion produced.
- [3] Unable to do overseas communication.
- [4] Communication speed slow due to FALLBACK.
 - Increase the transmission level SOFT SWITCH 8-4, 5, 6, 7, 8
May be used in case [1] [2] [3].
 - Decrease the transmission level SOFT SWITCH 8-4, 5, 6, 7, 8
May be used in case [3].

- Apply line equalization SOFT SWITCH 8-1, 2
May be used in all cases.
- Slow down the transmission speed SOFT SWITCH 6-5, 6, 7, 8
May be used in case [2] [3].
- Replace the LIU PWB.
May be used in all cases.
- Replace the control PWB.
May be used in all cases.

* If transmission problems still exist on the machine, use the following format and check the related matters.

[4] Error code table

1. Communication error code table

G3 Transmission

Code	Final received signal	Error Condition (Receiver side)
0	Incomplete signal frame	Cannot recognize bit stream after flag
1	NSF, DIS	Cannot recognize DCS signal by echo etc. Cannot recognize NSS signal (FIF code etc)
2	CFR	Disconnects line during reception (carrier missing etc)
3	FTT	Disconnects line by fallback
4	MCF	Disconnects line during reception of multi page Cannot recognize NSS, DCS signal in the case of mode change
5	PIP or PIN	The line is hung up without replying to telephone request from the receiving party.
6	RTN or RTP	Cannot recognize NSS, DCS signal after transmit RTN or RTP signal.
7	No signal or DCN	No response on receiver side or DCN signal received* (transmitter side)
8	–	Owing to error in some page the error could not be corrected although the specified number of error retransmission was attempted.
11	–	Error occurred after or while reception by the remote (receiving) machine was revealed to be impossible.
12	–	Error occurred just after fallback.
13	–	Error occurred after a response to retransmission end command was received.

G3 Reception

Code	Final received signal	Error Condition (Receiver side)
0	Incomplete signal frame	Cannot recognize bit stream after flag
1	NSS, DCS	Cannot recognize CFR or FTT signal Disconnects line during transmission (line error)
2	NSC, DTC	Cannot recognize NSS signal (FIF code etc)
3	EOP	Cannot recognize MCF, PIP, PIN, RTN, RTP signal
4	EOM	Cannot recognize MCF, PIP, PIN, RTN, RTP signal in the case of mode change
5	MPS	The line is hung up without replying to communication request.
6	PR1-Q	Cannot recognize PIP, PIN signal in the case of TALK request
7	No signal or DCN	No response in transmitter (cannot recognize DIS signal) or DCN signal received* (receiver side)
8	–	Error occurred upon completion of reception of all pages.
9	–	Error occurred when mode was changed or Transmission/Reception switching was performed.
10	–	Error occurred during partial page or physical page reception.
11	–	Error occurred after or during inquiry from the remote (transmitting) machine as to whether reception is possible or not.
12	–	Error occurred during or just after fallback.
13	–	Error occurred after the retransmission end command was received.
14	–	Error occurred after the voice communication command was received.

Super G3 mode

Error Code	Transmission Errors	Reception Errors
E-16	Same as E-0	Same as E-0
E-17	Same as E-1	Same as E-1
E-18	Same as E-2	Same as E-2
E-19	-	Same as E-8

E-29	Error occurred during handshaking for super G3 mode	
E-30		
E-31		

<Reference> Details of E-29 ~ 31

E-29	Handshaking error in V.8 negotiation procedure
E-30	Handshaking error in V.34 line probing procedure
E-31	Handshaking error in V.34 HDX training procedure

2. Service call error message

Message	Description
REMOVE ORIGINAL (S)	Document is stuck at the auto-feeder.
NO PAPER (TRAY)	No recording paper on the tray.
NO PAPER (UPPER)	No recording paper in the upper cassette.
NO PAPER (LOWER)	No recording paper in the lower cassette.
NO PAPER (BOTH CASS.)	No recording paper in either cassette.
NO PAPER (TRAY, UPPER)	No recording paper in the tray nor in the upper cassette.
NO PAPER (TRAY, LOWER)	No recording paper in the tray nor in the lower cassette.
NO PAPER	No recording paper anywhere.
SIZE ERROR	The size of the recording paper is wrong.
LASER ERROR	The laser unit abnormal.
POLYGON ERROR	The polygon motor abnormal.
FAN MOTOR ERROR	The fan motor abnormal.
CHECK UPPER CASSETTE	The upper cassette is not set properly.
CHECK LOWER CASSETTE	The lower cassette is not set properly.
CHECK BOTH CASSETTES	Neither cassette is set properly.
TONER EMPTY	There is no toner left.
PCU COMM. ERROR	No data communication between the PCU and the control PWB.
RX DOCUMENT TRAY OFF	The document-receiving tray is not set properly.
HIGH VOLTAGE ERROR	Abnormality with the high-voltage portion.
HEATER LOW ERROR	Heater temperature is too low.
HEATER HIGH ERROR	Heater temperature is too high.
WARMING UP ERROR	Warming up is not done properly.
CHECK COVER OR DRUM	Printer cover may be open, or the drum cartridge may not be set properly.
DRUM LIFE OVER	Drum life is over.
PAPER JAM	Recording paper is stuck inside.

[5] Overseas communication mode

(1) Function

The Super G3 (V.34) mode is susceptible to influence of line. It is better to use the G3 (V.17) mode for communication in specific line conditions. This function is provided to support this status.

(2) Memory retransmission

In case of memory transmission the retransmission is performed in the following conditions.

No.	Conditions	Operation
1	When a communication error occurred in communication in the Super G3 mode due to page 1 MCF reception failure.	The retransmission of this communication is performed after setting Super G3 to OFF (in V.17 mode).
2	When a communication error occurred in communication in the Super G3 mode after reception of page 1 MCF.	The retransmission of this communication is performed without setting Super G3 to OFF (in V.34 mode).
3	When a communication error occurred in retransmission.	Retransmission is performed again according to 1 and 2 above.
4	When a communication error occurred in sequential system communication.	Retransmission is performed according to 1 and 2 above for each station.

(3) Original transmission

Since retransmission is not provided for the original transmission, recovery by the method 1 is impossible. Accordingly, for the original transmission set Super G3 to OFF, and apply V.17 mode.

(4) Super G3 function setting to OFF by operator

A function to set Super G3 function to OFF is provided for operator in addition to the functions described in items (2) and (3) above. However, this function is invalid in the default mode.

It is made valid only when requested by using the soft switch.

SW75 No.4 = 0: Operation invalid (Default) 1: Operation valid

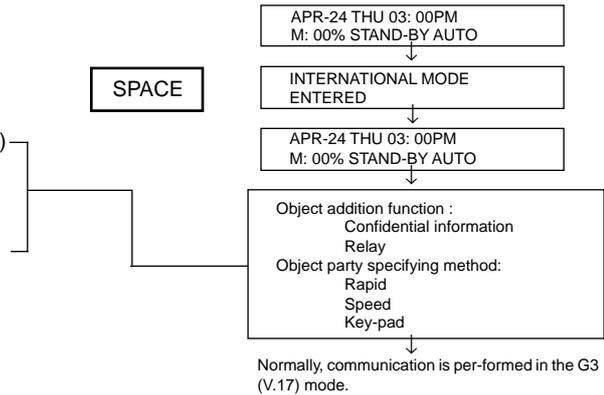

(4)-1 Setting method

① Before communication operation, lift the key overlay and press the SPACE key to set the communication to OFF in the Super G3 mode.

② Perform the transmission/polling operation.

The operations which are taken as objects are the following.

- * Instantaneous single station auto-dial transmission (original/memory)
- * Time-specified single station transmission
- * Program instantaneous single station transmission
- * Program time-specified single station transmission
- * Time-specified single station polling
- * Program instantaneous single station polling
- * Program time-specified single station polling
- * Manual transmission (original/memory)
- * Batch transmission

(4)-2 Canceling method (this setting is not canceled while one of the following operations is not performed)

① After setting operation (pressing the SPACE key) press the STOP key on the WAIT screen.

② After setting operation (pressing the SPACE key) hold for one minute.

In case of operation ① and ② the display shown right will appear for 2 seconds.

③ Perform the communication operation (all the communication operations).

④ Start up again the machine (turn on power).

INTERNATIONAL MODE
CANCELED

(4)-3 Others

① The operation to set Super G3 to OFF is valid only for one communication which is per-formed successively.

[6] Administrator mode in the personal book function

In the personal book function, 30 books from 01 to 30 may be set. It is also possible to set the administrator as a special book.

- (a) Setting : Same as the normal personal book, except for the book number to be specified as "00".
- (b) Switching to the administrator mode : Press the "PERSONAL BOOK" key and enter the "passcode of the book00" in the stand-by mode.
- (c) Cancellation of the administrator mode : Press the "STOP" key and enter "1" in the stand-by mode.
- (d) Function in the administrator mode : When the following list is output, the information of all books is read out.
 - 1) TELEPHONE NUMBER LIST
 - 2) RELAY GROUP LIST
 - 3) PROGRAM/GROUP LIST
 - 4) TIMER LIST
 - 5) MEMORY STATUS REPORT
 "PERSONAL BOOK LIST" may be output in item 16 of the "MENU + 2 : LISTMODE".

CHAPTER 3. MECHANICAL DESCRIPTION

[1] Mechanical description

1. Facsimile block

1-1. Document feed block and diagram

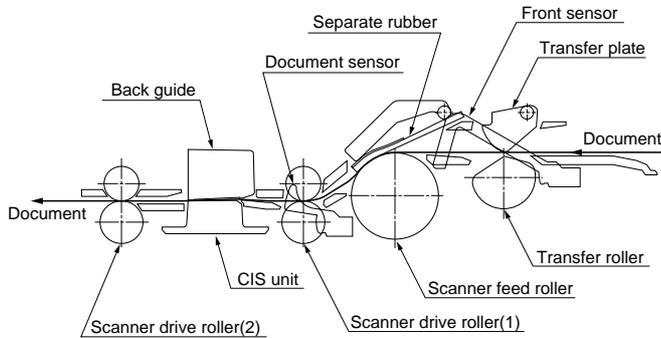

Fig. 1

2. Document feed operation

- 1) As shown in Fig.1, the document set in the hopper (the front sensor is on) is fed with the let out roller and paper feed roller which rotate together with the pulse motor.
- 2) When a specified number of pulses are received from the document sensor after the document lead edge is sensed, scanning will be started.
- 3) When a specified number of pulses are received from the document sensor after the document rear edge is sensed, scanning will be ended to discharge the document to the tray.
- 4) If the front sensor is on (the document is set up in the hopper), the next document is supplied and fed nearly when the last document is completely read and discharged. If the front sensor is off (no document is set up in the hopper), the drive will be stopped when the document is discharged to the tray.

3. Hopper mechanism

3-1. General view

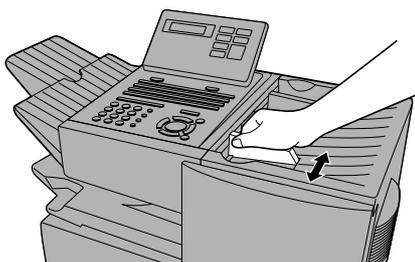

Fig. 2

The hopper is used to align documents with the document guides adjusted to the paper width.

NOTE: Adjust the document guides before and after inserting the document.

3-2. Automatic document feed

- 1) The structure with secure paper feed of the transfer roller and secure separation of the separation rubber plate system is employed. The transfer roller is semicircular as to be rotated only when the paper feed roller is driven with the 2-step paper feed clutch mechanism. Moreover, the separation is securely done by running the paper feed and transfer rollers more slowly than the feed roller.

- 2) Document separation system:
Friction + speed reduction ratio + roller backlash separation system

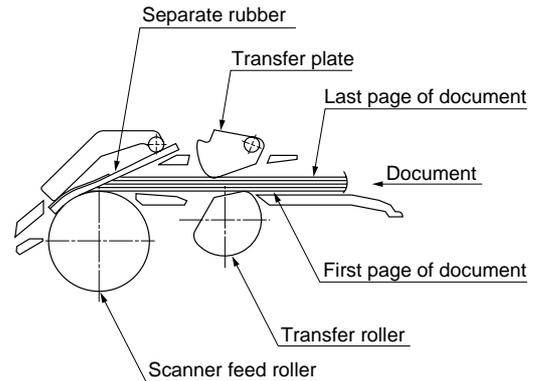

Fig. 3

3-3. Loading the documents

- 1) Make sure that the documents are of suitable size and thickness, and free from creases, folds, curls, wet glue, wet ink, clips, staples and pins.
- 2) Place documents face down in the hopper.
 - Adjust the document guides to the document width.
 - Align the top edge of documents and gently place them into the hopper. The first page under the stack will be taken up by the feed roller to get ready for transmission.

NOTE: 1) Curled edge of documents, if any, must be straighten out.

- 2) Do not load the documents of different sizes and/or thicknesses together.

3-4. Documents applicable for automatic feed

	Indication	Product specifications	
		Lower Limit	Upper Limit
Weight indication	Japanese indication Size 4 × 6	45kg paper	70kg paper
	Metric system indication	52g/m ²	80g/m ²
	American indication LB system indication	14 LB	20 LB
Thickness indication	Metric system indication	0.06mm	0.1mm
	Inch system indication	0.0024"	0.0035"
Document size Range	Document size	(148mm × 128mm) ~	
		W letter (279.4mm × 432mm)	
		A4 (210mm × 297mm) Letter (216mm × 279mm)	
Number of ADF sheets	Document size	B6 ~ Letter/A4 size	50 sheets
		B4 size/Legal	20 sheets
	Weight	W letter size	1 sheet
		90 kg (104g/m ²) or more 135 kg (157g/m ²) or less	1 sheet
Paper quality	Kind	Paper of fine quality/bond paper/ Kent paper	

NOTE: Double-side coated documents and documents on facsimile recording paper should be inserted manually.

Documents corresponding to a paper weight heavier than 90kg and lighter than 135kg are acceptable for manual feed.

Documents heavier than 135kg in terms of the paper weight must be duplicated on a copier to make it operative in the facsimile.

[2] Printer description

1. COMPONENTS LAYOUT

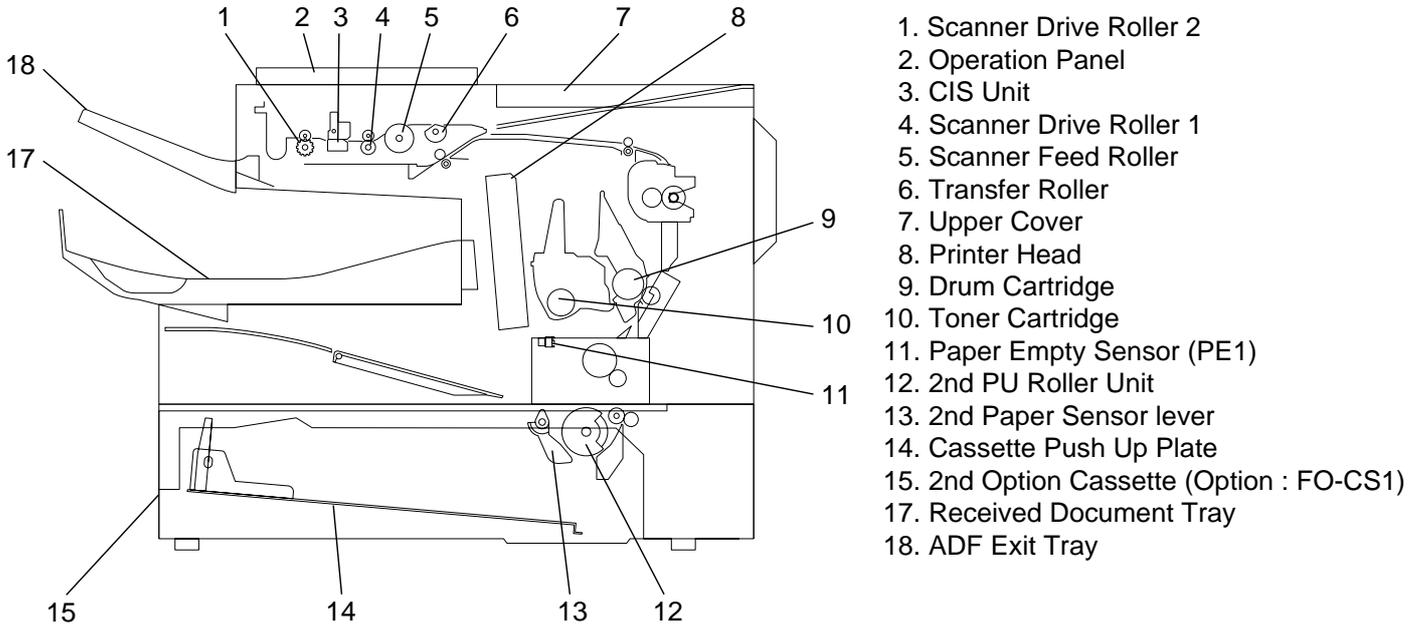

Fig. 1

2. DRIVE SECTION

2-1. Overview

The main motor (M1) transmits the drive to the rollers of the printer and the 2nd paper cassette unit via each gear as shown below.

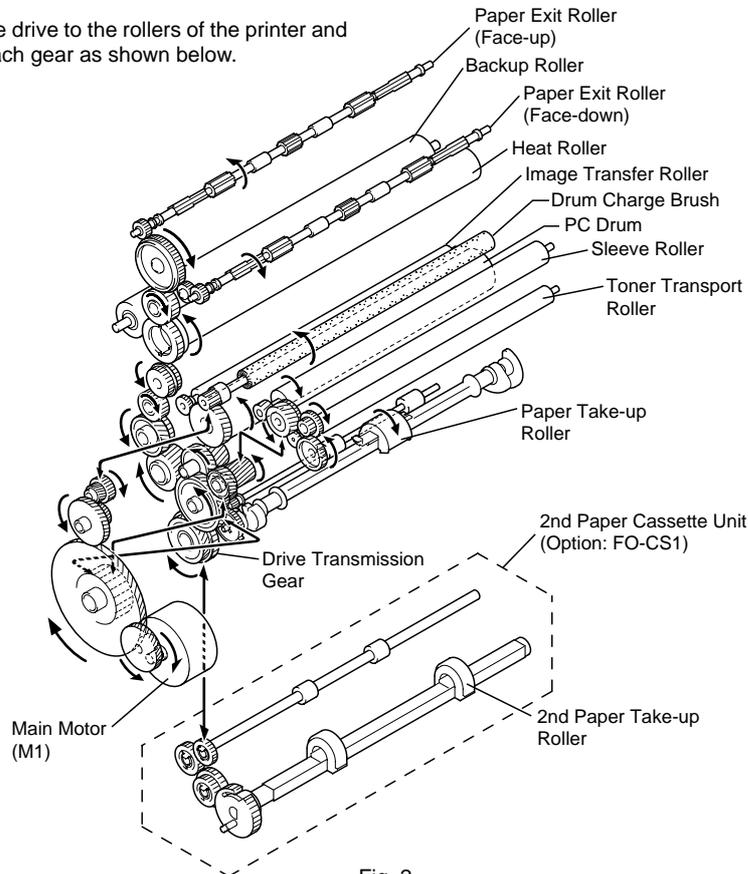

Fig. 2

3. PRINTER ENGINE ELECTRICAL COMPONENTS LAYOUT

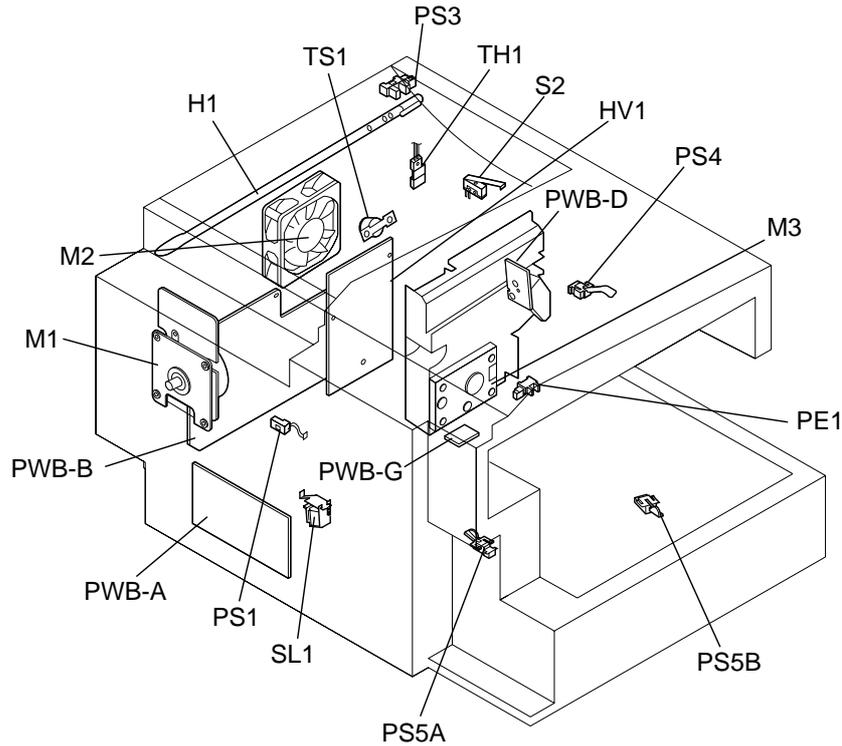

Fig. 3

4. ELECTRICAL PARTS IDENTIFICATION

Symbol	Name	Function
PWB-A	Printer PWB unit	Communicates with the control PWB and controls all printer operation.
PWB-B	Power Supply PWB unit	Converts the power voltage from AC voltage into DC voltage and supplies that to H1.
PWB-D	Laser Diode Drive PWB unit (Inside of the Print Head Unit)	Detects the start point of printing via the laser diodes and SOS sensor, and illuminates the PC Drum with the laser beam according to the image signals.
PWB-G	Toner Empty PWB unit	Toner quantity is read by the analog signal. (Use of LED)
M1	Main Motor	Provides the drive source for the printer.
M3	Polygon Motor (Inside of the Print Head Unit)	A regular heptagon mirror is installed, and rotates at high speed and makes the laser scan in scanning direction.
M2	Cooling Fan Motor	Exhausts heat from the body.
H1	Heater Lamp	A halogen lamp that supplies heat to the Fusing Rollers. (600 W)
HV1	High Voltage PWB unit	Supplies power to the following sections: - Drum Charge Brush: Charged voltage - Developing Sleeve Roller: Developing bias voltage - Developing Toner Regulation Plate: Developing blade voltage - Developing Toner Collecting Plate: Developing Lower Seal voltage - Image Transfer Roller: Image transfer voltage
PE1	Paper Empty Sensor	Detects that a sheet of paper is taken up. The signal is L when paper is detected.
PS1	Paper Take-Up Sensor	Detects that a sheet of paper is taken up. The signal is H when paper is detected.
PS3	Paper Exit Sensor	Detects when the paper is fed out. The signal is H when the paper is detected.
PS4	Paper Out Sensor	Paper out detection signal. The signal L when the paper is detected.
PS5A	Received Document Tray Sensor	The signal is L when there is a tray cover.
PS5B	Paper Size Sensor	Detects the size of the paper. Letter: signal H, Legal: signal L.
S2	Interlock Switch	Detects the opening or closing of the Top Cover. Cuts output voltage (except 5 VDC) when the Top Cover is open.
SL1	Paper Take-Up Solenoid	Transmits the drive of the Main Motor to the Paper Take-up Roller.
TH1	Thermistor	Detects the temperature of the Heat Roller, measures the temperature on the surface of the Heat Roller and sends to the Heater control circuit.
TS1	Thermostat	Cuts power to the Heater Lamp (H1) when overheating (215°C) is detected at the Fusing Section.

5. PAPER PATH

Paper can be fed into the printer from the Multi Purpose Tray (250 sheets) or from the Manual Feed Port (1 sheet).

Installing the 2nd Paper Cassette Unit (FO-CS1) (500sheets) adds another feeding method.

The paper fed by the Paper Take-Up Roller is transported to the Image Transfer Roller, Fusing Roller and then Paper Exit Roller. After this, the paper is fed out onto the Print Tray.

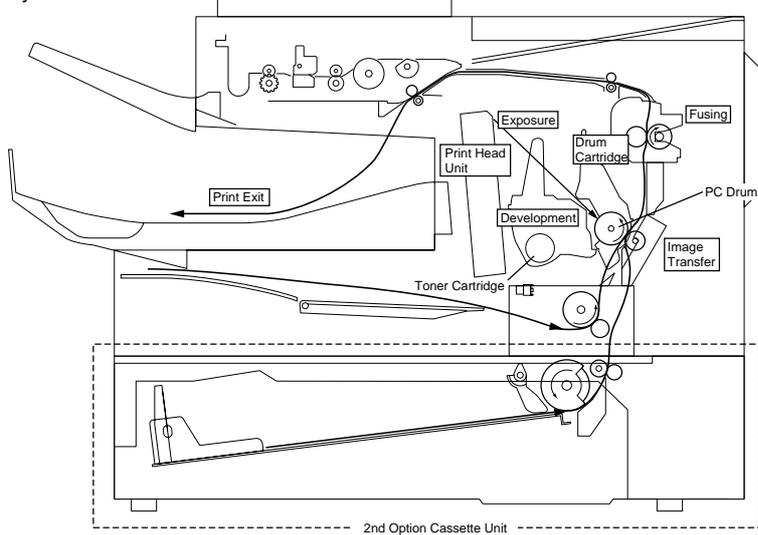

Fig. 4

6. PAPER TAKE-UP SECTION

6-1. Multi-Purpose Tray

When the Paper Take-Up Solenoid (SL1) is energized, the drive of the Main Motor (M1) is transmitted to the Paper Take-Up Roller via the Paper Take-Up Gear (one-way clutch) to turn the Paper Take-Up Roller one revolution. At the same time, the Depressing Cam turns and lifts the Paper Lifting Plate, and the first (top) sheet of paper on the tray is fed to the printer. The Fixed Separating Pad is used for the paper separation system. It prevents the second and subsequent sheets of paper from being fed together with the top sheet. The actual length of the paper is detected using the period of time through which the Paper Take-up Sensor (PS1) remains energized (or through which the paper moves past the sensor) and it is determined whether the actual length matches the paper length specified by the controller.

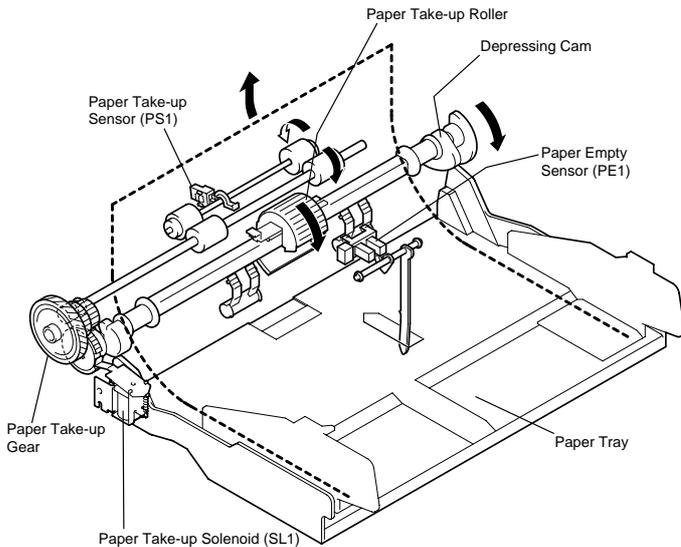

Fig. 5

7. DRUM CHARGE

The PC Drum is charged with static electricity before laser exposure. The Drum Charge Brush and the Pre-charge Film are used for the charging method.

The Drum Charge Brush and Pre-charge Film charging generate little ozone in the printer. Because the charge is directly applied to the PC Drum, the PC Drum can be charged by low voltage. In addition, the charge applied to the PC Drum is stable and even.

The Pre-charge Film supplies the charge to the PC Drum before being charged by the Drum Charge Brush to improve the charging efficiency. The Drum Charge Brush is turned by the drive of the Main Motor (M1) via a gear.

The electric potential on the surface of the charged PC Drum is approximately -800 V.

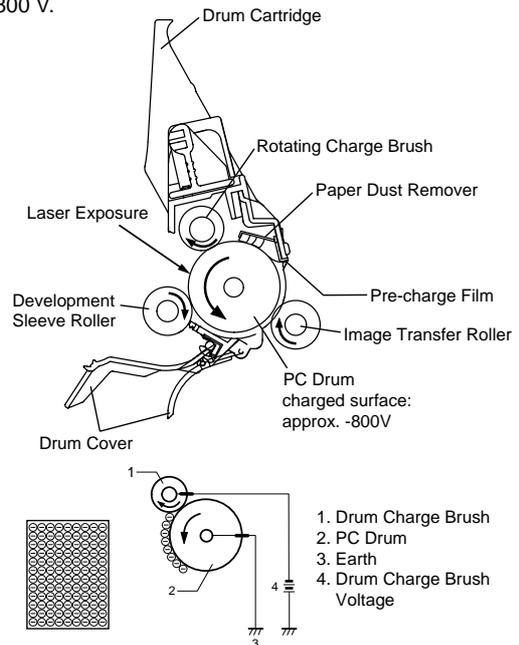

Fig. 6

8. LASER EXPOSURE

Laser exposure is the process of creating an invisible static charge image on the PC Drum by the laser beam emitted from the Print Head Unit. This process is controlled as follows in order to appropriately time image printing.

In the sub-scanning direction (vertical direction)

- When the printer receives the PRINT signal, the Polygon Motor and the Main Motor rotate and the paper is fed into the printer.
- The printing in the sub-scanning direction is started when the Controller PWB sends the VIDEO signal to the Print Head a certain time after the leading edge of the paper activates the Paper Sensor (TOD signal).
- The print starting position for the 2nd line is decided by delaying the VIDEO signal sending timing.

In the scanning direction (horizontal direction)

- The SOS Sensor is installed on the Laser Diode Control PWB to unify the laser emission timing for each scan line.

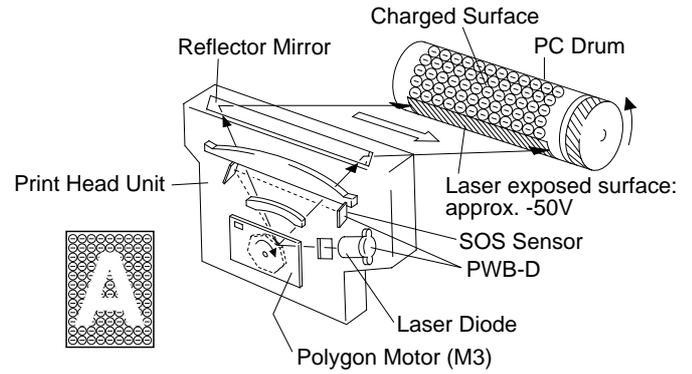

Fig. 7

9. DEVELOPMENT

9-1. Overview

Toner is applied to the invisible static image on the PC Drum and a toner image (developed image) is created on the drum surface.

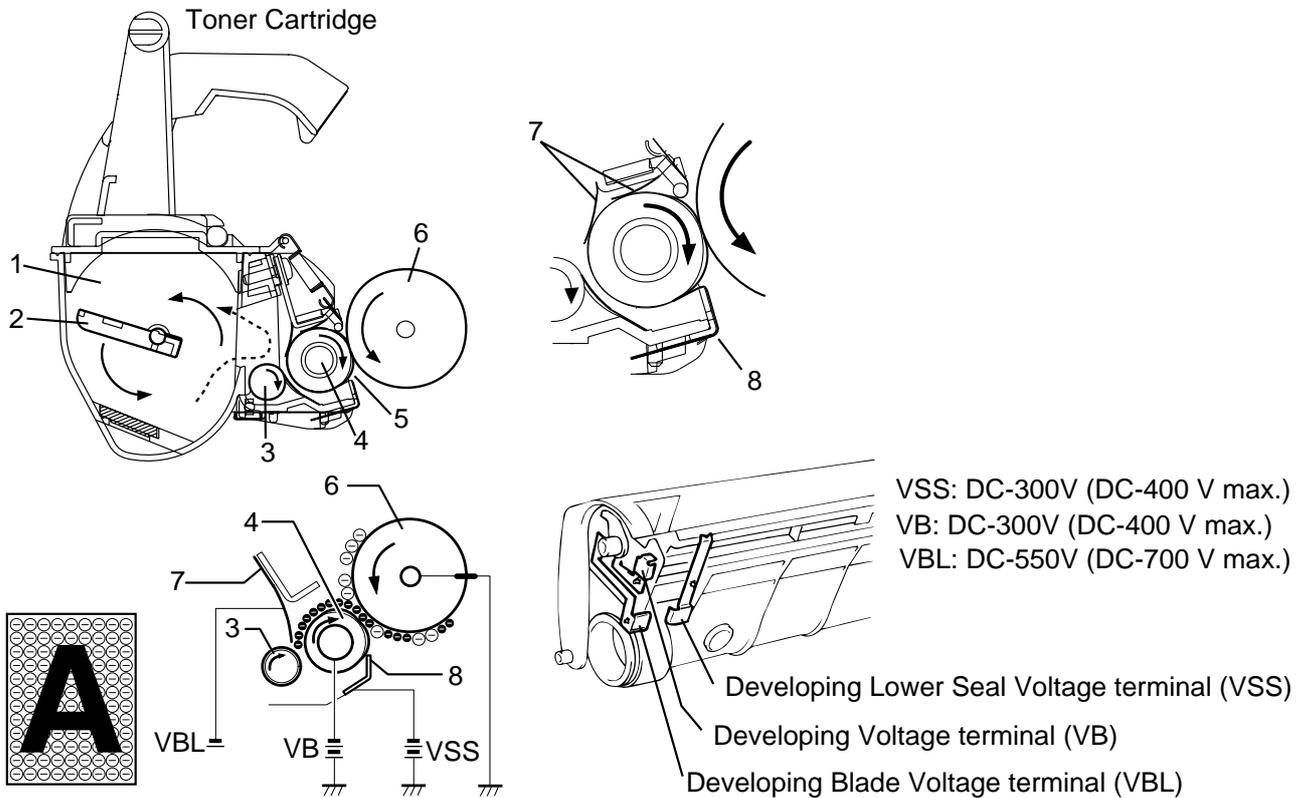

Fig. 8

No.	Part Name	Function
1	Toner Hopper	Contains toner.
2	Toner Agitating Screw	Agitates the toner in the Toner Hopper and sends the toner to the Toner Transport Roller.
3	Toner Transport Roller	Transports the toner to the Sleeve Roller.
4	Sleeve Roller	Turns the Resin Sleeve.
5	Resin Sleeve	Carries the toner to the PC Drum surface for development.
6	PC Drum	Exposed to laser to create an invisible image and rotates to carry the developed image to the paper surface.
7	Toner Blade	Spreads a thin, even coat of toner over the Resin Sleeve. The toner is negatively charged when passing between this Blade and the Resin Sleeve.
8	Bias Seal	Separates toner, which has not been attracted to the PC Drum, from the Resin Sleeve and returns it back to the Buffer Section.

10. IMAGE TRANSFER

10-1. Overview

- Image transfer is the process of transferring the toner image created on the PC Drum in the developing process to paper.
- Roller image transfer is used instead of corona image transfer as the image transfer method.
- In roller image transfer, there is little generation of ozone due to corona discharge. Also, there is no blur of toner because the paper is always pressed by the PC Drum and the Image Transfer Roller.
- When cleaning the Image Transfer Roller and before printing, reverse bias is applied.
- The residual electric potential on the paper is dissipated via a discharge needle.

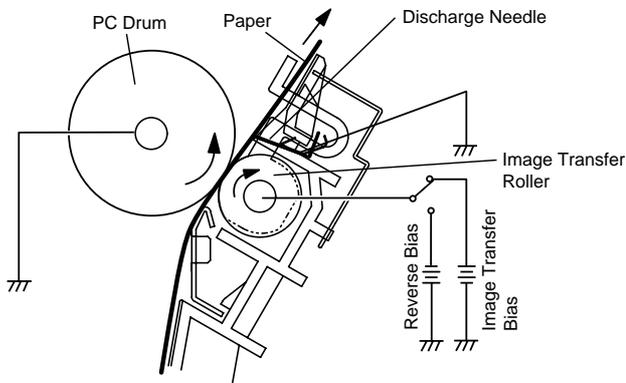

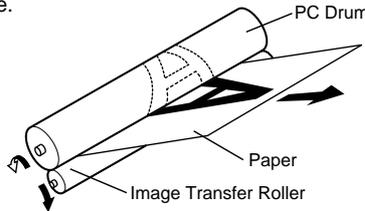

Fig. 9

11. FUSING

11-1. Overview

- The toner image transferred onto the paper is securely fixed to the paper.
- A heat roller system is used as the fusing system. The toner image is fused by the Heat Roller heated by the Heater Lamp (H1), and securely fixed by the pressure between the Heat Roller and Backup Roller.

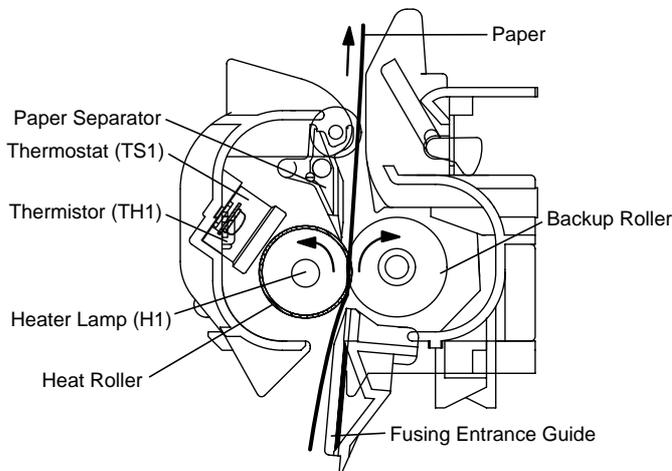

Fig. 10

11-2. Fusing Temperature Control Circuit

- The Thermistor (TH1) detects the surface temperature of the Heat Roller and inputs that analog voltage into IC4-78. Corresponding to this data, the Heater Lamp (H1) ON/OFF signal is output from IC4-55, causing the Heater Lamp (H1) to turn ON or OFF to control the fusing temperature.
- When the Heater Lamp (H1) is not turned OFF even if the Thermistor (TH1) detects a high temperature malfunction (if the surface temperature of the Heat Roller exceeds 230°C), the signal from IC4-79 changes from L to H to turn OFF the Heater Lamp (H1) forcibly.

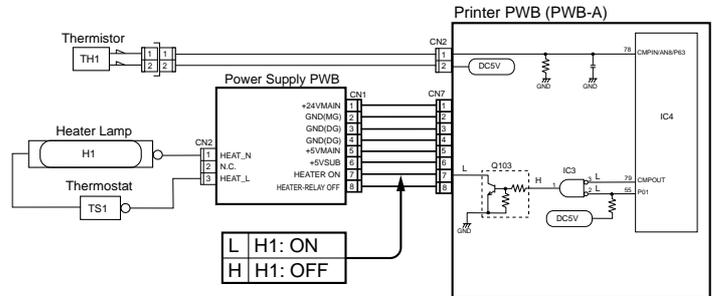

Fig. 11

(At 600 dpi)

The printer is initialized upon power supply. The Heater Lamp then turns on and the printer starts warming up. The temperature is controlled as follows.

Mode 1: The temperature is controlled to maintain 125°C during standby and 210°C during printing. If this mode continues for 300 seconds, the control will shift to mode 2.

Mode 2: The temperature of the Heat Roller falls gradually to about 190°C from about 210°C. If this mode continues for 208 seconds, the control will shift to mode 3.

Mode 3: The temperature is controlled to maintain 125°C during standby and 190°C during printing. Unless an error occurs or the control is opened, this mode is maintained.

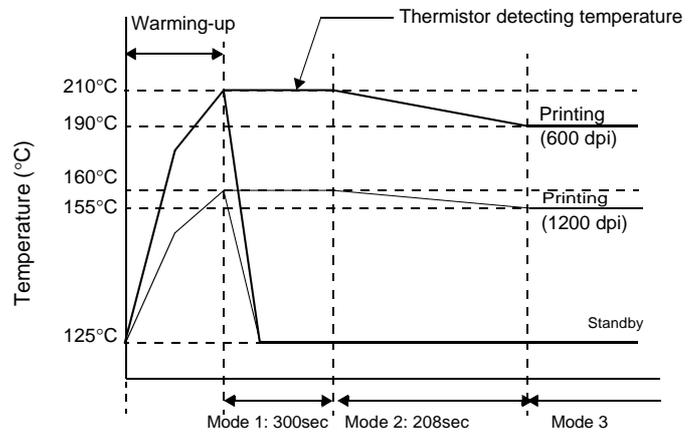

Fig. 12

	Temperature immediately after temperature control start		
The state before discontinuation of temperature control	Less than 50°C	50°C or more, less than 125°C	125°C or more,
Mode 1, warming-up	Mode 1		
Mode 2, 3 or Power OFF	Mode 1	Mode 2	Mode 3

12. PRINT SEQUENCE

Printing is carried out following communication between the engine and controller that determines the timing to be used. A general outline of the printing sequence is described below.

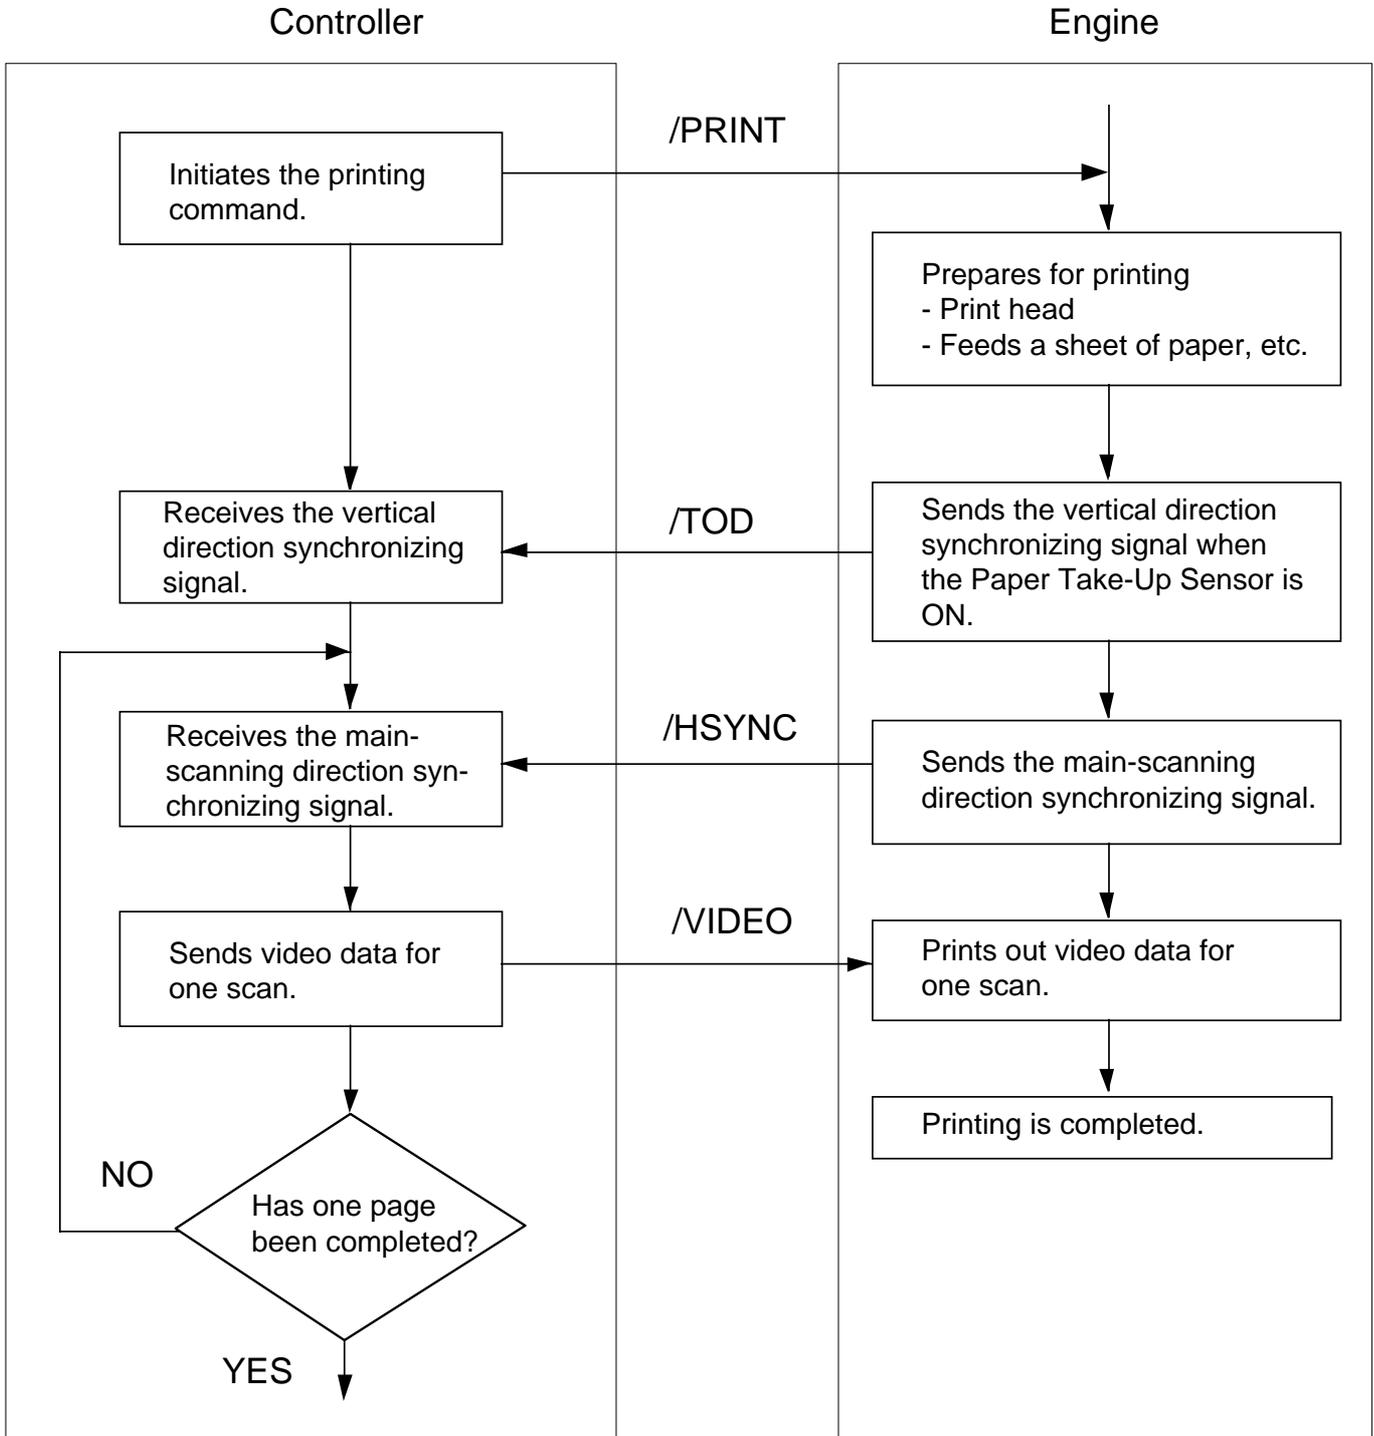

Fig. 13

13. Timing chart

13-1. Print Starting

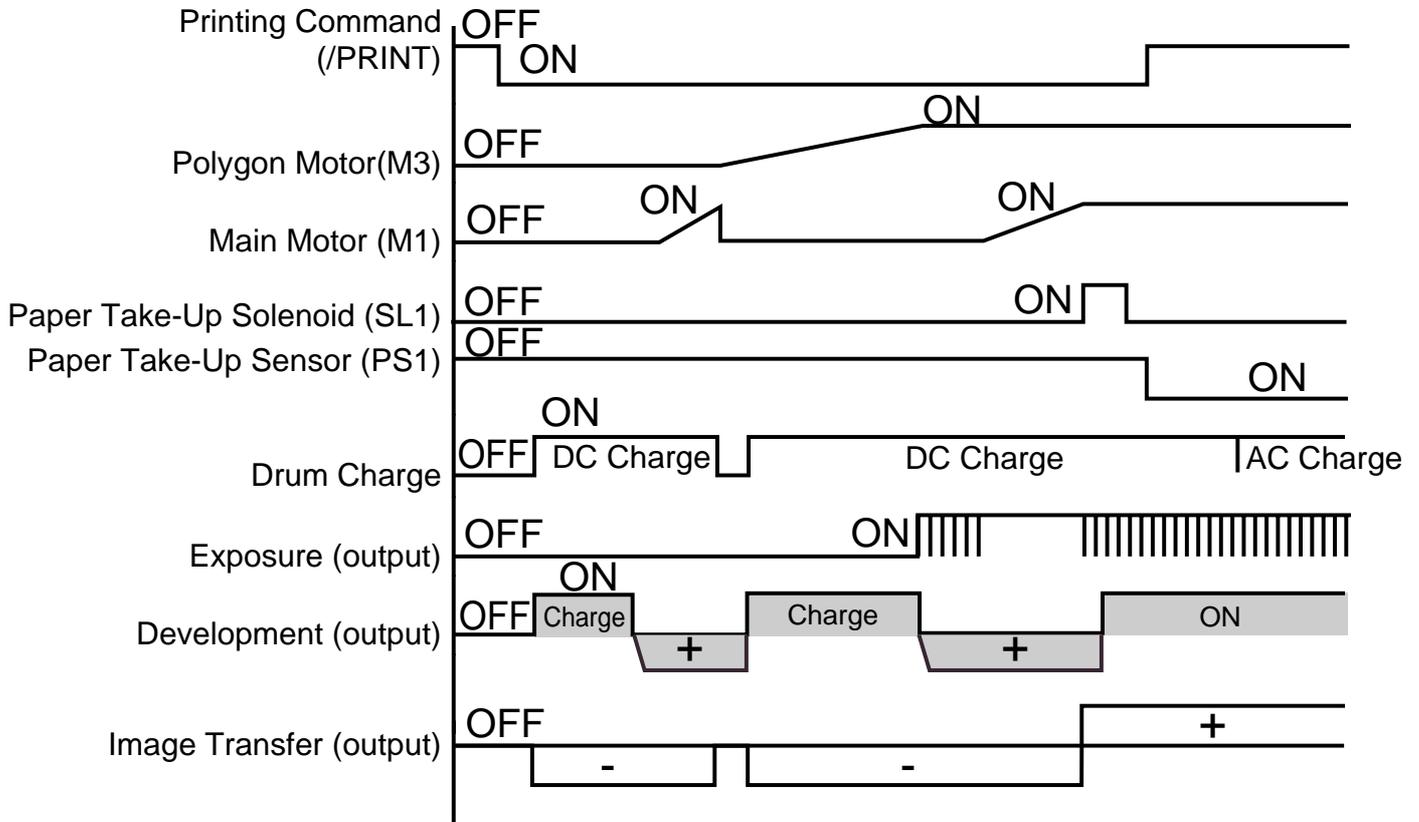

Fig. 14

13-2. Print Ending

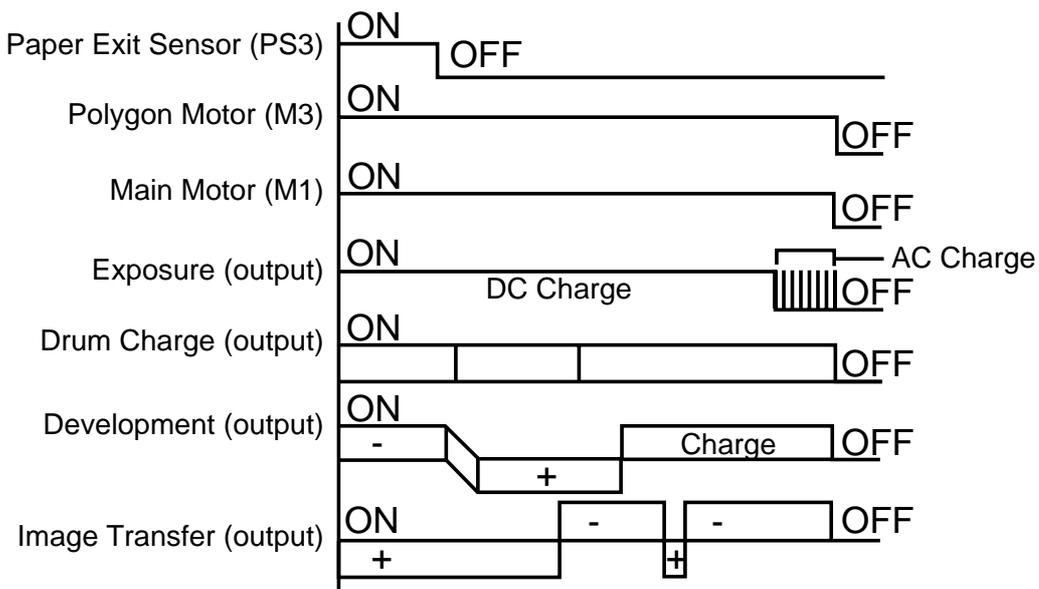

Fig. 15

[3] Disassembly and assembly procedures

- This chapter mainly describes the disassembly procedures. For the assembly procedures, reverse the disassembly procedures.
- Easy and simple disassembly/assembly procedures of some parts and units are omitted. For disassembly and assembly of such parts and units, refer to the Parts List.
- The numbers in the illustration, the parts list and the flowchart in a same section are common to each other.
- To assure reliability of the product, the disassembly and the assembly procedures should be performed carefully and deliberately.

14 Wire treatment

Parts list (Fig. 14)

No.	Part name	Q'ty
1	Band (100mm)	4
2	Core (F2125)	1
3	Core (F2124)	2
4	Band	1
5	Screw (3x10)	1

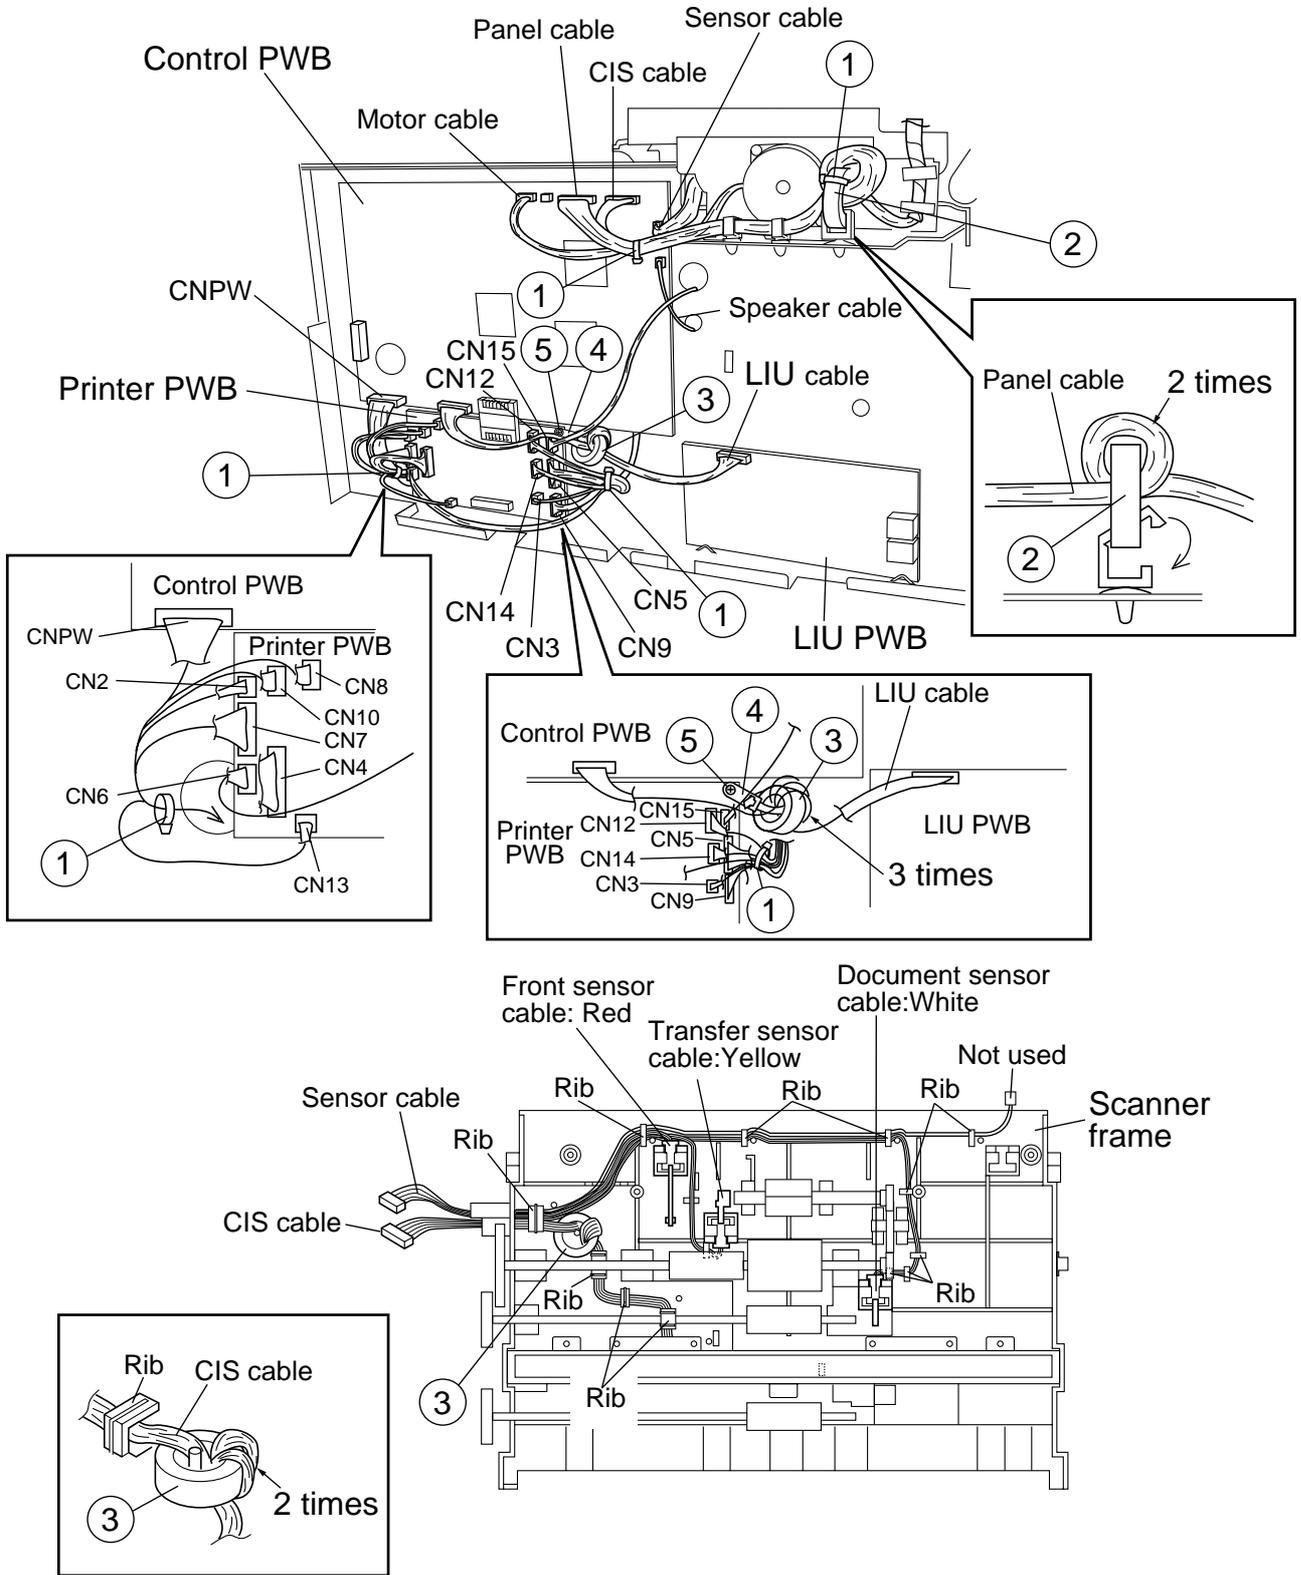

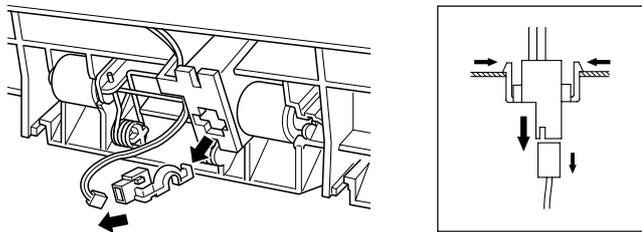

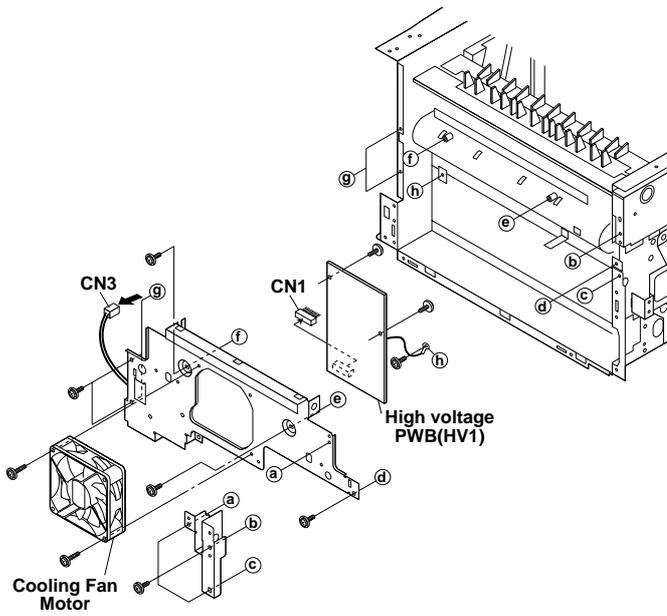

Fig. 14

15

High voltage PWB unit (HV1)

1. Remove the Cooling Fan Motor.(2 screws)
2. Remove the 2 covers. (9 screws)
3. Remove the 2 connectors.
4. Remove the High Voltage PWB.(2 screws)

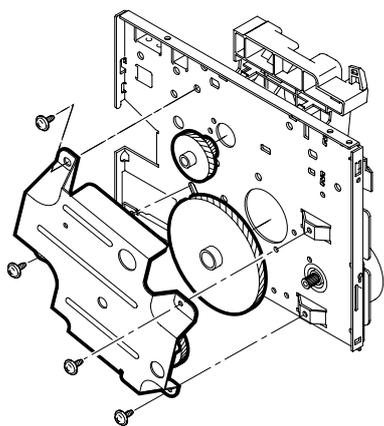

1. Remove the Paper Take-up Sensor (PS1). (1 connector)

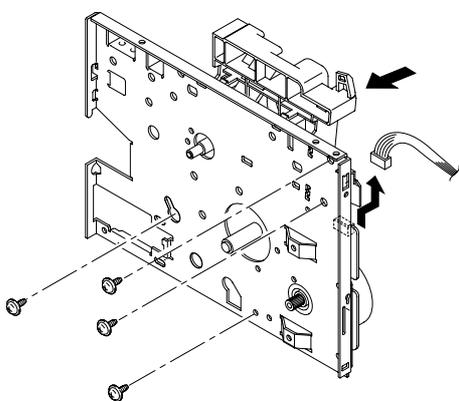

Fig. 15

16

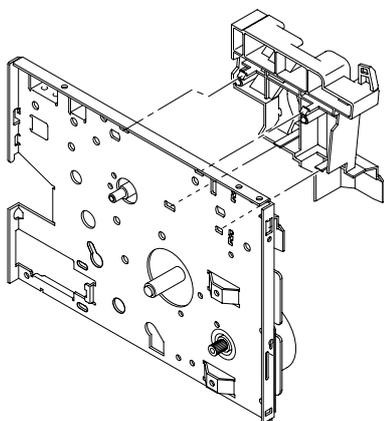

Main motor (M1)

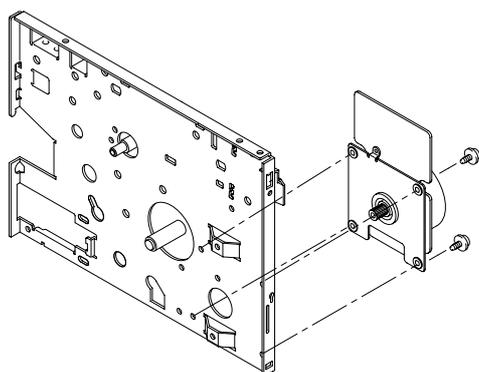

1. Remove the gear plate.(4 screws)
2. Remove 2 gears.

3. Remove the left side plate. (4 screws and 1 connector)

5. Remove the cartridge positioning plate. (Tabs at 4 places)

6. Remove the Main Motor Unit (M1). (4 screws)

Fig. 16

17 Paper take-up roller

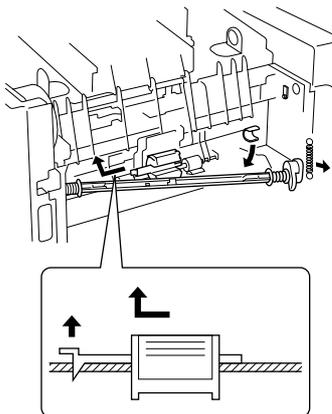

Fig. 17

1. Place the printer with its backside down.
2. Unhook the spring and remove the right-hand side of the Paper Take-up Roller shaft from its bushing.
3. Remove the Paper Take-up Roller.

18 Print head unit (PH)

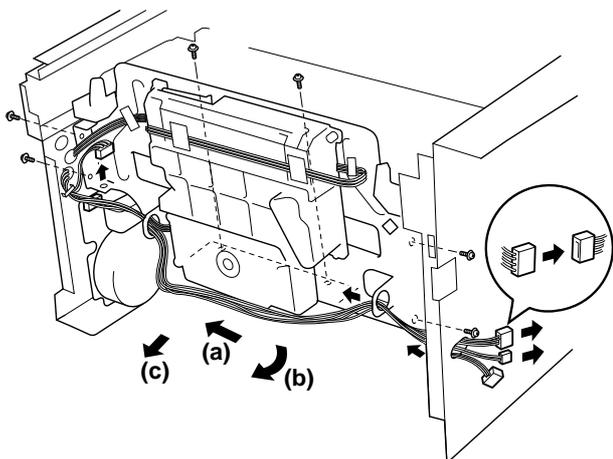

Fig. 18

1. Unplug the connector from the Main Motor Unit and remove the harness from the cord holder.
2. Unplug the connectors from the cord holder.
3. Remove the Print Head Unit (PH). (6 screws)

19 Paper empty sensor (PE1)

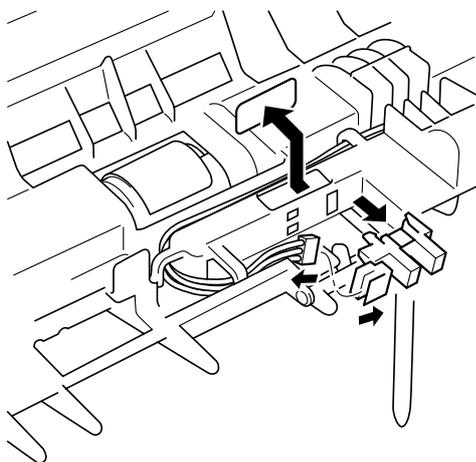

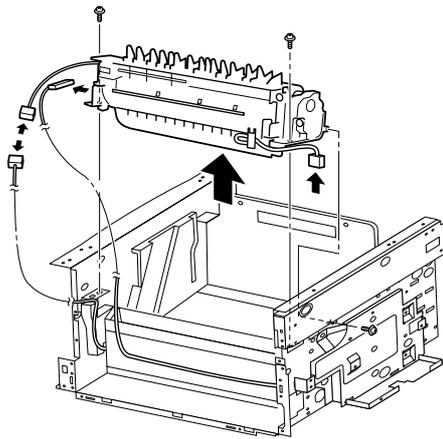

Fig. 19

1. Remove the sensor fixing bracket and remove the Paper Empty Sensor. (1 connector)

20

Fusing unit (1/2)

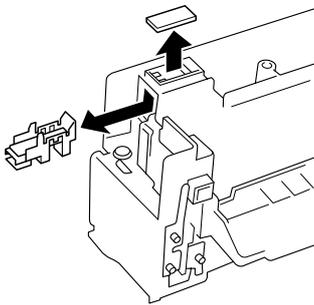

1. Remove the Fusing unit. (3 screws, 3 connectors)

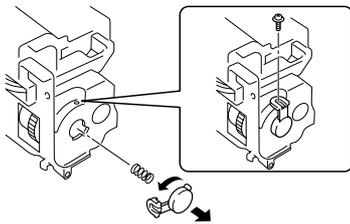

NOTE:

- The Fusing Unit is to be replaced as a unit at about every 50,000 printed pages.

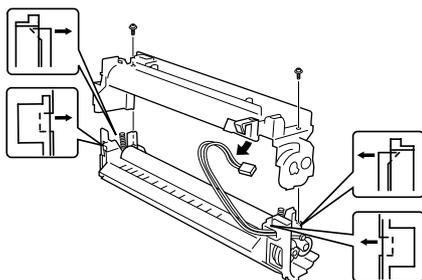

*: Use the following procedure when a part comprising the Fusing Unit is to be replaced individually to correct an image problem or the defective part.

2. Remove the sensor fixing bracket and the Paper Exit Sensor (PS3).

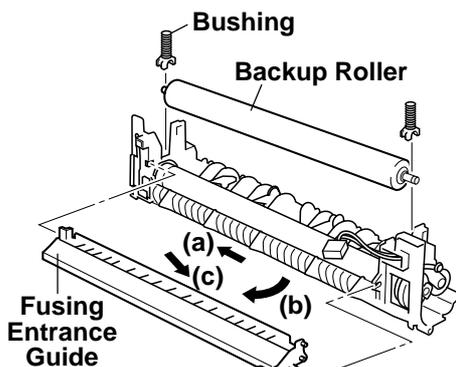

3. Remove the Heater Lamp holding cover. (1 screw and 1 spring)

4. Remove the 2 mounting screws.

5. Pressing the right and left tabs (at 2 places), separate the upper half of the Fusing Unit from the lower half.

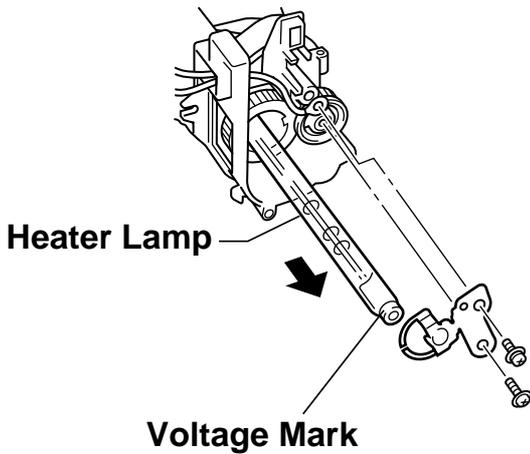

6. Remove the bushings and the Backup Roller.

7. Remove the Fusing Entrance Guide.

- (a) Push the Fusing Entrance Guide to the left.
- (b) Pull out the right end of the Fusing Entrance Guide.
- (c) Pull out the left end of the Fusing Entrance Guide.

Fig. 20

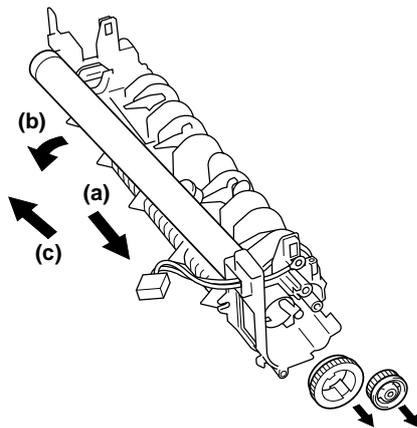

21 Fusing unit (2/2)

8. Remove the lamp holder. (2 screws)
9. Pull out the Heater Lamp (H1).

NOTE:

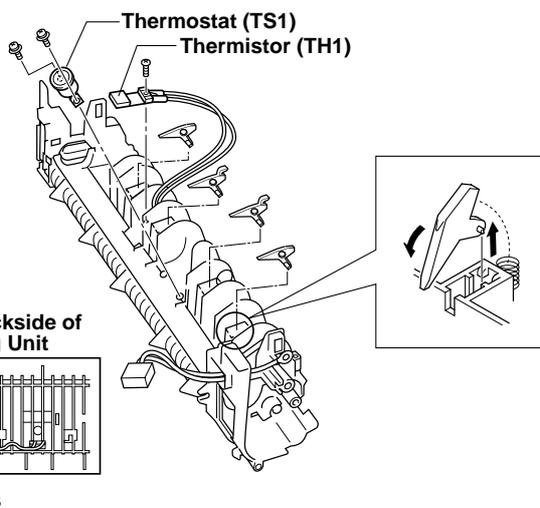

- Use care not to touch the lamp surface with bare hands.
- Position the voltage mark on the gear side when re-installing the lamp.

10. Remove the drive gear from the Heat Roller.
11. Slide the Heat Roller to the right (a), swing out the left end (b), and then slide the roller in the direction of (c) and pull it out.

NOTE:

- To prevent the surface of the Heat Roller from being scratched by the Fusing Separators, lift the separators when removing and reinstalling the roller. Use utmost care not to damage the surface of the roller.

12. Remove the Fusing Paper Separators. (At 4 places)
13. Remove the Thermistor (TH1). (1 screw)

NOTE:

- Route the harness as shown in Fig. A when reinstalling the Thermistor (TH1).

14. Remove the Thermostat (TS1). (2 screws)

[4] How to install the verification stamp (FO-45VS)

1. Open the operation panel unit.
2. Remove the screw (A1) x 1 pc. and open the operation panel more widely.

3. Remove the screws (B1) x 5 pcs., to remove document guide under.
4. Remove CIS unit
Carefully bend 2 hooks and remove CIS cable.
5. Install the verification stamp (FO-45VS) with the screw (B2) x 1pc.

6. Wire treatment

Stamp cable must be passed through six ribs as shown in fig.1.

Connect the stamp cable to CNSTP (2 pin) of control PWB

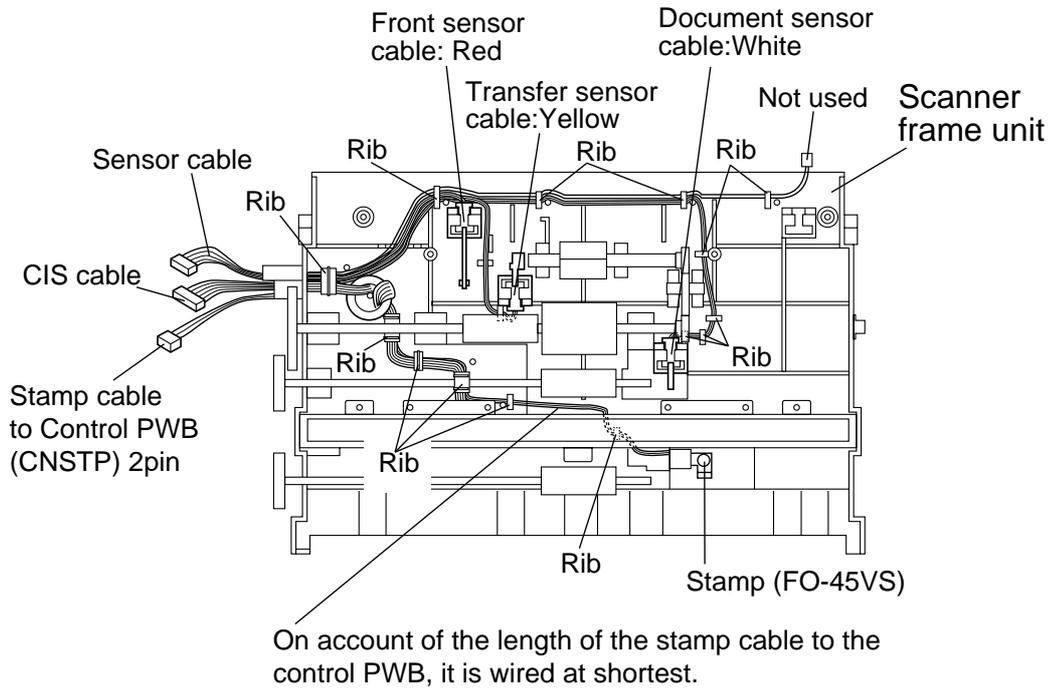

Fig. 1

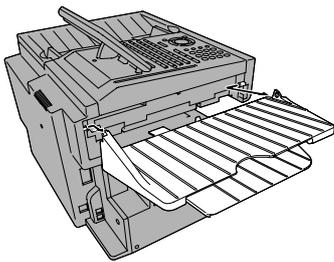

7. Soft switch setting

When you install the verification stamp (FO-45VS), set the soft SW 27. No. 3 initial setting to "1".

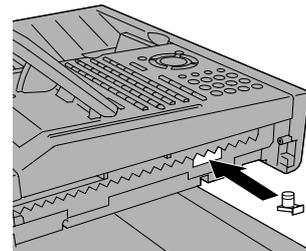

8. Replacing the verification stamp

If you are using the Verification Stamp function, you will need to replace the ink cartridge in the stamp unit when it runs out of ink (when the stamped mark on original documents becomes faint). A new ink cartridge can be obtained from your dealer.

① Remove the original document OUT tray.

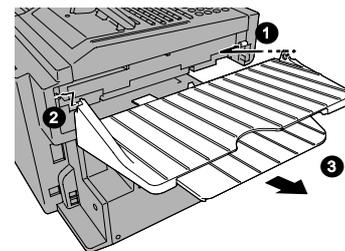

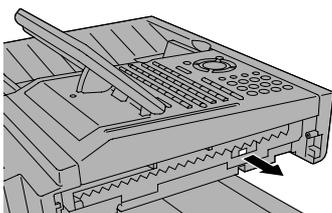

③ Insert the new ink cartridge into the machine (make sure that the tab is facing out).

④ Replace the original document OUT tray.

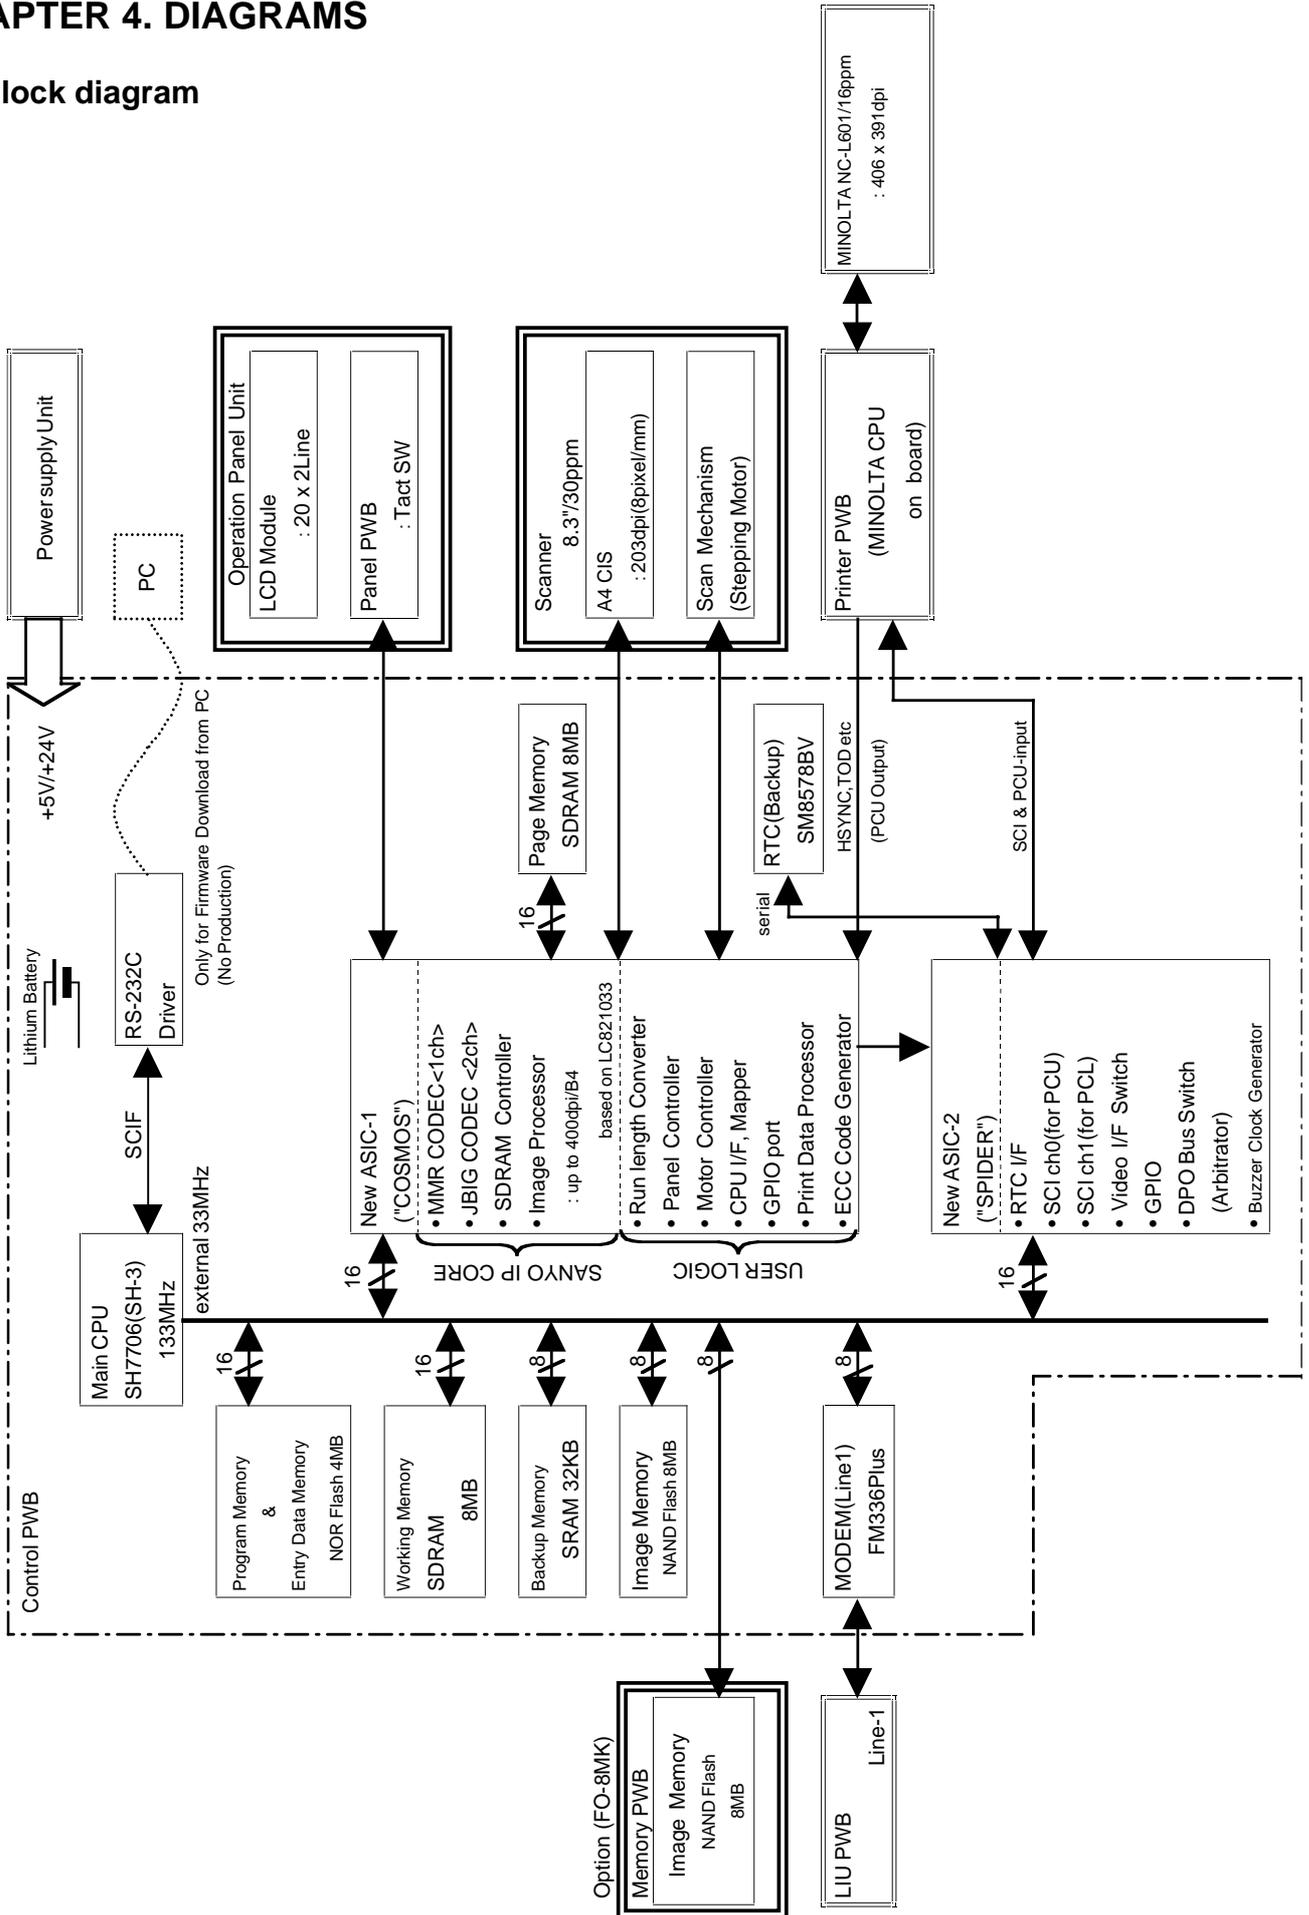

② Press down on the protruding tab of the green ink cartridge and pull the cartridge out with your fingers.

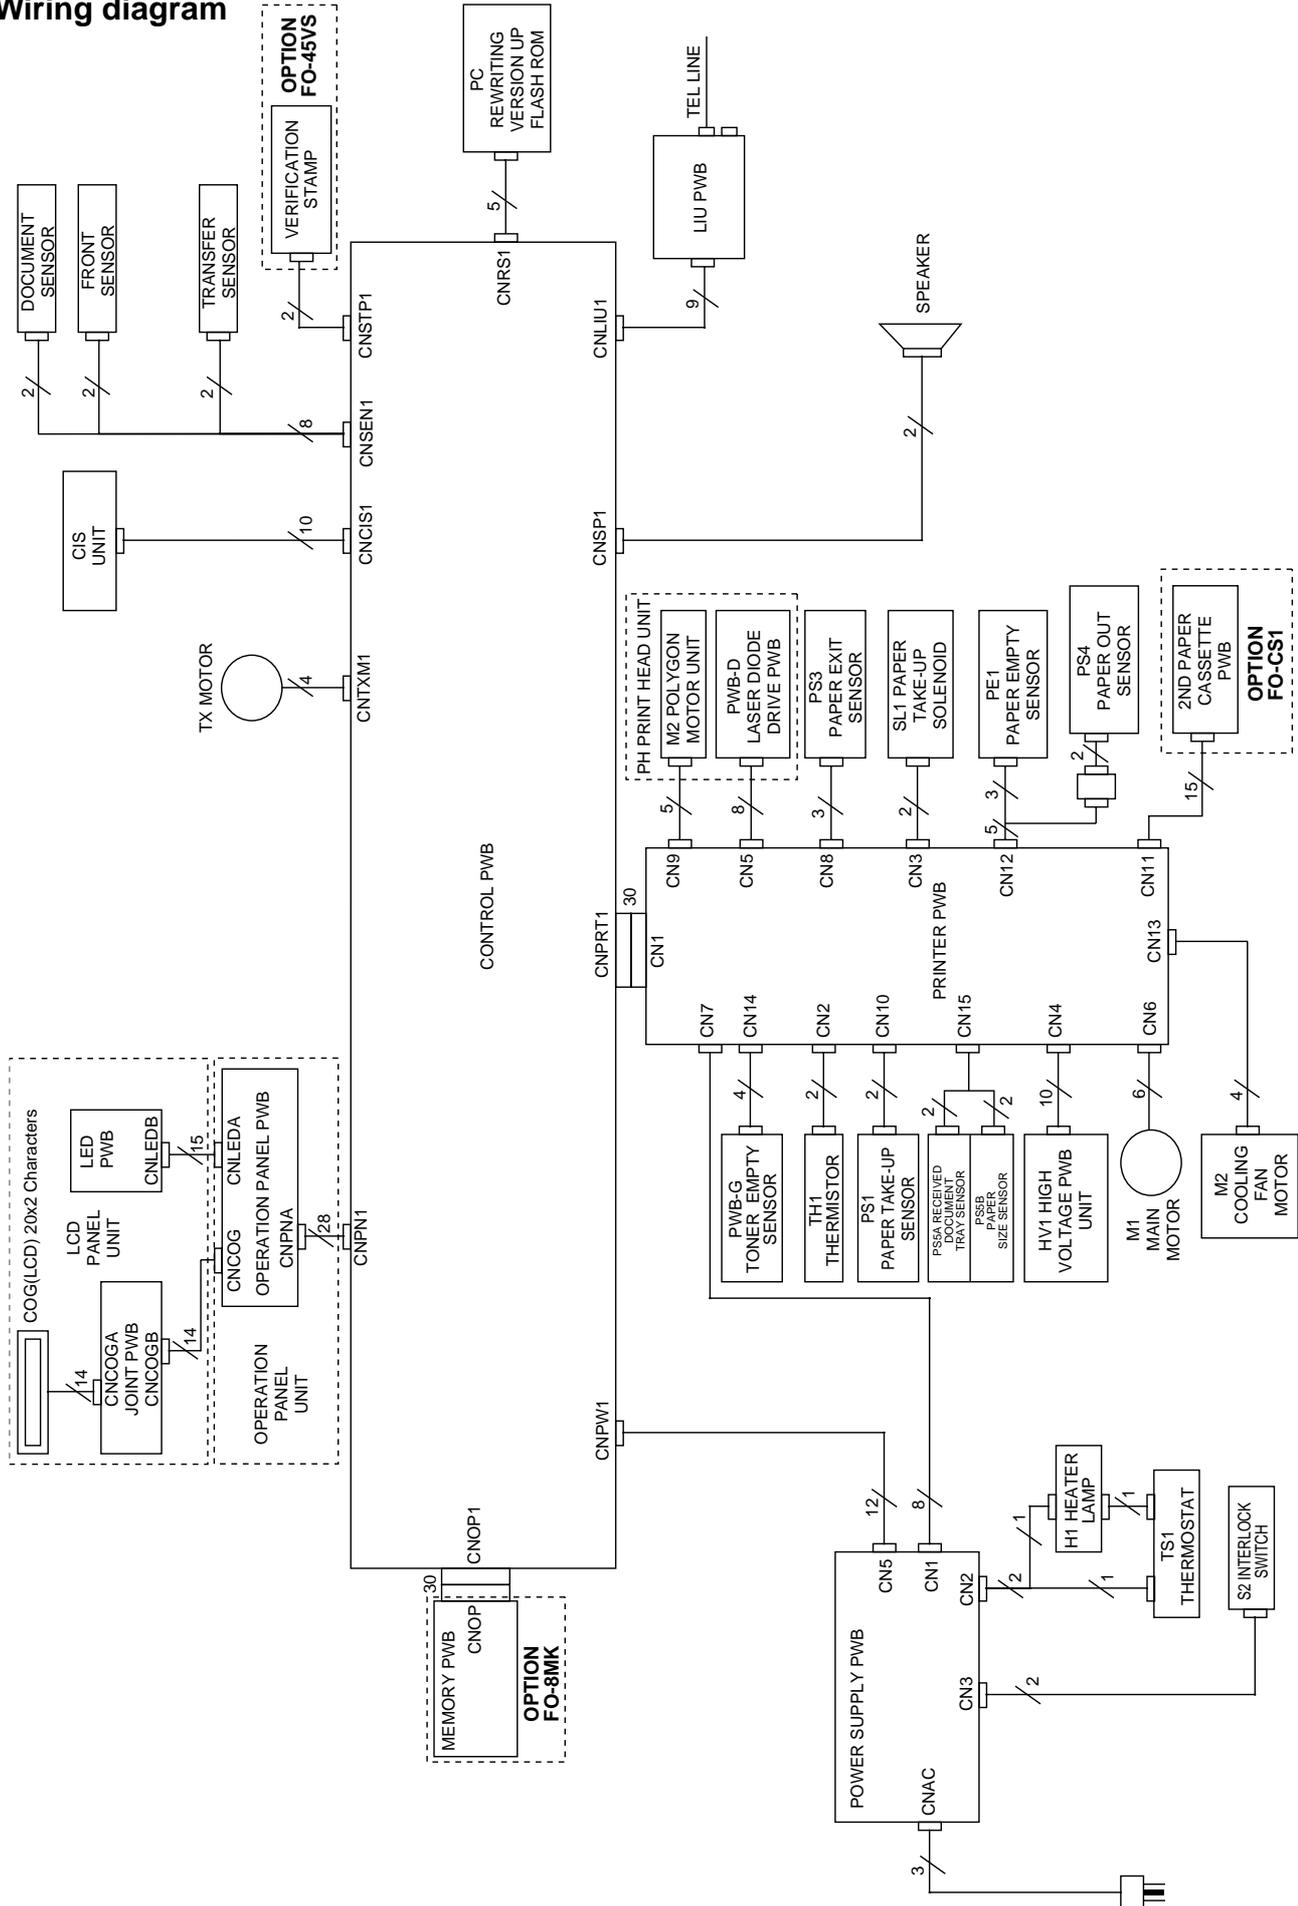

Stamp (Ink cartridge) only (20 pieces)
Parts code : **UINK-2009SC01**

CHAPTER 4. DIAGRAMS

[2] Wiring diagram

[3] Point- to-point diagram and connector signal name (1)

Point- to-point diagram and connector signal name (2)

CHAPTER 5. CIRCUIT DESCRIPTION

[1] Circuit description

1. General description

In this machine, the facsimile control block except the printer control is mainly composed of the units shown in Fig. 1.

2. PWB configuration

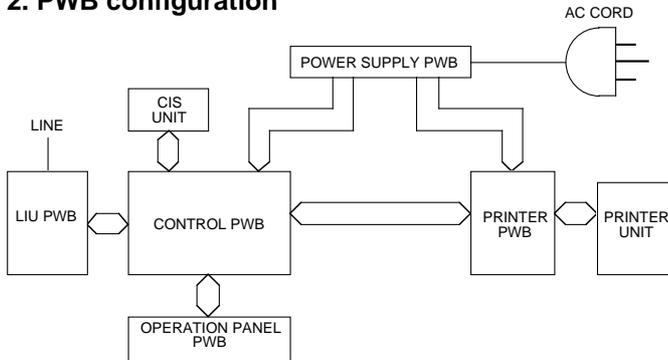

Fig. 1

1) Control PWB

The control PWB controls all the other operations except the printing operation of the printer.

2) CIS unit

CIS UNIT converts the image of the sending or copying draft into the photoelectric signals and transmits the signals to the control PWB.

3) LIU PWB

The LIU PWB controls the I/F telephone function of the circuit with the control signals from the control PWB.

4) Operation panel PWB

The operation panel PWB detects the key input, turns on and off LED and displays LCD according to the control signals from the control PWB.

5) Power supply PWB

DC voltages (+5V, +24V) are produced from AC120V, and are supplied to the printer unit and control PWB unit.

[2] Circuit description of control PWB

1. General description

The control PWB is composed of the following blocks.

- (1) Main control block
- (2) Backup memory block
- (3) Modem block
- (4) Scanner control block
- (5) Speaker amplifier
- (6) Page memory block
- (7) Drive block

2. Description of each block

(1) Main control block

This block consists of 32 bit RISC microcomputer HD6417706F133 (main component), flash ROM, 64 Mbit SDRAM, Main ASIC, Sub ASIC, etc. Each device is controlled either by the microcomputer directly or via Main ASIC.

1) HD6417706F133 (IC24): pin-176, QFP (main CPU)

This is a microcomputer with a core of 32 bit RISC (Reduced Instructions Set Computer) CPU, which periphery functions are integrated into. This device is equipped with the following function. The clock inputs 33.1776 MHz from outside and operates at 4-times frequency (approx. 133 MHz) internally.

Feature

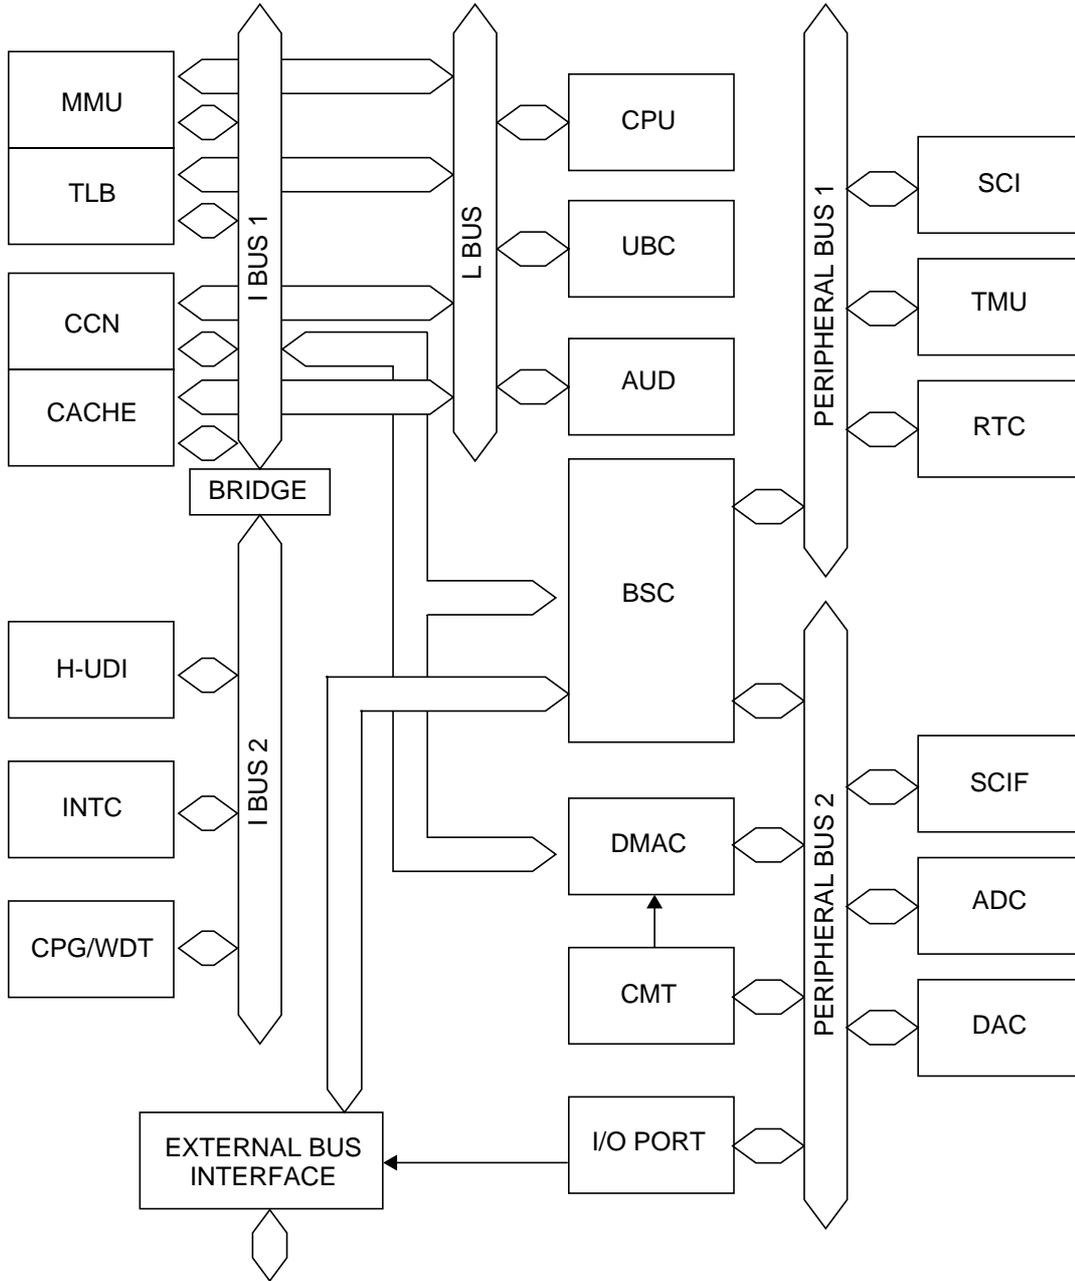

- Original Hitachi SuperH architecture
- Object code level compatible with SH-1, SH-2 and SH-3
- 32-bit RISC-type instruction set
 - Instruction length: 16-bit fixed length
 - Improved code efficiency
 - Load-store architecture
 - Delayed branch instructions
 - Instruction set oriented for C language
- Five-stage pipeline
- Instruction execution time: one instruction/cycle for basic instructions
- General-register: Sixteen 32-bit general registers
- Control-register: Eight 32-bit control registers
- System-register: Four 32-bit system registers
- 32-bit internal data bus
- Logical address space: 4 Gbytes
- Space identifier ASID: 8 bits, 256 logical address space
- Abundant Peripheral Functions
 - Memory Management Unit (MMU)
 - User Break Controller (UBC)
 - Bus state Controller (BSC)
 - Direct Memory Access Controller (DMAC)
 - Clock Pulse Generator (CPG)
 - Watchdog Timer (WDT)
 - Timer Unit (TMU)
 - Realtime Clock (RTC)
 - Serial Communication Interface (SCI)
 - Smartcard Interface
 - Serial Communication Interface with FIFO (SCIF)
 - 10-bit A/D converter (ADC)
 - 8-bit D/A converter (DAC)
 - Hitachi User Debugging Interface (H-UDI)
 - Advanced User Debugger (AUD)

2) LH28F320BFHE-PBTLZA (IC12): pin-48, TSOP (32 Mbit FLASH MEMORY)

This is a flash memory writing program and is also used for the registration data, such as telephone directory. 32 Mbit area is divided into 2 for every 16 Mbit; the lower-order and higher-order address sides are used for the program and for the registration data, respectively.

3) W986416DH or MT48LC4M16A2TG (IC25): pin-54, TSOP (64 Mbit SDRAM)

The program stored in the flash memory (IC12) mentioned in the above item 2) is downloaded to this SDRAM and used as a program execution memory. It is also used as various work memories and communication buffers. The devices manufactured by 2 enterprises are acknowledged. (Former model No.: manufactured by WINBOND, later model No.: manufactured by MICRON)

Legend:

- | | | | |
|----------|--------------------------------------|--------|--|
| ADC: | A/D converter | DMAC: | Direct memory access controller |
| AUD: | Advanced user debugger | H-UDI: | Hitachi user-debugging interface |
| BSC: | Bus state controller | INTC: | Interrupt controller |
| CACHE: | Cache memory | MMU: | Memory management unit |
| CCN: | Cache memory controller | RTC: | Realtime clock |
| CMT: | Compare match timer | SCI: | Serial communication interface (with smart card interface) |
| CPG/WDT: | Clock pulse generator/watchdog timer | SCIF: | Serial communication interface (with FIFO) |
| CPU: | Central processing unit | TLB: | Address translation buffer |
| DAC: | D/A converter | TMU: | Timer unit |
| | | UBC: | User break controller |

138	I/O	CKIO	System clock input/output	176	—	AVss	Analog power supply (0 V)

Notes: *1 Must be connected to the power supply even when the RTC is not used.

*2 Must be connected to the power supply even when the on-chip PLL circuits are not used.(EXcept in hardware standby mode.)

*3 Must be high level when the user system is used independently without using the emulator or H-UDI.

1. Except in hardware standby mode, all Vcc/Vss pins must be connected to the system power supply. (Supply power constantly.) In hardware standby mode, power must be supplied at least to Vcc-RTC and Vss-RTC. If power is not supplied to Vcc and Vss pins other than Vcc-RTC and Vss-RTC, hold the CA pin low.

2. A1, A2, A3, A7, A12, B1, C4, C7, D1, D2, D4, D7, D14, D15, E1, E2, E3, E4, F14, F17, G17, H14, H15, K14, P14, R10, T13, T15, T16, U11, U15, and U16 must be connected to Vss.

4) LC272D0BT-WA6 (IC6): pin-216, QFP (MAIN ASIC)

The device is the embed-array, which has the following functions.

① CPU interface

The block has the following functions.

That is, mapping executed in memory areas CS0 and CS4, that are generated by main CPU (SH-3), and then wait control and access control to the peripheral devices.

② NOR type flash memory interface

The block has control the protections to each block of a NOR flash memory. The NOR flash memory is used as two provided blocks; programming memory block and the entry and history data block.

③ NAND type flash memory interface

The block has the following functions. That is, access control to flash memory (standard setting memory and optional setting memory), and generates ECC code at accessing NAND flash memory.

④ DMA request control

The block has the following functions. That is, generate the two internal DMA requests; read request from FIFO buffer for encodes and write request from FIFO buffer for decodes. And set each request to the DMA request channels, ch0 and ch1 by setting register.

⑤ Interrupt request control

The block has the following functions. That is, encode interrupt request signal code by each generated interrupt priority level. And then at the each interrupt, set priority level, mask and clear interrupt factor.

⑥ CIS control and image processing

The block has the following functions. That is control the CIS and A/D converts the scanning image data from analogue to digital, and executes the converted image data processing.

⑦ Print image processing and output printing data

The block has the following functions. That is, converts the image data for printing into 400dpi, and applies smoothing processing. And then, output the printing data, according to /HSYNC signal from PCU.

⑧ CODEC

The block has the following functions. The One, the encoding from the image data (bit map data) in the page memory to the code data (MMR/MH) in the system memory. The other, the decoding from the code data (MMR/MH) in system memory to the image data (bit map data) in the page memory.

⑨ Page memory (SDRAM) interface

SDRAM is used as Page memory. The block has the controller of SDRAM and the arbiter of the accesses to SDRAM.

⑩ Scanner motor control

The block has the following function. That is, controls the PWM current control type stepping motor driver that uses a bipolar drive scheme.

⑪ Panel/LCD control

The block has I/O port for key sense and LCD control.

5) LC24199B-WJ0-E (IC21): pin-216, QFP (SUB ASIC)

The device is the gate-array, which has the following functions.

① PCU (Print Control Unit) interface

The block has the serial communication to PCU, and using this circuitry, controls/detects PCU.

② I/O port

The block has the following functions; LIU interface, Speaker control and sensor detect, which are controlled with software.

③ Generator of buzzer's frequency

The block has the generated buzzer's frequency by the software.

④ RTC (Real Time Clock) LSI control

Using serial communication to RTC, the device set and read the time.

⑤ Verification stamp control

The software control on/off of the verification stamp. And the control block has hardware timer instead of the continuous stamp-on status.

⑥ Original sensor detect

The software detects the original sensor. And then the control block has the generated interrupt circuitry by detecting the sensor signal risen/fallen.

6) SM8578BV (IC22): pin-8, SOP (Real time clock IC)

It is oscillated with the quartz oscillator of 32.768 kHz, and the clock and calendar functions are provided.

Even if the power supply of the main body is turned off, it is backed up with lithium battery (BAT1).

This device executes the clock-synchronous type serial communication with the Sub ASIC, and CPU can know the time and date through the Sub ASIC.

(2) Backup memory block

This block consists of flash memory for the image memory and 256 Kbit SRAM backed up with a battery.

The image memory has a standard capacity of 2 Mbytes, and it is possible to extend the memory to 10 Mbytes in total by installing the option memory FO-8MK to the connector CNOP1.

1) TC58V64BFT (IC27) ... pin-44, TSOP (64 Mbit NAND EEPROM)

This is non-volatile memory whose contents are not deleted even when the power is turned off. 2 Mbytes are available as an area for storing the encoded data of the copies or transmitted/received images.

It is controlled via the above-mentioned MAIN ASIC (IC6).

2) BS62LV256SC-70 (IC19) ... pin-28, SOP (256 Kbit SRAM)

Operation information before shutting off the power supply, user setting content and soft switch content are stored. Even if the power supply of the main body is turned off, it is backed up with a lithium battery (BAT1).

(3) Modem block

The block is mainly composed of the G3 FAX modem FM336PLus (IC30), and is provided with the following modem function.

1) G3 FAX modem

The modem satisfies the requirements specified in ITU-T recommendations V.34 half-duplex, V.17, V.33, V.29, V.27 ter, V.21, and meets the binary signaling requirements of V.8 and T.30 with Annex F.

Internal HDLC support eliminates the need for an external serial input/output (SIO) device in the DTE for products incorporating error detection and T.30 protocol. The modem can perform HDLC framing per T.30 at all data speeds. CRC generation/checking along with zero insertion/deletion enhances SDLC/HDLC frame operations. Two FSK (V.21 Ch. 1 and V.21 Ch. 2) flag pattern detectors facilitate FSK detection during high-speed reception. The modem features a programmable DTMF transmitter/receiver and three programmable tone detectors.

2) Features

- 2-wire half-duplex fax modem modes with send and receive data rates up to 33.6 kbps.
 - V.34 half-duplex, V.17, V.33, V.29, V.27 ter, and V.21 Channel 2
 - Short train option in V.17 and V.27 ter
- 2-wire duplex data modem modes
 - V.21, V.23 (75 bps TX/1200 bps RX or 1200 bps TX/75 bps RX)
- PSTN session starting
 - V.8 and V.8 bis signaling
- HDLC support at all speeds
 - Flag generation, 0-bit stuffing, ITU-T CRC-16 or CRC-32 calculation and generation
 - Flag detection, 0-bit stuffing, ITU-T CRC-16 or CRC-32 check sum error detection
 - FSK flag pattern detection during high-speed receiving
- Tone modes and features
 - Programmable single or dual tone generation
 - DTMF receiver
 - Tone detection with three programmable tone detectors
- Serial and parallel synchronous data
- Automatic Rate Adaptation (ARA) in V.34 half-duplex
- Auto-dial and auto-answer control
- TTL and CMOS compatible DTE interface
 - ITU-T V.24 (EIA/TIA-232-E) (data/control)
 - Microprocessor bus (data/configuration/control)
- Receive dynamic range:
 - 0 dBm to -43 dBm for V.17, V.33, V.29, V.27 ter and V.21
 - -9 dBm to -43 dBm for V.34 half-duplex
- Caller ID Demodulation
- Single tone detection in Data Mode
- ADPCM Voice Mode (Conexant Proprietary)
- Programmable RSLD turn-on and turn-off thresholds
- Programmable transmit level: 0 to -15 dBm
- Adjustable speaker output to monitor received signal
- DMA support for interrupt lines
- Two 16-byte FIFO data buffers for burst data transfer with extension up to 255 bytes
- Diagnostic capability
- V.21 Channel 1 Flag detect and V.21 Channel 2 Flag detect
- +3.3 V operation with +5 V tolerant inputs
- +5 V analog signal interface
- 100-pin PQFP package
- Typical power consumption
 - Normal mode:
 - VDD1 = 250 mW (+3.3 V for DSP); VDD = 35 mW (+5 V for IA)
 - Sleep mode:
 - VDD1 = 20 mW (+3.3 V for DSP); VDD = 0.1 mW (+5 V for IA)

3) Configurations, Signaling Rates, and Data Rates

Configuration	Modulation	Carrier Frequency (Hz) ± 0.01 %	Data Rate (bps) ± 0.01 %	Symbol Rate (Symbols/Sec.)	Bits/Symbol-Data	Bits/Symbol-TCM	Constellation Points

(4) Scanner control block

1) Image signal process block

The CIS is driven by MAIN ASIC (IC6), and the output video signal from the CIS is input into IC6 through the amplifying circuit. The ADC and buffer are provided in IC6, and the digital image processing is performed.

2) Mechanical control block

The mechanical control block is mainly composed of MAIN ASIC to control the following.

(a) Scanner motor control

The revolution speed and timing of the scanner motor are controlled to output the control signals to the motor driver (IC3).

(b) Verification stamp and LED lamp control

On/off of the end verification and LED lamp of CIS is controlled with the software.

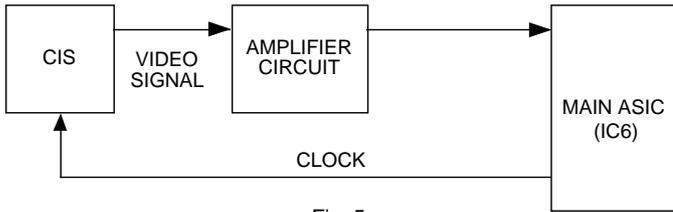

Fig. 5

(5) Speaker amplifier

The speaker amplifier monitors the line under the on-hook mode, outputs the buzzer sound generated by SUB ASIC, ringer sound, DTMF generated from the modem, and line sound.

(6) Page memory block

W986416DH or MT48LC4M16A2TG (IC5): pin-54, TSOP (64 Mbit SDRAM)

The page memory block is composed of one SDRAM of 64 Mbits, being commonly used as the image memory. The memory is divided into the page memory for the scanner and the page memory for printing. This memory is controlled by the MAIN ASIC directly.

The page memory for scanner is composed of the partial area of IC5. The image data of approx. one page (except in the super fine mode) of the draft read with the scanner can be stored. They are stored until they are contracted by CODEC function in MAIN ASIC.

The page memory for printing is composed of the remaining areas of IC5 and can store approx. one page of the image data decoded by CODEC function in MAIN ASIC. The data are stored until they are transferred to Printer PWB with the SUB ASIC and printed.

(7) Driver block

Sending motor driver (IC3: LB1845) ---- 28-pin DIP

This IC driver at the sending motor at the constant current with the bipolar, chopper system.

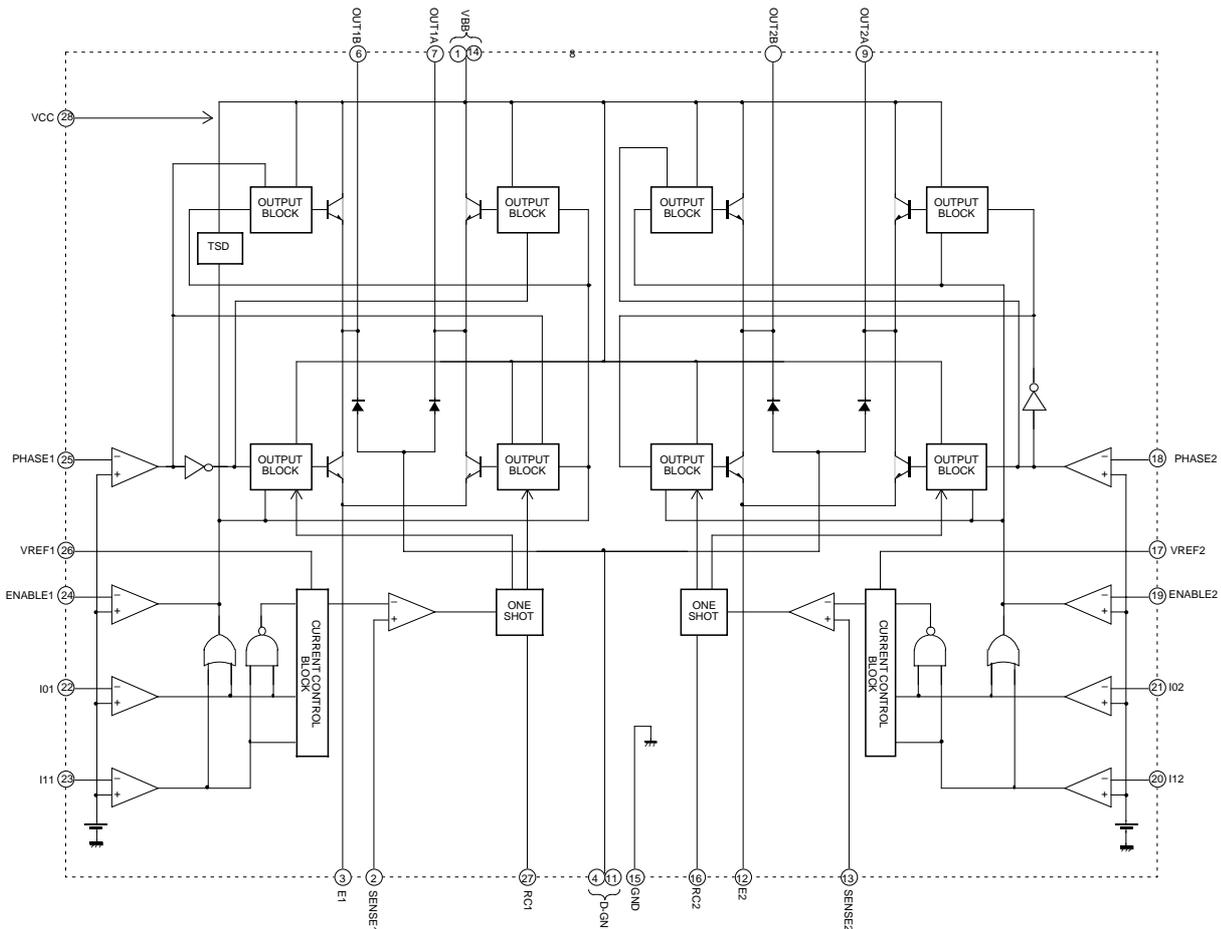

Fig. 6

I0	I1	Output Current
L	L	$V_{ref} / (10 \times R_E) = I_{OUT}$
H	L	$V_{ref} / (15 \times R_E) = I_{OUT} \times 2/3$
L	H	$V_{ref} / (30 \times R_E) = I_{OUT} \times 1/3$
H	H	0

Note: When ENABLE = H or I0 = I1 = H, the output is in OFF state.

LB1845 (IC3) Terminal description

Pin name	Pin No.	Pin Description
VBB	1, 14	Output stage power-supply voltage
SENSE1 SENSE2	2 13	Set current detection pins. Connect these pins, fed back through noise filters, to E1, and E2.
E1 E2	3 12	Current control pins by connecting between this pin and GND.
DGND	4,11	Internal diode anode connection
OUT1B OUT1A OUT2B OUT2A	6 7 8 9	Output pins
GND	15	Ground
RC1 RC2	27 16	Used to set the output off time for the switched output signals. The fixed off times are set by the capacitors and resistors connected to these pins. $t_{off} \approx CR$
Vref1 Vref2	26 17	Output current settings The output current is determined by the voltage (in the range 1.5 to 7.5V) input to these pins.
PHASE1 PHASE2	25 18	Output phase switching inputs. [H] input : OUT A = high, OUT B = low [L] input : OUT A = low, OUT B = high
ENABLE1 ENABLE2	24 19	Output on/off settings [H] input : output OFF [L] input : output ON
I01, I11 I02, I12	22, 23 21, 20	Digital inputs that set the output current The output currents can be set to 1/3, 2/3, or full by setting these pins to appropriate combinations of high and low levels.
VCC	28	Logic block power supply.

[3] Circuit description of CIS unit

1. CIS

CIS is an image sensor which puts the original paper in close contact with the full-size sensor for scanning, being a monochromatic type with the pixel number of 1,728 dots and the main scanning density of 8 dots/mm.

It is composed of sensor, rod lens, LED light source, control circuit and so on, and the reading line and focus are previously adjusted as the unit.

Due to the full-size sensor, the focus distance is so short that the set is changed from the light weight type to the compact type.

2. Waveforms

The following clock is supplied from LC272DOBT-WA6 via 74HCT244 on the control board, and AO is output.

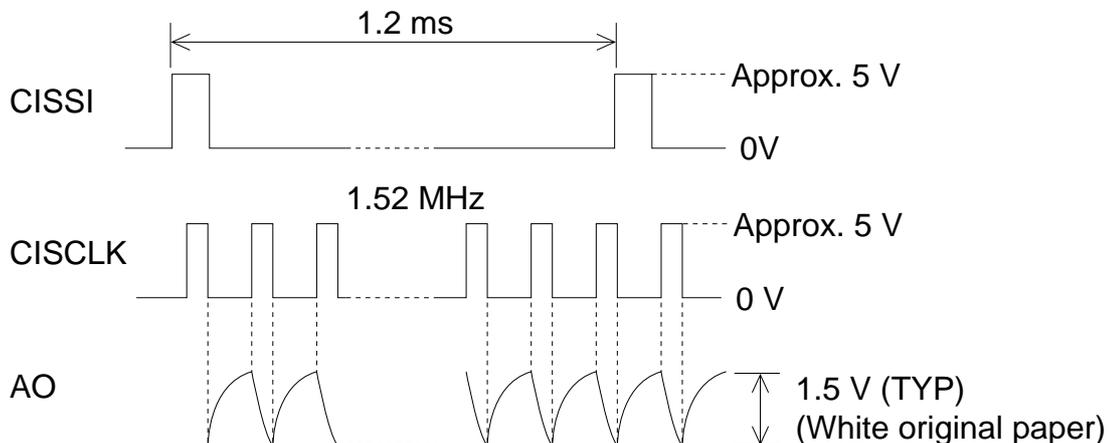

Fig. 7

[4] Circuit description of LIU PWB

(1) LIU block operational description

1) Block diagram

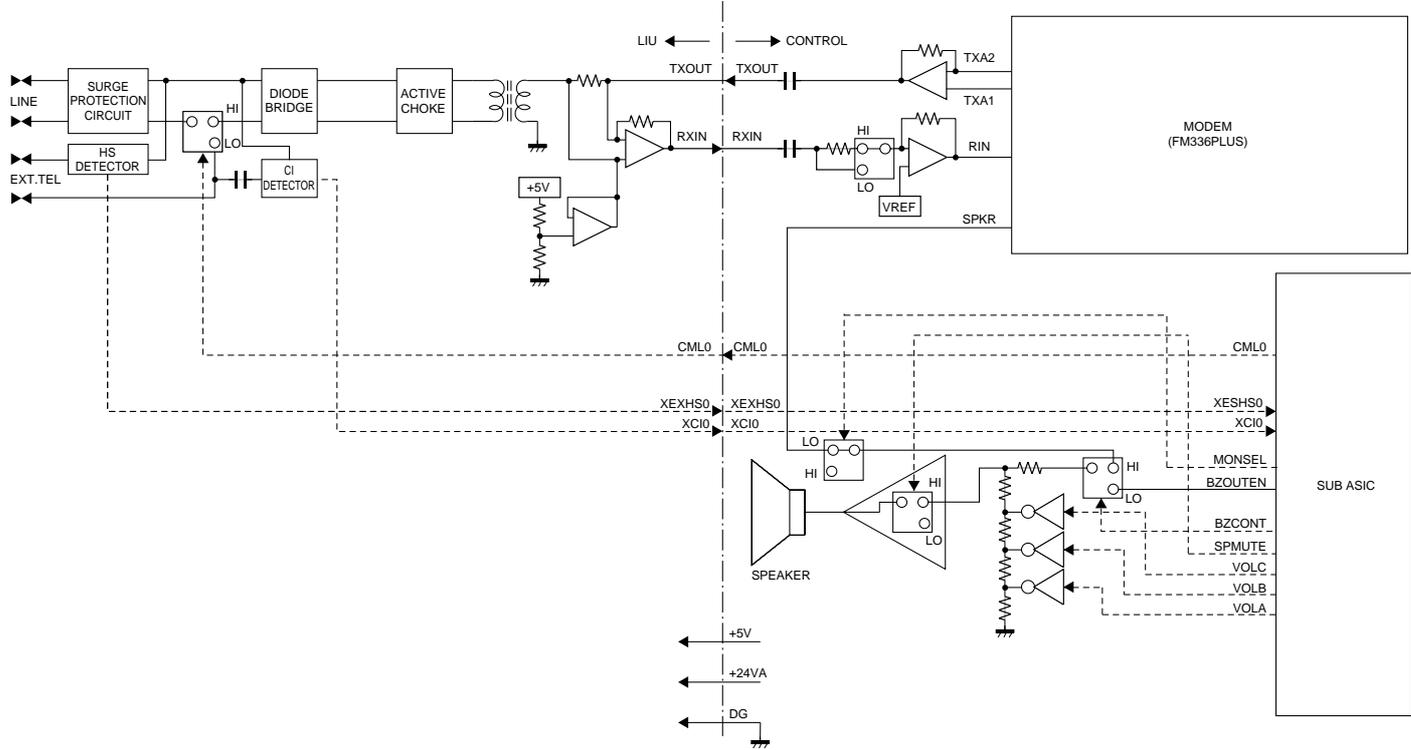

Fig. 8

2) Circuit description

The LIU PWB is composed of the following 9 blocks.

1. Surge protection circuit
2. On-hook status detection circuit
3. Dial pulse generation circuit
4. CML relay
5. Matching transformer
6. Hybrid circuit
7. Signal selection
8. CI detection circuit
9. Power supply and bias circuit

3) Block description

1. Surge Protection circuit

This circuit protects the circuit from the surge voltage occurring on the telephone line.

- The AR1 protect the circuit from the 390V or higher line surge voltages.
- The AR2 and AR3 protect the circuit from the 500V or higher vertical surge voltages.
- The ZD6 and ZD7 control the voltage generated on the secondary side of matching transformer to 2V.

2. On-hook status detection circuit

The on-hook status detection circuit detects the Status of the push speaker key, and the status of the hook of a telephone externally connected.

- External telephone hook status detection circuit (XEXHS0)

This circuit comprises the photo-coupler PC3, resistors R13 and R12, Zener diodes ZD1 and ZD2.

When an external telephone is connected and enters the on-hook mode, the LED of photo-coupler PC3 emits light and the light receiving element turns on. The status signal XEXHS0 is input to the pin10 of (SUB ASIC) (IC21: Control PWB).

XEXHS0 LOW : EXT. TEL OFF-HOOK

XEXHS0 HIGH: EXT. TEL ON-HOOK

3. Dial pulse generation circuit

The pulse dial generation circuit comprises CML.

CML ON: Make

CML OFF: Break

4. CML relay

The CML relay switches over connection to the matching transformer T1 while the FAX is being used.

5. Matching transformer

The matching transformer performs electrical insulation from the telephone line and impedance matching for transmitting the FAX signal.

6. Hybrid circuit

The hybrid circuit performs 2-wire-to-4-wire conversion using the IC of operational amplifier, transmits the voice transmission signal to the line, and feeds back the voice signal to the voice reception circuit as the side tone.

7. Signal selection

The following signals are used to control the transmission line of FAX signal. For details, refer to the signal selector matrix table.

[Control signals from output port]

Signal Name	Description																												
CML0	<u>Line connecting relay and DP generating relay</u> H: Line make L: Line brake																												
SP MUTE	<u>Speaker tone mute control signal</u> H: Muting (Power down mode) L: Muting cancel (Normal operation)																												
VOL A VOL B VOL C	<u>Speaker volume control signal.</u> VRSEL1 VRSEL2 matrix <table border="1" style="margin-left: 20px;"> <thead> <tr> <th></th> <th>VOL A</th> <th>VOL B</th> <th>VOL C</th> <th>RING/ Receiving</th> <th>Buzzer</th> <th>DTMF</th> </tr> </thead> <tbody> <tr> <td></td> <td>L</td> <td>L</td> <td>L</td> <td>High</td> <td>–</td> <td>High</td> </tr> <tr> <td></td> <td>H</td> <td>L</td> <td>L</td> <td>Middle</td> <td>High</td> <td>Middle</td> </tr> <tr> <td></td> <td>L</td> <td>L</td> <td>H</td> <td>Low</td> <td>Low</td> <td>Low</td> </tr> </tbody> </table> (the circuit is located in the control PWB.)		VOL A	VOL B	VOL C	RING/ Receiving	Buzzer	DTMF		L	L	L	High	–	High		H	L	L	Middle	High	Middle		L	L	H	Low	Low	Low
	VOL A	VOL B	VOL C	RING/ Receiving	Buzzer	DTMF																							
	L	L	L	High	–	High																							
	H	L	L	Middle	High	Middle																							
	L	L	H	Low	Low	Low																							
BZCONT	<u>Speaker output signal switching</u> L: Buzzer signal output H: When monitoring line signal (the circuit is located in the control PWB.)																												

[Signals for status recognition according to input signals]

Signal Name	Function
XCI0	Incoming call (CI) detection signal
XEXHS0	H: The handset or external telephone is in the on-hook state. L: The handset or external telephone in the off-hook state.

[Other signals]

Signal Name	Function
TXOUT	Transmission (DTMF) analog signal output from modem
RXIN	Reception (DTMF, others) analog signal input into modem

NO	Signal Name(CNLIU)	NO	Signal Name(CNLIU)
1	RXIN	6	CML
2	TXOUT	7	+5V
3	CI	8	DG
4	EXHS	9	+24VA
5	DPON (N.C.)		

8. CI detection circuit

The CI detection circuit detects the CI signals of 15.3 Hz to 68 Hz. A CI signal, which is provided to the photo-coupler PC1 through the C1 (0.82 uF), R6 (22K), and ZD3 and R5 (13K) when the ring signal is inputted from the telephone line.

9. Power supply and bias circuits

The voltages of +5V and +24VA are supplied from the control PWB unit.

(Example: Fax signal send)

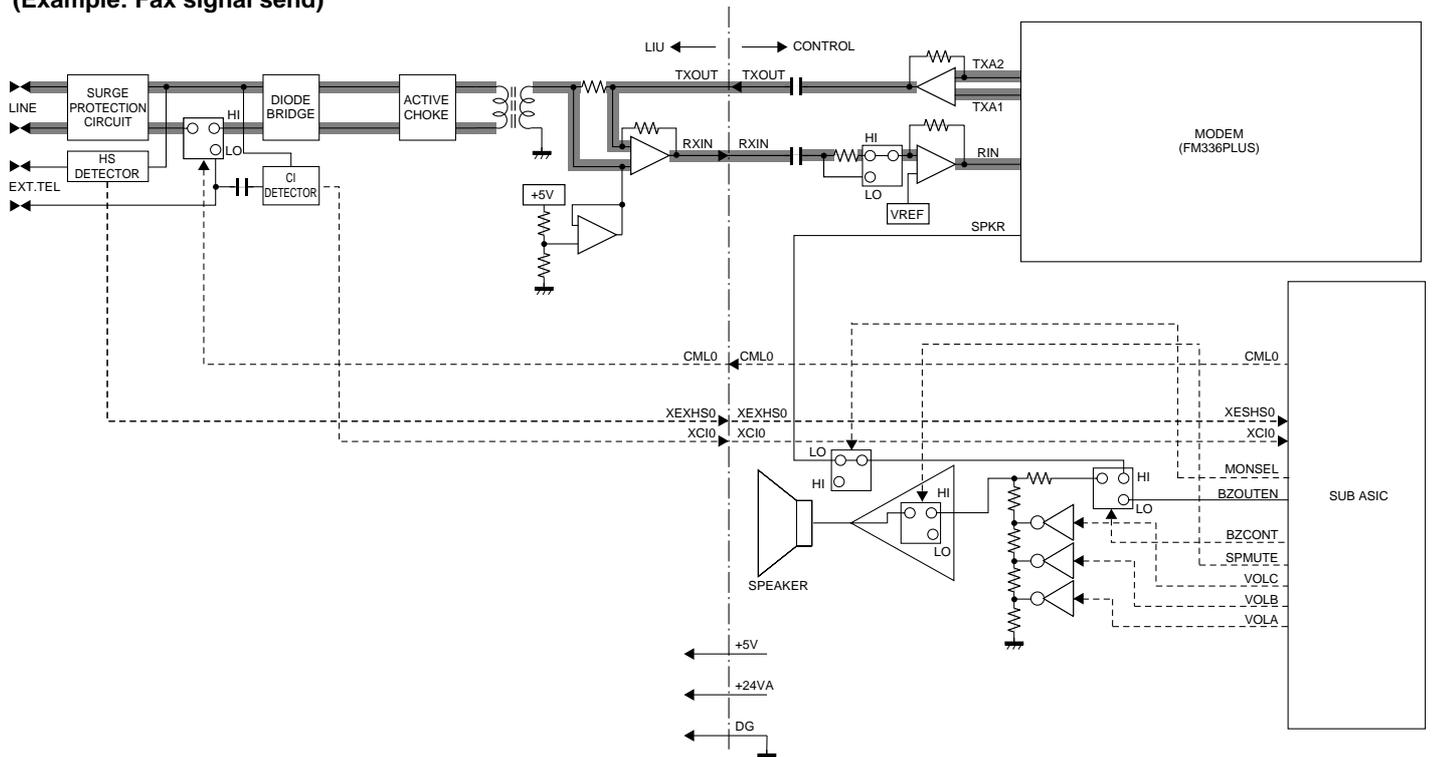

Fig. 9

[5] Circuit description of operation panel PWB

1. Operational description

1) Operation panel PWB

The operation panel PWB includes the ten key scan circuit and the LED lighting circuit. The LS145 is controlled through LD0~LD3 (4 bits) and ten key detection is performed. The HC174 is controlled through LD0~LD5 (6 bits) to provide LED lighting information.

2) COG(LCD) (LMG2025-TPR)

The COG uses the one-chip LCD driver IC to display 20 digits x 2 lines. The LCD display density is controlled with an external resistor.

2. Block diagram

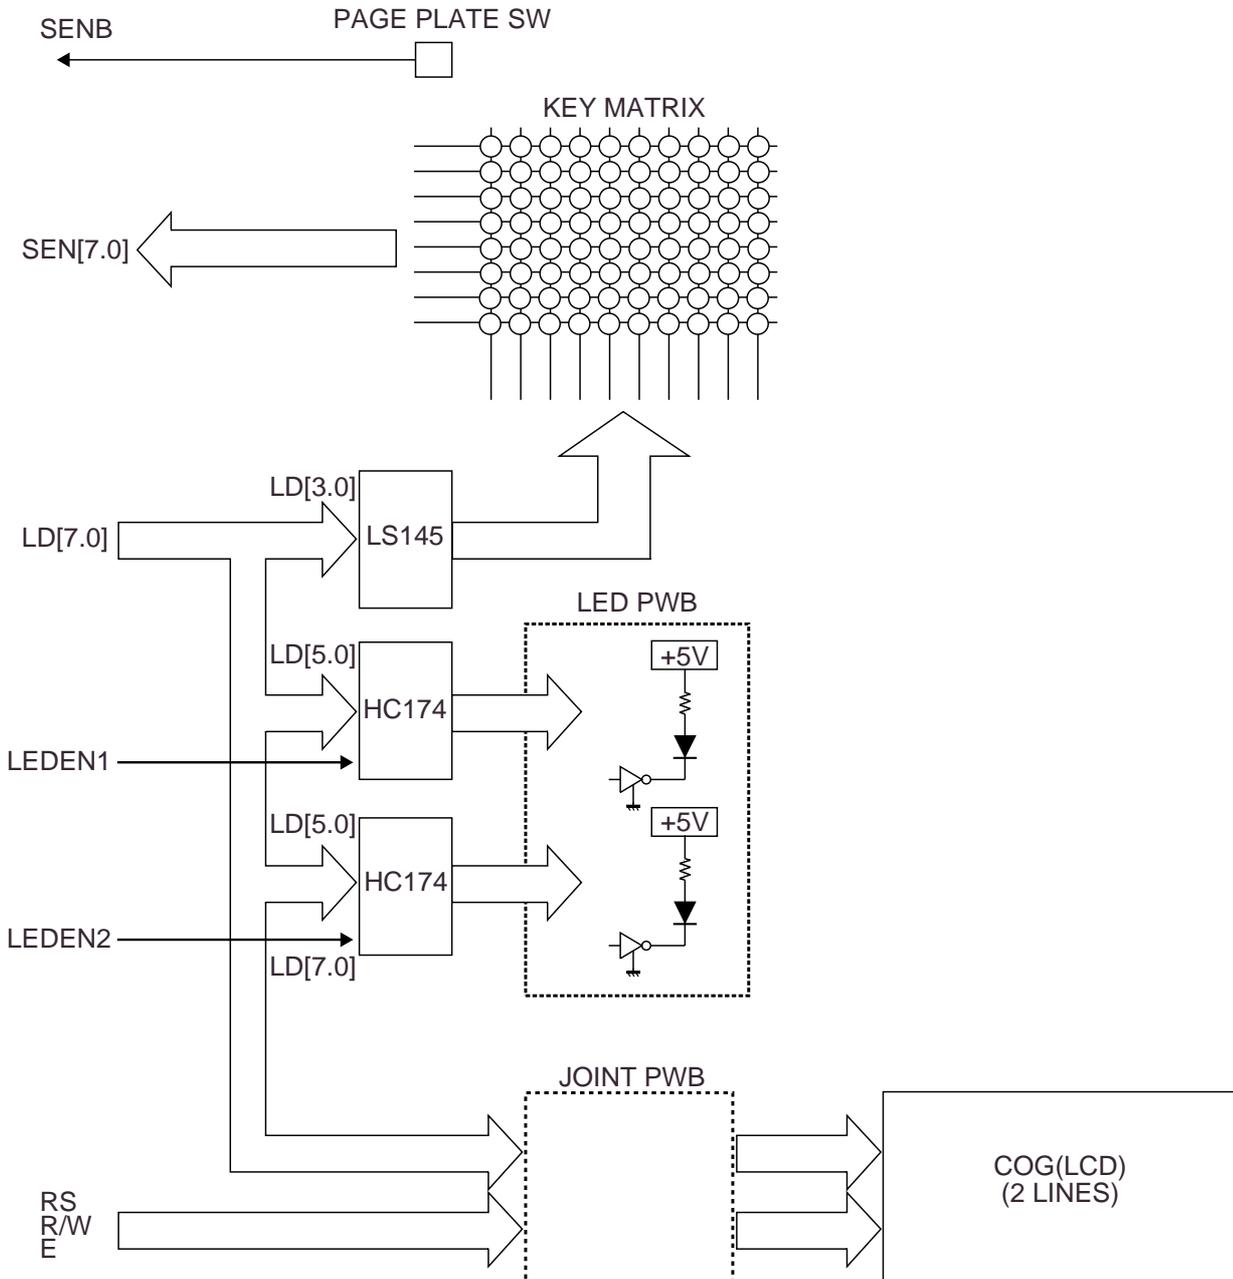

Fig. 10

[6] Circuit description of power supply PWB

This unit supply input AC 120 V/60 Hz, +24 V, +5 V as block diagram shows. (See Fig. 11)

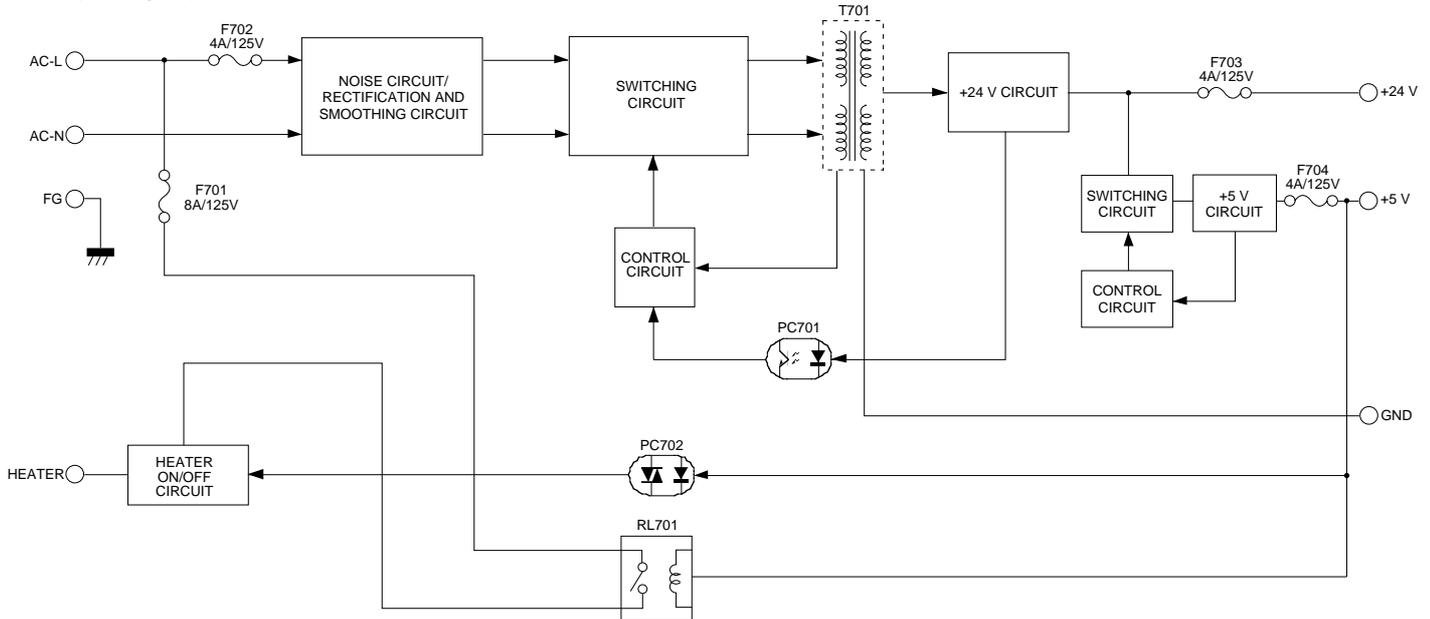

Fig. 11

1. Noise/Rectification and smoothing circuit

Filter part reduces the outgoing noise that generated in the Power Supply unit, and prevents the invasion of the noise from outside. The excessive surge such as the thunder is prevented by Varistor X701.

Rectification and Smoothing circuit is supply DC voltage to switching part by AC input rectify by Diode D701, D702, D703, D704 and smoothing Capacitor C706.

2. Switching circuit

This circuit is adopt Ringing Choke Converter system that self-excited. This system supplies power as follows;

AC voltage that supplied by Rectifying and smoothing part is change high-frequency pulse by NO/OFF repeat of MOS FET Q701. And while Q701 ON, accumulate energy in primary winding of transformer T701. And while OFF, eject energy to secondary winding.

Control of constant voltage is carry out by as follows;

Feedback put on control circuit through photo coupler from +24 V Output. Over Current Protection Circuit detect spread of ON period by Output Load is heavy, and extend OFF period by control circuit. And turn down energy that accumulating in primary winding.

Over Current Protection is make secondary side of output voltage +24 V's rising over voltage condition by conducting Zener Diode D711 that between +24 V output and GND. Then protection is carrying out by Over Current Protection Circuit of Control Circuit working.

3. +24 V circuit

+24 V Circuit is supplied by Transformer T701 Output Rectification and Smoothing by Diode D710, Capacitor C715.

4. +5 V circuit

+5 V Output is carry out stabilization by step-down Chopper Circuit that inputted above +24 V. When MOS FET Q705 ON, this system supply load energy through L705, and when OFF, accumulated energy in L705 Rectification to load by D715. Control of constant voltage is carry out by detect +5 V output by Shunt Regulator and put on Feedback.

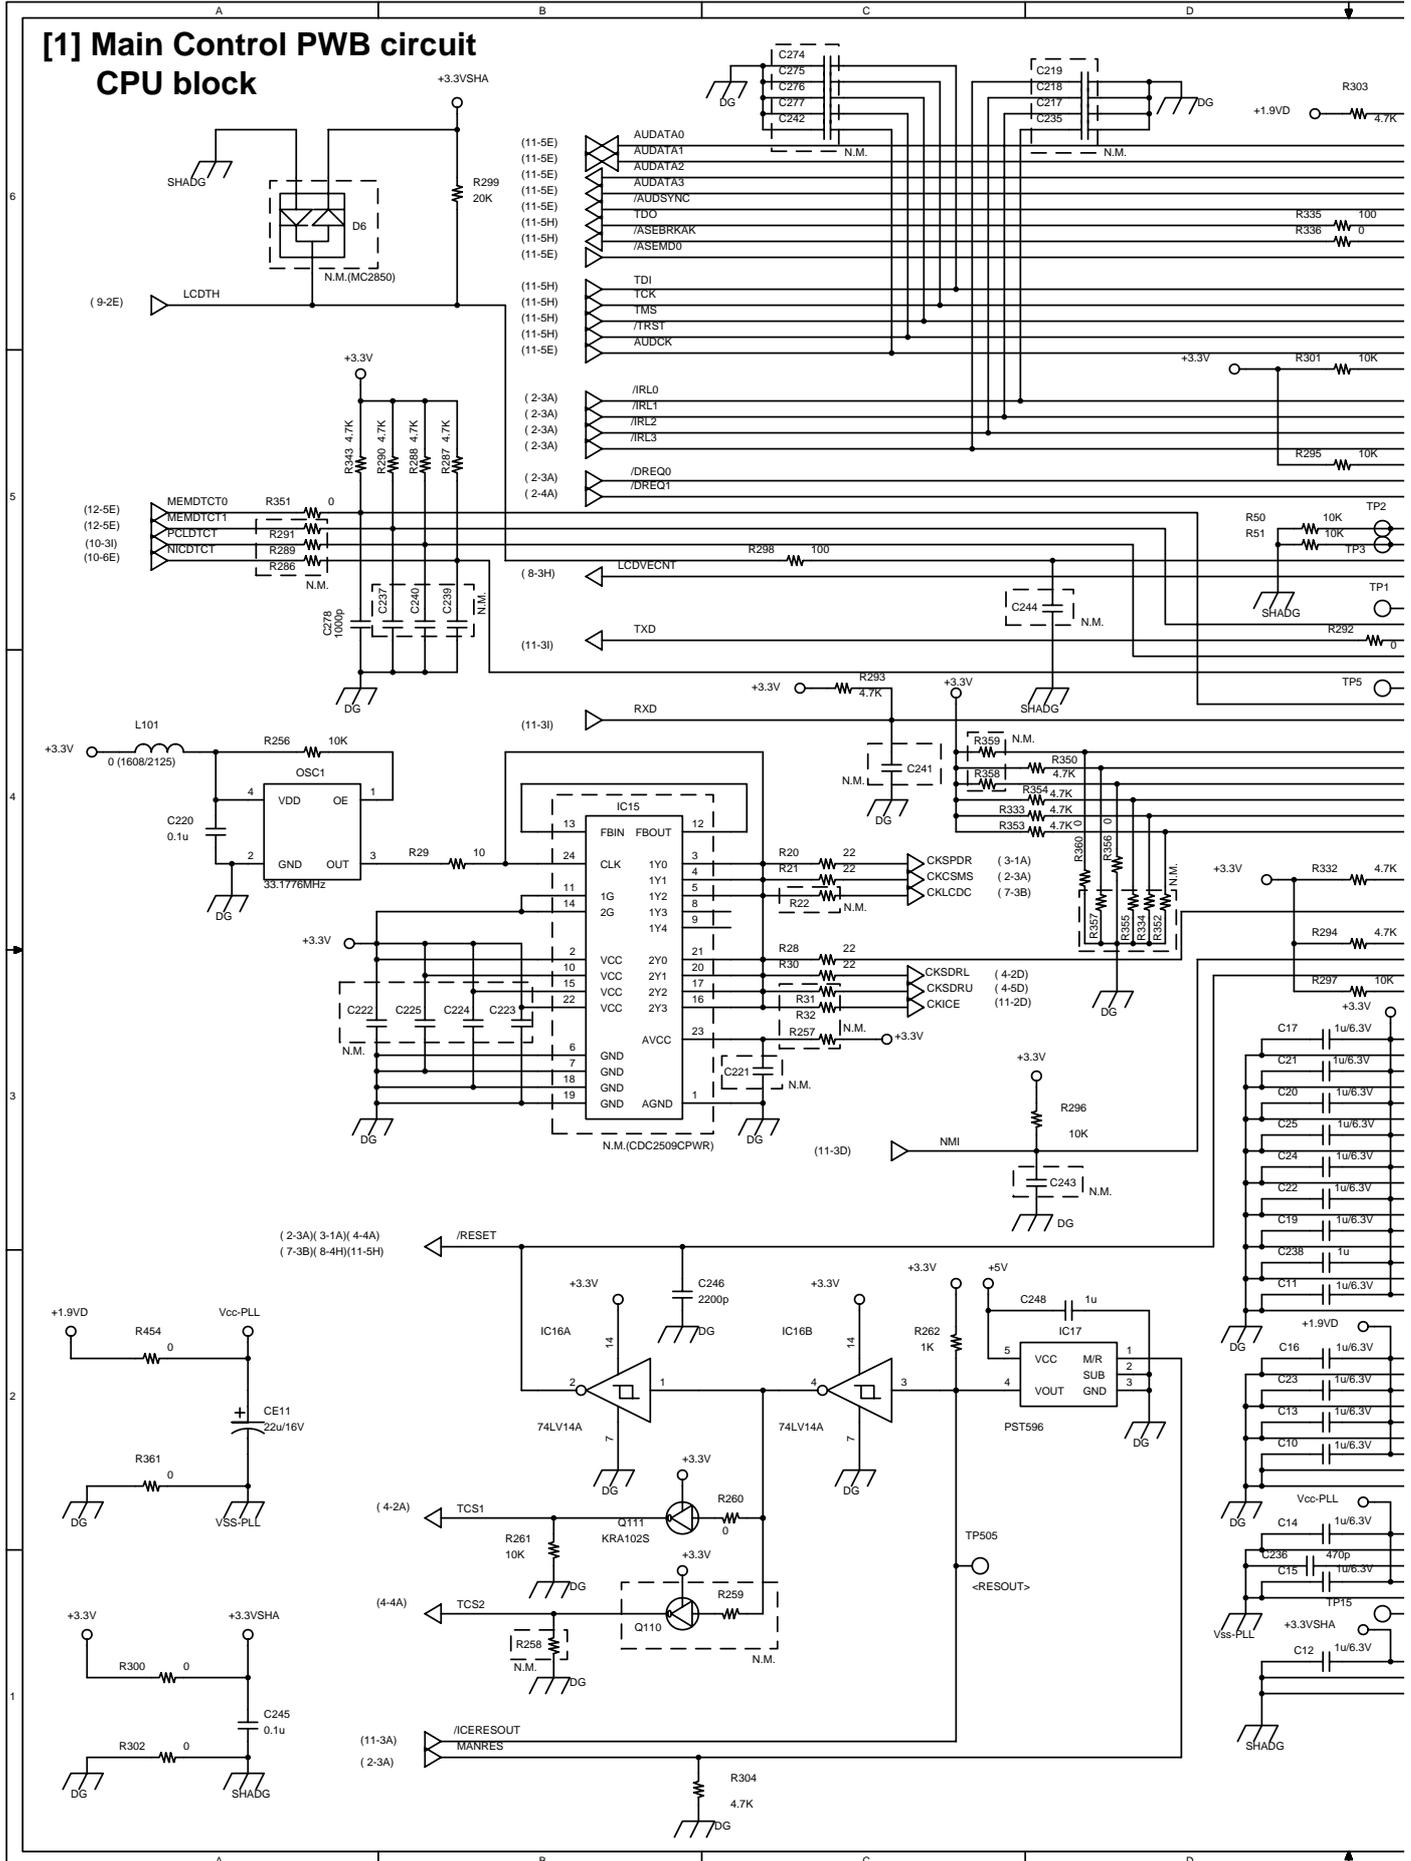

5. HEATER ON signal

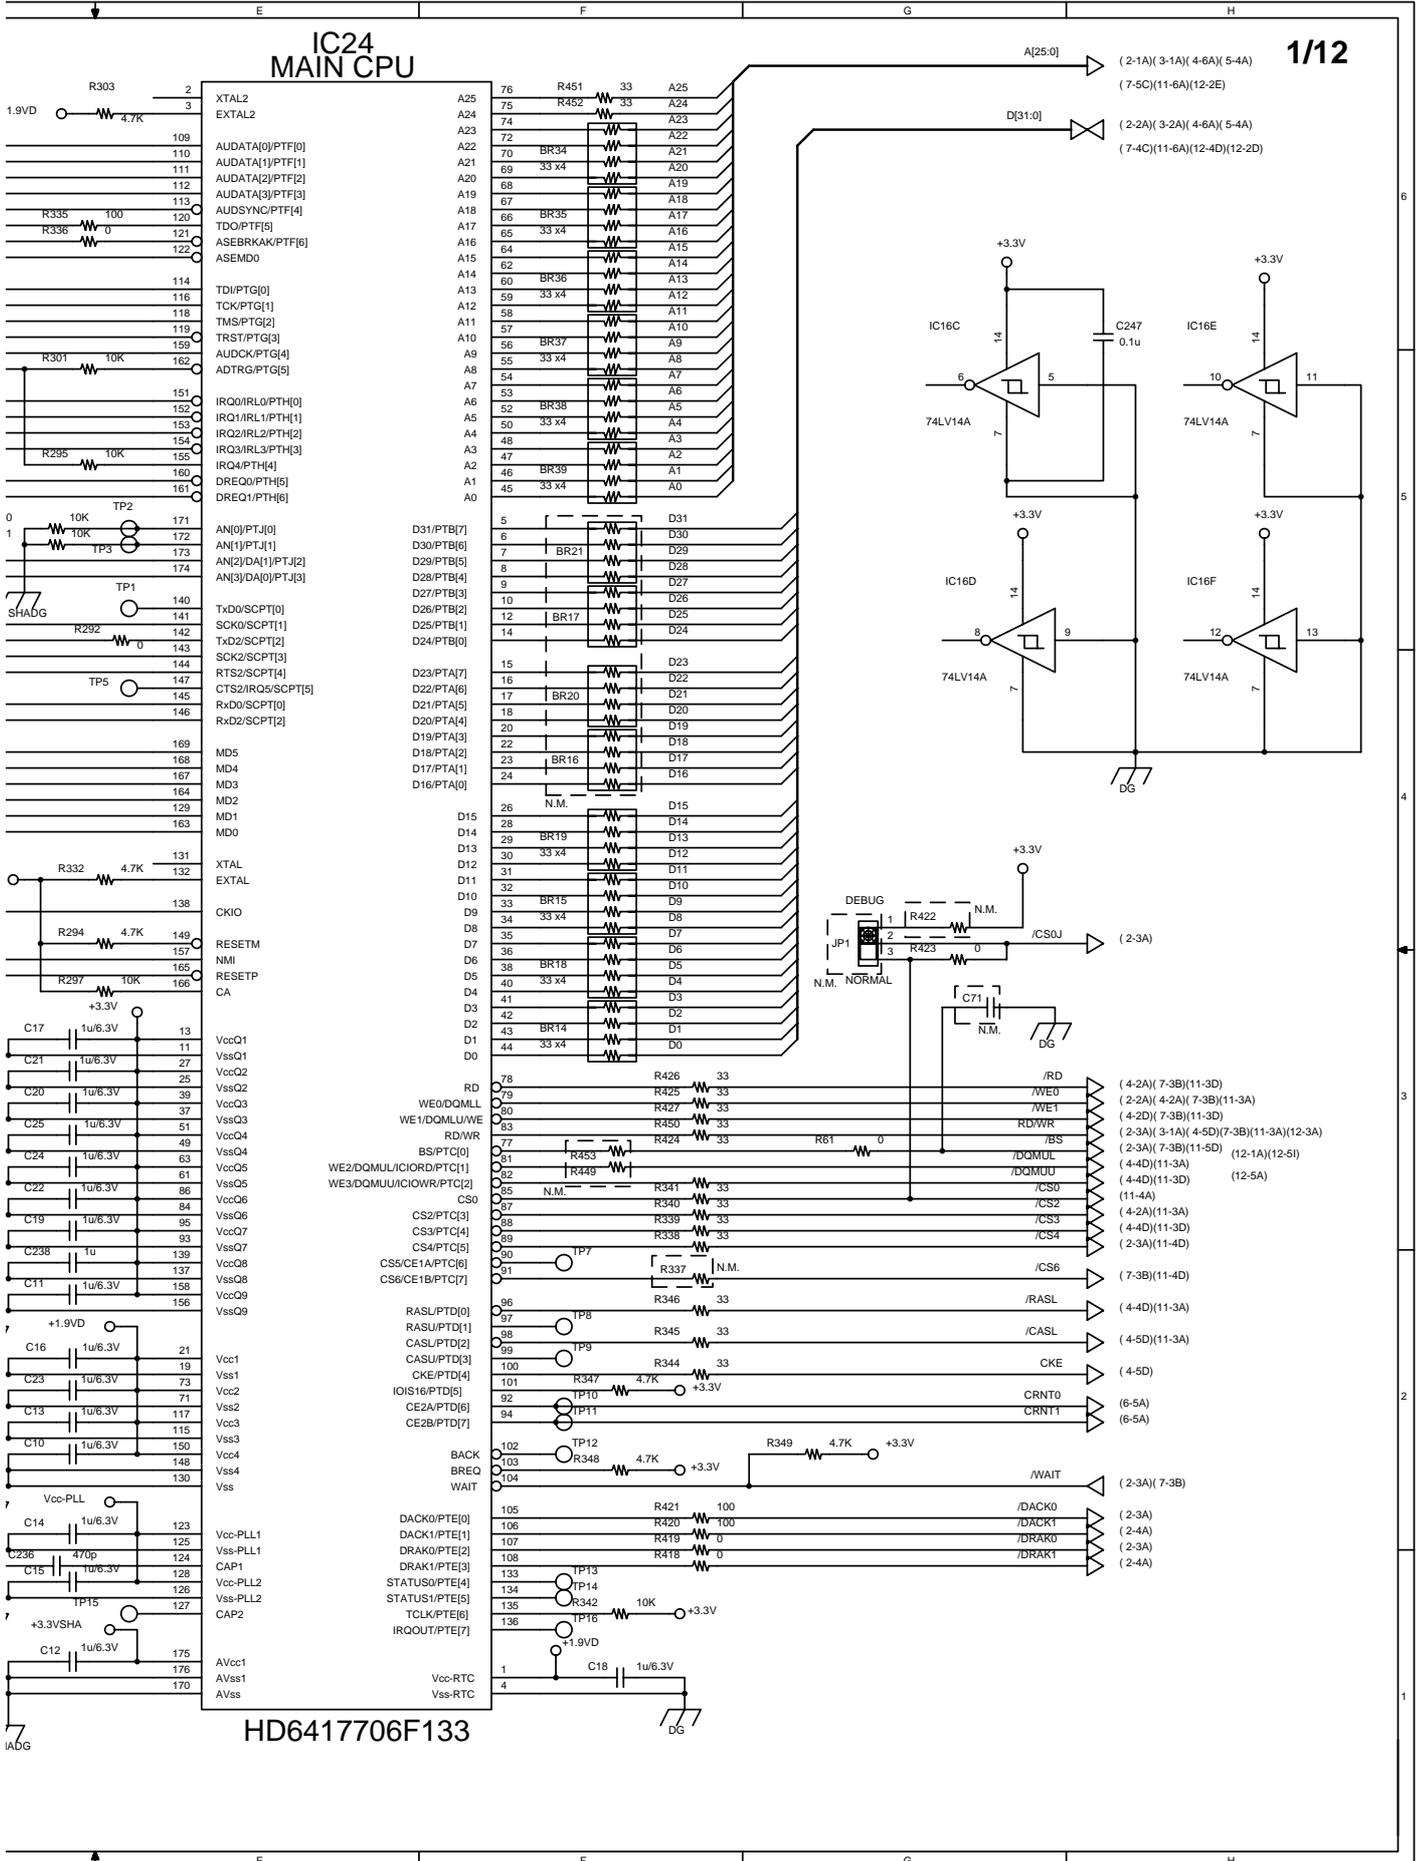

HEATER ON/OFF is carry out by send a signal through Trigger TR701 of Photo Triac Coupler PC702 by (High/Low).

6. HEATER-RELAY OFF signal

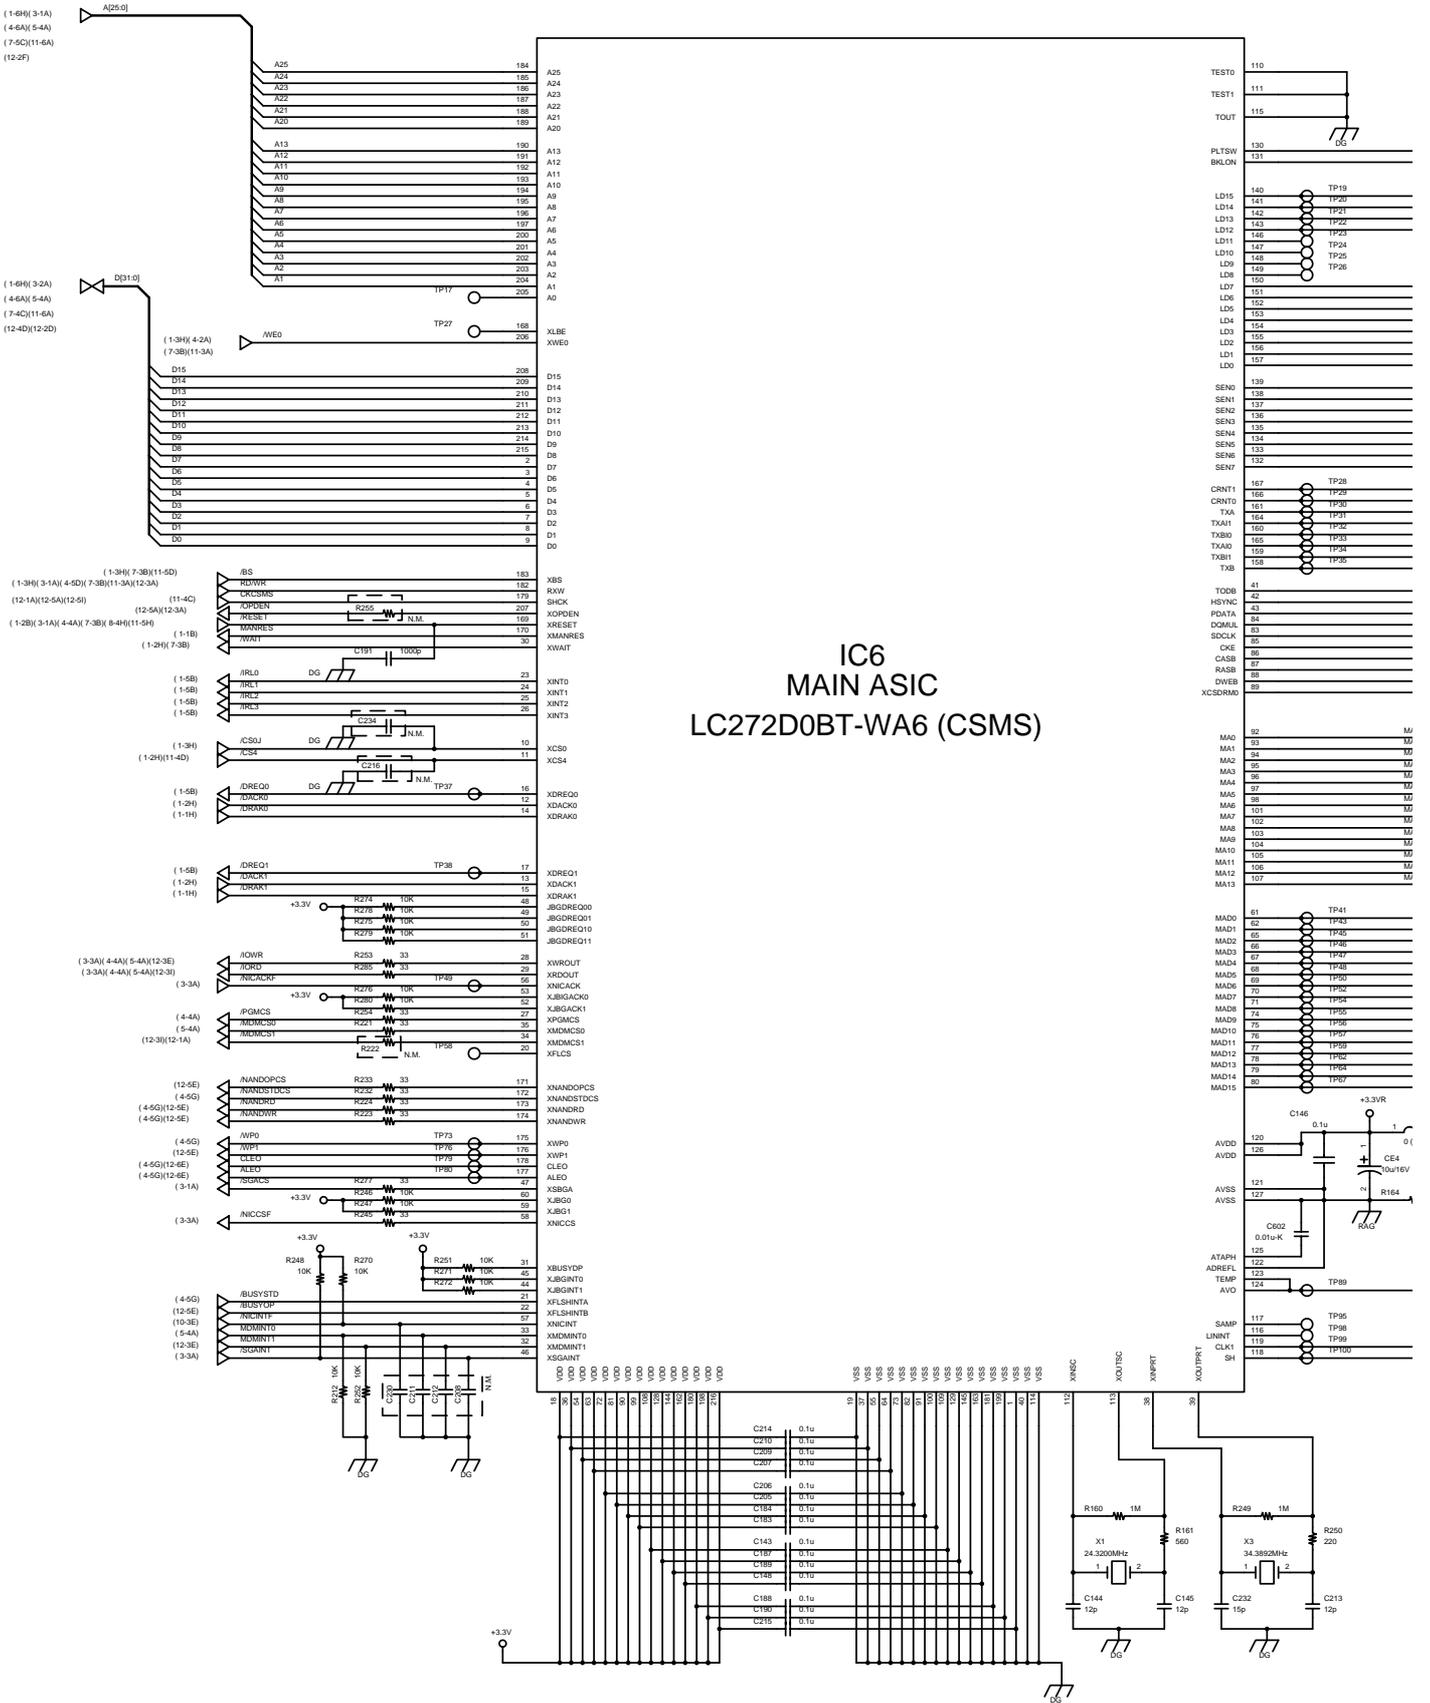

ON/OFF of Relay RL701 is carry out by (High/Low). But when HEATER-RELAY OFF Signal change High to Low, Thyristor SR701 keep ON condition. So RL701 keep OFF condition till Power Supply re-inter.

[2] Rewriting version up the FLASH ROM

1. Outline

FO-4400 is connected with PC in a serial cable, and Firmware of FO-4400 is downloaded.

2. Preparation

PC side:

(1) Communication software (Tera Term Pro Version 2.3 (free software)) is installed.

It distributes separately. (tterm23.zip)

- tterm23.zip is decompressed to the suitable directory.
- Setup.exe is double-clicked and installed.
- Start Tera Term and set up Serial Port. Figs. 2, 3, 4)

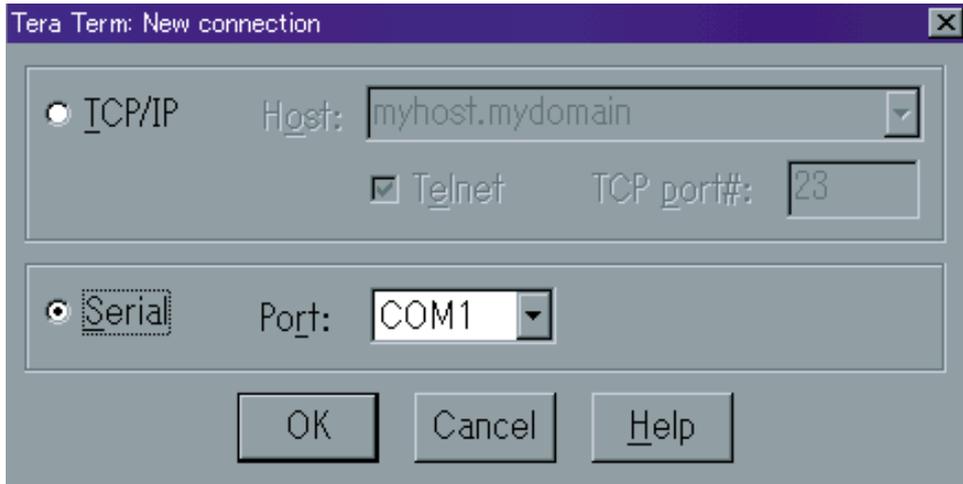

Fig. 2

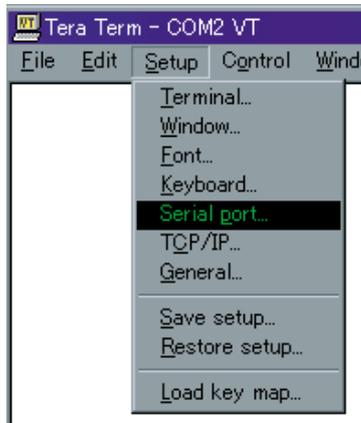

Fig. 3

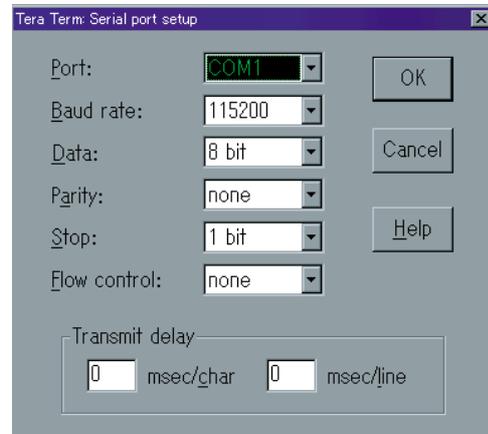

Fig. 4

Note: According to the environment of PC to be used, one of COM1 and COM2 is chosen.

(2) The file of the firmware to update is copied to a suitable directory.
(The extension of the file for update is “ver”.)

FO-4400 side:

- (1) Turn off the power.
- (2) The door for option board wearing in the back of FO-4400 is opened.
- (3) The conversion cable of 9pin - 5pin is connected the white connector which has five pins.
(The connector is at the upper left of the door.)
- (4) FO-4400 is connected with PC with a serial straight cable and a conversion cable.

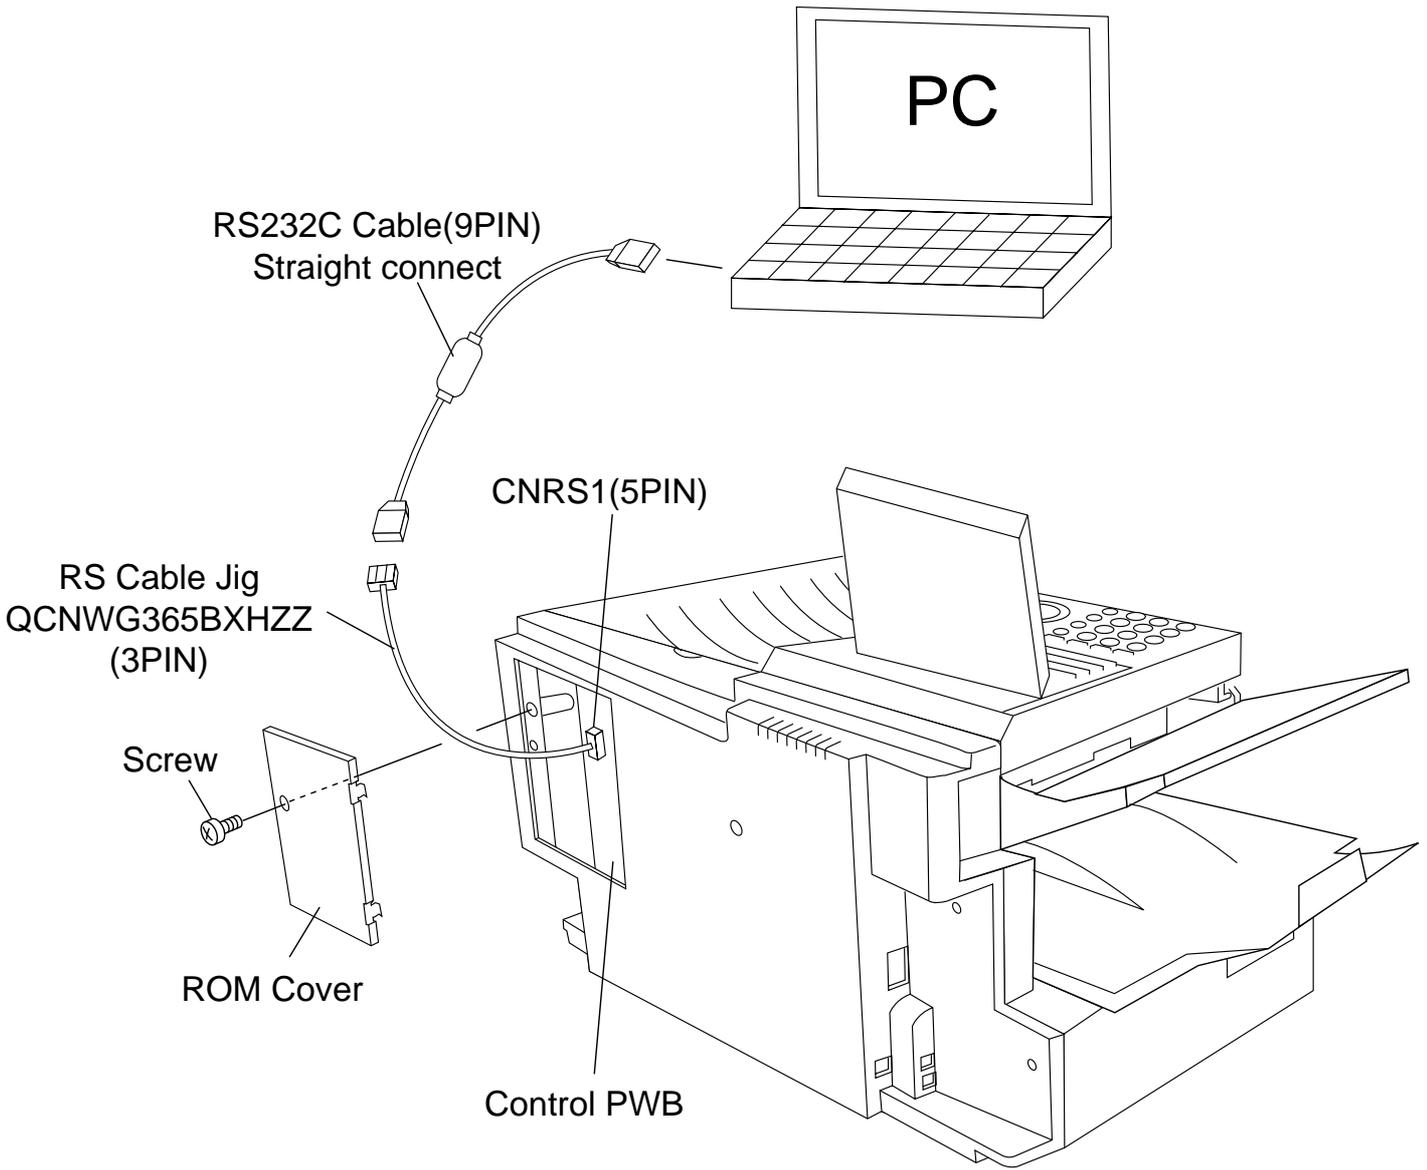

Fig. 5 Connected cable

PART CORD	PRICE RANK	NAME	REMARKS
QCNWG365BXHZZ	BH	RS cable JIG (3PIN)	Connects RS-232C cable and CNRS1(Control PWB)

3. Operating Procedure

FO-4400

(1) Turn on the power, pushing "START"+"STOP".

MEMORY CLEAR
1=ALL, 2=IMAGE, 3=NO

(2) Push "MENU".

Flash Loader

The size of a firmware file is 2.5MB.

Transmission takes about 4 minutes and 30 seconds.

(6) After transmission is completed, write in a flash memory.

Flash Loader
Writing

Note: Never turn off the power, when displayed as "Writing".

Note: When not displayed as "Writing", please turn off the power and redo from the beginning.

(7) After about 30 seconds,

OK
Reset Machine

(8) Turn off the power.

PC

(3) Start Tera Term Pro.

(4) [File]-[Send File] is chosen. (Fig.5)

(5) [Option] Binary is checked. (Fig.6)

Double-click the file to download.

A file transfer is started.

Fig. 6

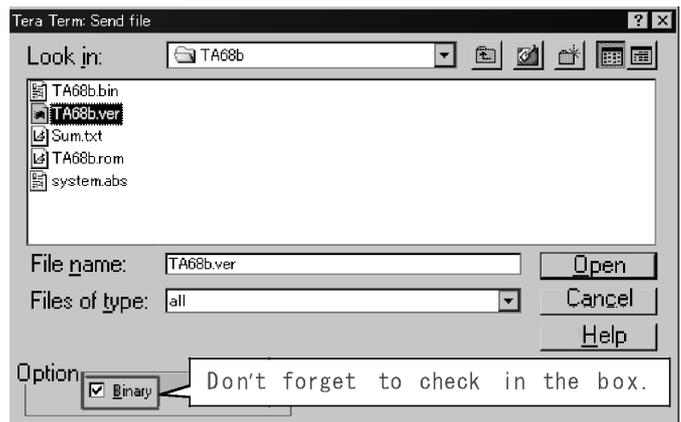

Fig. 7
