

Model: CDX-C810DSP

No. 422

Subject: PICKUP IS HEARD THROUGH SUBWOOFER
OUTPUTS

Date: March 28, 1997

Symptom:

(157)

Audible pickup can be heard through the subwoofer outputs. When the unit is tapped or shocked by vibration, you can hear a thumping noise coming from the subwoofer outputs.

Solution:

There are two traces between C230 and C239. (see diagram below) if these traces have been cut they need to be jumped back for a connection. Jumper the two cut traces with thin wires on the solder side of the main board. After traces are reconnected, test unit by tapping chassis and monitor the subwoofer output .
