# Chapter One

---

## Overview

This guide provides comprehensive information on the Windows '00/'98/ME/XP Driver for the KSI TPRO/TSAT-PCI board.

## Introduction

The Driver for the KSI TPRO/TSAT-PCI Board provides functionality to the board's interfaces and devices.

## Product Description

The TPRO-PCI performs timing and synchronization functions referenced to an input timecode signal. The board synchronizes its on-board clock to the incoming timecode. The on-board clock's time is also provided as an IRIG-B output. The board includes a time-tag TTL input, a programmable "heartbeat" pulse or squarewave output (with interrupt capability), and a programmable "match" start/stop time output (with interrupt capability)

The TPRO-PCI continues to increment time ("freewheel") in the absence of an input timecode. Thus, the board can be used as an IRIG-B timecode generator by setting the initial time via the PCI bus.

The input timecode format (IRIG-B, IRIG-A, or NASA36) is detected automatically. Synchronization to the input timecode is also automatic and can be enabled/disabled via the PCI bus. A propagation delay offset may be specified to compensate for cable delays.

The timecode input is an amplitude-modulated sine wave. An automatic gain control (AGC) circuit permits a wide range of input amplitudes. The timecode input is differential; the board does not reference this signal to ground. A single-ended input (referenced to ground) is also acceptable.

The board can be ordered with option "-M" to synchronize to a one-pulse-per-second (1PPS) input instead of an incoming timecode. In this case, the initial time is programmed via the PCI bus, and the board begins counting on the next 1 PPS pulse.

## Caveats

---

### Caution

*If your system is equipped with the TPRO-PCI 450-10 software driver, it **must be uninstalled** before installing the new, updated driver.*

*To uninstall the driver:*

1. *Go to “Control Panel”, “Add/Remove Programs”.*
  2. *Remove the TPRO-TSAT PCI DEVELOPERS KIT.*
  3. *Perform a “find file” for **450-10** and remove all.*
  4. *Perform a second “find file” for **TPRO** and remove all.*
  5. *Install the new drivers as indicated in this manual.*

# **Chapter Two**

---

## **Installation and Application**

## Installing the TPRO/TSAT-PCI Win '00/'98/ME/XP Driver

### **Step One**

Install TPRO/TSAT-PCI card in a vacant slot of desired Personal Computer.

### **Step Two**

Power on PC. When the Plug and Play Manager finds new hardware, choose “Have Disk” to install the driver from the CD. Select the “TPRO.INF” file from the CD and follow prompts to finish installation.

### **Step Three**

Go to the CD-ROM drive in Windows Explorer.

### **Step Four**

Double-click on **setup.exe**. The setup utility launches.

### **Step Five**

Follow the on-screen prompts, making sure to accept defaults. The utility commences copying application files. When this process is finished, the control utility installation is complete.

### **Step Six**

Click the “Finish” button on the screen.

## Executing the TPRO/TSAT Control Utility

### Step One

From the start Menu select the “Programs” folder.

### Step Two

Select the “KSI” folder.

### Step Three

Select the “TPRO-TSAT Control Utility” program.

## Application Example

```
*****  

MAIN.C  

*****  

*****  

#include <stdlib.h>  

#include <stdio.h>  
  

#include <tpro.h>  
  

*****  

MAIN  

*****  

*****  

int main (void)  
{
    TPRO_BoardObj *hnd;  
  

    if (TPRO_open (&hnd, "TPROpcio0") != TPRO_SUCCESS)  

        return (1);  
  

```

```

***  get latitude
*/
{
  TPRO_LatObj Latitude;

  if (TPRO_getLatitude (hnd, &Latitude) != TPRO_SUCCESS)
    return (1);

  // print results
  printf ("Latitude: %d Degrees\t%f minutes\n",
         Latitude.degrees, Latitude.minutes);
}

/**
***  get longitude
*/
{
  TPRO_LatObj Longitude;

  if (TPRO_getLongitude (hnd, &Longitude) != TPRO_SUCCESS)
    return (1);

  // print results
  printf ("Longitude: %d Degrees\t%f minutes\n\n",
         Longitude.degrees, Longitude.minutes);
}

/**
***  get satellite information
*/
{
  TPRO_SatObj SatInfo;

  if (TPRO_getSatInfo (hnd, &SatInfo) != TPRO_SUCCESS)
    return (1);

  // print results
  printf ("Satellites tracked: %d\n", SatInfo.satsTracked);
}

TPRO_close (hnd);

getchar ();
}

```

*This page intentionally left blank.*

## Support Routine Descriptions

The TPRO-PCI driver permits overlapping use of the TPRO-waitXXX routines and other device access routines. However, it should be noted that simultaneous access to the device requires multiple open device handles. That is, if an application requires access to the device driver from two different threads, then each thread must have its own device handle.

### **TPRO\_open**

```
unsigned char TPRO_open (TPRO_BoardObj **hnd, char *deviceName);
```

This routine allocates a TPRO\_BoardObj object, sets a handle to the tpro/tsat, and sets the driver firmware, fpga revision (if applicable), and the driver revision strings.

Arguments: Pointer to TPRO\_BoardObj handle  
 Device name - "TPROpcio0"

Returns: TPRO\_OBJECT\_ERR - error allocating board object  
 TPRO\_HANDLE\_ERR - error retrieving handle to device  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

### **TPRO\_close**

```
unsigned char TPRO_close (TPRO_BoardObj *hnd);
```

This routine frees the allocated board object and closes the handle to the tpro/tsat device.

Arguments: Pointer to TPRO\_BoardObj

Returns: TPRO\_CLOSE\_HANDLE\_ERR - error closing handle to device  
 TPRO\_DEVICE\_NOT\_OPEN - device is not open  
 TPRO\_SUCCESS - success

### **TPRO\_getAltitude**

```
unsigned char TPRO_getAltitude (TPRO_BoardObj *hnd, TPRO_AltObj *Altp);
```

This routine retrieves the altitude information from the tSAT board. Altitude distance is in meters.

Arguments: Pointer to TPRO\_BoardObj  
 Pointer to TPRO\_AltObj

Returns: TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## TPRO\_getDate

```
unsigned char TPRO_getDate (TPRO_BoardObj *hnd, TPRO_DateObj *Datep);
```

This routine retrieves the current date from the TPRO/tSAT board. The date is in Gregorian Format.

Arguments: Pointer to TPRO\_BoardObj  
 Pointer to TPRO\_DateObj

Returns: TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## TPRO\_getLatitude

```
unsigned char TPRO_getLatitude(TPRO_BoardObj *hnd, TPRO_LatObj *Latp);
```

This routine retrieves the latitude information from the tSAT device.

Arguments: Pointer to TPRO\_BoardObj  
 Pointer to TPRO\_LatObj

Returns: TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## TPRO\_getLongitude

```
unsigned char TPRO_getLongitude(TPRO_BoardObj *hnd, TPRO_LongObj *Longp);
```

This routine retrieves the longitude information from the /tSAT device.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to the TPRO\_LongObj

Returns: TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## TPRO\_getSatInfo

```
unsigned char TPRO_getSatInfo(TPRO_BoardObj *hnd, TPRO_SatObj *Satp);
```

This routine retrieves the number of satellites tracked from the tSAT device.

Arguments:    Pointer to the TPRO\_BoardObj  
              Pointer to the TPRO\_SatObj

Returns:        TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
                  TPRO\_COMM\_ERR                    - error communicating with driver  
                  TPRO\_SUCCESS                      - success

## TPRO\_getTime

```
unsigned char TPRO_getTime(TPRO_BoardObj *hnd, TPRO_TimeObj *Timep);
```

This routine retrieves the current time from the TPRO/tSAT device. The seconds value is received as type double.

Arguments:    Pointer to the TPRO\_BoardObj  
              Pointer to the TPRO\_TimeObj

Returns:        TPRO\_COMM\_ERR                    - error communicating with driver  
                  TPRO\_SUCCESS                      - success

## TPRO\_resetFirmware

```
unsigned char TPRO_resetFirmware(TPRO_BoardObj *hnd);
```

This routine resets the firmware programmed on the TPRO/tSAT device. This function is for troubleshooting purposes only and should not be used in the main application.

Arguments:    Pointer to the TPRO\_BoardObj

Returns:        TPRO\_COMM\_ERR                    - error communicating with driver  
                  TPRO\_SUCCESS                      - success

## **TPRO\_setHeartbeat**

```
unsigned char TPRO_setHeartbeat(TPRO_BoardObj *hnd, TPRO_HeartObj *Heartp);
```

This routine controls the heartbeat output. The heartbeat output may be a square wave or pulse at various frequencies.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to the TPRO\_HeartObj

Returns: TPRO\_FREQ\_ERR - invalid frequency value  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## **TPRO\_setMatchTime**

```
unsigned char TPRO_setMatchTime(TPRO_BoardObj *hnd, TPRO_MatchObj *Matchp);
```

This routine drives the match output line high (start time) or low (stop time) when the desired time is met.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to the TPRO\_MatchObj

Returns: TPRO\_DAY\_PARM\_ERR - invalid days parameter (must be 0-366)  
 TPRO\_HOUR\_PARM\_ERR - invalid hours parameter (must be 0 - 23)  
 TPRO\_MIN\_PARM\_ERR - invalid minutes parameter (must be 0 - 59)  
 TPRO\_SEC\_PARM\_ERR - invalid seconds parameter (must be 0 - 69)  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## **TPRO\_setPropDelayCorr**

```
unsigned char TPRO_setPropDelayCorr (TPRO_BoardObj *hnd, int *us);
```

This routine sets the propagation delay correction factor.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to correction factor in microseconds

Returns: TPRO\_DELAY\_PARM\_ERR - invalid propagation delay factor  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## **TPRO\_setTime**

```
unsigned char TPRO_setTime(TPRO_BoardObj *hnd, TPRO_TimeObj *Timep);
```

This routine sets the time on the on-board clock of the TPRO/tSAT device. If the board is synchronized to a GPS antenna this value will not be accepted.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to the TPRO\_TimeObj

Returns: TPRO\_DAY\_PARM\_ERR - invalid days parameter (must be 0-366)  
 TPRO\_HOUR\_PARM\_ERR - invalid hours parameter (must be 0 - 23)  
 TPRO\_MIN\_PARM\_ERR - invalid minutes parameter (must be 0 - 59)  
 TPRO\_SEC\_PARM\_ERR - invalid seconds parameter (must be 0 - 69)  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## **TPRO\_setYear**

```
unsigned char TPRO_setYear(TPRO_BoardObj *hnd, unsigned short *yr);
```

This routine programs the TPRO/tSAT device with the desired year. If the board is synchronized to a GPS antenna this value will not be accepted.

Arguments: Pointer to the TPRO\_BoardObj  
 Pointer to the desired year

Returns: TPRO\_INVALID\_BOARD\_TYPE\_ERR - invalid board type for function  
 TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## **TPRO\_simEvent**

```
unsigned char TPRO_simEvent(TPRO_BoardObj *hnd);
```

This routine simulates an external time tag event.

Arguments: Pointer to the TPRO\_BoardObj

Returns: TPRO\_COMM\_ERR - error communicating with driver  
 TPRO\_SUCCESS - success

## TPRO\_synchControl

```
unsigned char TPRO_synchControl(TPRO_BoardObj *hnd, unsigned char *enbp);
```

This routine commands the TPRO/tSAT device to synchronize to input or freewheel. This distinction is made using the enable argument. If the enable argument is (0) the clock will freewheel, otherwise it will synchronize to input. When disabling synchronization (freewheeling), the device will continue to synchronize until the time is set.

Arguments:    Pointer to the TPRO\_BoardObj  
               Pointer to the synch enable

Returns:      TPRO\_COMM\_ERR - error communicating with driver  
               TPRO\_SUCCESS - success

## TPRO\_synchStatus

```
unsigned char TPRO_synchStatus(TPRO_BoardObj *hnd, unsigned char *status);
```

This routine reports the synchronization status of the TPRO/tSAT device. When status is equal to zero, the device is freewheeling. Otherwise the device is synchronized to its input.

Arguments:    Pointer to the TPRO\_BoardObj  
               Pointer to the synch status variable

Returns:      TPRO\_COMM\_ERR - error communicating with driver  
               TPRO\_SUCCESS - success

## TPRO\_waitEvent

```
unsigned char TPRO_waitEvent(TPRO_BoardObj *hnd, TPRO_WaitObj*waitp);
```

This routine will report the time an external event was detected on the Time Tag Input pin. The routine will block for a given number of ticks (in milliseconds) until an event occurs or the timeout period has been reached.

Arguments:    Pointer to the TPRO\_BoardObj  
               Pointer to wait time

Returns:      TPRO\_TIMEOUT\_ERR - routine has timed-out  
               TPRO\_COMM\_ERR - error communicating with driver  
               TPRO\_SUCCESS - success

## **TPRO\_waitHeartbeat**

```
unsigned char TPRO_waitHeartbeat(TPRO_BoardObj *hnd, unsigned int *ticks);
```

This routine will reports the condition of the heartbeat output. The routine will block for a given number of ticks (in milliseconds) until a heartbeat occurs or the timeout period has been reached.

Arguments:    Pointer to the TPRO\_BoardObj  
              Pointer to timeout variable in milliseconds

Returns:      TPRO\_TIMEOUT\_ERR - routine has timed-out  
                TPRO\_COMM\_ERR - error communicating with driver  
                TPRO\_SUCCESS - success

## **TPRO\_waitMatch**

```
unsigned char TPRO_waitMatch(TPRO_BoardObj *hnd, unsigned int *ticks);
```

This routine will reports the condition of the match start time. The routine will block for a given number of ticks (in milliseconds) until a match start time occurs or the timeout period has been reached.

Arguments:    Pointer to the TPRO\_BoardObj  
              Pointer to wait time

Returns:      TPRO\_TIMEOUT\_ERR - routine has timed-out  
                TPRO\_COMM\_ERR - error communicating with driver  
                TPRO\_SUCCESS - success
