## Chapter 8

## DOWNLOAD CHARACTERS

With this printer you can create new characters and symbols, download their dot data, and have them printed in place of selected characters in the regular character set. Characters that can be generated in this way range from simple but useful symbols like the check mark through to complex Chinese or Japanese characters.

Regular characters are permanently stored in the printer's ROM, but characters you design are downloaded and stored in RAM for use.

## DESIGNING YOUR OWN DRAFT CHARACTERS

Designing and printing your own characters has two requirements: first, designing the shape of the character, calculating the data necessary to make the shape, and sending that data to the printer, and secondly, sending the command to print the downloaded characters instead of the regular characters. There are a number of design constraints for download draft quality charactens:

- The matrix or grid on which you design the characters is six boxes wide by nine boxes high.
- Horizontally, dots may be centered in a box, or may straddle a line, making the actual character grid 11 dots wide by 9 dots high. Vertically, dots can only be centered in a box. See Figure 8-1.

Figure e-1. Dots can be inside boxes or straddle the vertical lines of the grid.

- The minimum width of a character is five dots.
- The user-defined characters may use eight dots vertically.
- Dots cannot overlap - that is, you may not have a dot inside a box next to one that is on a line.
- You may define any position in the ASCII table.

Photocopy the grid in Figure 8-2 to help design your new characters. We will use a tiny representation of a car-shaped symbol for our example.

Figure 8-2. Use this grid (or one similar to it) to define your own draft characters.

## Defining the attribute data

Before you start the definition, you will need to decide exactly where in the regular ASCII set you want to place your characters. After downloading, you access yournew characterby sending the code for the character you replaced.

Next you must choose whether to make the car symbol an ascender or a descender. This determines how the character is seated on the line:
Ascender: Def Descender: Wef

We decided that our car symbol will be a "descender", so a figure " 1 " is written next to Descender on the grid. If your character is not a descender, write a " 0 " next to Descender.

Next, you must specify the left space and the last print column of the character.
Being able to specify the width of the character allows you to specify the precise area inside the grid that the character will occupy, so that narrow characters will look attractive next to wide ones.
Acceptable values for the left space are 0 to 7 , and the last print column are from 4 to 11.
Our character will occupy from column 1 to column 11, so the left space is 0 and the character width data is 11 .

## Assigning the character data

Now, we calculate the vertical numerical values of the columns of dots, and enter them underneath the grid. For example, looking at Figure 8-3, we see that in the left-most column there are five dots, and they are sitting in the " 64 " box, " 32 " box, " 16 " box, " 8 " box, and " 4 " box. Thus its vertical value is 124 . In the next column, there is no dot straddling the vertical line; its value is recorded as 0 .

Figure 8-3. Add the values of the dots in each column and write the sum of each column at the bottom. You will see the letters $m 1, m 2, m 3$, etc., are above your values. When you define the character, you will substitute your value for each of these letters.

## Sample program

To demonstrate how to use the download characters, let's use the "car" character and some other user-defined characters to print a small graph. This program will do just that with the Standard mode:

```
1000 WIDTH "LPT1:'".255
1010 LPRINT CHRक(27):"\times0';
1020 LPRINT CHR$(27);"&";CHRक(0);
1030 LPRINT CHR$(60);CHR$(62):
1040 FOR N=60 TO 62
1050 FOR M=O TO 11
1060 READ MM
1070 LPRINT CHR$(MM):
1080 NEXT M
1090 NEXT N
1100 LPRINT
1110 DATA 139, 2, 5, 8,241, 0
1120 DATA 0.241, 8, 5, 2, 0
1130 DATA 139.124. 0. 66. 4.64
1140 DATA 36, 16, 2, 16, 12, 0
1150 DATA 139, 46, 16, 2, 60, 0
1160 DATA 48, 0,48, 0,48, 0
1170
1180 LPRINT CHR$(27);'D';CHR$(11):CHR$(0):
1190 LPRINT CHR$(27):'h";CHR$(1);
1200 LPRINT " U.S. EXPORTS"
1210 LPRINT CHRक(27):"h":CHR$(0):
1220 LPRINT CHR$(27):'%'';CHR串(1);
1230 LPRINT ''AUTOS';CHR$(9):
1240 FOR I=.4 TO 9.3 STEP . 4
1250 LPRINT CHR$(61);

## DEFINING YOUR OWN NLQ CHARACTERS

As you probably noticed, NLQ characters are printed by two passes of the print head. Half of the character is printed on the first pass, and the remainder on the second pass. The paper is rolled up half a dot height in between passes to let the print head print dots on the second pass that overlap the previous dots, in order to fill in the spaces and produce denser characters. Additionally, the print head speed is halved, and the dots are printed at double the density of draft characters. For this reason, NLQ characters can contain up to 23 dots in the horizontal direction.

Fundamentally, the process to define and print downloaded NLQ character is the same as for draft characters, except that you must assign the character data according to the emulation mode, you are using.

## Assigning the character data with the Standard mode

There are differences in the way the attribute information is processed.
In the draft quality mode the attribute byte carries the descender data, and

Flgure 8-4. Use this grid (or one similar to it) to define your own NLQ characters with the Standard mode.
specifies the left space and the character width. In the NLQ mode, there are three attribute bytes, the first byte describes the character's left space, the second byte describes the character width. And the third byte describes the right space. Appropriate allocation of data in these three bytes lets you place the character where you like within the grid.
Use the grid in Figure 8-4 to help plot the data. The vertical definition of the character is 18 dots. Each byte therefore represents a third of the vertical definition. That's where the numbers down the left side of the grid come in. Notice that there is a number for each row of dots and that each number is twice the number below it. By making these numbers of two we can take any combination of dots in a vertical column and assign them a unique value.
If we plot our car-shaped symbol for NLQ, the grid data will look like Figure 8-5.
The defining process is the same as for draft characters, except that you must selectNLQ mode, and you must define 69 data. If you wish to print your NLQ characters with the regular character set, the remarks regarding the simultaneous use of regular and download characters in the draft character section apply equally to NLQ characters.

Figure 2-5. Add the values of the dots into three bytes.

The following program demonstrates how to use the NLQ download characters with the Standard mode:

```
1000 WIDTH "LPTI:".255
1010 LPRINT CHRक(27):"×1"
1020 LPRINT CHR$(27);"&";CHR$(0);
1030 LPRINT CHR$(60):CHR$(62);
1040 FOR N=60 TO 62
1050 LPRINT CHR$(O);CHR$(23):CHR$(O);
1060 FOR M=1 TO 69
1070 READ MM
1080 LPRINT CHR车(MM):
1090 NEXT M
1100 NEXT N
1110 LPRINT
1120
1130 LPRINT CHR$(27);"D';CHR$(11);CHR$(0);
1140 LPRINT CHR$(27):"h":CHR$(1):
1150 LPRINT " U.S. EXPORTS"
1160 LPRINT CHR$(27):"h";CHR$(0):
1170 LPRINT CHR$(27);'%'";CHR$(1);
1180 LPRINT "AUTOS";CHR$(9):
1190 FOR I=.4 TO 9.3 STEP . }
1200 LPRINT CHR$(61);
1210 NEXT I
1220 LPRINT
1230 LPRINT "CHEMICALS";CHR$(9);
1240 FOR I=.4 TO 8.7 STEP . }
1250 LPRINT CHR$(60):
1260 NEXT I
1270 LPRINT
1280 LPRINT ''GUNS';CHR$(9);
1290 FOR I=.4 TO 1.4 STEP . }
1300 LPRINT CHR$(62):
1310 NEXT I
1320 LPRINT
1330 LPRINT CHR$(9);"+--";
1340 SCALE$=''--+--'"
1350 FOR I=2 TO 8 STEP 2
1360 LPRINT SCALE$:
1370 NEXT I
1380 LPRINT "--+"
1390 LPRINT CHR$(9):" '';
1400 FOR I=2 TO 8 STEP 2
1410 LPRINT "' '';I;
1420 NEXT I
1430 LPRINT CHR$(27);'%';'CHR$(O)
```

## Assigning the character data with the IBM mode

Fundamentally, the process to define and print downloaded NLQ character with the IBM mode is the same as for draft characters, except that you must supply about four times as much character data, and you must design the character with the two passes of the print head in mind.
Use the grid in Figure 8-6 to help plot the data with the IBM mode. Due to the two-pass process, NLQ characters can contain up to 16 dots vertically.

Figure 8-6. Use this grid (or one similar to it) to define your own NLQ characters with the IBM mode.
To make the character data easier to calculate, put the first pass dots with black circle on the grid when you are designing your characters, and the second pass dots with white circle. Remember that adjacent dots may not overlap on the same pass; in other words, if one dot is in a box, its adjacent dot on the same pass may not be on next box. Therefore, to make smooth characters, put the dots needed to overlap any spaces in a character in the appropriate places in the second pass grid.

If we plot our car-shaped symbol for NLQ, the grid data will look like Figure 8-7.

The defining process is the same as for draft characters, except that you must select NLQ mode, and you must define 46 data. If you wish to print your NLQ

| $\begin{array}{ll} \text { First } & m / \ldots \\ \text { pass } & m ? . . . \end{array}$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \ldots m 45 \\ & \ldots m 40 \end{aligned}$ |  |  | Second pass |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 128 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 128 | ASCII Code Descender | 61 |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## MEMO

## Chapter 9 MS-DOS AND YOUR PRINTER

When using your printer with an IBM PS/2, PC-AT or compatible, you will probably be using PC-DOS or MS-DOS as an operating system. A number of software tricks may be useful here. This chapter is not, however, a substitute for the operating system manuals supplied with your computer.

To learn how to print files, etc. it is best to read the relevant parts of these manuals.

## INSTALLING APPLICATION SOFTWARE WITH YOUR PRINTER

When installing application software, you may find that your printer is not specifically mentioned in the lists of printers given for installation. However, this should pose no problem. Read this section, and guidelines provided with your software on printer installation.

Choose one of the following (in order of preference) according to your selected Emulation mode.

| $\#$ | Standard mode | IBM mode |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Star XR-1020/1520 | * Proprinter III |  |  |
| 2 | Star XR-1000/1500 | * Proprinter II |  |  |
| 3 | Star NX-1020 Color | * Proprinter |  |  |
| 4 | Epson EX-800/1000 |  |  |  |
| 5 | * Epson FX-850/1050 |  |  |  |
| 6 | Star NX-1000 Color |  |  |  |

NOTE: * does not support color printing.
If your software package does not mention printers by name, but asks instead what features your printer is capable of, the most common questions are: "Can your printer perform a backspace?" and "Can it do a hardware form feed?". You should answer "Yes" to both these questions.

Other software packages may allow you to install specific features. Spreadsheet programs will often ask for the maximum number of columns to be printed. This is given below.

|  | CPI | Number of columns <br> Normal type |  |
| :--- | :--- | :---: | :---: |
| Wide type |  |  |  |

Sometimes the software installation will ask you for aninitialization sequence to return to the default settings. The command for your printer is $<\mathrm{ESC}>$ @ .

Make sure that the Memory Switches are set for the correct printeremulation, and that you have selected the appropriate character set using the Memory Switch settings.

If you are in doubt about the configuration of your application software, seek expert advice. Your software supplier will probably be your most qualified reference.

## EMBEDDING PRINTER COMMANDS

Many word-processors and other software lack commands for changing font, printing double-size characters, or printing in color. Your printer therefore has commands that can be embedded in documents to control these functions without software help. The commands consist of a capital letter enclosed in double parentheses, followed by a digit:

Font:

| $((\mathrm{F})) 0$ | Tms Romn |
| :--- | :--- |
| ((F))1 | Sanserif |
| ((F))2 | Courier |
| ((F))3 | Prestige |
| ((F))4 | Script |
| ((F))7 | Orator |
| ((F))9 | Draft |

Size:
((S))0
((S)) 1
((S)) 2
Double height
((S)) 3
Double width and height

Color: |  | $((\mathrm{C})) 0$ | Black |
| :--- | :--- | :--- |
|  | $((\mathrm{C})) 1$ | Red |
|  | $((\mathrm{C}) 2$ | Blue |
|  | $((\mathrm{C}) \mathbf{3}$ | Violet |
|  | $((\mathrm{C}) 4$ | Yellow |
|  | $((\mathrm{C}) 5$ | Orange |
|  | $((\mathrm{C}) 6$ | Green |

If you want to print a title in double-size Script, then change to regular-size fonts for other text, you can use these commands as follows:
File as seen on computer screen:

```
((F))4 ((S))3
Printer commands
    ((F))O ((S))0
Font commands ((F))1can be ((F)) 2embedded
    ((F)) 3anywhere ((F))9in a document.
```

Printout:

## Printer commands

Font commands can be embedded anywhere in a dowment.

When you use these commands there are several points to note:

- The font ((F)) command is ignored if the FONT LOCK mode was selected when power was switched on.
- The color ((C)) command is valid only when the color ribbon is installed.
- A line consisting of commands alone prints as a blank line.
- The software will not know that these are commands, so you cannot trust your software to give you the correct line width. The printed line may be considerably shorter than the line on the screen; the extra space being the space that was occupied by the commands.

One way to handle the last problem is to prepare your document without the commands, then insert them as a final step, with the margins released. The find, replace, and copy functions of word-processing software can be helpful here.

If you do not use these commands or the panel controls, the printer will print standard-size, draft characters.

The printer supports various commands in addition to the above, such as quadruple-size printing.
Most of these other commands consist of the escape code followed by one or more letters or numbers.

If your software enables you to place the escape code in your files, or if you are able to define this as a user option during installation, you can also embed these escape sequences.

## PROGRAMMING THE PRINTER WITH DOS COMMANDS

If your system includes the file PRINT.COM you can use the main DOS printing command. Simply type the word PRINT followed by the name of the file you want to print. To print a file named README.DOC, for example, type:
A>PRINT README.DOC

The computer may respond with the following message, asking which printer to use:
Name of list device [PRN]:

If your computer is connected to only one printer, press RETURN to select the default choice (PRN).
Printing will begin and the A> prompt will reappear. You can execute other commands or programs while the file is being printed.
A single PRINT command can print two or more files. List the file names consecutively on the same line, or use wild-card characters (* and ?). Each file will be printed starting on a new page. The PRINT command also has control options. For example, you can terminate a printing job in progress with the /T option. (The printer may not stop printing immediately as there may be considerable data stored ahead in its buffer.) For the / $T$ option, type:
A>PRINT/T

See your DOS manual for further information about the PRINT command. If your system does not includePRINT.COM, you can print files by using the PRN device name in COPY or TYPE commands such as the following:

$$
\begin{aligned}
& \text { A }>\text { COPY README.DOC PRN } \\
& \text { A TYPE README.DOC >PRN }
\end{aligned}
$$

COPY and TYPE do not permit you to execute other commands while the file is printing.

If you want a particular font, or print pitch, you can make these settings from the control panel before you start printing. See Chapter 5.

If you print from the DOS command level very often, it will be advantageous to create a printer setup file. Then instead of setting font etc. manually each time, you can complete the setup with a single command from your computer. For example, you can create a file containing printer command to select near letter quality, and select elite pitch with the Standard mode. You can find the commands in Chapter 7. We suggest the following:

- Near letter quality
- Elite pitch
<ESC> "x" "1"
<ESC> "!" <1> is a powerful command that, in addition to selecting elite pitch, cancels unwanted features such as underlining which might be left from previous commands. The angle brackets around the $<1>$ indicate character code 1 , which is a control code, not the printable digit " 1 ".

You may want to place additional commands in this file, such as left and right margins, line spacing and bottom margin commands. Or you may want to create a variety of setup files with a different set of commands in each.

To avoid excess line feeds, you should place the commands on one line in the setup file. You may or may not be able to generate a setup file with wordprocessing software; it depends on whether your software lets you enter control codes. If your system includes the file EDLIN.COM, however, you can easily create a setup file with the DOS line editor.

An appropriate name for this setup file would be NLQELITE.DAT. To use the DOS line editor, type the command EDLIN NLQEJ JTE.DAT, then type the underlined parts of the following display. Press RETURN at the end of each line. Do not type the symbol " $\wedge$ ". This symbol means to hold the CTRL key down while pressing the next key: for example, $\wedge$ V means to type CTRLV. ${ }^{\wedge} \mathrm{C}$ means to type CTRL-C, which indicates the end of the input.

```
A>EDLIN NLQELITE.DAT
New file
*1
    1:*^\cup[X1^U[!^\cupA
    2:**C
*E
```

${ }^{\wedge} \mathrm{V}$ indicates that the following character is a control code. ${ }^{\wedge} \mathrm{V}[$ enters the <ESC> code. <ESC> has character code 27, and "[" is the 27th character from A in the ASCII sequence. Similarly, ${ }^{\wedge}$ VA enters the control code $\left.<1\right\rangle$. See your DOS manual if you need further information about EDLIN.

You can now set up the printer by sending it the file NLQELITE.DAT. To avoid unnecessary logging of commands, switch hard-copy output off (by pressing CTRL-PRTSC if hard copy is on). To print the file README.DOC in NLQ elite type, give the following two commands:

$$
\begin{aligned}
& \text { A>COPY NLQELITE.DAT PRN } \\
& \text { A }>P R I N T \text { README.DOC }
\end{aligned}
$$

For greater convenience you can make a batch file that will set up the printer and print any specified file with a single command. To create such a batch file with the name NLQPRINT.BAT, type in the first four lines shown next. ${ }^{\wedge} \mathrm{Z}$ means to press the CTRL and Z keys simultaneously. To use this file to print README.DOC, type the fifth line.

```
A>COPY CON NLQPRINT.BAT
COPY NLQELITE.DAT PRN
PRINT %1
^Z
A>NLQPRINT README.DOC
```

The first line above is a copy command from the CONsole screen to a file named NLQPRINT.BAT. The next two lines are the contents of this file. The \%1 is a dummy parameter: whatever file name you type after NLQPRINT will be substituted for $\% 1$ and printed.

## PROGRAMMING WITH BASIC

## As an example of programming the printer on Microsoft BASIC, we have listed the program for the IBM-PC. This program runs in the printer's Standard mode, and the downloadable condition.

```
1600 LPRINT E$:"4";'Italica":E$:"5":".

## How the program works

This program begins by assigning a number of printer commands to BASIC string variables (lines 1000 to 1070). You can find most of these commands near the beginning of chapter 7 .

The WIDTH "LPT1:" 255 statement in line 1090 means infinite line width. It prevents the IBM-PC from inserting unwanted carriage returns and line feeds in graphics data.

Actual printing begins in line 1100 . Using the preassigned commands, the program prints samples of its different fonts, followed by samples of the print pitches, then some double and quadruple-sized printing.

Next comes the central attraction of the program: a line of text printed fourteen times in expanding and contracting loops to give a barrel effect. The work is done by four printer commands: a command setting the right margin (line 1390); a centering command (line 1410); a command to vary the line spacing (lines 1430 and 1480); and a command to micro-adjust the space between characters (lines 1440 and 1490).

Next the program returns to normal spacing and gives a demonstration of the printer's word-processing abilities: italic printing, bold printing, underlining, subscripts, etc.

The row of carsymbols in the next printed line is created by downloading two new character patterns, which are printed in place of the character "<" (character 60). Details can be found in Chapter 8.
The final part of the program uses dot graphics to print some "SW" logos with various densities.

The dot pattern of the logo was originally laid out on graph paper, then converted to the data in lines 2420 to 2690 with the help of a calculator. Each number represents eight vertical dots. (See "Graphics commands" in Chapter 7 for details.)

The pattern is printed in four rows, each eight dots high and 65 dots wide. Lines 1790 to 1860 read the dot data into a string array variable named LOGO\$. Line 1870 sets the line spacing to $8 / 72$ inch so that the rows will connect vertically. The loop in lines 1880 to 1960 and lines 1980 to 2060 do the printing in four passes of the print head.

Resident fonts are:
matt maraweray Sanserif characters. Prestige characters, orator characters,

Tms Romn characters, Courier characters. Script characters, Helvet characters,

Print pitches are:
Pica pitch (10 CPI). Condensed pica pitch (17 (PI), Proportional spacing,
Double-height,
Doublewidth.
Double-sized,
Quad-sized
Various line and character spacings:

Other features:
Emphasized, Double-strike, Italics,
Underlining, surerscrift and surscript, Download characters: mbinmanama

Various dot graphics densities:

## MEMO

## Chapter 10

## TROUBLESHOOTING AND MAINTENANCE

The following section on troubleshooting and maintenance is intended only as a brief guide.
Remember that your printer is a highly sophisticated electronic device, which also contains high voltage inside. For that reason, only carry out those operations described in this chapter.
CAUTION: Any attempt to carry out operations other than those described here may result in electric shock and/or damage to the printer. When carrying out any repairs or maintenance, always follow the instructions carefully.

## TROUBLESHOOTING

Your printer is a reliable piece of precision machinery, which should not cause you any trouble, provided it is used and treated sensibly. However, if you doexperience a minor problem, the few tips below help you avoid having to make an unnecessary service call. The following table gives you ideas on where to look in this section if you experience faults:

| Region of fault | Description |
| :---: | :---: |
| Power supply | Power is not being supplied to the printer |
| Printing | The printer does not print, or stops printing |
|  | The print is faint or uneven |
|  | Dots are missing in characters or graphics |
|  | While using application software, fonts or characters cannot be printed |
|  | The printout is not what is expected when running a program |
| Paper feeding | Single sheets do not feed properly (without ASF) |
|  | Continuous paper does not feed properly with the tractor feed |
|  | The ASF is not operating or is not feeding paper properly |
|  | Paper park (switching between continuous paper and cut sheets) is not working properly |
|  | Text is being printed all on one line, or with extra blank lines |
|  | Page length and margin settings are not what is expected |

Remember-it is better not to attempt operations or repairs above your level of competence.
Otherwise, you run the risk of damaging the printer.

## Power supply

If the POWER indicator does not illuminate, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the power cable properly <br> plugged into the electrical <br> outlet? | Turn off the printer, ensure the power cable is securcly <br> connected, and then turn the printer back on. |
| Is power being supplied to <br> the outlet? | Turn off the printer, unplug it. Try the outlet with <br> another appliance to determine if electricity is being <br> supplied from that outet. |
| Is the printer voltage correct? | Check the bottom panel of your printer to ensure that the <br> outlet voltage corresponds to the voltage required by the <br> printer. If they do not match, DONOT try to operate the <br> printer. Contact your supplier. |

## Printing

If your printer does not print, or suddenly stops printing, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the interface cable con- <br> nected securely? | Check both ends of the cable - printer and computer to <br> make sure that the connector is firmly in position. |
| Is the ON LINE indicator illu- <br> minated? | If it is not press the ONLINE <br> on-line. |
| Is the PAPton to set the printer <br> minating? | indicator illu- |
| Is the printer beeping inter- <br> mittenlly? | The release lever is moved while the paper is in printing <br> position. Move the release lever to the original position. |
| Is the paper caught up inter- <br> nally? | Tum off the power, remove the jammed paper, replace, <br> tumon the printer, and continue printing. Make sure that <br> the loading edge of the paper is smooth and uncreased. |
| Is theribboncaughtup around <br> the print head? | Tum off the power, remove the ribbon, retension it, and <br> replace it. This problem occurs most frequently with a <br> worn ribbon, so you may need to replace the ribbon. |
| Is the software you are using <br> properly installed for your <br> printer? | Check the installation settings in your software, and <br> reinstall if necessary. |
| Can the printer perform self- <br> test operations? | Turn the printer off, and turrn it on again, holding down <br> one of the butons to perform a self-test. If these do not <br> work, contact your dealer. |

## If the print is faint, or uneven, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the ribbon properly in- <br> stalled? | Check and reinstall if necessary. |
| Is the ribbon wom out? | The ribbon has a long life, but will eventually need <br> replacing. Fit a new ribbon cartridge if necessary. |

If dots are missing in the printing, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Are dots missing at random <br> in the printing? | The tibbon has become slack, causing it to get caught <br> up. Stopprinting, remove the ribbon cartridge, retension <br> and replace it. |
| Is a line of dots missing con- <br> sistently throughout the <br> printing? | The print head may be damaged. Stop printing, and <br> contact your supplier. |

If your application software cannot print the fonts or characters selected, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is your application software <br> properly installed? | Check the software installation, and re-install the <br> software if necessary. |
| Are fonts not being selected <br> properly? | Check the software installation, and insert the com- <br> mands necessary for font changes into the software. |
| Are characters other than <br> those expected being prinled? | Either you are using the wrong International Character <br> Set (reset with Memury Switch or software com- <br> mands), or you have the wrong character set selected <br> (for example if characters other than IBM block graphic <br> characters are being printed). Correct this with Memory <br> Switch or the appropriate software sequences. |

If the printout is not what is expected:

| Check | Possible remedy |
| :--- | :--- |
| Is the printer installed cor- <br> rectly? | Your software may think that it is driving a different <br> emulation to the one actually set. Check the Mernory <br> Switch settings to make sure you have the right emula- <br> tion. |
| Is the printer not printing <br> anything that you are ex- <br> pecting? | Use the Hex Dump mode to analyze the output from the <br> computer to the printer. This will enable you determine <br> that the right escape sequence, etc are being transmitted. |

## Paper feeding

If cut sheet paper (without ASF) is not feeding smoothly, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the paper release lever <br> pushed front (to the L posi- <br> tion)? | Set the release lever to the It position. |
| Is the paper guide in place <br> and vertical? | The paper guide should be in place and vertically for cut <br> sheets to feed smoothly. |
| Are the left and right guides <br> too close together? | If the left and right guides are too close together, the <br> paper will not feed smoothly. Move them a little further <br> apart to allow the paper feed freely. |
| Is the ASF selected with the <br> Memory Switch setting? | If it is, then deselect it. |
| Are you trying to feed paper <br> using the front panel buttons <br> while the ON LINE indicator <br> illuminated? | You can only feed paper in this way the printer is off- <br> line. Set the printer off-line and then feed paper. |
| Is the paper too thick? | There are limits to the thickness of paper that can be fed <br> in this way. Try with thinner paper. |
| Are froms jamming between <br> printing surface and the <br> platen? | Clean the surface of the platen roller with a cloth barely <br> dampended with a little alcohol. |

If fanfold (continuous) paper is not being fed correctly using the tractor feed, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the paper release lever <br> pushed to the <br> Is the paper guide in the ver- <br> tical position? | Make sure the release lever is pushed to the lit position. <br> horizontal. |
| Are the holes on each side of <br> the paper aligned with regard <br> to each other in the tractor <br> units? | If the two sides of the paper are out of alignment, realign <br> them so that the tractor holes match up. |
| Are the tractor units too close <br> or too far apart? | Misalignment of the tractor units, making the paper too <br> close or too tight, will prevent a smooth paper feed. |
| Are the tractor units locked <br> in position and the covers <br> closed? | Correct this if necessary. |

| Check | Possible remedy |
| :--- | :--- |
| Is the paper feeding freely <br> into the printer? | The paper should not be too far from the printer (less <br> than 1 meter/3 feet), and there should be no cables or <br> other obstacles obstructing its path. The paper should <br> also be feeding straight into the printer, and an angled <br> feed may cause jams and blockages. |
| Is the paper caught up around <br> the perforation? | It is recommended to skip around the perforation. If you <br> cannot, set on the CR-CENTERING with Memory <br> switch. |
| Are you trying to feed paper <br> using the front panel buttons <br> while the ON LINE indicator <br> illuminated? | You can only feed paper in this way the printer is off- <br> line. Set the printer off-line and then feed paper. |
| Is the paper too thick? | There are limits to the thickness of paper that can be fed <br> in this way. Try with thinner paper. |

If the ASF is not operating or is not feeding paper correctly, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Has the correct ASF option <br> been selected with the <br> Memory Switch? | Select correct option. |
| Is the release lever set to the <br> position? | The release lever should be set to the single-sheet <br> position. |
| Is the ASF correctly <br> mounted? | Make sure that the ASF is properly seated on the printer. <br> Is paper caught up near the <br> print head? <br> Are the left and right guides <br> too close together? <br> Stop printing, remove the jammed sheet (you may have <br> to remove the ASF for this), and continue. <br> Is there too much paper in the <br> paper feed hopperor stacker? <br> paper will not feed smoothly. Move them a little further <br> apart to allow the paper to feed freely. <br> Whe ASF's paper feed hopper and stacker can hold <br> being fed into the ASF? <br> between 100 to 150 sheets each. Make sure that there is <br> no more paper than this in either the hopper or stacker. <br> Has the paper been used al- <br> ready or is it creased? <br> If this is not done, paper jams may occur. Remove the <br> stack of paper from the ASF and fan it before <br> reinserting. <br> using the front panel buttons <br> while the ON LINE indicator <br> illuminated? |
| Only new, uncreased paper should be used with the <br> ASF. |  |
| Is the paper too thick or too <br> thin? | You can only feed paper in this way the printer is off- <br> lne the pre limits to the thickness of paper that can be fed <br> in thy with different paper. |

If the paper park facility does not appear to be working correctly, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the paper release lever in <br> the position? | The paper release lever must be set to the <br> after the fanfold paper has been parked. |
| Has the fanfold paper been <br> properly parked? | Make sure that the PAPER indicator comes on after the <br> fanfold paper has been parked. |

If text is being printed all on one line, or with extra blank lines, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the text all on the same <br> line? | Carriage returns are not being expanded to <CR> + <br> LLF> pairs. Check the Memory Switch setting and <br> correct. |
| Is text being printed with ex- <br> tra blank lines? | Two line feeds are being printed. Either make sure your <br> software print just a carriage return or (if this is not <br> possible), set the AUTO LF to OFF with the Memory |
| Switch setting. |  |

If the page length and margins are not what is expected, check the following:

| Check | Possible remedy |
| :--- | :--- |
| Is the printing starting too <br> high or too low on the page? | Use the Micro Feed facility to adjust the print position <br> relative to the page. |
| Does the printer'spage length <br> not match the physical page <br> length? | Use the Memory Switches to set up the correct page <br> length, or use software commands to do it. |

## MAINTENANCE

Essentially, your printer is a robust piece of equipment, but should be treated with a modicum of care in order to avoid malfunctions. For example:

- Keep your printer in a "comfortable" environment. Roughly speaking, if you are comfortable, then the environment is suitable for your printer (see Chapter 2).
- Do not subject the printer to physical shocks or excessive vibration.
- Avoid over-dusty environments. Dust is the enemy of all precision mechanical devices.
- To clean the exterior of the printer, use a cloth barely dampened with either water with a little detergent or a little alcohol, but do not allow any liquid to fall inside the printer.
- The interior of the printer may be cleaned with a small vacuum cleaner or a compressed-air aerosol (sold for this purpose). When performing this operation, be sure not to bend or damage any cable connections or electronic components.

## REPLACING THE PRINT HEAD

This is not a job which you will need to do very often. The print head has been designed to last for about 100 million draft characters. In normal everyday use, this will translate to years of life. However, if the print quality is faint, even after you have changed the ribbon or you have adjusted the gap between the print head and the platen (see Chapter 4), the print head may need replacement.

Only use a replacement print head as recommended by your supplier.

1. Tum OFF the printer, and unplug the power cord.
2. Open the front cover, and remove the ribbon cartridge.
3. If the printer has been in operation immediately before this operation, the print head will be hot. Allow time for the print head to cool before attempting to work on it.
4. Unscrew the two screws that hold the print head in place and set them aside.
5. Disengage the connector, then remove the print head.
6. Place the new print head on its support, seating it on the two pins.
7. Fasten the print head down with the two screws.
8. Replace the ribbon cartridge and close the front cover, then plug the power cord back in.

Figure 10-1. Replacing the print head.

## PINOUT OF INTERFACE CONNECTOR

The following describes the pinout of the interface connector (signals which are low when active are overlined).

## Parallel interface

| Pin | Name | Function |
| :---: | :---: | :--- |
| 1 | $\overline{\text { STROBE }}$ | Goes from high to low (for $\geq 0.5 \mu \mathrm{~s}$ ) when active |
| 2 | DATA0 | High when active |
| 3 | DATA1 | High when active |
| 4 | DATA2 | High when active |
| 5 | DATA3 | High when active |
| 6 | DATA4 | High when active |
| 7 | DATA5 | High when active |
| 8 | DATA6 | High when active |
| 9 | DATA7 | High when active |
| 10 | $\overline{\text { ACK }}$ | 5 $\mu$ low pulse acknowledges receipt of data |
| 11 | BUSY | Low when printer ready to receive data |
| 12 | PAPER | High when paper out. Can be disabled with Memory <br> Switch setting |
| 13 | SELECT | High when printer is on-line |
| 14,15 | N/C |  |
| 16 | SIGNAL GND | Signal ground |
| 17 | CHASSIS | Chassis ground (isolated from signal ground) |
| 18 | +5 V | +5V DC output from printer |
| $19 \sim 30$ | GND | Twisted pair ground return |
| 31 | $\overline{\text { RESET }}$ | When this input signal is low, printer is reset |
| 32 | $\overline{\text { ERROR }}$ | Outputs low when printer cannot continue, due to an <br> error |
| 33 | EXT GND | External ground |
| 34,35 | N/C |  |
| 36 | $\overline{\text { SELECT IN }}$ | Always high |

## Serial Interface

| Pin | Name | Function |
| :---: | :---: | :--- |
| 1 | GND | Printer's chassis ground. |
| 2 | TXD | This pin carries data from the printer. |
| 3 | RXD | This pin carries data to the printer. |
| 4 | RTS | This pin is always set space. |
| 5 | CTS | This pin is Space when the computer is ready to send <br> data. <br> This printer does not check this pin. |
| 6 | N/C |  |
| 7 | GND | Signal ground. |
| $8 \sim 10$ | N/C |  |
| 11 | RCH | This printer turn this pin Space when it is ready to <br> receive data. <br> This line carries the same signal as pin 20. |
| 12 | N/C |  |
| 13 | GND | Signal ground. |
| $14 \sim 19$ | N/C |  |
| 20 | DTR | This printer turns this pin Sapee when it is ready to <br> receive data. |
| $21 \sim 25$ | N/C |  |

## CHARACTER SETS

The following tables show the standard and IBM character sets.
The decimal character code of each character is shown in an inset to the lower right of the character.

The hexadecimal code can be found by reading the entires at the top and left edges of the table. For example, the character " $A$ " is in column 4 and row 1, so its hexadecimal character code is 41 . This is equivalent $(4 \times 16+1=65)$ to decimal 65 , the number in the inset.

Control codes recognized by this printer are indicated by abbreviations inside pointed brackets < > .

(low order)

## Standard character set \＃2

## International character sets

When an international character set is selected by a command from software, the following changes are made in the Standard Italic character set:

| Country | 35 | 36 | 64 | 88 | 90 | 91 | 92 | 93 | 94 | 96 | 123 | 124 | 125 | 126 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| U.S.A. | \# | \$ | a | X | 2 | [ | 1 | ] | ${ }^{*}$ |  | ' | ; | \} | $\sim$ |
| FRANCE | \# | \$ | a | X | 2 |  | ç | S |  |  | é | u | e |  |
| GERMANY | \# | \$ | S | X | 2 | A | 0 | U | $\cdots$ |  | ä | ö | ü | $\beta$ |
| ENGLAND | £ | \$ | @ | X | 2 | [ | 1 | ] |  |  | \ | ; | \} | $\sim$ |
| DENMARK 1 | \# | \$ | @ | X | 2 | E | 0 | A |  |  | æ | $\varnothing$ | 8 |  |
| SWEDEN | \# | a | E | X | 2 | $\stackrel{\text { A }}{ }$ | 0 | A | U | e | ä | $\ddot{\circ}$ | a | ü |
| ITALY | \# | \$ | @ | X | 2 | - | 1 | é |  | ù | a | o | è | 1 |
| SPAIN 1 | R | \$ | a | X | 2 | i | N | i |  |  |  | K | \} |  |
| JAPAN | \# | \$ | @ | X | 2 | [ | ¥ | 1 | - |  | \{ | : | \} | $\sim$ |
| NORWAY | \# | a | E | X | 2 | F | 0 | A | i | e | æ | $\varnothing$ | a | ü |
| DENMARK 2 | \# | \$ | E | X | 2 | E | 0 | $\AA$ | U | e | æ | $\varnothing$ | a | ü |
| SPAIN 2 | \# | \$ | á | X | 2 | i | N | $i$ | e |  | 1 | n | o | u |
| LAIII AMERICA | \# | \$ | á | X | 2 | i | N | ¿ | é | ü | 1 | ก | \% | ú |
| KOREA | \# | \$ | @ | X | 2 | [ | \# | ] | $\stackrel{ }{ }$ |  | \{ | ; | \} | $\sim$ |
| IRISH | \# | \$ | a | U | , | [ | 1 | 1 |  |  | A | E | 0 |  |
| LEGAL | \# | \$ | \$ | X | 2 | - | ' | " | $\pi$ |  | 0 | C | + | ${ }^{m}$ |

The command for selecting the international character set is:
<ESC> "R" n
Where $n$ means character code $n$, i.e. $\operatorname{CHR} \$(n)$ in BASIC. The values of $n$ are:

| 0 | U.S.A. | 6 | Italy | 12 | Latin America |
| :--- | :--- | ---: | :--- | :--- | :--- |
| 1 | France | 7 | Spain I | 13 | Korea |
| 2 | Germany | 8 | Japan | 14 | Irish |
| 3 | England | 9 | Norway | 64 | Legal |
| 4 | Denmark I | 10 | Denmark II |  |  |
| 5 | Sweden | 11 | Spain II |  |  |

## Character set \＃1

Other characters are identical to character set \＃2．
The duplication of control codes enables systems with a 7－bit interface to obtain control functions when the most significant bitis set to 1 by the＜ESC＞ ＂$>$＂command in the standard mode．

|  | 0 | 1 |

Underlining, 69
Uni-directional printing, 101
Unpacking, 6
Upright characters, 68

## V

Vertical position commands, 79-84
Vertical tab, 83, 84

Weight, 139

## Z

Zero style, 59, 73

## COMMAND SUMMARY

## Standard Mode

The following commands take effect with the Standard mode.

| CONTROL CODE | FUNCTION | Page |
| :---: | :---: | :---: |
| <BEL> | Bell | 100 |
| <BS> | Backspace | 86 |
| <HT> | Horizontal tab | 88 |
| <VT> | Vertical tab | 84 |
| <CR> | Carriage retum | 86 |
| <LF> | Line feed | 80 |
| <FF> | Form feed | 82 |
| <SO> | Expanded printing for one line | 75 |
| <SI> | Condensed printing | 74 |
| <DCl> | Set printer on-line | 100 |
| <DC2> | Cancel condensed printing | 74 |
| <DC3> | Set printer off-line | 100 |
| <DC4> | Cancel one-line expanded printing | 75 |
| <CAN> | Cancel last line | 99 |
| <ESC> <LIF> | Reverse line feed | 80 |
| <ESC> <FF> | Retum to top of current page | 83 |
| <ESC> <SO> | Expanded printing for one line | 75 |
| <ESC> <SI> | Condensed printing | 74 |
| <ESC> <EM> <0> | Manual feed | 101 |
| <ESC> <EM> <1> | Select ASF bin \#1 | 102 |
| <ESC> <EM> <2> | Select ASF bin \#2 | 102 |
| <ESC> <EM> <4> | Auto feed | 101 |
| <ESC> <EM> "R" | Eject paper from ASF | 102 |
| <ESC> <EM> "T" n | Set print start position on ASF | 102 |
| <ESC> <SP> $n$ | Increase character spacing | 76 |
| <ESC ${ }^{\text {ces }}$ "! $n$ | Select master print mode | 76 |
| <ESC> "\#" | Accept MSB as is | 99 |
|  | Absolute horizontal tab in inches | 89 |
| <ESC> "\%" 0 | Select ROM character set | 97 |
| <ESC ${ }^{\text {c }}$ " $0_{0}$ " 1 | Select download character set | 96 |
| <ESC> "\&" <0> n1 n2m0 m1 m2 m3 ... mll |  |  |
| <ESC> "\&" <0>n1 n2 m0 m1 m2 d1 d2 ...dx |  |  |
|  | Define NLQ download characters | 94 |
| <ESC> "*" no n1 n2m1 m2 ... | Select graphics mode | 91 |
| <ESC> "-" 0 | Stop underlining | 69 |
| <ESC "-" 1 | Stat underlining | 69 |
| <ESC $>$ "" n0 | Select vertical tab channel | 84 |
| <ESC> "0" | Set line spacing to $1 / 8$ inch | 79 |
| <ESC> "1" | Set line spacing to $7 / 72$ inch | 79 |
| <ESC> "2" | Sa line spacing to $1 / 6$ inch | 79 |
| <ESC> " 3 "n | Seat line spacing to $n / 216$ inch | 79 |
| <ESC> "4" | Select italic characters | 67 |
| <ESC ${ }^{\text {c } 5 \text { " }}$ | Select upright characters | 68 |
| <ESC> " 6 " | Select character set \#2 | 71 |
| <ESC> "T" | Select character set \#1 | 71 |
| <ESC> "8" | Disable paper-out detector | 83 |
| <ESC> "9" | Enable paper-out detector | 83 |
