

50MS/s PXIBus Arbitrary Waveform Generator

MODEL TE5200

- Single-channel 50 MS/s waveform generator
- Multiple instrument synchronization
- 14 Bit vertical resolution
- 2 Meg waveform memory
- 1 ppm clock accuracy and stability
- Extensive modulation capabilities AM, FM, Arbitrary FM, FSK, Ramped FSK and Sweep
- 10 digits sample clock frequency setting, limited by 1 μ S/s

- Waveform sequencing with up to 4096 segments and sequences
- Occupies a single PXI slot only
- Ultra fast waveform downloads using DMA
- Extremely low phase noise carrier
- ArbConnection software for easy waveform creation & control

Model 5200 is a Single-Channel PXI-based Arbitrary Waveform Generator. It is a high performance waveform generator that combines many powerful functions in one small package. Supplied free with the instrument is ArbConnection software, which is used for controlling the 5200 and for generating, editing and downloading waveforms from a remote computer.

PXIbus: A Cost Effective Format

The 5200 is a sensible alternative to a GPIB-based waveform generator when developing a PXI-based test system. The 5200 provides a synergistic combination of a function generator, arbitrary waveform synthesizer, programmable sequencer, pulse generator, and modulation generator in one instrument. The 5200 delivers all this at a lower cost than comparable bench-type, or VXI-based instruments. This versatility ensures that the Model 5200 will adapt to future testing needs as well as current ones.

50 MS/s Sample Rate

New technology requirements are driving communications systems to use increasingly

narrow channel width. A high sample rate of 50 MS/s makes the 5200 an ideal modulation source for troubleshooting new encoding schemes. The 5200 also provides high-speed waveforms to simulate signal distortion, power line cycle dropouts, video signals, component failures and power supply transients.

14 Bit Resolution

The 14-bit resolution provides 16,384 output levels. This means that even audio waveforms can be generated with excellent fidelity. It also allows video - and other complex waveforms - to be generated with small details superimposed on large signals, in order to test the response of receiving systems.

2Meg Waveform Memory

The 5200 provides 2Meg of waveform memory as standard, far more than competitive models. This waveform memory is accessible via a high-speed interface. Also, waveform memory is segmentable, allowing the storage of up to 4096 different waveforms of variable size. This allows test software to switch between many different waveforms rapidly and without having

to download multiple times, enhancing test throughput in a way that cannot be duplicated by other competing products.

Sequences of up to 4096 Waveforms

Powerful sequencing capability allows linkage of up to 4096 waveform segments and/or bursts (repeated segments) into strings. A segment can be repeated up to 128K times in burst mode. Sequenced functions run continuously or are initiated by a trigger. It is also possible to mix continuous and triggered segments within one sequence. These sequencing features permit the creation of complex waveform or pulse patterns using minimal amounts of memory. Sequences are created by writing a sequence table. Sequence table download is extremely fast because ArbConnection writes to registers and does not require the overhead of an embedded controller.

TABOR ELECTRONICS Ltd.

50MS/s PXIBus Arbitrary Waveform Generator

Model TE5200

Flexible Triggering Capability

Combining PXIBus trigger lines with the 5200 sync capability transforms the instrument into an Arbitrary Trigger Generator. In addition to continuous output, the instrument can also wait for a trigger to initiate a single waveform, a burst of waveforms or a sequence of waveforms. Triggers can also be used to advance a sequence of waveforms one segment at a time. The 5200 accepts the trigger signals for multiple sources: eight backplane trigger lines plus STAR trigger, front panel trigger input, and manual commands such as *TRG

Sample Clock Agility

The Model 5200 has outstanding low phase noise characteristics and carrier stability. Such characteristics are very much needed for telecommunication and channel separation applications. On the other hand, the output of the 5200 can be made extremely agile for applications needing sweep, FSK and FM. The sample clock of the instrument is derived from a DDS (Direct Digital Synthesis) circuit so controlling instantaneous frequency is a matter

of changing its input bits. You, as a user, should not really care how it is done but the end result is magnificent: functions like wide-band FM, wander, linear and logarithmic sweep are easily created and executed by the generator. A unique and extremely useful feature of ArbConnection is the FM Composer. The FM composer screen looks very much like the Wave Composer screen except the "Y" axis is given in units of frequency, so waveforms you create using the FM composer generate frequency change over time. You can create any arbitrary waveform shape or even use the equation editor to generate exotic shapes which eventually you can use to frequency modulate your main output.

Arbitrary Waveforms

The last but not least is flexibility of the 5200 as an Arbitrary Waveform Generator. Combined with the power of ArbConnection, there is no limit to what you can create and generate. Waveform coordinates can be imported from a variety of sources such as MathLab, ASCII files etc. Anything you can show on one of the

composer screens is downloaded in a split of a second and generated by the main output. Place 2 or more Model 5200's in a chassis and harness the power of multi-instrument synchronization to create multiple, phase-controlled output channels. Then vary module-to-module phase offsets to create multi-phase signal source. Really exciting!

ArbConnection

Unlimited Source of Arbitrary Waveforms. With the ArbConnection software you can control instruments functions, modes and features. You can also create virtually an unlimited variety of test waveforms. Freehand sketch allows you to draw your own custom waveform for quick analysis of analog signals. You can use the built-in equation editor to create your own exotic functions. Add or subtract components of a Fourier series to characterize digital or analog filters or, inject random noise into a signal to test immunity to auxiliary noise.

Model TE5200

Service and Support

Beyond providing precision Test & Measurement instruments, Tabor Electronics provides unparalleled service and support, and is continuously finding new ways to bring added value to its customers.

Our after-sales services are comprehensive. They include all types of repair and calibration, and a single point of contact that you can turn to whenever you need assistance. As part of our extensive support, we offer individualized, personal attention Help Desk, both online and offline, via e-mail, phone or fax.

Tabor Electronics maintains a complete repair and calibration lab as well as a standards laboratory in Israel and USA. Service is also available at regional authorized repair/calibration facilities.

Contact Tabor Electronics for the address of service facilities nearest you.

Applications

For expert technical assistance with your specific needs and objectives, contact your local sales representative or our in-house applications engineers.

Manuals, Drivers, and Software Support

Every instrument comes equipped with a dedicated manual, developer libraries, IVI drivers, and software. However, if your specific manual is lost or outdated, Tabor Electronics makes it possible to log-on to its Download Center and get the latest data "in a click".

Product Demonstrations

If your application requires that you evaluate an instrument before you purchase it, a hands-on demonstration can be arranged by contacting your local Tabor Electronics representative or the Sales Department at our Corporate Headquarters.

Three-year Warranty

Every Tabor Electronics instrument comes with a three-year warrantee. Each one has full test results, calibration certificate, and CD containing product's manual and complete software package. Our obligation under this warranty is to repair or replace any instrument or part thereof which, within three years after shipment, proves defective upon examination. To exercise this warranty, write or call your local Tabor representative, or contact Tabor Headquarters and you will be given prompt assistance and shipping instructions.

Specifications 50MS/s PXIBus Arbitrary Waveform Generator

Model TE5200

STANDARD WAVEFORMS

Waveforms: Sine, Triangle, Square, Pulse, Ramp, Sinc (Sine(x)/x), Gaussian Pulse, Exponential Fall, Rising Pulse, Noise, DC.

Frequency Range: Waveform dependent
Source: Internal synthesizer

SINE

Frequency Range: 100µHz to 25MHz
Band Flatness: 5% to 10MHz; 20%, to 25MHz

Programmable Parameters: Start phase, 0 to 360°
Harmonics and non-related spurious:

at 5Vp-p < -55dBc for carrier frequencies 1MHz
< -45dBc for carrier frequencies 5MHz
< -35dBc for carrier frequencies 10MHz
< -28dBc for carrier frequencies 25MHz

Total Harmonic Distortion: 0.05% to 100kHz

TRIANGLE

Frequency Range: 100µHz to 12.5MHz
Start phase: 0 to 360°

SQUARE

Frequency Range: 100µHz to 25MHz
Duty cycle: 1% to 99%
Rise/Fall time: <10ns
Aberration: <5% ±10mV

PULSE

Frequency Range: 100µHz to 6.25MHz
Adjustable Parameters:

Delay 0% to 99.9% of period
Rise Time 0% to 99.9% of period
High Time 0% to 99.9% of period
Fall Time 0% to 99.9% of period

Rise/Fall time: <10ns
Aberration: <5% ±10mV

RAMP

Frequency Range: 100µHz to 12.5MHz
Adjustable Parameters:

Delay 0% to 99.9% of period
Rise Time 0% to 99.9% of period
Fall Time 0% to 99.9% of period

SINC (SINE(x)/x)

Frequency Range: 100µHz to 3.125MHz
"0" Crossing: 4 to 100 cycles

GAUSSIAN PULSE

Frequency Range: 100µHz to 3.125MHz
Time Constant: 10 to 200

EXPONENTIAL FALL/RISING PULSE

Frequency Range: 100µHz to 6.25MHz
Time Constant: -20 to 20
Noise Bandwidth: 25 MHz

DC

Range: -100% to 100% of amplitude

ARBITRARY WAVEFORMS

SAMPLE CLOCK

Range: 100mS/s to 50MS/s
Vertical Resolution: 14bits
Waveform Memory: 2Meg points standard
Download Rate: 5Meg points per second

MEMORY SEGMENTATION

No. of Segments: 1 to 4096
Min Segment Size: 16 points
Memory Interleave: 4 (All trace lengths must be multiples of 4)

SEQUENCED ARBITRARY WAVEFORMS

Operation: Permits division of the memory bank into smaller segments. Segments may be linked, and repeated in user-selectable fashion to generate extremely long waveforms.

Advance Modes: Automatic Sequence Advance
No triggers required to step from one segment to the next. Sequence is repeated continuously through a pre-programmed sequence table

Stepped Sequence Advance:

Current segment is sampled continuously, external trigger advances to next programmed segment. Control input is TRIG IN connector.

Single Sequence Advance:

Current segment is sampled to the end of the segment including repeats and idles there. Next trigger advances to next segment. Control input is TRIG IN connector.

Mixed Sequence Advance:

Each step of a sequence can be programmed to advance either a) automatically (Automatic Sequence Advance), or b) with a trigger (Stepped Sequence Advance)

Advance Source:

External, Internal or software trigger

Sequencer steps: From 1 to 4096

Segment loops: From 1 to 128k

COMMON CHARACTERISTICS

MAIN OUTPUT

Connector: Front panel BNC
Stand-by: Output Off or Normal
Impedance: 50Ω, ±1%
Protection: Protected against temporary short to case ground

FREQUENCY

Resolution: 10 digits limited by 1S/s
Accuracy: 1ppm
Stability: 1ppm

REFERENCE

Standard: 0.0001% (1ppm TCXO) initial tolerance over a 19°C to 29°C temperature range; 1ppm/°C below 19°C and above 29°C; 1ppm/year aging rate
External: 10MHz TTL, 50%, ±2% duty cycle

AMPLITUDE

Range: 80mV to 8Vp-p, into 50Ω; Double into open circuit
Resolution: 4 digits

Specifications 50MS/s PXIBus Arbitrary Waveform Generator

Model TE5200

ACCURACY(1kHz)

800mV to 8Vp-p $\pm(1\% + 10mV)$
80mV to 799.9mVp-p $\pm(1\% + 1mV)$

OFFSET

Range: 0 to $\pm 3.6V$, amplitude dependent
Resolution: 2.2mV

ACCURACY

4V window: $\pm(1\%$ of reading + 1% of amplitude + 2mV)
400mV window: $\pm(1\%$ of reading + 1% of amplitude + 200V)

FILTERS

50MHz Elliptic
25MHz Elliptic

SYNC/MARKER OUTPUT

Outputs: Front panel SYNC Output BNC connector
PXI Backplane TTLTrig 0 through 7, programmable
Impedance: 50 Ω , $\pm 1\%$
Level: >2V into 50 Ω , 4V nominal into 10k Ω
Protection: Protected against temporary short to case ground
Validators: BIT, LCOM
Position: Point 0 to n, Programmable with 4-point resolution
Width Control: Programmable
Range: 4 to 10000 waveform points
Resolution: 4 points
Source: Main output

SINEWAVE OUTPUT

Connector: Front panel SMB
Impedance: 50 Ω , $\pm 1\%$
Level: 1V into 50 Ω
Protection: Protected against temporary short to case ground
Sample clock frequency

Source: Sample clock
Frequency Range and Resolution: Same as Sample clock
Flatness: -3dB at 100MHz
Total Harmonic Distortion: 0.3% to 100kHz
Harmonics and non-related spurious: -55dBc to 1MHz
-45dBc to 10MHz
-35dBc to 50MHz

INPUTS

TRIG Input

Connector: Front panel BNC
Impedance: 10k Ω , $\pm 5\%$
Threshold Level: TTL
Min Pulse Width: 20ns
Slope: Positive or negative going edge.

10 MHz REFERENCE INPUT

Connector: Front panel SMB
Impedance: 10k Ω , $\pm 5\%$
Threshold Level: TTL
Duty Cycle: 50%, $\pm 5\%$

MODULATION

FM

Waveform Modulation: Sine, Triangle, Square, Pulse, Ramp, Sinc (Sine(x)/x), Gaussian Pulse, Exponential Fall, Rising Pulse, Noise, DC, Arb
Source: Internal
Resolution: 10 digits
Accuracy: 0.1%
Modulating Frequency Distortion: <0.1%
Deviation Range: 100mS/s to 50MS/s
Trigger Advanced Mode: Automatic, Triggered, Gated or Software Command

Marker
Output & Level: Same as SYNC output.
Position: Fixed at carrier frequency

FM - BUILT-IN STANDARD WAVEFORMS

Carrier Waveforms: Sine, Square, Triangle and Ramp

Modulation Frequency Range: 1 mHz to 100 kHz

FM - DOWNLOADED ARBITRARY WAVEFORMS

Modulation Source: User waveform, any shape, 10 to 20000 waveform points
Modulation sample clock Range: 1mS/s to 2MS/s
Download Rate: 5Meg points per second

FSK

Carrier Sample

Clock Range: 100mS/s to 50MS/s
Source: External, Front panel Trigger input BNC.
Low level Carrier sample clock
High level Hop frequency

Frequency Range: From 10MHz to DC
FSK Delay: Minimum 1 waveform cycle + 50ns

RAMPED FSK

Ramp Time Range: 10s to 1s, 3 digits, $\pm 0.1\%$

Sweep

Carrier Waveforms: Sine, Square, Triangle, Ramp, Arb
Type: Linear or Logarithmic
Direction: Up or down, depending on the start and stop setting
Sweep Time: 1ms to 1000 s, 7 digits, $\pm 0.1\%$
Range: 100mS/s to 50MS/s
Trigger Advanced Mode: Automatic, Triggered, Gated or Software Command Marker Output and Same as SYNC output.
Level: Programmable for selected frequency

TRIGGERING CHARACTERISTICS

TRIGGER SOURCES

EXTERNAL

Connector: Front panel BNC
Level: TTL
Slope: Positive or negative
Frequency: DC to 5MHz
Impedance: 10k Ω , DC coupled

INTERNAL

Range: 100mHz to 2MHz
Resolution: 7 digits
Accuracy: 0.01%

Software Backplane: SCPI command
TTLTrig0 through TTLTrig7;
STAR

Specifications 50MS/s PXIBus Arbitrary Waveform Generator

Model TE5200

TRIGGER START PHASE

Description: Waveform starts from point n and completes at point n-1.
Range: 0 to 1999999 waveform points (2Meg)
Resolution: 4 points

START/STOP CONTROL (BREAKPOINT)

Range: 0 to 1999999 waveform points (2Meg)
Source: External (Rear Panel Trigger Input BNC) or software command
Resolution: 4 points
Breakpoint Error: ±4 points

SYSTEM DELAY

Trigger to waveform output: 1 Sample Clock+120ns

GATED MODE External signal enables generator. First output cycle synchronous with the active slope of the triggering signal. Last cycle of output waveform always completed

BURST

Waveforms: Sine, Triangle, Square, Pulse, Ramp, Sinc (Sine(x)/x), Gaussian Pulse, Exponential Fall, Rising Pulse, Noise, DC, Arb

Number of cycles per burst: 1 to 128k
Trigger source: Manual, External or Internal

MULTI-INSTRUMENT SYNCHRONIZATION

Description Multiple instruments can be connected together and synchronized to provide multi-channel synchronization.

SAMPLE CLOCK

Source: From Master card to slave boards through the local bus
Range and Resolution: Same as Sample Clock
Initial Skew: <20ns to the first master; 20ns cumulative to additional slaves

Phase Offset Between

Instruments: Programmable from 0 to n points

GENERAL

Power Requirements: 10Wmax
Current Consumption: +5V - 30mA
 +12V - 200mA
 -12V - 200mA
 +3.3V - 1.4A

Operating temperature: 0°C - 40°C
Humidity (non-condensing) 11°C to 30°C: 85 %
 31°C to 40°C: 75 %

Storage temperature: -40°C to + 70°C.
Dimensions: Single width, 3U high
Weight: Approx 0.5kg
Safety: Designed to meet IEC 1010-1, UL 3111-1, CSA 22.2 #1010
EMC: CE marked.
Reliability: MTBF per MIL-HDBK-217E, 25°C, Ground Benign

Workmanship Standards: Conform to IPC-A-610D

Supplied Accessories: CD containing Operating Manual, ArbConnection software and developer libraries.
Warranty: 3 years standard
