MODULAR TEST INSTRUMENTS

- 10 kHz to 2.5 GHz frequency range with a reference frequency of 50 kHz
- 4.5 mV to 5.5 V amplitude range
- Amplitude flatness from ±1.5 to ±4% of 50 kHz reference
- · Synthesized frequency accuracy
- Excellent VSWR
- 20 stored front-panel settings capability with non-volatile memory
- · Self-test on power-up
- Easy integration into GPIB systems
- Companion to CG 5011
 Programmable Calibration Generator

The SG 5050 is the only choice for anyone who needs leveled output amplitude to calibrate analog or digital scopes with bandwidth to 2.5 GHz — under either local or programmable control. That's because no other programmable leveled sine wave generator is built specifically to fill scope calibration requirements. The SG 5050's leveled output is variable from 10 kHz to 2.5 GHz with a programmable reference frequency of 10 kHz to 10MHz. Crystal-controlled frequency accuracy eliminates drift so there's no second-guessing results.

Accurately calibrated output voltage is provided from 4.5 mV to 5.5 V peak-to-peak into 50 Ω . Absolute amplitude accuracy is \pm 1.5% from 10 kHz to 50 kHz, with flatness from \pm 1.5 to \pm 4% over the remainder of the frequency range to 2.5 GHz.

A remote leveling head is standard and plugs directly into the oscilloscope to ensure that the output signal is level at all times. All other signal generators are specified at the front-panel BNC connector, not at the end of the cable going to the instrument under test.

SG 5050 Programmable Leveled Sine Wave Generator for Scope Calibration

Easy test setup — either locally or over the GPIB

The SG 5050's front panel is simple to operate, providing complete status and error information through a bright, 8-digit display. To simplify manual use and reduce bus traffic in ATE applications, you can store up to 20 front-panel settings in non-volatile memory.

Frequency and amplitude along with front-panel store/recall settings are all fully programmable. Automating test procedures makes scope calibration some four times faster than manual test methods allow — and virtually eliminates the risk of operator error.

Configure the SG 5050 with a CG 5011 Programmable Calibration Generator

As three-wide TM 5000 Series modules, they conveniently fill a six-slot TM 5006A mainframe to form a complete, cost-effective benchtop or rackmount calibration system.

Finally, count on TEGAM to offer more support of your purchase, including comprehensive manuals, applications assistance and updates.
