## Formatting Conventions

Not all object identifiers (OIDs, or commands) apply to all instruments; the following tables include columns with symbols indicating which OIDs are supported for the specified product series.

Symbol used	Description
■	Indicates that the OID is supported by the default instrument configuration
▣	Indicates that the OID is supported only if the required option is installed or only on the specified instrument or instruments
○	Indicates that the OID is not supported

This sample table shows how the symbols are used in the tables

# Management Information Base (MIB)

This section describes the object identifiers (OIDs, or commands) used to remotely control the Tektronix WFM series Waveform Monitor instruments. The following list shows the instrument models and software version that this manual supports:

The commands are in the following MIB files:

- `wfm-mon.mib`: a general-purpose MIB that is shared by all of the supported instruments (command descriptions start on page 3).
- `wvr8000.mib`: a MIB that is specific to the Waveform Rasterizer instruments (command descriptions start on page 306).

You can download the MIB files from the Tektronix Web site ([www.tektronix.com](http://www.tektronix.com)) or from the instrument, using the remote interface.

## MIB Definitions

This MIB uses:

- The SNMPv2 Structure of Management Information - SNMPv2-SMI
- The SNMPv2 Textual Conventions - SNMPv2-TC (rfc 1903)
- The SNMPv2 Conformance Statements - SNMPv2-CONF (rfc 1904)

The following imports are included:

- Module-Identity, Object-Type, Notification-type, enterprises from SNMPv2-SMI
- DisplayString from SNMPv2-TC
- Module-Compliance, Object Groups from SNMPv2-Conf

## Object Descriptions

Descriptions for Group and Table are as follows:

<code>tek</code>	OBJECT IDENTIFIER ::= { enterprises 128 }
<code>tv</code>	OBJECT IDENTIFIER ::= { tek 5 }
<code>tvproducts</code>	OBJECT IDENTIFIER ::= { tv 1 }
<code>tvtmibs</code>	OBJECT IDENTIFIER ::= { tv 2 }

The MIB module tables describe the control statements for the supported instruments. The management information base tables begin with the MIB Definitions.

	Input source names vary from instrument to instrument depending on the hardware configuration. Modular instruments, like the WFM8000 series, typically identify inputs by card and port (1A, 2B, etc.). Non-modular instruments, like the WVR-series, identify ports by name (SDI A, COMPOSITE B, etc).
