The 7834 Storage Oscilloscope has a stored writing speed of 2500 cm/ μ s, enabling storage of single-shot rise times to 1.45 ns, 3.6 cm high, at eight-divisions amplitude, reduced-scan mode. The 7834's mainframe bandwidth is 400 MHz (nonstore). The system bandwidth may vary from 160 MHz to 400 MHz depending on the plug-in selected.

This instrument has four storage modes: bistable and variable persistence, FAST bistable and FAST variable persistence.

FAST Variable Persistence provides the maximum stored writing rate of 2500 cm/ μ s (reduced scan). View time is at least 30 s.

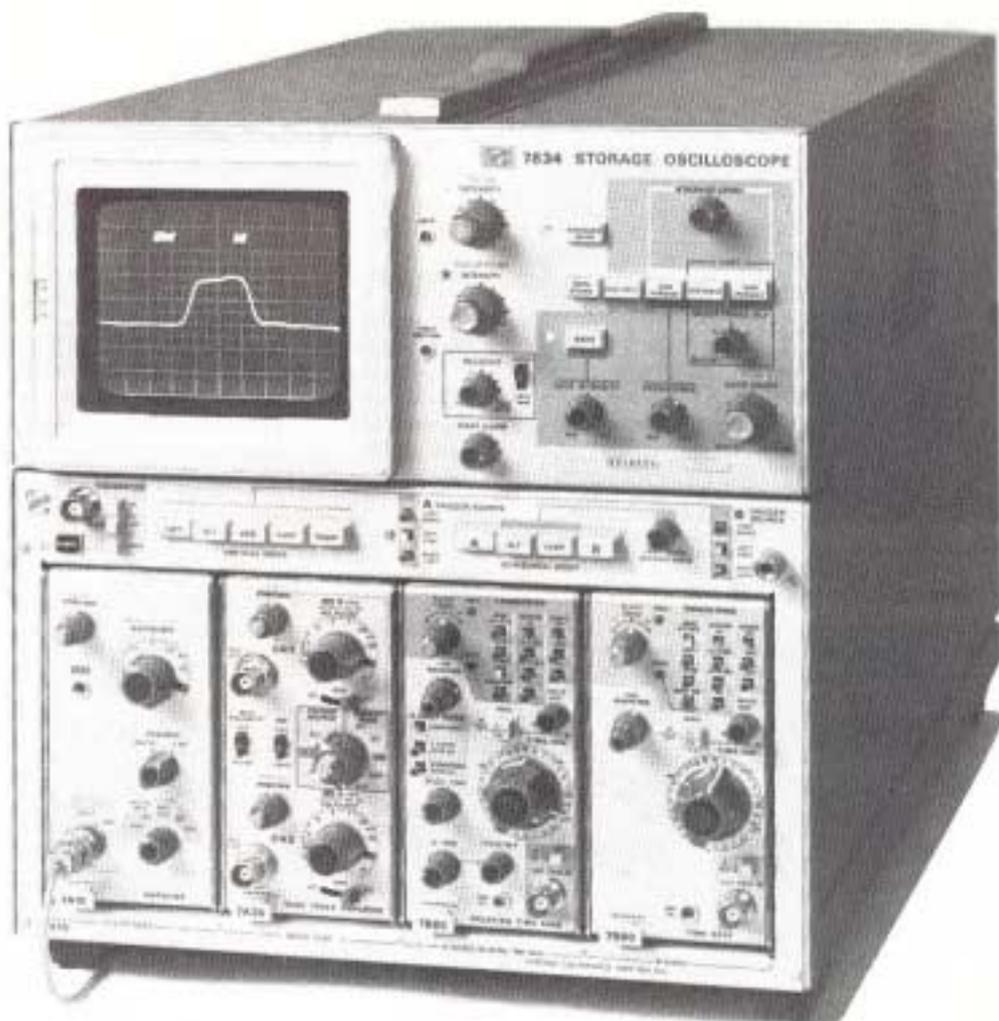

FAST Bistable increases bistable writing rates to 350 cm/ μ s (reduced scan).

Bistable provides stored displays with long (30 minute) view time.

Variable Persistence gives high contrast displays of both single-shot and repetitive phenomena. When viewing changing waveshapes, variable persistence provides continuous bright displays of new information as old information fades from the CRT.

The 4 compartment flexibility means that more than one measurement can be performed at the same time without switching plug-ins. The 7834 also offers auto-erase for automatic display updating, a save control for 30 times longer viewing, gated readout which prevents the blooming that tends to occur between sweeps with nongated readout, and an adjustable multitrace delay for varying the viewing time prior to the next sweep in the FAST transfer mode.

The multimode storage unit is designed for single shot, low-rep-rate or fast pulse analysis.

CRT AND DISPLAY FEATURES

Graticule — Internal variable illuminated graticule: 8 x 10 division (0.9 cm/div) graticule in full scan and 8 x 10 division (0.45 cm/div) in reduced scan.

Option 01, without CRT Readout and Probe Power — Deletes CRT readout and probe power.

Phosphor — P31.

CRT Display Modes — Nonstore, Bistable, Variable Persistence, FAST Bistable and FAST Variable Persistence (full and reduced scan).

Persistence — (Variable Persistence mode only) controls rate of continuous erasure of the variable persistence and fast variable persistence stored displays.

Auto Erase — Continuously variable from \sim 1 s to $>$ 10 s.

Multitrace Delay — Adjusts the transfer cycle time in the FAST transfer modes. Continuously variable from \sim 1 s to $>$ 4 s.

Save — Prevents display from being accidentally erased, and provides up to 30 times longer viewing times in all modes.

Integral Z-Axis Input — 2 V p-p for full intensity range from dc to 1 MHz. Positive signal blanks the trace. Maximum input voltage is 15 V (dc plus peak ac).

Auto-Focus — Maintains CRT focus following changes in display intensity after focus control has been initially set.

Beam Finder — Limits display within graticule.
