June 2002

Welcome [firstname] [lastname]

NAB is the broadcast industry's largest tradeshow, this year attracting over 90,000 visitors to Las Vegas April 8-11. As always Tektronix had a major presence showcasing our products, providing regular tutorial sessions and this year introducing our latest product, the WFM91D which features below. The next major show for us is IBC which takes place in Amsterdam 13-17 September. Enjoy our latest newsletter, let us have your comments and feel free to pass on to friends and colleagues!

New Handheld Video Signal Monitor

This unique product is ideally suited to anyone involved in installation or maintenance of video circuits and systems. The [NEW WFM91D](#) auto-detects the presence of analogue or digital signals and on its high-resolution, 4 in./102 mm colour LCD provides picture and waveform displays amongst many others.

New Poster and Application Note Available

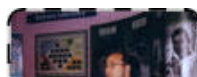

If you work with video and need to know that your signals are "legal" and "valid" (or want to know what that means!) we have a [new poster](#) which provides all the technical and operational details you need. Even further detail is covered in our popular [SD/HD Video Primer](#). For anyone involved in system design, the essentials of timing and synchronisation are revealed in our new Application Note "Timing and synchronisation in a Multi-Standard, Multi Format Environment" which is now available on request or [downloadable](#).

sessions and hands-on practice. The newly-launched Tektronix Laboratory at Wood Norton features video test equipment including analogue, standard-definition and high-definition video, as well as the latest MPEG test platforms. Students attending Broadcast Engineering Foundation, Broadcast Engineering Consolidation, and TV Technology courses will gain experience in using the equipment in real situations. Please visit the web site for the full release and more on [BBC Training](#).

New WFM700

Our WFM700 HD/DS Signal Monitoring Platform is now in extensive use by production facilities and service centres due to the flexibility of its modular architecture. Our newly launched [interactive web demo](#) offers a comprehensive tour of the products capabilities.

[Return to top](#) 

AD920 MPEG Tester

Our AD920 is the first line of defence for critical MPEG error analysis. Its rugged casing and simple operation make it perfect for field use. Ideal for simple error checking, a log of errors is maintained on screen giving the user historical representation of stream associated errors. A [web demo](#) is available on this unique product.
