

SAF LOK MK4 HANDCUFFS

Designed for outstanding security and safety

CHARACTERISTICS

- Keyless fitting and double-locking (cannot be tightened or loosened once set)
- Linkless chain (not welded but cast as a complete chain)
- One-piece stainless steel cast body construction
- Long service life and lower through life costs
- Multi-pinned lock mechanism.

SAF LOK Mk4 handcuffs have been developed by Thales Australia to conform to the stringent design parameters of the law enforcement community. SAF LOK Mk4 handcuffs are manufactured at our Lithgow light engineering facility and are currently in service with Australian law enforcement agencies. SAF LOK Mk4 handcuffs are the preferred choice of law enforcement agencies due to their ease of use and the superior security and safety that they offer to the user.

SAF LOK Mk4 handcuffs

SAF LOK MK4 HANDCUFFS

DESIGNED FOR OUTSTANDING SECURITY AND SAFETY

Easy to use

SAF LOK Mk4 handcuffs are simple to fit and double-lock. The smooth ratchet action ensures that the handcuffs can be applied to large and small wrists with minimum effort.

Officers can apply the handcuffs easily and quickly in any conditions. Double locking is achieved by fingertip and does not require a key. This allows control of the subject without loss of momentum.

In stressful tactical situations, the law enforcement officer is free to concentrate on the rest of the mission as soon as the cuffs have been applied. The user friendly locking system also enables the officer to reset the cuffs quickly for reuse.

Secure

The cuff has a unique tumbler lock that is more resilient to tampering than other cuffs on the market.

The link design ensures that links cannot be worked against each other in such a way as to break the chain or cause self-injury. Unique keys offer improved pick resistance.

Strong

Every law enforcement officer needs a set of handcuffs whose design is optimised to deal effectively with all law enforcement situations. One-piece casting of cheek plates, locking arms, swivels and links provide a stronger handcuff than models with laminated plates, rivets and welds. The body and handcuff arm are manufactured in stainless steel, as one unit. The swivel and links are also manufactured in stainless steel, as one unit. The cuffs are tensile tested to NIJ international standards.

Long Life

High quality long-life equipment represents security for the officer and value for the purchasing agency. Money saved by purchasing long-life equipment can be used to meet other priorities. Using one-piece casting techniques during manufacture instead of pressed steel, ensures long life of the handcuffs.

A combination of unique design and the selective use of materials gives the SAF LOK handcuff an enviable reputation for long life. Many of the original cuffs manufactured in the 1960s are still in daily service with the police forces.
